Caplesco-Poenaro (*Bull. et Mém. de la Soc. de Chir. de Bucarest*, No. 4, 1905) puts on record two cases of penetrating wound involving both thorax and abdomen, and traversing the diaphragm, in which combined thoracotomy and laparotomy were practised with successful results. In both cases the injury consisted in a stab between the eighth and ninth ribs in the right hypochondrium. The pleural cavity having been exposed and explored, and a wound through which the finger could be passed into the abdomen having been found in the diaphragm, laparotomy was performed, and lesions discovered in the peritoneal cavity were dealt with. In one case in which there was free bleeding from a superficial rent in a much-enlarged spleen, a partial ligature was applied to the pedicle of this organ. In the second case the author found a wound of the stomach which was much distended by a recent meal and abundant extravasation of gastric contents into the peritoneal cavity. The wound, which involved the anterior wall of the stomach, and was about 3½ cm. in length, was sutured, and the abdomen washed out and drained. In the first case the wound in the diaphragm was sutured from its thoracic surface after partial resection of the ninth rib. Both of these patients, who were young men, made speedy and complete recoveries. The author publishes these two cases with the object of confirming his opinion that, in order to prevent late complications, both abdominal and costo-diaphragmatic exploration may be assumed as indicated in instances of penetrating wounds of either hypochondrium.

286. Treatment of Acute Post-Operative Dilatation of the Stomach.

Halstead of Chicago (*Surg., Gyn., and Obst.*, No. 1, 1906) publishes a fatal case of acute gastric dilatation following nephropexy, and gives an instructive review of the pathology, symptoms, and treatment of this rare and very grave condition. In discussing the treatment he points out that a sufficient number of cases have recovered to lead to the hope that an early diagnosis will in the future be made more frequently, and that with proper treatment the death-rate, which is now very high, will be lowered. Müller, who succeeded in saving life in two cases, lays great stress upon the posture of the patient, the pelvis being elevated, and the body so placed that the stomach can be readily emptied, retraction of the distended viscus being favoured by gravity. This surgeon also employed the stomach tube frequently. In general the plan of treatment may be briefly stated as consisting in stimulants, preferably the hypodermic injections of strychnine administered to the full physiological limit. Rectal alimentation, with complete rest of the stomach, secured by frequent use of the stomach tube, should be employed. The pain, which is frequently severe, may be controlled by the judicious use of hypodermic injections of morphine. The thirst from loss of large quantities of fluid through the stomach should be relieved by saline solutions given hypodermically or by the rectum. When collapse is imminent, or where suppression of urine occurs, intravenous administration of saline solution may be found useful. In the most severe type of this complication operative measures—such as gastrostomy or gastroenterostomy—for the purpose of draining and relieving the over-distended stomach, would, the author thinks, be found rational. It is pointed out, however, that the patient's condition under these circumstances would render any surgical procedure extremely hazardous.

OBSTETRICS.

287. Delivery of a Hydrocephalic Fetus by Spinal Tapping.

J. W. Ballantyne (*Journ. of Obst. and Gyn. of the Brit. Emp.*, February, 1906) describes a case in which he delivered a hydrocephalic fetus by spinal tapping. The patient was a healthy woman, 46 years of age, who had previously given birth to an anencephalic fetus. There was a moderately contracted pelvis, with a breech presentation. The abdomen was greatly distended; palpation revealed nothing like a hard fetal head, but rather a general, even, and rounded swelling extending up to the ensiform cartilage, and fluctuation could be indistinctly felt. Some difficulty was experienced in bringing down the feet and legs, and still greater difficulty in dragging the arms through the brim. It was then observed that there was a ruptured spina bifida in the lumbar region, and from this fact, as well as from the former history of the birth of an anencephalic fetus, and from the large size and peculiar feeling of the uterus, the author came to the conclusion that the fetal head was hydrocephalic. Traction was made upon the body, but the head could not be drawn through the brim. Perforation would have been difficult because the pelvic brim was narrow and the head quite above it; but in this case there was no thought of attempting delivery by perforation. Instead of this the fluid was drawn off by passing a male silver catheter through the opening in the spinal canal made by the spina bifida, up the canal, into the cranial cavity. As soon as the tip of the catheter was felt to be lying free in the cavity it was moved about in order to ensure reaching all the parts of the hydrocephalic sac. The fluid flowed freely, and in a few seconds the bones of the collapsing head could be easily felt through the abdominal walls. The head was then drawn with some difficulty through the contracted pelvic brim and the birth rapidly completed. In this case Ballantyne made use of the teratological opening into the spine, but in a case which he previously reported he made an opening in the upper dorsal region, and he would have done so in this case if there had been any difficulty in reaching the cranial cavity. In order to reach the fluid he thinks it probable that a metal rather than a rubber catheter must always be used. The operation of tapping, as thus conducted, fulfils the object of overcoming a grave obstruction existing above the pelvic brim by means of a simple operation performed outside the vulva. Another interesting point about this case is the previous obstetric history of the patient. She had given birth first to a female child, which had died *in utero* long before expulsion; second, to a female anencephalic fetus, the labour being complicated by marked hydramnios; third, to a living male child; fourth, to a hydrocephalic fetus, as described above. The author is strongly of opinion that the association of the two teratological conditions was not coincidental, but was relational in this patient, and that she was the subject of "recurrent monstriparity." In this recurrent monstriparity there seems to be a tendency to give birth to malformed infants rather than to infants with any special malformation, and there seems to be a sex preference, the female children being malformed more often than the male ones. Further, although the monstrosities may not be similar in appearance, there is a resemblance in origin. In this case, for instance, hydrocephalus, spina bifida, and anencephalus are all malformations of the nervous system, and they probably all originated in the same way.

GYNAECOLOGY.

288. The Surgery of Cancer of the Cervix Uteri.

Emil Ries (*Surg., Gyn., and Obst.*, September, 1905) shows how, thanks to the heroic industry of gynaecologists of various countries, the investigation of carcinoma of the cervix has recently made the most brilliant progress. Our old ideas of the pathology of this disease were erroneous in so far as they assumed that the advance and spreading of carcinoma of the cervix was different from that of other cancers. We know now that carcinoma of the cervix, like other carcinomas, is liable to invade early not only the connective tissue surrounding the primary seat of the cancer, but also the regionary lymphatic glands. The microscope alone can determine whether connective tissue and glands be invaded or not. Enlarged glands may be free from carcinoma, infiltration of ligaments near the cancerous cervix may be inflammatory and nothing more, whilst small glands and ligaments quite supple and normal according to touch may be full of cancerous elements. The size of the primary cancer is no reliable criterion of the lymphatic invasion, and this invasion follows, with more or less regularity, certain paths. In short, carcinoma of the cervix behaves exactly like other cancers. Therefore carcinoma of the cervix must be submitted to the same treatment which is generally accepted as the only scientific and safe course in cancer of other regions of the body. It is only, in Ries's opinion, by an abdominal operation including a thorough anatomical dissection, and not a mere search for glands, that the surgeon can insure the patient against recurrence. The complete operation is of necessity tedious, difficult, and dangerous, but the mortality has been increased because operators have undertaken advanced cases quite beyond the aid of surgery. On the other hand, the "reduction" or modification of the radical operation means, among other things, that the operative mortality sinks, but recurrences rise up to the old rate of pre-radical days. The advocates of this modified radical hysterectomy seem proud of declaring that it can be done within forty minutes—a space of time far too short, in Ries's opinion, for allowing of complete dissecting away of diseased glands. They further make out that the proportion of cancerous glands in an average case of cancer of the cervix is small—a misleading conclusion, because the fact that few glands are removed in "modified" operations does not prove that no infected ones are left behind. In short, "while radicalism mitigated and tamed is rewarded by a low operative mortality, ultimate failure of the whole work is invited." In conclusion, Ries insists that our duty towards the carcinomatous patient must be to attain the greatest possible protection from the return of the disease rather than to minimize the interference. The vaginal operation, which many surgeons can perform with admirable dexterity and with temporarily good results, cannot represent anything like an approach to perfect surgical treatment, since cancerous glands exist in over a third of apparently operable cases. In the abdominal operation it is useless to remove only such glands as are enlarged when small and soft glands left behind may be cancerous. As for igni-extirpation by the vaginal route, not only has it all the disadvantages of vaginal hysterectomy, but, as Ries points out, the father of the method has abandoned it in favour of the abdominal operation.

289. **Large Live Lumbrici in an Ovarian Dermoid.**

AMANN of Munich reported (*Monats. f. Geb. u. Gyn.*, July, 1905, p. 166) a case where an ovarian dermoid cyst contained live organisms far above microbes, as well as highly-organized tissues. The patient had suffered from fever after delivery, and the dermoid tumour which she bore suppurated, as is not rarely the case. It contracted parietal adhesions, and ultimately pus discharged from the umbilicus, a complication not unknown. The suppurating sinus was laid open and a cavity full of pus exposed; then a tuft of hair and some teeth were extracted. A mass of something indefinite lay deep in the sac; it was observed to move, and proved to be three large lumbrici twisting round each other. The longest measured nearly 1 ft. in ength. The most curious feature in the case was the absence of any trace of faeces or faecal odour in the cavity of the dermoid cyst, although the worms could only have entered it through a communication with some part of the alimentary canal. No faeces came away during convalescence, the cavity being drained and allowed to close, though the ultimate history of the case is not published.

290. **Abdominal Section during Pregnancy.**

A. DORAN (*Journ. of Obstet. and Gyn. of the British Empire*, November, 1905) describes 2 cases, in one of which a myomectomy, in the other an ovariotomy, was perormed during pregnancy. The first patient was a primipara in the third month of pregnancy. The tumour, a essile subserous fibromyoma of the uterus which occupied he whole of the left half of the pelvis to considerably below the level of the brim, was successfully enucleated; he haemorrhage was not excessive and was easily controlled. The subsequent labour was somewhat prolonged, on account first of an excess of liquor amnii and second of a breech presentation which could not be turned because of the extreme irritability of the uterus. The patient, however, did well and involution of the uterus after labour proceeded normally. The second patient also was a primipara in the third month, the tumour in this case being a fibroma of the ovary. The tumour, which was freely movable, extended upwards more than half way to the umbilicus, downwards to the brim, and filled the right flank so as to displace the uterus to the left. The free mobility of the tumour was held to be an indication for operation; both because the removal of a pedunculated growth does not involve great risk of abortion, and because if such a tumour be left untreated axial rotation or descent into the pelvis may occur and lead to dangerous complications. The operation was successfully performed, there was very little haemorrhage, and the subsequent labour was an easy normal one. In both cases the diagnosis was easy. In many cases of the kind diagnosis is difficult, and if an ovarian tumour or uterine fibroid remain unrecognized until the onset of labour the difficulty of diagnosis becomes extreme. The author dwells upon the risk which may attend attempts to push up a pelvic tumour during labour.

THERAPEUTICS.

291. **Treatment of Acute Articular Rheumatism.**

RAUZIER (*Arch. Gén. de Méd.*, March 13th, 1906), in a paper on the treatment of acute articular rheumatism, points out the main lines on which it is to be carried out, and discusses the salicylate treatment and the treatment of the affected joints. When salicylate of soda cannot be tolerated by the stomach he recommends that it should be given per rectum. Pregnancy, cerebral, cardiac, and renal complications, contraindicate the use of salicylates. In pregnancy he thinks the best drug to employ is antipyrin. As an application to relieve pain in the affected joints he recommends a lotion containing oil of henbane and laudanum; he also thinks salicylate of methyl of great service for the relief of the joint pains. It should be applied to the skin over the affected joints, and covered with cotton-wool and a piece of waterproof material. The vapour given off from this drug is absorbed by the skin, and gives rise to the formation in the blood of salicylate of soda. Locally it causes some redness of the skin and slight smarting, but has marked analgesic properties. It should not be applied in the form of an ointment, as it is thereby liable to lose much of its therapeutic value.

292. **Thiosinamin in Traumatic Strictures.**

H. MOHR (*Therap. Monat.*, January, 1906) has employed thiosinamin in the treatment of a traumatic stricture of the duct of the parotid gland. The patient had received a wound of the left cheek, which extended from the outer canthus of the eye to the angle of the jaw, and was deep enough to reach almost to the mucous membrane of the mouth. About eight days after the injury the cheek in the neighbourhood of the parotid gland began to swell, a softened spot developed in the scar tissue, and finally a fistula formed from which saliva escaped. The fistula closed again several times, but always reopened. The author saw the patient about five weeks after the occurrence of the accident, and found that there was then a small fistula in the wound tissue. An attempt was made to pass a fine probe from the opening of the duct in the mouth along to the parotid gland, but the passage of the probe was stopped by scar tissue, and it was clear that the duct had been divided wholly or in part, and was now narrowed or altogether closed by scar tissue. A large probe was next introduced and pushed in the direction of the gland, and as a result a collection of saliva and pus escaped both from the external fistula and from the internal opening of the duct. The probe was introduced daily, being left in longer as time went on; the external fistula closed in eight days. Unfortunately there was a constant tendency for the stricture to reappear, and the fistula seemed several times in danger of breaking open again. Under these circumstances injections of thiosinamin began to be employed in addition to the other treatment, the fluid injected consisting of a watery solution of thiosinamin together with 20 per cent. of glycerine; the injections caused some pain, but the pain quickly passed off. In the course of four weeks ten injections were made subcutaneously at a distance from the wound and five directly into the scar tissue over the site of the stricture. For more than a fortnight scarcely any improvement could be seen, but after this time steady improvement set in. The scar tissue at the site of the stricture became progressively softer, the probe passed more readily, and soon the number of times of passing it could be diminished. Meanwhile the external scar became firmer, and saliva was passed normally into the mouth. At the end of two and a half months from the beginning of the thiosinamin treatment the external scar was perfectly firm, the probe passed along the duct with but little resistance, and the union between the parts of the divided duct was such as to allow of the normal passage of saliva. As to how far this result depended on the passing of the probe, etc., and how far upon the drug it is not easy to determine, but looking at the cause of the illness, and remembering that salivary fistulae often resist conservative treatment, the impression is gained that the action of thiosinamin in softening the scar tissue must have substantially contributed to the cure. The author believes that thiosinamin is chiefly valuable in the treatment of strictures in combination with mechanical dilatation, and that by softening the tissues it makes recovery possible in some cases, hastens it in others, and counteracts the tendency to relapse.

293. **Proponal as a Hypnotic.**

OBSERVATIONS on the hypnotic value of proponal, originally recommended in 1905 by Fischer and v. Mehring, have been recorded by S. Kalischer (*Neurolog. Centralb.*, March 1st, 1906, p. 206). Proponal is allied to veronal, and is dipropylbarbituric acid. Like veronal, it is a colourless crystalline substance, which in dilute solution has a bitter taste. It is easily soluble in dilute alkalies. It may be given in tabloid form (0.1 gram), or dissolved in water, tea, or milk either warm or cold. Care was taken to eliminate the effect of suggestion, and it was administered to a series of patients suffering from organic and functional nervous diseases, some of whom had been the subjects of protracted insomnia and were accustomed to the use of hypnotics, and others were sleep-hypochondriacs, such as were not satisfied unless they had slept for a definite number of hours and had wakened with a refreshed feeling. The doses used varied from 0.1 to 0.6 gram. A dose of 0.1 gram had apparently no hypnotic effect. A dose of 0.2 gram, while not definitely hypnotic, was useful in cases in which sleep was broken but rarely needed active assistance. It was found sufficient for patients who had difficulty in falling asleep or for those who woke up after a short sleep and did not easily fall asleep again. With this dose the drug given after the first sleep was of use. In doses of 0.3 to 0.5 gram sleep was produced in a quarter to one hour, and often more quickly than after the administration of veronal. Proponal was less conspicuous in its effect than the corresponding dose of veronal, but even with large doses there were not the after-effects of veronal-tinnitus, giddiness, etc. After proponal sleep the patients felt freer and fresher and were able to work. There was no obvious inclination to sleep the next day, or an effect lasting to the next night, as after sulphonal and trional. There was thus lacking a persistent sedative effect. Doses of 0.1 gram given frequently during the day exerted a sedative effect, but did not cause sleepiness at night unless the dose were increased. There was no tolerance of the drug after prolonged use, even for several weeks, requiring an increase of the dose to give the hypnotic effect. There were no untoward after-effects on the stomach, bowels, heart, kidneys, or skin. It appeared, therefore, that proponal was well worth recommending as a substitute or variant for other hypnotics. On the whole a smaller dose than that of veronal was effective. In slight cases of insomnia 0.2 to 0.3 gram might act very well, but in severe cases 0.4 to 0.6 gram might be required. It had no influence on pain and had no effect on the sleeplessness due to pain, and there was no evidence that it had a favourable action in conditions of mental excitement, depression, or anxiety.

294. **Bromide of Methylatropin.**

DOMENICO (*Rif. Med.*, January 27th, 1906) discourses on the merits of bromide of methylatropin as a mydriatic. Of the sixteen mydriatics used at one time or another by the author, this latest is especially useful in old people, in children, and where atropin is not tolerated. In one case of iritis with secondary glaucoma, bromide of methylatropin was used as a local mydriatic without producing any increase of tension or giving rise to any bad symptoms. The author has never observed any untoward results from its use. In addition to its mydriatic effect, which appears in about ten minutes, and lasts a longer or shorter time according to the strength of the solution, the drug, owing to the bromide element, has a distinct sedative and analgesic effect. It is a white, amorphous, very light, bitter powder, soluble in water, but hardly at all in chloroform or ether. For ophthalmic purposes it may be used in strengths from ¼ to 5 per cent.; a useful average strength is 1 per cent. It may also be used for general purposes, much in the same way that atropin is used.

295. **Prevention and Treatment of Pneumonia.**

BEVERLEY ROBINSON (*Med. Record*, April 7th, 1906) believes that with the first symptoms of fever, chill, pain in the side, cough, and expectoration, beechwood creosote should be vaporized more or less continually in the patient's room. He feels sure that there is no drug used in this way which has more preventive value in the treatment of pneumonia. Besides the use of creosote inhalations, he insists upon perfect ventilation. At frequent intervals the inhalations are stopped altogether and the windows are opened wide. Draughts must not be tolerated. The windows are opened more or less according to temperature and moisture. The writer believes that the physician should not be "unduly enthusiastic" as yet about any one agent alone.

PATHOLOGY.

296. **The Demonstration of Flagella in Spirochaetes.**

ZETTNOW (*Deut. med. Woch.*, March 8th) has been successful in demonstrating the flagella of the spirochaete of African relapsing fever, and publishes two photographic reproductions of his specimens. There is no special difficulty in the actual staining of the flagella; the main technical problem to be overcome is to free the spirochaetes from the albuminous material, with which they are surrounded in the circulating blood, without damaging them or breaking off their flagella. Unless this is done it is obviously impossible to obtain films free from extraneous matter, and consequently the clear ground, necessary for successful flagella staining, cannot be obtained. It is necessary first to defibrinate the blood, and then to centrifugalize it so thoroughly that the spirochaetes separate out as a white layer from the clear serum. After the serum has been poured off, the spirochaetes are treated with normal saline solution, and are then centrifugalized three times in order to wash off the adherent serum. The organisms are then emulsified in water, and spread on perfectly grease-free coverslips in a thin layer, which should dry quickly, as the flagella very readily disintegrate. The spirochaete of African relapsing fever possesses many lateral flagella, and tufts of from three to five are occasionally demonstrable at the extremities.

297. **Framboesia Tropica (Yaws).**

CASTELLANI (*Deut. med. Woch.*, January 25th, 1906), in continuation of his work on the parasites found in yaws, states that out of a total of 14 typical cases of this disease he has found spirochaetes in 11. Amongst these spirochaetes there occurs an extremely delicate variety which in circumscribed lesions is not associated with the presence of other micro-organisms. In his opinion this parasite is indistinguishable morphologically from the *Spirochaeta pallida* of Schaudinn. But since he maintains a differentiation between framboesia and syphilis, he is inclined to the view that if the spirochaete which he has found in framboesia has an etiological significance in that disease it must be biologically distinct from the spirochaete of syphilis. He proposes, therefore, to call his organism *Spirochaeta pertenuis* or *pallidula*.

298. **The Regeneration of Suprarenal Tissue.**

LABAZINE (*Arch. des Sciences Biol.*, St. Petersburg, p. 249, vol. xi, 1905) has produced experimental lesions on the suprarenals of rabbits, with the object of seeing how far these organs are capable of regeneration. He finds that they possess this capacity in only a very slight degree. Every lesion is followed by a loss of parenchymatous substance and a formation of connective tissue. When large portions of the gland are excised no restitution of parenchyma takes place. Cauterization is more deleterious in its action than traumatism. The multiplication of glandular cells appears early (twenty-four hours after a traumatic lesion), and attains its maximum in from two to five days. The multiplication takes place in the cortical but not in the medullary part of the organ, and is chiefly confined to the peripheral portion of the former.

AN EPITOME OF CURRENT MEDICAL LITERATURE.

MEDICINE.

299. Constricted Liver.

G. SENNI (*Il Policlin.*, February, 1906) discusses the cause and describes the appearances of those cases in which a lower lobe is separated from the rest of the liver by a deep sulcus at the level of the costal arch. His remarks are illustrated by reports of eight cases observed by himself and ten cases recorded by others. The constriction is always in that part of the front of the liver between the mammillary and mid-axillary lines where the ribs and their cartilages are most yielding. Only adult females are affected, and the author ascribes all cases to tight lacing. The rarity of the disease in comparison with the frequency of tight lacing is explained by the fact that the excessive pressure usually falls on the under surface of the liver, and only affects its anterior face when the lower border of the liver is displaced downwards either by hypertrophy or ptosis of the liver. In recorded cases in which no attempt has been made to notice this point, it is common to find accidental allusion to enlargement of the liver or to the pre-existence of diseases causing it (for example, syphilis and malaria), or to a general ptosis of the abdominal viscera. A simple depression on the anterior surface of the liver is the earliest stage of the disease. Later the continuance of the cause, the atrophy of the part subject to pressure, the passive congestion of the dependent lobe and consequent traction on the contracted part, make the condition permanent, and sometimes lead to such a shrinkage of the atrophic part that it becomes little more than a pedicle containing some liver parenchyma with fibrous tissue, blood vessels, and bile duct. The gall bladder is necessarily displaced downwards, and its dependent position and the consequent stagnation of its contents frequently lead to stone formation, discovered *post mortem* or at operation, but not yielding symptoms during life, because the position of the gall bladder prevents the stones from entering he duct. The attribution of the whole disease to cholelithiasis is a confusion of cause and effect. The non-existence of reported cases in men is alone sufficient to negative this theory. The displaced portion of the liver may be of any volume, from that of a small orange to that of a fetal head. It is usually found in the right epicolic egion, but sometimes the abnormal length of the pedicle admits of its being found in the right iliac fossa or in the rue pelvis. The parenchyma of the portion displaced often undergoes the changes usually associated with passive congestion. The hepatic flexure of the colon is necessarily displaced and assumes a U shape. The ymptoms caused are very variable: nervous and digestive disturbances, painful dragging sensations, dull pains adiating to the back, thorax, and thighs. The dullness of he displaced lobe is sometimes separated from the rest of he liver dullness by an area of resonance, where a coil of ntestine intervenes between the pedicle and the body wall. As the liver is enlarged in nearly all these cases, the right kidney is usually somewhat displaced downwards, and may be recognized by palpation as a tumour distinct from that under consideration. The importance of an exact diagnosis is indicated by the fact that unnecessary surgical intervention has been practised in cases wrongly diagnosed. urgical treatment has consisted in removing the displaced obe as a neoplasm, or fixing it to the body wall. Any peration should include an examination of the gall ladder. Sometimes the tumour may be fixed by wearing suitable apparatus. Failing this the author recommends perative immobilization for all troublesome cases not omplicated by cholelithiasis and cholecystitis. These omplications call for cholecystotomy or cholecystectomy, r they may be treated by a partial hepatectomy.

300. Transient Stenosis of the Superior Vena Cava in Pulmonary Tuberculosis.

W. SPIRIG (*Corr.-Bl. f. Schweizer-Aerzte*, February 1st, 906) reports the case of a man, aged 40, with consolidation f the right apex and tubercle bacilli in the sputum, who was attacked with symptoms of occlusion of the superior ena cava. On June 27th, after eating, he complained of eadache, and fell asleep. He awoke suddenly shrieking, ot up, and fought in the air, thinking that he was being ttacked and strangled. An hour later he became calmer, ut was greatly changed in appearance. The face, neck, and arms were of a bluish-red colour and turgid, and the eyes were prominent. There were headache and a sensation of strangulation. The lower part of the body was normal. Similar though less violent attacks of delirium occurred during the night of June 28th and again on June 29th. On the latter date his mind became clear, though the headache and sensation of compression of the neck persisted. There was a sensation of "pins and needles" in the arms, which were cold, cyanosed, swollen, powerless, and heavy. No haemoptysis occurred. The conjunctivae were reddened, and the palpebral fissures were narrowed. The mucous membranes of the mouth, pharynx, and larynx were cyanosed, and the superficial veins of the neck and face were extremely prominent. The glottis was not oedematous. The optic discs were normal, but the retinal veins were engorged. There was no dyspnoea. The pupils were equal and reacted normally. The pulse was 94 and regular. The pulmonary signs were unchanged, but over the right supraclavicular fossa, right clavicle, right first two interspaces close to the sternum, upper part of the sternum, left sterno-clavicular joint, and left supraclavicular fossa there was a blowing murmur resembling the *bruit de diable*. It was most intense at the right second rib, became fainter when traced to the left, and was inaudible below the right third rib. It was uninfluenced by respiration and the cardiac beats. On July 3rd the congestion of the upper part of the body was subsiding and the *bruit* was audible only at the right sterno-clavicular joint and in the first two interspaces to the right of the sternum. On July 7th the venous congestion had completely disappeared and there was no *bruit*. On September 10th, after a stay in the country, the bloated appearance had been replaced by the pallor and sharpness of features characteristic of tuberculosis. The pulmonary signs were practically unchanged. The attack of June 27th could be explained only by obstruction of the superior vena cava or both innominate veins. The initial delirium was evidently due to sudden disturbance of the cerebral circulation. If obstruction of the superior vena cava gradually occurs the brain adapts itself to the altered conditions and delirium is exceptional. The distribution of the *bruit* exactly corresponded to that of the superior vena cava and its tributaries. The obstruction was probably situated behind the cartilage of the first right rib immediately below the junction of the two innominate veins. That it was not below the entrance of the vena azygos was proved by the absence of distension of the intercostal veins, all of which except the first enter the azygos vein. The obstruction was probably due to traction of adhesion between the two layers of the pleura over the diseased right apex, the mediastinal fibrous tissue, and the walls of the superior vena cava, which is here separated from the lung only by the mediastinal pleura. The vein thus became kinked but was soon straightened and its lumen was restored by the heightened intravenous pressure which resulted above the obstruction. Thrombosis was excluded by the rapid disappearance of the symptoms, and compression of, instead of traction on, the vein was rendered improbable by the absence of any condition which could produce it.

301. Raynaud's Disease in Children.

SOMMELET (*Thèse de Paris*, 1905), who has collected statistics, is of opinion that Raynaud's disease occurs as frequently in children as in adults. He met with 6 cases in one year. The writer raises the question whether Raynaud's disease differs in the child and the adult. He is of opinion that ulceration and tissue destruction are slight in the former, impairment of function is less marked, and there are practically no general symptoms. In children the disease follows vasomotor disturbances. Local syncope and asphyxia constitute general evidence, and there is usually considerable pain.

SURGERY.

302. Multiple Gunshot Perforations of the Intestine.

PICQUÉ (*Bull. et Mém. de la Soc. de Chir. de Paris*, No. 8, 1906), in a report of a case of gunshot wound of the abdomen, communicated to the Société de Chirurgie by M. Pieri of Marseilles, directs attention to some points of special interest from a clinical point of view to be found in this record. The patient was a male, aged 18, whose abdominal cavity had been traversed by a bullet entering near the lower end of the sacrum, and emerging in the middle line of the anterior abdominal wall at a point about four finger-breadths below the umbilicus. When first seen by Pieri, five hours after the receipt of injury, the man presented no indications of wounding of the intestine, the general condition being excellent, with a pulse of 92 and a temperature of about 99°. No pain was excited by pressure over the abdomen, and although, as was afterwards discovered, the intestine had been perforated in fifteen places, there was no prehepatic clear sound. There was, however, slight resistance of the recti muscles. Notwithstanding this absence of symptoms, Pieri at once practised free median laparotomy, and, after having sutured a wound in the rectum, discovered and sutured thirteen other intestinal perforations situated between the caecum and the duodenum. The fifteenth wound was a very irregular one, and the surrounding intestinal wall too much disorganized to permit of suturing; consequently the injured portion of the intestine was resected. Although there were evident signs of peritonitis, and false membrane and faecal matter were observed about the wounded portions of intestine, the wound in the abdominal wall was completely closed, and no attempt was made to establish drainage. The patient made a good recovery. In his comments on this record Picqué points out that in cases of this kind the two chief factors of success are the absence of haemorrhage and the individual resistance of the patient to peritoneal septicaemia. The interval between the time of the injury and that of the operation is also a point of great importance, as it has been proved statistically that there is a direct ratio between the prognosis and the duration of this interval. Reference is made to the delay in cases of perforating injury of the abdomen, of the first indications of peritonitis which usually are not observed before the eighth hour; while in cases of pathological perforation, as in gastric and duodenal ulcers, typhoid ulceration, and appendicitis, perforation is almost immediately followed by pain and inflammatory reaction. It is suggested that in cases of pathological perforation the intensity of the reaction may be dependent on a high degree of septicity and toxic action in the contents of the intestine. In Pieri's case the perforations in the intestines were closed by purse-string sutures. Picqué, though acknowledging this to have been a happy idea under the circumstances, and pointing out that the duration of the operation must thus have been much shortened, is of opinion that this method of suturing cannot be regarded as generally applicable. It can only be applied to small perforations, is likely to cause deformity of the intestine and constriction of its lumen, and offers less security than the ordinary suture in two rows.

303. **Treatment of Congenital Luxation of the Hip.**

Hendrix (*Journ. de Chir. et Ann. de la Soc. Belge de Chir.*, No. 2, 1906) holds that in the bloodless treatment of congenital luxation of the hip complete reduction of the head of the femur, notwithstanding elongation and a much improved position of the limb, is really in most cases not effected. The luxation, he states, is transposed and not reduced, the head of the femur being placed not into or over the cotyloid cavity, but just below the antero-inferior iliac spine. This transposition, which has been demonstrated by the methodical application of the Roentgen rays, is attributed in the first place to the abnormal condition of the cotyloid cavity, which in cases of congenital luxation is converted into a shallow triangular depression without any prominent and overhanging margin above; and in the second place to a change in the direction of the neck of the femur, which instead of diverging, as in the normal condition, upwards and inwards, is anteverted or carried forwards, so as in extreme instances to form an angle of 90 degrees, or it may be more, with the line it would have taken under normal anatomical conditions. With the object of overcoming the tendency to transposition the author, after forcible displacement of the head of the femur, rotates the limb inwards and fixes it in this position during a period of not less than four months. In his concluding remarks the author states that in every case of congenital luxation of the hip, whether this be simple or complicated, treatment by bloodless methods still remains, and indeed will long remain, a difficult matter. Each case has its individual physiognomy, and presents some special difficulty. The secret of success, it is held, depends on the care taken by the surgeon to make out the state of the neck of the femur and, immediately after reduction has been effected, to rotate the lower limb inwards to a degree corresponding to the degree of anteversion of the neck, and to maintain for a sufficient time the limb in this position. This method, the author states, has afforded a high percentage of good results, and been attended with a success superior to that indicated by the majority of published statistics.

304. **Caecostomy and Intestinal Irrigation in Amoebic Dysentery.**

Curl (*Annals of Surgery*, April, 1906), in a paper on the relative value of caecostomy and appendostomy in the treatment of amoebic dysentery by irrigation of the colon, gives the results of his experience of this therapeutical method in the Colon Hospital, Isthmus of Panama. He has reached the conclusion that irrigation is not justified in late cases in which there is great prostration and advanced pathological change in the mucous and submucous layers of the large intestine. On the other hand, early cases can be controlled by irrigation per rectum, combined with proper diet and rest. It is only in the intermediate class of cases, in which the ordinary treatment has failed, where there is a tendency to an increase in the daily number of stools, and where considerable strength remains, though the patient is getting weaker, that operative treatment is indicated. The author prefers caecostomy to appendostomy, as in his practice the results of the latter operation have not been so good as those of the operation in which the fistula was established in the caecum proper. The appendix, it is stated, even when most carefully handled, shows a tendency to sloughing, and there is a certain amount of secretion from its mucous membrane which may prevent spontaneous closure of the sinus. The appendix, it is held, should, as a precautionary measure, be removed in operations for caecostomy. A rapid improvement, it is stated, usually follows the beginning of irrigation, but convalescence is slow, and the closure of the fistula is in some cases attended with difficulty. The author does not express a sanguine view of the general prospects of this treatment, although he is of opinion that it may save life in selected cases.

OBSTETRICS.

305. **Treatment of Puerperal Septic Diseases.**

S. Marx (*Med. Record*, April 28th, 1906) declares that puerperal infection depends upon infection from without, gaining its entrance practically always by lesions in the vagino-uterine route. These, like infective areas in other parts of the body, should be discovered and attacked energetically and wisely. The writer has maintained for years that practically all sepsis arising after labour gains its entrance from the so-called puerperal ulcers, whether they be situated at the vaginal outlet, their most frequent site, or upon or within the cervix. Early recognition and treatment will cut short many a case from beginning sepsis that would otherwise develop into a dangerous and prolonged illness. All elevations of temperatures, or an abnormally high pulse-rate, with or without fever, in the period of the puerperium, should be considered with suspicion. Every case of this kind should be looked upon as one of sepsis, until the diagnosis can be absolutely made. A complete and thorough physical examination must always be made before the local one, except in those cases in which there is no question that sepsis is the one and only condition present. In the case of evident ulcerative areas, which are limited to the lower genital tract, the interior of the uterus should under no condition be invaded by hand or instrument. Carbolic acid, in pure form, is the cauterant of choice because of its painlessness, its deep influence, and the ability to control its action with alcohol. In the case only of intrauterine sapraemia is the exploration for retained products of conception justified.

306. **Heteroplastic Ovarian Grafting.**

Robert T. Morris (*Med. Record*, May 5th, 1906), reports a case of heteroplastic ovarian grafting followed by pregnancy, and the delivery of a living child. The patient was a married woman, 21 years old. Menstruation began when she was 15 years old, and stopped in four years. The last two years the patient had suffered from the common symptoms of the menopause. The writer made a diagnosis of cirrhotic ovaritis, and decided to do ovarian grafting. Four months after the operation the patient menstruated. The period lasted for five days. It was five months before menstruation again took place, lasting but one day. In the following month it lasted four days, and after that it appeared at normal intervals. Four years after the grafting the patient was delivered of a child, weighing 7½ lb. The writer states that the present case of heteroplastic grafting renews the hope that certain women who have reached the menopause through disease, surgical operation, or possibly after the normal menopause, may be made fertile.

GYNAECOLOGY.

307. Abdominal Ovariotomy during Labour.

H. R. Spencer (*Journ. of Obst. and Gyn. of the Brit. Emp.*, March, 1906) describes a case of ovariotomy performed during labour. The patient was a primipara, aged 24, who was admitted to University College Hospital three weeks after tapping of the abdomen had been carried out at a lying-in hospital; she was a little more than eight months pregnant. When first seen at the hospital, the patient's abdomen was enormously distended and measured 47 in. in circumference. The measurement from the ensiform cartilage to the umbilicus was 13 in., and from the pubes to the umbilicus 12 in. The greater part of the abdomen was occupied by a thin-walled cyst, dull on percussion, and giving distinct evidence of fluctuation; the outline of this cystic tumour could not be distinctly made out. The pregnant uterus could be felt as a firm tumour in the lower part of the abdomen on the right side. The os uteri admitted two fingers; the head presented low in the pelvis. Contractions could be felt per vaginam from time to time. The case was diagnosed as a large and probably ruptured ovarian cyst complicating labour. An operation was decided upon, but was not performed until later on in the labour, when strong pains had been felt for about an hour. At the operation the tumour was found to be a multilocular cyst of the left ovary, ruptured at the lower part so as to permit of the escape of fluid into the peritoneal cavity. The cyst was removed and every precaution taken against haemorrhage from the stump, the pedicle being tied in two and as a whole with floss silk, and the ovarian being afterwards understitched, while the peritoneum was drawn over the raw surface. After the abdominal wound had been closed a vaginal examination was made, and showed the cervix to be fully dilated and the head low in the pelvis. Forceps were applied, and a strong and living female child was delivered. The placenta was expressed a few minutes later. There was no *post-partum* haemorrhage. The whole operation, including the delivery, lasted seventy minutes. A point of interest in this case is the tapping to which the patient had been subjected before admission to the hospital. On this point experience has only strengthened the opinion expressed by the author twelve years ago, that "the tapping of ovarian cysts, unless they are undoubtedly malignant, or unless the patient is suffering very acutely from some pulmonary affection or grave general disease independent of the tumour, is in my opinion an unjustifiable procedure." The second point of interest is the treatment to be adopted in the case of a patient in labour who has a large ovarian tumour which does not obstruct delivery. The three alternatives are: (1) To deliver by the natural passage, dilating the canal if necessary, and then to perform ovariotomy; (2) to perform ovariotomy, and leave the delivery to nature; (3) to perform ovariotomy at the end of the first stage of labour, and immediately afterwards to deliver by forceps while the patient is under the anaesthetic, the course adopted in the case here recorded. Each of these three methods has advantages peculiar to itself; by the first method the injurious effects of the anaesthetic on the fetus are avoided, and the operation of ovariotomy is facilitated; by the second the maternal and fetal injuries common in instrumental deliveries are avoided; by the third the ovariotomy can usually be performed with more complete asepsis than just after delivery, the risk of rupture of the large cyst during labour is lessened, and only one administration of the anaesthetic is, as a rule, required.

308. Sarcoma of Female Urethra.

Kamann (*Monats. f. Geb. u. Gyn.*, April, 1906) describes an instructive case of a tumour which presented at the urethral meatus. The patient was 55, and had been subject for a year to a yellow discharge and for three months to burning pains during micturition. She consulted the doctor for a swelling in the vulva, which she had first noticed four days previously. Kamann detected a dark-red tumour of the size of a small walnut, with its surface ulcerated; it completely covered the meatus and part of the vaginal outlet, and was connected with the mucous membrane of the urethra by a distinct pedicle, so that it simulated a uterine polypus with its pedicle constricted by the meatus, simulating an os externum. Clumsy attempts were made afterwards by an inexperienced operator to remove the tumour; ultimately it was extirpated by aid of the thermo-cautery. One year later the patient was free from any sign of recurrence. The tumour was found to be a small-celled sarcoma, partly angeiomatous; it arose from the submucous connective tissue of the urethra.

THERAPEUTICS.

309. Denys's Tuberculin.

At a meeting of the Société Internationale de la Tuberculose held on January 9th (*Gaz. Méd. Belge*, January 25th) Denys, of Louvain, presented a communication in which he said that for ten years he had used in the treatment of tuberculosis in the human subject, whatever was the seat of disease, a tuberculin consisting simply in a bouillon of Koch's bacilli, passed through a porcelain filter so as to eliminate every germ. The product, according to him, is distinguished from all others by the fact that it has not undergone the altering action of heat or chemical reagents. It is extraordinarily active in tuberculous persons in whom it may cause reactions in doses of 0.000,001 gram, 0.000,000,1 gram, and even 0,000,000,01 gram. It is injected in doses progressively increased till the patient can tolerate a gram of the pure bouillon. An essential point in the method is that the injections must be made in such a way as to avoid exciting any reaction, as this is only exceptionally tolerated and then only when slight. Of 442 cases of pulmonary tuberculosis in the cavitation stage, 193, or 43.6 per cent., have been cured, the bacilli disappearing; 56 are in a condition as satisfactory as that of the cured cases, except that there is still a little expectoration containing bacilli, indicating that the lung is clearing itself; 36 have been greatly improved, 29 improved, 19 are stationary, 9 have got worse, and 100 have died. Denys claims a successful result in 314 cases, or 71 per cent. He holds that these results cannot be explained by hygienic treatment or diet. When the tuberculous process has not gone beyond consolidation, a cure may confidently be looked for. Excellent results are also obtained in cases in which the disease is situated in the pleura, intestine, peritoneum, glands, bones, and joints. Finally, Denys declares that the method is quite harmless. In reply to S. Bernheim, Denys said the treatment had never caused albuminuria. Some of the cases had been under observation since 1896, and during all that time the cure had been maintained. He added that after cure, further regular treatment was needed to prevent relapse.

310. Electrical Irrigation in Intestinal Obstruction.

Lebon (*La Clinica*, January 19th, 1906) recommends electrical irrigation for cases of intestinal obstruction which resist ordinary treatment by enemata or drugs. He considers it advisable to try this method before resorting to surgical measures. It will not overcome obstruction due to strangulation, but produces a rapid cure when faecal impaction is the cause. He employs Boudet's rectal electrode. This consists of a hollow metal sound insulated by a rubber envelope and perforated twice or more at the end. The sound is connected in the usual way with the coil battery and manometer, and is attached by a rubber tube to the irrigator. A large flat electrode wrapped in lint is provided for the abdomen. The patient lies on his back with the pelvis elevated; the electrode is applied to the abdomen after being saturated with salt solution, and the flow of water is slowly turned on. The sound requires to be held in position during the whole process. The current is then started; at first very weak, it is gradually increased until 35 to 40 milliampères are reached; after five minutes it is decreased to zero, and by means of a commutator or by altering the wires the direction of the current is altered. The intensity of the current is then gradually increased again; finally an interrupted current is used for a few minutes. The whole treatment should last for from fifteen to twenty minutes, unless relief has been obtained before. With each interruption of the current the abdominal muscles contract strongly, and peristalsis is excited so that the patient experiences severe colic. The irrigation must be kept up as long as the sound remains in the rectum. If the result is negative, a second application may be given four or five hours later; should this also fail to prove beneficial, surgical measures are indicated. Electrical treatment is contraindicated when one has reason to suspect intestinal ulceration, and when the patient is in a feeble and prostrate condition.

311. Aspirin in Chorea.

Massalongo and Zambelli (*Gazz. degli Osped.*, January 21st, 1906) have tried aspirin in many ordinary cases of chorea with good results. In 4 cases of very severe chorea they have had equally satisfactory results. In the beginning they gave from 3 to 5 grams daily (the patients varied from 10 to 15 years), and reduced it to 2 or 3 grams later. Some good effects were noticed as early as the second day, and chiefly showed themselves in the direction of lessened disturbance in the movements of the mouth and head, so that feeding became much less troublesome and some sleep was obtained. Treatment varied from fifteen to twenty-five days in duration. The authors were particularly impressed with the value of the drug in their 4 severe cases, and believe that no other remedy as yet proposed is as effectual as aspirin.

312. Antiplague Vaccination.

Kolle and Strong (*Deut. med. Woch.*, March 15th, 1906) have endeavoured to produce immunity against plague by inoculation with highly attenuated cultures of living bacilli. They obtained from Dr. Maassen a culture which was to begin with of low virulence, and this they further attenuated to such a degree that when a million times the usual fatal dose was inoculated into guinea-pigs and rats, the animals neither fell ill nor died. They also found that their highly-attenuated plague cultures produced in inoculated animals a high degree of resistance against virulent plague bacilli. Satisfied by these results that their material was innocuous, Strong inoculated in Manila 42 human beings with varying doses of these living attenuated plague cultures. The first experiments were made on criminals condemned to death, the dose first used being one hundredth of a loopful of culture. As this produced no manifest effect, 10 other persons were inoculated with the same dose, the results being in every case confirmatory of the first experiment. In subsequent experiments the doses were steadily increased, and in one instance a whole agar culture was finally inoculated. The persons inoculated have been kept for more than four months under observation, and it can be affirmed that no deleterious effects have resulted. There is a transient rise of temperature and some swelling at the seat of inoculation, but these disappear by the third day. A careful investigation for the presence of specific properties in the blood serum was made in 29 cases. It was found that the serum of the experimental subjects not only showed specific agglutinative properties towards fresh, virulent plague bacilli but also developed a marked degree of immunity in experimental animals. In order to determine how long these virulent bacilli survived in the animal body they were inoculated subcutaneously into monkeys. It was found by making cultures, under aseptic precautions, from the tissues of the inoculated animals that bacilli were still present in large numbers after the lapse of from six to eight hours, but after this period they gradually began to diminish, and cultures made twenty-four hours after the inoculations proved to be sterile. In both guinea-pigs and monkeys the inoculation of these attenuated cultures produced a high degree of immunity against virulent plague bacilli which were subsequently inoculated. Kolle and Strong find that the attenuation of plague bacilli is readily brought about by incubation at a temperature of from 41° C. to 43° C. and by the introduction into the nutrient broth of from 0.5 to 5 per cent. of alcohol.

PATHOLOGY.

313. Experimental Replantation of Thigh.

Alexis Carrel and C. C. Guthrie, of the Hull Physiological Laboratory, Chicago, report (*Science*, March 9th) the results of experiments on the replantation of the thigh after amputation in a dog. They had previously shown (*Amer. Jour. of Med. Sciences*, February, 1906) that a satisfactory circulation could be established in a replanted thigh. In the communication here abstracted they record a summary of observations made on a similar experiment extending over a longer post-operative period. The animal employed was a small white bitch. Through a longitudinal incision the vessels of the thigh were exposed and cut above the point of Scarpa's triangle. The skin was circularly severed, and the thigh completely amputated above the junction of its lower and middle third. After a few minutes the limb was replanted. The ends of the bone, the muscles, the vessels, and the sciatic nerve were united. The circulation was re-established after having been interrupted for one and a quarter hours. The pulsations of the popliteal and "saphenous" arteries were normal. The dark blood circulated very actively through the femoral and saphenous veins. Red blood flowed from the small arteries of the peripheral part of the cut limb. The skin was sutured and a plaster dressing applied to the limb and trunk. After the operation the general and local conditions of the animal remained very satisfactory. It drank and ate normally, and walked on its three sound limbs. The skin of the replanted foot remained normal, but its hue was redder and its temperature higher than that of the normal foot. The anterior part of the foot soon become moderately swollen. Seven days after the operation the dressing was partially removed. The limb presented neither oedema nor trophic troubles. The oedema of the anterior part of the foot was doubtlessly due to pressure by the lower edge of the bandage, as the swelling completely disappeared within a few hours after correcting the fault of the dressing. The skin was normal, and the wound had united *per primam intentionem* without evidence of inflammation. The temperature of the skin was higher below than above the line of suturing. Eight days after the operation the foot appeared normal in size, all oedema having disappeared. On the tenth day, during the afternoon, the temperature of the replanted foot became lower—that is, similar to that of the normal foot. The dressing was then removed. It was found that, owing to a slipping of the plaster bandage, some urine had got into the cotton dressing and caused infection of the upper part of the longitudinal incision. A small cutaneous abscess had developed along the vessels. The general conditions of the animal were excellent, and the nutrition of the limb satisfactory. As the arterial pulsations were much weakened, and as it was considered important to accurately determine the cause of this change, the animal was etherized and the vessels examined through cutaneous incisions, after which the animal was killed. This dissection *in vivo* gave the following results: The point of the vascular anastomoses was surrounded by the small subcutaneous abscess. The venous anastomosis was good. The arterial anastomosis was partially occluded by a small clot. All the other portions of the vessels appeared perfectly normal. The circulation through the limb was not satisfactory, as the obliteration of the anastomosis was not complete. The union of the skin, the muscles, and the sciatic nerve was normal. The process of consolidation of the bone was beginning. It is probable, but not certain, that if the animal had been allowed to live, the arterial stenosis would have gradually increased, and that in the end the circulation would have been interrupted. Then, no doubt, gangrene of the limb would have occurred, which result would have been due primarily to the secondary infection of the skin. This shows that in such experiments asepsis must be rigidly observed, not only during the operation but during all the post-operative period. Conclusions: (1) The circulation of a replanted limb, re-established an hour and a quarter after interruption by end-to-end anastomosis of the femoral artery and vein, is normal, as judged by the metabolism of the limb; (2) no trophic trouble occurs (at least during ten days); (3) healing of the severed tissues appears to be as rapid and complete as after an ordinary surgical wound.

314. The Possibility of Airborne Infection with Plague.

Goss (*Arch. des Sciences Biol.*, St. Petersburg, p. 330, vol. xi, 1905) has endeavoured to ascertain whether dust containing plague bacilli is a possible source of infection. For this purpose he has conducted inhalation experiments upon guinea-pigs and rabbits with material containing plague bacilli in suspension. In some of his experiments he has added pneumococci, in consideration of the fact that in some plague epidemics the pulmonary form of the disease has often been accompanied by a pneumococcic infection. It is therefore of interest to know whether the presence of the pneumococcus facilitates the penetration of the plague bacillus. He finds that when plague bacilli are slowly dried, at a moderately low temperature, they preserve their virulent properties for about a month. The inhalation of plague dust is harmless for guinea-pigs when their respiratory tracts are normal, but when the respiratory mucosa is injured the bacilli contained in the dust are enabled to gain access to the tissues. The presence of the pneumococcus in the plague-infected dust does not increase the virulent properties of the plague bacillus; nor, on the other hand, does the presence of plague bacilli facilitate the pathogenic action of the pneumococci.

AN EPITOME OF CURRENT MEDICAL LITERATURE.

MEDICINE.

315. Constipation in Chronic Peritonitis.

Villard (*Lyon Méd.*, April 29th, 1906) believes that constipation is due under many circumstances to more or less latent chronic inflammation of the peritoneum. To prove his point he records a list of cases showing (1) the frequency of intestinal paresis in chronic inflammation of the peritoneum, and (2) the frequency of disappearance of the paresis after removal of the inflamed part. In the list of cases are 6 instances of appendicitis, 4 of salpingitis, and 3 of cholecystitis. In 2 cases constipation had preceded an acute attack of appendicitis by from ten to twenty years, and was cured by removal of the appendix. In a case of salpingitis due to gonorrhoea, the mischief seemed to be confined to the appendages of the left side, which were accordingly removed. The constipation persisted, however, till the right tube and ovary had also been removed on account of inflammation. Villard does not deny that the constipation may be due to the mechanical pressure of adhesions, but in the course of his observations he has not found the characteristics of this form, such as localized pain and gurgling, partial abdominal distension, and the alternation with diarrhoea. He believes the explanation is rather to be found in Stokes's law, "that muscle subjacent to a serous inflammation is more or less paralysed." He would seek, therefore, in every case of chronic constipation for localized tenderness, and even in default of any acute attack, would remove the appendix to relieve the constipation, provided that the tenderness, however slight, was constantly present over McBurney's point. In the cases of tenderness over the gall bladder and uterine appendages, where the symptoms are not severe enough to justify removal, the ordinary purgatives are not indicated, but, rather, measures should be adopted to counteract the intestinal paresis, such as massage, the administration of strychnine, and, above all, the use of large enemata of hot water, which act as sedatives to the inflamed tissue.

316. Grocco's Triangular Dullness.

Vignola (*Gazz. degli Osped.*, February 11th, 1906) discusses the triangular paravertebral area of dullness which was described by and named after Grocco. This dull area is found on the side opposite to that of the pleural effusion. Certain authors having injected one pleura *post mortem* were unable to find this dull area on the opposite side; but more recent experiments, in which the diaphragm was kept in position by peritoneal injections of gelatine and the aorta filled with similar fluid, confirmed Grocco's original statement; and it was proved that, after the pleura was filled with fluid under these conditions, the paravertebral area of dullness on the opposite side could be easily determined. Although it is not quite clear as to what is the cause of this dullness, actual observation has shown that it is not due to a second effusion. The author records 3 cases of pleural effusion occurring in children (6 and 8 years old) where this triangular dullness could be well made out. The dullness was observed to vary with the condition of the diseased pleura. In the third case (one of serous effusion gradually becoming purulent) the triangular dullness was marked as long as the effusion was serous, but when it became purulent this paravertebral dullness disappeared.

317. Paralysis of the Recurrent Laryngeal Nerve in Mitral Stenosis.

I. Frischauer (*Wien. klin. Woch.*, December 28th, 1905) eports a case of this rare complication of mitral stenosis, which was first described by Ortner in 1897. Five cases have been published in which the diagnosis was confirmed *ost mortem*, and two others in which the clinical diagnosis was unconfirmed anatomically. The mechanism appears ot always to be identical, and the nerve may be comressed in at least three ways: (1) The dilated left auricle may compress the nerve directly. This occurred in a case f Ortner's, in which the nerve was flattened between the pper wall of the dilated left auricle and the aorta, and in ne of Hofbauer's, in which the left auricular appendix was firmly wedged between the pulmonary artery and the orta exactly at the spot where the nerve wound round the ortic arch. (2) The nerve may be compressed against the ulmonary artery, which is forced upwards by the dilated left auricle, or in the acute angle between an abnormally directed ductus arteriosus and the left branch of the pulmonary artery. The latter mechanism was that found in a case recorded by Kraus in which the highest point of the auricle, though dilated, was at least 2⅜ in. distant from the compressed portion of the nerve. (3) The left bronchus may be forced upwards by the dilated left auricle and compress the nerve against the aortic arch. The writer's observation is as follows: A woman, aged 30, was admitted to hospital on August 7th. The apex beat was in the fifth interspace outside the nipple line. The cardiac dullness extended to the right of the sternum and upwards to the lower border of the second rib. In the second interspace it was two fingerbreadths in width, and in the third about three. There were a systolic thrill at the apex and systolic and diastolic apical murmurs. There was also a faint systolic tricuspid murmur. There was slight abductor paralysis of the left vocal cord, which later became complete, with extreme hoarseness. The x rays showed that the cardiac shadow was greatly enlarged. The right auricle took little part in the enlargement, but at the left border of the shadow, above that of the ventricle, were two pulsating elevations, the upper due to the pulmonary artery and the lower to the left auricle. The space between the heart and vertebrae was almost filled by the dilated auricles. As all the usual causes of paralysis of the recurrent laryngeal nerve could be excluded with certainty or great probability, compression of the nerve by the dilated left auricle was diagnosed. Death occurred on October 30th. The necropsy showed that there was extensive old endocarditis of the mitral valve. The ventricles and auricles were dilated and hypertrophied. The left recurrent laryngeal nerve was compressed between the aorta and the pulmonary artery, which was forced upwards by the dilated left auricle and pulmonary veins. At this spot the nerve was thinned and flattened, and its fibres had degenerated.

318. Rabies.

Materazzi (*Gazz. degli Osped.*, March 25th, 1906) has made some investigations on dogs and rabbits with regard to the value of Negri's corpuscles in the diagnosis and etiology of rabies. He believes the discovery of these bodies is sufficient to prove the presence of rabies. And although they are most commonly found in the cornua ammonis, and should be first looked for in that situation, yet they may exist elsewhere, and a negative report should not be given until the whole nervous system is examined. If after this the report is still negative, it is necessary to proceed to injection experiments in animals. In most cases it is not necessary to do more than examine for the Negri corpuscles, and thereby save much time and expense in arriving at a quick and sure diagnosis, for by this method a diagnosis can be reached in twenty-four hours, and since every hour gained, from the point of view of early treatment, represents so much better chance of recovery, any method which facilitates early and certain diagnosis is to be welcomed.

SURGERY.

319. Penetrating Wounds of the Nasal Cavity.

Pusateri (*Archiv. per le Sci. Med.*, December, 1905) states that amongst recent researches into the processes of healing as they affect cartilage there is no record of any inquiry into wounds of the nasal cartilages. The special interest of the subject depends on the difficulty of disinfecting the nasal cavities and on the question as to the part played by perichondrium in the regeneration of cartilage. The author investigated both aseptic and infected wounds in dogs, choosing animals of about 5 kilog. in weight and under 1 year of age. He passed a grooved sound into the nostril, cut down upon the groove, and carried his incision forwards and downwards for about 2 cm. After the subject was killed the parts were fixed in alcohol, cut into sections, and subsequently stained with haematoxylin, eosin, and other reagents. Twelve dogs aseptically wounded were killed after intervals of from two to twenty-six days. In the latter, as opposed to the earlier specimens, the wound of the cartilage, originally oblique, had become almost vertical. The cartilaginous stump adjoining the septum at first was twisted inwards so as to have a free end in the nasal cavity, but later the free end was retracted by the cicatrix first out to, and then beyond, the level of the other cut edge. The thickness of the cicatrix was not uniform. The cut edges of epithelium did not come into perfect apposition, but rapidly healed by proliferation of the deep epithelial cells. In four dogs, killed on the second, fourth, eighth, and thirteenth days, the wound was inflicted as before, but an attempt was made to provoke suppuration by means of a broth culture of *Staphylococcus pyogenes aureus*, with which the knife was treated. A pad of cotton-wool was also dipped in the culture and afterwards inserted in the nose. No suppuration was caused in any case, but the wounds healed exactly as in the first series of aseptically-wounded dogs, healing being complete, and the cicatrix hardly visible on the thirteenth day. The author, therefore, abandoned the attempt to cause a suppurating wound of the dog's nostril. He thus summarises the results obtained: (1) In aseptic wounds of the nose penetrating into the nasal cavity the two borders of the cut cartilage ride on one another so as to change the direction of the wound, and a distinct extravasation of blood is formed between the cartilaginous and the muscular layers; with the reabsorption of this coagulum and the beginning of cicatrization the pieces of cartilage are gradually approximated and come almost to the same level; (2) the cure of the cartilaginous wound is due to the new formation of connective tissue, the perichondrium and the pre-existing cartilaginous cells taking no part in the process of repair; (3) the two edges of the wound of the epithelium of the nasal mucosa are found united by the sixth day; (4) the cure of the wound is by first intention, and its margins show little inflammatory reaction. The fibroblastic new formation begins from the fifth day, and lasts a long time, on account of the blood extravasation on the surface of the cartilages, the process being completed only on the twenty-sixth day.

320. Abdominal Surgery in the Russo-Japanese War.

Von Ettingen (*Journ. de Chir. et Ann. de la Soc. Belge de Chir.*, No. 4, 1906), at the last Congress of the German Society of Surgery, presented a report on gunshot wounds of the abdomen in the Russo-Japanese war, to which class of injuries his attention was particularly directed whilst he was attached to the Red Cross Service of the Russian Army during this campaign. The benignity that had been previously noted, of modern infantry bullets as compared with former leaden projectiles and modern artillery projectiles, was, it is stated, confirmed and verified with regard to the weapons used by the Japanese, while gunshot injuries caused by discharge at a short distance—under 30 metres—have become more dangerous than they were formerly; those caused by a bullet discharged at longer distances are, as a rule, less serious, and, by reason of the anatomical condition of the wounds, assure a more favourable prognosis. Theoretically, a bullet wound of the abdomen ought never to indicate immediate laparotomy except in cases of rapidly progressive abdominal haemorrhage. With this exception, the treatment should be expectant. On the other hand, abdominal injuries caused by shrapnel, fragments of shell, and all irregularly-shaped projectiles present a much worse prognosis; but even in wounds of this kind, though laparotomy might be regarded theoretically as the proper treatment, it has been found in actual practice that the patient may sometimes recover without surgical intervention, while an operation will almost always fail. In such cases the idea of immediate laparotomy, the author holds, ought always to be rejected on the field of battle. The mortality of abdominal wounds treated without operation was 45 per cent. in the Japanese, and 55 per cent. in the Russian army. Primary laparotomy is not likely to give better results than these. Many patients whom an immediate operation would very probably have carried off have, it is held, been saved by secondary laparotomy.

321. Saccular Dilatation of Saphena and Hernia.

Picquet and Clacys (*Bull. et Mém. de la Soc. Anat. de Paris*, November, 1905) report an instance where a large dilatation of the internal saphena vein within 1½ in. of its junction with the femoral vein was diagnosed at a hospital as a femoral hernia. A truss was prescribed, which caused so much pain and interfered so completely with the patient's work that she had to discontinue it. She consulted Guinard for pains in the lower extremities and varicose veins. At that time she was 31 years of age. Over six years previously, in the course of a twin pregnancy, very large varices developed in each leg and disappeared after labour, whilst within two years a swelling developed in the left groin after heavy work. After the error in diagnosis and treatment above-noted, the varicose veins began to dilate again, and the patient suffered from frequent desire to make water. Guinard defined a tumour of the size of a small hen's egg in the middle of Scarpa's triangle on the left side. It could be reduced, and there was no gurgling during reduction, but directly pressure was relaxed the swelling reappeared. There was distinct thrill; impulse on coughing, and almost complete disappearance of the tumour when the patient lay down were also noted. The circulatory and respiratory centres showed no sign of disease, nor was there hernia of the bladder. Guinard operated; the swelling was a sacciform dilatation of the inner aspect of the internal saphena vein. When empty it was of the size of a walnut, the aperture of communication with the channel of its vein was wide, and its walls were healthy and uniform in thickness with the walls of the vein itself. Picquet and Clacys observe that Sir W. Bennett has shown that lateral dilatations of veins are of congenital origin, whilst fusiform dilatations are simply varices, both as to cause and pathology.

OBSTETRICS.

322. Glycosuria, Albuminuria, and Eclampsia in Pregnancy.

Rendu (*Ann. de Gyn. et d'Obstét.*, April, 1906) reports a case where the symptoms of eclampsia came on quite unexpectedly, and the proportion of albumen in the urine was phenomenal, yet the patient recovered. A married lady, aged 21, in good circumstances, and apparently in good health, became pregnant in April, 1905. On August 8th Rendu found that the urine contained a large proportion of sugar, but no albumen; on the 21st the sugar had disappeared, whilst phosphates were in excess. On October 1st the patient, living in the country, ate heartily of jugged hare, a fact on which Rendu lays stress. Next day she suffered from sickness and diarrhoea, and Rendu was called in, and during his visit she had a violent fit. The urine already passed solidified on boiling. The patient was put on milk diet; large doses of hydrate of chloral were injected. The fits continued—on the evening of the third day they occurred five or six times—amblyopia was marked, and there was much anasarca. On the fourth day the patient seemed better, artificial serum was given as an enema every six hours, and the strong doses of chloral were continued. The urine was still scanty, and solidified on boiling. The patient thenceforward began to improve steadily, the urine increased in amount, and the anasarca had disappeared by the ninth day. By October 13th the patient was doing well, she drank five pints of milk daily, the albuminuria began now to diminish. By the 23rd it had disappeared, and there was fetid vaginal discharge. Rendu induced labour, and on the next day delivered the patient of a macerated fetus. The placenta formed a small, tough, white mass. The puerperium was free from fever or any other complication. During the course of the illness above described the urine was analysed with great care by an expert, who found that the urine passed shortly before the first convulsion contained albumen in the enormous proportion of 50 grams to the litre. The value of the milk treatment was manifest. Rendu dwells on the fact that the patient on the day before the first attack ate a great deal of jugged hare, and certainly suffered from vomiting, diarrhoea, and abdominal pain soon after the meal. When he witnessed the first convulsion, it was urine passed before the fit occurred that he inspected and examined, and it was that sample which held 50 grams of albumen. On the next day, when every precaution had been taken to keep the urine from admixture with extraneous elements, it still contained 45 grams of albumen to the litre.

GYNAECOLOGY.

323. Malignant Degeneration of Fibroids.

Winter (*Monats. f. Geburts. und Gynäk.*, April, 1906), in discussing all forms of degeneration of fibroids, dwells at length on malignant changes. Beginning with carcinoma he insists that there is a direct relation between cancer and uterine myoma. Cancer of the cervix is found in 2 per cent. of all cases of uterine fibroid disease, whilst cancer of the body of the uterus occurs in no less than 1.2 per cent. In the uterus free from fibroids cancer of the cervix is fifteen times more common than cancer of the body. Winter maintains that the complication is too rare to influence the question of operative or expectant treatment, and does not even insist that in hysterectomy the cervix should always be removed. In 17 cases of cancer of the stump it is only certain that in 7 the cervix was free from cancer when the uterus was amputated. Diagnosis is difficult. The free escape of a sero-sanious discharge, sharp pains referred to the tumour, and haemorrhages at or after the menopause are highly suspicious. Sarcoma represents a change in the myoma itself. In 753 cases of uterine fibroid disease this change was noted in 5 per cent.; it occurred more than twice as frequently in submucous than in interstitial fibroids, and twice as often in the latter as compared with subserous fibroids. Diagnosis of sarcomatous degeneration of uterine fibroids is very difficult. In the case of interstitial myoma the complication alternately involves irregular haemorrhages, very severe local pain, and emaciation and debility; ascites and peritoneal inflammation appear later, and often it is not till the development of metastases that malignancy becomes evident. Change in consistence of the fibroid is in itself no indication of malignancy.

324. Pelvic Surgery and the Bacteriology of Peritonitis.

P. W. G. SARGENT (*Journ. of Obst. and Gyn. of the Brit. Empire*, March, 1906) discusses the bacteriology of peritonitis in relation to pelvic surgery. In collaboration with L. S. Dudgeon, he has examined a large number of cases of different forms of peritonitis, and claims through these investigations to have disproved the theory that the initial lesions in peritonitis of intestinal origin are due to the common pyogenic cocci, even though these may be rapidly outgrown by the colon bacilli, and to have established the fact of the pre-eminence of the colon bacillus as a cause of peritonitis. The organisms found in peritonitis are, in order of frequency and importance, the *Staphylococcus albus*, the colon bacillus, the *Streptococcus pyogenes*, *Bacillus pyocyaneus*, pneumococcus, gonococcus, and rarely the *Staphylococcus aureus*. The organism most frequently found, the *Staphylococcus albus*, seems to have a favourable influence in that it gives rise to the appearance of an exudate containing vast numbers of phagocytic cells upon whose presence and their power of dealing with pathogenic organisms the chances of recovery depend. The relative frequency with which the various organisms are found is not the same in diseases of the female pelvic organs as in peritonitis in general. The pelvic peritoneum is not less easily infected than the abdominal peritoneum, but the organisms most frequently met with in pelvic peritonitis are the less virulent ones, and the mortality is therefore low. The forms of peritonitis met with in gynaecological work are those connected with (1) extrauterine gestation, (2) salpingitis, (3) inflamed ovarian cysts, (4) infections connected with pregnancy, (5) accidental infections. In each of the 17 cases of extra-uterine gestation examined by the authors the presence of the *Staphylococcus albus* was demonstrated and they found the same organism to be present in haemorrhage into the peritoneal cavity from ruptured liver or spleen. In many of the cases of extrauterine gestation the patients' blood serum gave a specific agglutinative reaction with the *Staphylococcus albus*. This staphylococcus is quite distinct from the *Staphylococcus pyogenes albus* described by Rosenbach and closely resembles the white staphylococcus isolated by Welch from aseptic wounds; its presence does not denote sepsis, and a distinction is to be made between the terms "aseptic" and "sterile." In 5 out of the 8 cases of salpingitis examined by the author and L. S. Dudgeon the interior of the tubes and the peritoneal exudate were both sterile, but in one case the gonococcus was found in both situations. Other cases of peritonitis are on record in which the presence of the gonococcus has been demonstrated, and the apparent sterility in the majority of the cases shows the absence of the ordinary pyogenic organisms, and it must therefore be recognized that the gonococcus is certainly a cause, and probably a common cause, of peritonitis. In gonorrheal peritonitis the onset is usually sudden but not very severe, and the case commonly runs a very mild course and may subside without operation but with the formation of adhesions. In cases of inflamed ovarian cyst the outlook is very different. In 2 of the author's 3 cases the colon bacillus was obtained from the pus, in the third the *Streptococcus pyogenes*. In two of the cases the *Staphylococcus albus* was present on the exudate at a distance from the cyst. All three cases ended fatally, although in all of them operative treatment was resorted to, and the abdominal cavity in each case was flushed out and drained. No case of puerperal peritonitis occurred in the series, but the author thinks there is little doubt that many of the puerperal cases are of streptococcic origin. He believes streptococcus infection to be uniformly fatal. In accidental infection almost any of the pyogenic organisms may be the etiological factor. The bearing of these investigations on treatment may be considered under three heads:—(1) Operative treatment; (2) drug treatment; (3) specific drug treatment. (1) In any plan of operative treatment, the principle of treatment underlying action is that the so-called tolerance of the peritoneum, and therefore the chances of recovery of the patient, depend upon the number and effectiveness of the leucocytes thrown out into the exudate. In the more virulent infections, therefore—as, for instance, that due to the colon bacillus—heroic measures in the direction of evisceration and copious douching are likely to do harm by spreading infection and washing away phagocytes. In such cases the cleansing treatment should be strictly localized, the upper part of the peritoneal cavity being left untouched. Turbid exudate is to be recognized as being distinct from pus, and being indeed in many cases, especially when it is found in the peritoneal cavity remote from the area of intense inflammation, an aid towards recovery. In mild infections, however, when there is much foreign material to be removed—as, for instance, when blood has escaped into the peritoneal cavity from a pregnant Fallopian tube—copious and general irrigation should be employed because of the danger of a future infection by a more virulent organism. A general rule on the question of drainage is that drainage is unnecessary in the peritonitis due to intraperitoneal haemorrhage and pyosalpinx, but is indicated in the more severe infections, such as those arising from a suppurating or gangrenous ovarian cyst. (2) Drug treatment: The bacteriology of peritonitis bears upon the question of the administration of opium, for Dudgeon and Ross have shown that morphine inhibits leucocytosis and may thus militate against recovery, while the investigations of Durham and Dudgeon in disputing the theory that purges in peritonitis cause a spread of infection, lead to the view that the administration of opium for the purpose of limiting intestinal movement is unnecessary. (3) Serum treatment: This treatment needs an intelligent application to the particular case. The colon bacillus can be recognized with sufficient rapidity to allow of specific treatment if film preparations and cultures of the exudate are taken at the time of operation. But whatever serum is employed, the following rules should be adhered to: First, a multivalent serum is to be preferred to one prepared from a single strain of the organism in question; secondly, the dose should be much larger than that usually employed; thirdly, it should never be given as a last resort in desperate cases, where the moribund tissues are incapable of responding to the serum, or even in some instances of absorbing it from the site of inoculation.

THERAPEUTICS.

325. The Treatment of Haemoptysis.

PIC AND PETIJEAN (*Lyon Médical*, February 12th, 1906 believe, from the result of their laboratory experiments and clinical experience, that nitrite of amyl is the most useful pulmonary haemostatic; its action is always rapid and certain and its toxicity is little. The researches showed that the useful dose varies from 3 to 9 drops by inhalation; that the latent period is short—from half a minute to three minutes; that no pulmonary vaso-dilatation succeeds the vaso-constriction; that no case of fatal poisoning occurred; and that the haemostatic action resulted either in the early congestive stage, or at the period of cavitation. In the laboratory a curarized dog was kept alive by artificial respiration. The fall of arterial pressure in larger circulation was first noted. The colour of the lungs was observed before and after an injection of nitrite of amyl. After the injection the normal rose colour gave way to a white anaemic tint, beginning in patches, which extended and coalesced so as to involve the whole parenchyma of the lung. This action lasted for about eight minutes, and was so marked that if a deep section of the lung were made at the time of the injection at the end of the latent period, the bleeding ceased almost as if a ligature had been applied. A trocar placed in the pulmonary artery so as to give a pressure tracing showed a marked rise of blood pressure after the injection, a rise which was maintained for ten minutes. It is not pretended that amyl nitrite is a certain specific for haemoptysis. It is admitted, for instance, that in cases where the haemorrhage is due to pulmonary congestion due to enlargement of the right side of the heart, digitalis is likely to give a better and more permanent result; but Pic and Petijean believe their experiments have shown enough to give amyl nitrite the first place among the vasomotor drugs in haemoptysis.

326. Tuberculosis and Recalcification.

Louis Rénon (*Journ. des Prat.*, April 28th, 1906) describes in brief the treatment of tuberculosis by the administration of salts of lime as carried out by Ferrier. It appears that those persons in whom the teeth and bones are deficient in lime salts are more liable to tuberculosis than normal persons; this decalcification Ferrier considers due to the action of acid or acid salts (hydrochloric, phosphoric, sulphuric); to organic acids, such as are contained in oranges and lemons, and to acids derived from fermentation in the stomach (acetic, lactic, butyric). In the tuberculous the acids arising from fermentation in the stomach are probably important causes of decalcification, and this fermentation is no doubt produced by the excessive overfeeding which is often carried out by such patients. Ferrier's method of administering salts of lime is carried out in the following manner: The stomach is emptied half an hour before each meal, and the patient takes a glass of strong bicarbonate of lime water, and at the middle or end of the meal he takes a cachet containing 40 gr. each of calcium carbonate and tribasic phosphate of lime, and 35 gr. of sodium chloride. The diet is also regulated as follows: Three meals a day only are allowed; wine, cider, beer, alcohol, butter, fats, oils, and acids are forbidden; very little sugar or pastry is allowed, and the allowance of bread must not exceed 300 grams per day. With this treatment Ferrier has obtained very good results. The author has been able to endorse Ferrier's views as to the benefits to be derived from this method of treatment; he finds that, although the patient may not put on much flesh, yet the tuberculous lesions become "drier" and more limited, and a great increase of appetite occurs. Further, in support of this plan of treatment a colleague of the author has found that there is a diminution of tuberculosis amongst the people working or living in the neighbourhood of lime kilns, and due, he supposes, to the inhalation of particles of lime in the form of a powder.

327. Local Treatment of Prostatic Hypertrophy with Radio-active Mineral Water.

Altmann (*Wien. klin. Woch.*, December 7th, 1905), encouraged by the successful results obtained by Moszkowicz, Stegmann, and others with the Roentgen rays in the treatment of enlarged prostate, has investigated the local action of Gastein thermal water on this gland. Gastein water is on analysis simple pure warm water, and the source of its medicinal properties was unknown until it was found to be strongly radio-active. This radio-activity is probably induced in its passage through radio-active earths, and the emanations thus absorbed quickly evaporate—that is, it contains no radio-active substance. Hence it is efficacious only at the source. Curie and Detierne found that solutions of radium salts are much more active than is the same salt undissolved. To utilize the radio-activity of Gastein water the writer injected it straight from the spring into the bladder or rectum, or both, according to the case. The anterior subvesical part of the gland, especially an enlarged "middle lobe," is reached by the endovesical method, 50 c.cm. of the water being injected into the empty bladder through a catheter and left there. For the rectum the writer employs a specially-constructed instrument which he calls a prostatophor. It consists essentially of a double-channelled catheter, which is curved to fit over the prominence of the prostate gland. The openings are anterior, so that the posterior surface of the gland—separated only by the rectal wall—is constantly irrigated. The Gastein water is raised to body temperature, and irrigation may, if necessary, be continued for hours, the patient being in the lateral position. During the first week of treatment, or more rarely in the second week, a severe reaction occurs. The general symptoms are those which frequently affect patients taking the waters, and consist in depression, vertigo, and circulatory and gastrointestinal disturbances. The local symptoms are swelling and tenderness of the prostate gland, aggravation of the radiating pains and dysuria, turbidity of the urine, and haematuria. The reaction is more severe with the rectal than with the vesical application of the waters. It seldom lasts more than one or two days, and is not accompanied by pyrexia. A similar though more pronounced reaction occurs if the gland is subjected to the *x* rays. It is of good augury, and is almost invariably followed by rapid improvement. The cause is probably toxaemia, from absorption of products of glandular disintegration. The prostate becomes reduced in size through depletion and atrophy of its glandular elements, especially if the hypertrophy is of an adenomatous type. The bladder, unless completely paralysed, regains its tone, and cystitis is improved through the bactericidal action of the radium emanations. The rays also have an analgesic action, and subjective sensations and pains disappear. Micturition becomes normal, or at least improves as regards the length of time urine can be retained, the amount passed at a time, and the quantity of residual urine. The anatomical improvement in the gland is not necessarily parallel to the functional improvement in the symptoms, and occasionally, though the gland shrinks, functional improvement may not occur. The treatment is contra-indicated in advanced sepsis, profuse haemorrhages, and destructive renal changes.

PATHOLOGY.

328. The Differential Diagnosis of Typhoid Bacilli.

Loeffler (*Deut. med. Woch.*, February 22nd, 1906) has been continuing his researches on the differentiation of typhoid bacilli from nearly allied organisms by the use of media to which malachite green has been added. His experiments with liquid media are interesting. One of these media contains 2 per cent. peptone and 1 per cent. nutrose in 100 c.cm. of distilled water, and is neutralized by the addition of 1.06 c.cm. of normal potash. To this is added 5 per cent. of milk sugar and 1 per cent. of grape sugar. After boiling for a short time and then cooling to a gentle warmth, 3 c.cm. of a 2 per cent. solution of malachite green are added. When this medium is inoculated with typhoid bacilli and with other organisms belonging to the typhoid family, striking differences are brought out. In the typhoid tubes the nutrose is precipitated in a quite distinctive manner. The fluid is coagulated like acidified milk, and above the coagulated layer there is a clear green liquid. On the other hand, the majority of the other organisms, such as the coli group, Gaertner's bacillus and paratyphoid bacilli, produce quite a different result. Active fermentation takes place; the nutrose is precipitated, and adheres in dirty green flakes to the walls of the tube, whilst some of it is carried upwards by the development of gas and floats as a dirty green layer on the surface of the fluid. When the constitution of this medium is modified by the omission of grape sugar, further distinctions are brought out. Only the coli organisms and a few very closely related bacilli are capable of producing fermentation. The coli group can therefore be differentiated from the rest. Other organisms, again, while not producing fermentation, have a reducing action on the green, so that it turns to a pale yellow colour. This reduction is more quickly brought about when the alkalinity of the medium is slightly increased. The typhoid bacillus does not change the medium, but only exerts a very gradual reducing action on the green. The paratyphoid bacillus A, on the other hand, turns the solution pale blue. Amongst other liquid media which Loeffler finds useful is one which contains, in 100 c.mm. of distilled water, 1 per cent. nutrose, 2 per cent. milk sugar, and 5 per cent. of a 2 per cent. green solution. In this medium only one of the organisms which it may be requisite to differentiate produces a marked modification. This is the small, actively motile, typhoid-like bacillus which is found in faeces and in polluted water—the *Bacillus faecalis alcaligenes*. This organism converts the green solution into a bright blue.

329. Venous Hyperaemia and Acute Inflammation.

A. Donati (*Giorn. d. R. Accad. d. Med. d. Torino*, Nos. 1 and 2, 1906) has studied the influence of venous hyperaemia (Bier) upon the process of acute infective inflammation. He injects cultures of *Staphylococcus aureus* or *Streptococcus pyogenes* into the two ears of a rabbit under identical conditions. Twenty-four to thirty-six hours later, an inflammatory reaction having appeared, he adjusts an elastic band around the base of one ear, so as to produce venous hyperaemia; after eighteen to twenty hours the band is removed for a few hours and then reapplied. He finds that the area of inflammatory hyperaemia round the seat of injection grows more rapidly in the ear with constricted base than in the other; and that the abscess which appears is smaller, more rapidly formed, sooner opened, and sooner healed than it is in the ear which is not rendered hyperaemic by the bandage. Hence he concludes that venous hyperaemia accelerates the processes of inflammatory reaction and repair throughout their course.

AN EPITOME OF CURRENT MEDICAL LITERATURE.

MEDICINE.

330. Anorexia in Tuberculosis of the Lungs.

AEDICKE (*Therap. Monats.*, March, 1906) mentions the hief causes of anorexia in tuberculous disease of the lungs, nd the various methods which may be employed to correct is loss of appetite. If anorexia be dependent upon yrexia, he advises that an antipyretic drug be adminis- red about one hour before the time of taking food, and e has found pyramidon or antifebrin the best drug for is purpose. If the temperature curve is very irregular, e advises that the chief meal of the day be taken at the me when the temperature of the body is lowest. Cough -a common cause of loss of appetite if occurring at meal mes—gives rise to shaking of the stomach, nausea, and metimes vomiting. For these patients the author vises the administration of small doses of dionin a uarter of an hour before meals. Inability to take fficient food may be due to tubercle of the epiglottis or ytenoids, which renders swallowing painful. These con- itions must be suitably treated to enable the patient to vallow comfortably. Imperfect state of the teeth and eglect of the state of the mouth, chronic gastric catarrh, lcer and cancer of the stomach, and nervous dyspepsia ay all give rise to loss of appetite ; swallowing of the utum may also do the same, and for this condition lavage the best remedy. Constipation and diarrhoea, both equent causes of anorexia, must be suitably treated, the rmer by the administration of laxatives, and the latter, ependent as it may be on chronic intestinal catarrh and berculous ulceration of the mucosa, by a suitable ietary, and by preparations of intestinal astringents such bismuth, and by opium. Intestinal parasites, marked aemia, and disease of the female generative organs may so cause loss of appetite; they must be treated in the propriate ways. Of medicinal means for the improve- ent of the appetite, the author has found that of the tters orexin has been most serviceable, increasing the nsation of hunger and aiding digestion. Of other omachics he mentions the spices, broth obtained from oking of salted meats, preparations of blood, creosote in nall doses, lysol (recently used by Burger in cases of berculous disease in children), and, lastly, alcohol in nall doses. In febrile cases, if the administration of an tipyretic does not have the desired effect in diminishing e anorexia, the author recommends that a little dilute ydrochloric acid should be given. He thinks it better, wever, to administer some gastric juice obtained from a g's stomach. Of all the methods employed to arouse a gging appetite in patients suffering from tuberculosis of e lungs, the author considers the following the most liable: Make the patient as happy and contented as ssible; let him have abundance of fresh air, and, in rtain cases, gentle exercise; let him take a course of senic.

331. Infantile Mongolism.

MBY (*Arch. de Méd. des Enfants*, No. 4, 1906), who, in ss than two years, has had under his own observation cases of infantile Mongolism, directs attention to this omaly, which, he believes, is more frequent than is pposed, and is often unrecognized. Mongolism, which s been described in this country by Langdon Down and uttleworth, is defined by the author of this memoir as a riety of congenital idiocy characterized by Mongolian atures, which give to the young subjects a vague resem- ance to individuals of the yellow race. It is not rare in rly infancy, and, according to English observers, occurs about 5 per cent. of the cases of idiocy; but this, the thor thinks, a low estimate, as many cases of Mongolism e, he believes, classed as instances of myxoedema, kets, and other infantile affections of a like character. e affection, which occurs more frequently in male than female infants, is decidedly congenital, and the Asiatic st of features is well marked at birth. It does not seem be influenced by consanguinity, and the part played by e inheritance of neuro-pathological conditions, and by philis, alcoholism, and tuberculosis is regarded as important. Much is attributed to the effect of long and fficult deliveries associated with strong mental emotion affliction. The results of pathological examination in ses of Mongolism indicate a general condition of arrested development; visceral abnormalities, especially malformations of the heart, having been found in many instances in association externally with marked atrophy of the genital organs and sometimes with cryptorchism. Lissencephaly has been observed in some instances, the convolutions of the brain being broad and flattened and less marked than in the normal condition, and the sulci not so deep. The root of the nose is depressed, and the almond-shaped palpebral clefts are small and oblique in an upward direction toward the external canthus. The patient is often blear-eyed and affected with chronic blepharitis, which condition is generally associated with strabismus, nystagmus, and epicanthus. The cheeks are large and soft and of a dirty yellow colour. The little subject is always brachycephalic, the antero-posterior diameter of the cranium being almost equal to the transverse diameter. The author describes the different characters presented by the hair, the teeth, tongue, skin, and extremities, all of which indicate retarded corporal development. Although the growth of the body is slow in comparison with that of healthy and normal infants, the trunk is not dwarfed in Mongolism as it is in myxoedema and rickets by kyphosis. In a review of the more or less depraved condition of the subjects of this form of idiocy it is stated that they are not so morose and torpid as the subjects of myxoedema, and that they all show signs of a remarkable development of the musical sense. In education much may be done by appealing to the instinct of imitation, while that of calculation must be regarded as altogether wanting. These Mongolian idiots, however, seldom reach an advanced age; the majority die in the early months or the early years of life, some from difficulties in feeding, others from an intercurrent malady, such as bronchitis, bronchopneumonia, and pulmonary tuberculosis. There can be no hope of cure, or even of a possible improvement, as one has to deal with a developmental anomaly and with an intrauterine cerebral malformation, which in many instances degrades the infant to or even below the level of the monkey. Mongolism has many characters in common with myxoedema, and might, perhaps, in some cases be confounded with rickets and achondroplasia ; but as a rule the characteristic Chinese or Mongolian aspect will suffice for establishing the diagnosis. The results of medical treatment have not been found encouraging. Some good, it is stated, may be effected by hygienic means, especially good and substantial nourishment and country air. In slight cases satisfactory results may be obtained by appropriate education, but under the most favourable conditions the only capacities that can be acquired by a subject of this affliction are those of simple manual labour.

332. Syphilis and General Paralysis.

SPIELMANN AND PERRIN (*Province Médicale*, April 12th, 1906) have investigated the antecedents of 75 cases of general paralysis, paying special attention to the frequency with which syphilis is to be found in their history. Of these 75 cases, the greater number showed their first signs of the disease between 32 and 45 years of age, and a considerable number of cases were made up of men who had been subject to considerable intellectual effort. In 7 of the cases locomotor ataxy had existed before the onset of the general paralysis. Of these 75 cases, in 60—that is, 81.08 per cent. —syphilis was found as an antecedent, and in 8 other cases syphilis was probable, although it could not be definitely proved; in every one of these 68 cases the syphilis had been either very mild or of a moderate severity. The disease was found to make its appearance most frequently between the sixth and twelfth years after syphilitic infection. Next to syphilis, the only other factor which plays an important part in the etiology of general paralysis is, according to the authors, alcoholism, and this they find to have been present in about 30 per cent. of their cases. As regards the effect of antisyphilitic treatment in ameliorating the symptoms of the disease, it is interesting to note that although all the cases investigated by the authors have been treated by the intensive mercurial treatment and by iodides (30 only, however, were well treated), in 6 a slight amelioration of the symptoms was noticed; 2 patients have had long remissions, fifteen months and twelve months respectively; in no case, however, has the progressively downward course of the disease been really checked. The authors conclude that general paralysis is usually due to syphilis, and that the chances of a non-syphilitic person becoming paretic are very small. They think, however, that certain toxins other than the syphilitic may act on the cerebral cortex in a similar way.

SURGERY.

333. Extirpation of Malignant Growths of the Mouth.

Goris (*Journ. de Chir. et Ann. de la Soc. Belge de Chir.*, No. 4, 1906) points out that the radical treatment of cancer, consisting in its latest developments in free removal of all the diseased structures, together with the associated lymph glands and vessels, is attended with special difficulty when the surgeon has to deal with a malignant growth of the mouth or the pharynx. In cases of this kind he not only endeavours to bring about what in the remote future may prove to be a definite and durable cure, but he has also to avoid the early post-operative dangers of septic infection, of erysipelas, and of bronchopneumonia. The author does not approve of the practice of operating for cancer of the tongue in two stages, as it is difficult, he believes, at the second operation performed for the removal of cervical glands to start at the level at which in the first operation the removal of the disease ceased. It is regarded as an essential condition of a good operation for cancer that no part of the infected tract be left untouched. Before removal of a growth from the tongue or pharynx, it is possible, the author thinks, to effect decided asepsis by strict injunctions to the patient to brush the teeth and to wash out the mouth frequently in the course of the day, with a solution of salicylic acid, for several days preceding the time of the operation. Just before the operation, the tongue, the oral surfaces of the cheeks, and the gums should be cleansed first with white soap, then with alcohol, afterwards with sublimate solution, and finally with alcohol again. Tracheotomy having been performed, the pharynx and the back of the mouth are packed with sterilized gauze. In extensive oral operations in which there is likely to be free bleeding, tracheotomy, it is urged, is a much more useful operation than ligature of the internal carotid. The latter operation, the author thinks, causes some disturbance in the region in which he is about to operate, as most of the affected glands are to be found over the carotid vessels. The arterial haemorrhage during the removal of the cancer is not very troublesome, and it is thought really not worth while to add a second delicate operation to one that in itself is decidedly grave. Tracheotomy, it is held, should be always practised when, as a result of operative mutilation, the patient is likely to be prevented during several days from swallowing and spitting. In such cases the tracheotomized patient would be able to expel easily through the cannula any fluid flowing into the trachea, which might if allowed to accumulate infect the bronchi. In the author's opinion tracheotomy under those circumstances, far from being a predisposing condition of bronchopneumonia, would, on the contrary, be an excellent means of preventing this complication. Moreover, it favours complete and comfortable anaesthesia, and thus tends to shorten the duration of the operation. Resection of one-half of the inferior maxilla, which is necessary in the removal of a growth, such, for instance, as malignant neoplasm of the tonsil, which cannot be otherwise rendered accessible, is also necessary, the author holds, in the extirpation of cancerous disease of the tongue and pharynx associated with glandular enlargement. If this operation be practised the buccal and cervical regions form a single cavity from which a malignant tumour, together with all diseased glands, can be as readily removed as in a case of cancer of the breast. In removal of the tongue for cancer, the author, after free excision of the original disease, extirpates the submaxillary gland, and dissects away the extension of cellular tissue together with all the visible lymph glands over the internal jugular vein, thus removing all doubtful tissue, from the lingual growth to the most remote appreciable ramifications of the lymphocytes. The floor of the mouth is reconstituted by suturing with catgut the mucous membrane of the cheek to what remains of that of the tongue.

334. Common-duct Cholelithiasis.

Mayo Robson (*Surgery, Gynaecology, and Obstetrics*, No. 1, 1906) publishes an important article on the recognition and prevention of the greatly-enhanced series of dangers of cholelithiasis threatened by the entrance of a gall stone into the common bile duct, and on the treatment of such dangers if they have unfortunately supervened. This surgeon in the first place states that he has been led by the results of his own experience to question the statements of Courvoisier with regard to the relative frequency of choledochal cholelithiasis, and also to the number of single stones in the common duct. He agrees with other recent observers that Courvoisier's estimate that the presence of calculi in the common duct occurs only in 4 per cent. of all cases of cholelithiasis is far too low, and states that in as many as 40 per cent. of his own gall-stone cases there have been concretions in the common duct. Courvoisier in his original observations stated that in two-thirds of the cases only a single stone was found in the common duct. This, again, is contrary to the author's experience, as he has found that a single gall stone is the exception, and that in quite 80 per cent. of cases the concretions are multiple. In discussing the diagnosis of common-duct cholelithiasis the author points out that important help may be found in a careful examination of the urine, when, if the pancreas is involved, certain crystals may be revealed by an elaborate chemical process discovered by Cammidge. As an aid to diagnosis, examination of the faeces has not, it is held, received sufficient attention. These excretions usually present variations with regard to the relative quantities they contain of neutral fat and fatty acids, and also to their chemical reaction, according as the case be one of calculous obstruction not involving the pancreas, or as one of obstruction of the pancreatic duct either by a growth of the head of the pancreas or by a gall stone impacted in the pancreatic portion of the common duct. Jaundice, from the author's experience, is a constant sign in common-duct lithiasis, though it is often revealed only by an icteric tinge in the conjunctivae. When stones are present in the gall bladder, the pain, it is stated, commences under the costal margin and radiates to a point beneath the right scapula, whereas when the stones are in the common duct, the pain is more centrally situated, and usually radiates to the mid-scapular region. In some cases, particularly those in which adhesions have formed between the stomach and gall bladder, and those of well-marked interstitial pancreatitis, the pain may be epigastric throughout. The author states that he has never received any help in diagnosis from the *x* rays, but he points out that carbonate of lime, which enters so largely into the composition of pancreatic calculi, casts a very deep shadow. A long, though not exclusive, list is given of the dangers associated with cholelithiasis, and after a reference to the very disappointing results of purely medicinal treatment when once gall stones have reached the common duct, the different steps are described of the author's modified operation of choledochotomy, by which, it is asserted, a complete clearance of the bile ducts can now be effectually performed, and with exactness and certainty. By this method the mortality of choledochotomy has in his practice been reduced from 16.2 to 3.9 per cent. In conclusion, the author expresses the opinion that in view of the serious dangers of cholelithiasis on the one hand, and the facility of diagnosis and the slight risk of his method of operative treatment on the other, the wisest course is not to wait for complications to arise, but to advise the removal of the disease at an early period.

335. Laryngeal Stenosis after Tracheotomy or Intubation.

Copetti (*Gazz. degli Osped.*, April 1st, 1906) discusses the persistence of laryngeal stenosis after tracheotomy and intubation in relation to 1,200 cases of diphtheria seen between 1900 and 1904. Of these cases, primary tracheotomy was necessary in 25 and secondary tracheotomy in 94; 300 were intubated. Post-operative stenosis persisted in 40 of the cases. But the difficulty in many of these was purely mechanical (granulations, pressure of glands, etc.) or due to the grave condition of the patients (all children), for example, pneumonic or cardiac complications. There remained, however, a residuum of 10 cases where no such explanation could be accepted. These might be divided into two groups, (1) where the stenosis and difficulty was due to a constitutional condition of "spasmophilia" associated with a rickety or tuberculous diathesis; (2) a smaller group where the spasm seemed to be reflexly produced by some pulmonary irritation, for example, bronchopneumonic foci. The author gives details of each of the 10 cases.

OBSTETRICS.

336. Haematology of Pregnancy.

J. C. M. Given (*Journ. of Obstet. and Gyn. of the Brit. Emp.*, April, 1906) has made examinations of the blood in twelve consecutive cases of women during pregnancy and the puerperium. The examinations were made at regular intervals, and as nearly as possible at about the same time in all the cases, the hour chosen for the examination being between 11 a.m. and 12 noon, in order to avoid the variations due to digestion. The conclusions at which the author arrived were as follows: (1) Slight leucocytosis occurs in the last months of pregnancy. (2) Sudden well-marked leucocytosis is found immediately after labour, and has probably commenced during labour. (3) This leucocytosis is a polymorphonuclear increase, and rapidly falls to normal in the few days which follow labour. (4) It is about equally common in primiparae and multiparae. (5) It occurs either in full time or premature labour. (6) If the child be dead before the onset of labour or in cases of renal inadequacy, the increase is slight. (7) The leucocytosis is not influenced by chloroform and other drugs. (8) A well-marked increase in the lymphocytes begins a few days after delivery, and becomes very marked during the second and third weeks; this increase is synchronous with, and probably caused by, the involution of the uterus. The more marked this lymphocytosis is the better the patient is doing, and the more rapid will be her return to health.

337. **Syphilis and Pregnancy.**

Novy (*Zentralbl. f. Gynäk.*, No. 20, 1906) reports a family history where Colles and Baumès's law was not followed. The husband had contracted syphilis six years and had been under treatment, when he married a healthy wife who became pregnant in the first year of married life, and gave birth three weeks before term to a weak, anaemic child, which she suckled. When five weeks old the infant became ill, there was paralysis of the left hand as well as periostitis of the left humerus, and later on coryza with eczema of the nose and mouth. The child died when 2½ years of age with symptoms of amyloid kidneys. Nineteen months after the birth of the first child the mother, who had continued in good health free from disease, gave birth to a robust infant. She suckled it, and when it was three months old a hard chancre developed in the mother's nipple; there was a papular eruption on the mouth of the child, who afterwards died with brain symptoms. The mother suffered from the usual secondary lesions. Novy is inclined to believe that the mother was not infected until she nursed the second of her two syphilitic infants, so although she had borne them she enjoyed no immunity against syphilis, primary symptoms developing through evident infection from the second.

GYNAECOLOGY.

338. **Paravaginal Section.**

W. Sinclair (*Journ. of Obstet. and Gyn. of the Brit. Emp.*, April, 1906) discusses the operation of paravaginal section, an operation which is an alternative to vaginal hysterectomy and to abdominal hysterectomy. In extended operations for cancer the immediate mortality from vaginal hysterectomy has been brought down to a very low figure as compared with that from abdominal hysterectomy, but the frequency of relapse after vaginal hysterectomy caused a reaction against this method and in favour of abdominal hysterectomy. Relapses have, however, proved frequent after the abdominal operation also. Paravaginal section was introduced by Schuchardt with the object of extending the percentage of operability in cancer of the uterus, of obtaining better remote results, and of at the same time avoiding the dangers inherent in abdominal hysterectomy. It is claimed in favour of the paravaginal operation that it is easy to perform; the surgeon can count with certainty upon being able to complete the operation; accidents to the bowels, bladder and ureters can be avoided with ordinary care; haemorrhage can be controlled in the early stage of the operation by pressure forceps, and post-operation haemorrhages can be entirely prevented; by suturing and pressure, the sides of the extensive wound can be kept together, and healing be obtained per primam; the operation is the safest of all the methods of hysterectomy when the vagina is narrow or the parametrium is involved The present article is written especially to call attention to the advantages of the operation in non-malignant cases. For diseases which cause chronic bad health without danger of a fatal result, a comparatively safe and easy method of operative treatment is essential, and by paravaginal section such a method is supplied. The author describes the operation both from the point of view of operative gynaecology and from that of the anatomist. The object of the incision is to obtain free access to the diseased parts, and if care be taken to avoid injury of the sphincter ani and the rectum, almost every other structure may be cut through in order to obtain a free field for manipulation of the affected parts. "The left labium is cut through, and with it the whole of the vaginal tube and vault; the paravaginal and pararectal tissues are laid open; the levator ani and coccygeus muscles are entirely or partially divided, as well as the cellular tissue of the ischio-rectal fossa. The first incision through the labium is made externally through the skin and subcutaneous structures of the perineum round towards the coccyx below the level of the anus, so as to get the widest gaping of the wound. . . . The second part of the operation consists in making a circular incision round the vault of the vagina, so as to separate the portio vaginalis uteri, and gain access to the broad ligaments. The third stage is the process of separation of the diseased uterus by ligation of the broad ligaments." Notes are given descriptive of the operation in six cases; five out of the six patients were unmarried. Two of the cases were of atresia cervicis uteri, one of multiple fibromyomata of the uterus and retroflexion, one of fibromyoma of the uterus undergoing necrosis and sarcoma of the posterior wall, one of multiple fibromyomata, and one of malignant disease of the cervix uteri with pyometra and necrosing fibromyoma. The last case is given as an example of the value of the operation in an advanced case of malignant disease as a safe alternative to abdominal hysterectomy. The mortality in these cases was *nil*, and in most cases the patients made uninterrupted recoveries. In one case in which the patient was in poor condition there was a small slough in the ischio-rectal fossa, and in the last case during the healing of the wound there was a little sloughing of the fat and subcutaneous tissues at the outer extremity of the paravaginal wound near the anus. The author confidently anticipates that the operation of paravaginal section will make its way in this country, especially in the treatment of such cases as are given as illustrations in the article.

339. **Prolapse of Female Urethra in Childhood and Age.**

Dienst (*Monats. f. Geb. u. Gyn.*, April, 1906) examined a girl, aged 10, who had recently bled from the vulva after falling against a log of wood. The bleeding was traced to a swelling of the size of a hazel nut, which was seen to be prolapsed urethral mucous membrane. Excision of a wedge-shaped piece of mucous membrane and suture of the cut edges proved satisfactory, curing the prolapse. Dienst had previously operated on a girl aged 11, where the prolapse had occurred when she lifted a heavy basket full of potatoes. He had also excised the urethral mucosa for prolapse in a woman 71 years of age; it developed when the patient strained during defaecation. In childhood the paraurethral connective tissue is very easily damaged and cannot resist a strain, in age it is very loose; hence the relative frequency of prolapse of the urethra in childhood and in aged subjects.

THERAPEUTICS.

340. **Camphor in the Treatment of Phthisis.**

Volland (*Therap. Monat.*, February, 1906) has during the last nine or ten months made use of injections of 10 per cent. camphor oil in the treatment of cases of phthisis complicated by a weak rapid pulse, a regular but weak pulse, or by an irregular or unequal pulse. He uses the camphor in large doses in some cases, giving as much as 0.4 gram of camphor in the twenty-four hours. The injections can be given every day for weeks or months without intermission, and the author believes that it is only by the use of large doses given for long periods that a marked and permanent effect upon the heart can be obtained. The first case in which the author tried camphor was that of a tuberculous man who after influenza began to suffer from attacks of breathlessness and cyanosis. Oxygen was freely used in these attacks, and apparently but for the oxygen the patient would have succumbed. In addition to the oxygen, injections of camphor oil were made every ten or fifteen minutes during the height of each attack, and later at intervals of from a quarter to half an hour. The patient gradually recovered, and six months after the first attack was able to walk about; the pulse by this time had sunk to 100 per minute. Camphor was again exhibited, and after another month the pulse-rate had fallen to 80. The author was impressed by the benefit derived from camphor in this acute case, and he therefore began its use in chronic cases of heart weakness in tuberculosis. The results he obtained were strikingly good.

In the case of one patient who had for years had an irregular thread-like pulse of from 140 to 150 per minute a course of camphor treatment was followed by a fall in pulse-rate to from 110 to 120 per minute, while the pulse became always readily perceptible. In another case a patient with disease of both lungs and marked shortness of breath had a pulse of 130 when she came to the sanatorium. Under general treatment she gradually improved, but neither the pulse-rate nor the shortness of breath showed any change. Camphor injections were now begun, and the pulse-rate fell to 90 per minute. Another successful case was that of an excitable man with an irregular pulse of 120 per minute. After six weeks of camphor treatment the pulse lost its irregularity, and the rate fell to 90. During the treatment the patients are subjectively improved. The author has never found camphor injections harmful. In one case in which 300 injections in all had been made under the skin of the forearm, four small abscesses formed, but they were clearly traumatic in nature. The injections were supposed by Nienhaus to dispose to haemorrhage in phthisis, but the author's observations do not support this view, and in one of the cases of haemoptysis treated by him the pulse came down from 130 to 80 in forty-eight hours under the camphor treatment. He would add to the number of effective remedies in phthisis 10 per cent. camphor oil given subcutaneously in sufficient amounts and for an adequate length of time; the injections undoubtedly increase the strength of the heart, and so influence favourably the tuberculosis.

341. **Preventive Use of Antitetanus Serum.**

PERGOLA (*Clin. Mod.*, October 18th, 1905) considers that injections of antitetanic serum should be used in all cases of wounds which have come into contact with the soil, or which have been caused by firearms, or which are from any cause liable to become infected with the tetanus bacillus. He has collected 30 cases in which it has been so employed as a prophylactic measure, and finds that the results obtained warrant its further use. He employed a serum prepared at the Pasteur Institute, and he recommends also Tissoni's antitoxin; he gives a dose of 10 to 40 c.cm., according to the extent and condition of the lesion. It is not possible to assert that these cases would have developed tetanus had they not been submitted to the preventive treatment, but similar cases which are not so treated tend to develop it; patients feel no constitutional disturbance from the use of the injection. He refers also to two persons brought to the hospital with tetanus already developed, and in whom the cure was attributed to the serum treatment. After a careful analysis of his cases he concludes that the mortality due to tetanus has been greatly reduced by the introduction of serumtherapy, which shows its full value best in prolonged cases. The longer the period of incubation is, the more favourable will the prognosis be. After the malady has declared itself he advocates the use of strong repeated doses, and points out the preventive value of the injections when the wounds are unclean. Intracerebral and intravenous injections have no advantage over those given subcutaneously. He thinks that by the general use of antitetanic serum as a prophylaxis the disease might become almost stamped out in Italy.

342. **Treatment of Scarlatinal Otitis.**

SPRAGUE (*Amer. Journ. of Med. Sci.*, September, 1905) inveighs against the expectant treatment of otitis media so frequently complicating scarlet fever, and quotes his personal experience of some 60 cases of the fever occurring in the first five months of last year. Pain in the ear, rise of temperature, and increased pulse-rate generally characterized the commencement of the affection, though pain was absent in some of the cases, and the only condition which attracted attention was an otherwise unaccountable sudden rise of temperature. The latter were discovered by the routine practice of aural examination in all cases where a sudden fever developed in order that by freely incising the drum ulcerative perforation might be forestalled and thorough drainage and depletion assured. No specific organism has yet been isolated as peculiar to the otitis of scarlet fever, but the condition is evidently due to a streptococcus invasion, most probably haematogenous in origin, rather than by way of the Eustachian tube. Treatment is essentially surgical and antiseptic. Daily irrigation of the nose and throat as a preventive measure is deprecated, as involving the risk of washing infection through the Eustachian tube. A warm, even temperature of the room night and day should be maintained to lessen the chances of congestion of the ear and mucous membranes. Ice should be constantly applied to the neck at the earliest signs of lymphatic swelling, and iodide of lead ointment is useful in reducing any inflamed glands. If spontaneous rupture of the drum occurs, the serous discharge should be removed by pledgets of sterilized wool and not by syringing; but when the discharge has become purulent syringing every two hours should be adopted in order to keep the canal as free as possible. In all cases of scarlet fever any discomfort in the ear or sudden rise of temperature should be immediately notified to the medical attendant in order that if signs of otitis are present the drum may be at once freely incised. Prior to incision the canal must be sterilized by syringing with 1 in 2,000 bichloride and dried with sterile wool, and afterwards it may be closed with sterile wool, which should be changed as often as it becomes saturated. If the discharge becomes purulent antiseptic syringing is indicated, followed by carefully drying and the instillation of boric acid solution in 60 per cent. alcohol. In severe cases a 1 per cent. solution of bichloride in 60 per cent. alcohol, or 2 per cent. nitrite of silver solution may be dropped into the ear. Tenderness and swelling of the mastoid lymphatics may be relieved by icebags or leeches, but mastoid suppuration necessitates immediate operation. If, however, desquamation is in progress and the urgency for operation is not great it is best to wait till the period of desquamation is over, as experience points to the slowness of repair during that time. As regards the infectivity of the discharge, a fortnight after the cessation of desquamation should elapse before such cases are freed from isolation, and during this time antiseptic treatment should be continued.

PATHOLOGY.

343. **The Effect of Eosin upon Tetanus Toxin.**

FLEXNER AND NOGUCHI (*Journ. of Exper. Med.*, January, 1906) find that eosin in solutions exceeding 1 per cent. in strength quickly destroys tetanospasmin in the dark, and in 0.6 per cent. solutions greatly reduces the activity of the poison. It is noteworthy that the tetanus produced by the modified poison is of a chronic nature. When eosin and tetanus toxin are injected separately but simultaneously into a rat, the effect of the eosin consists in delaying the onset of symptoms and prolonging the period of intoxication. The power of eosin to destroy or modify tetanus toxin in the body, though marked, is not absolute. In whatever way the eosin is brought into the body of the infected animals, it causes an increase in the period of intoxication and delay in the supervention of death. If the eosin solution is sufficiently concentrated and is brought into relation with the focus of development of tetanus spores, it is capable not only of modifying the tetanus, but of wholly suppressing its development. The mode in which the eosin acts has not yet been completely elucidated. Even in the highly sensitive guinea-pig tetanic symptoms may be restrained, provided that the eosin is brought into close relationship with the developing tetanus poison before it is fixed by the nervous tissues or reaches the general circulation.

344. **Reptilian Tuberculosis.**

E. BERTARELLI (*Archivio p. l. Sci. Med.*, No. 3, 1905) inoculated two large specimens of the South Australian lizard *Varanus varius* (Shaw), with cultures of avian and of human tubercle bacilli, subcutaneously. The results were negative, though the injections were large and were repeated. Then one of the animals was injected subcutaneously with 0.2 c.cm. of tuberculous human sputum; in 3½ months it showed marked signs of marasmus, and was killed. The site of the injection then showed a caseating tuberculous nodule the size of a cherry, with a necrotic centre; the heart and lungs were normal, but the mesenteric glands were much enlarged and caseating, and contained typical giant cells, but no tubercle bacilli. The subcutaneous tuberculous deposit also contained giant cells, and these were full of tubercle bacilli. The other lizard was given enormous subcutaneous injections of avian tubercle bacilli (Kral), but showed no signs at all of infection or disease. It was then injected with tuberculous human sputum twice, but showed itself much more resistant to the infection than did the animal described above. Four months later it was killed, and showed no signs of tubercle excepting at or near the sites where it had been inoculated with the sputum. Here there was definite evidence that the tubercle bacilli had multiplied freely, without producing any acute lesion. Bertarelli suggests that the tubercle bacilli from these foci might be much attenuated in virulence, and possibly suitable for antituberculous vaccination.

AN EPITOME OF CURRENT MEDICAL LITERATURE.

MEDICINE.

345. Pressure on the Recurrent Laryngeal Nerve by the Left Auricle.

E. BONARDI (*Gazz. Med. Ital.*, February 1st, 1906) describes a case of laryngeal hemiparalysis caused by the pressure on the left recurrent laryngeal nerve of the dilated and hypertrophic left auricle. He describes the development of the aorta and its larger branches, and gives an account of other cases in which clinical and anatomical evidence has shown laryngeal paralysis to be due to compression of the left recurrent laryngeal nerve between the aorta and either a dilated auricle or the pulmonary artery displaced by cardiac enlargement. Bonardi's patient, a domestic servant aged 40, suffered from rheumatism four and a half years before admission to hospital. On admission she was suffering from dyspnoea, and was sometimes unable to lie down; her pulse was 110, small and irregular, respirations 28, digestion much disturbed. The heart beat was diffused, with feeble apex beat in the nipple line in the sixth space. At the apex, systolic and presystolic murmurs were heard. There were also pericardial and pleuro-pericardial friction sounds. The cardiac dullness was increased upwards and to the left, but there was no dullness over the manubrium or in the first or second right intercostal space. The liver and stomach were much enlarged, the lower extremities very oedematous. The urine was scanty and contained much albumen. The progress of the case was from bad to worse. A fortnight after admission there were signs of pulmonary infarction. Twelve days after this the symptoms suddenly became more urgent, with acute dilatation of the heart, increase of dullness over the upper part of the heart, systolic pulsation in the liver and the jugular vein, and a decided difference between the two radial pulses, the left being smaller, more feeble, and often lost altogether. At the same time there was sudden dysphonia and barking cough. A laryngoscopic examination was made and the report was, "profound anaemia of the whole pharyngo-laryngeal mucosa. Complete left hemiplegia, with the vocal cord in abduction through paralysis of the left recurrent laryngeal." The *post-mortem* examination, made three days later, confirmed this opinion and the clinical diagnosis of pericarditis and mitral stenosis and regurgitaion leading to pressure on the recurrent laryngeal. The eft auricle was found to be sensibly hypertrophied and enormously dilated, compressing the recurrent laryngeal against the aorta. Apparently the author explains the weakness of the left radial pulse by the pressure exerted on the aorta by the enlarged auricle, at the point of origin of the left subclavian artery.

346. Gonorrhoeal Septicaemia and Endocarditis.

THAYER (*Amer. Journ. of Med. Sci.*, November, 1905) says hat the comparative frequency of gonorrhoeal septicaemia nd endocarditis is generally recognized, and it has been hown by many that a demonstrable septicaemia may xist in connexion with various complications other than ndocarditis. The development of symptoms suggestive f septicaemia with fatal results, consecutive to gonorhoea, without evidence *intra vitam* of any local complicaon, is also an occurrence of no great rarity. In most of hese instances necropsy reveals some local focus of nfection outside of the urethra. Podula in 1892 described form of mild intermittent or continued fever which he ad observed in a number of cases of gonorrhoea, somemes in simple cases but more particularly in those with omplications. After running a course of several weeks' uration the fever disappeared. From our present knowdge of the gonococcus it is natural to regard these cases, oth mild and severe, as instances of true septicaemia. hayer observed an instance of this continued fever of bout seven weeks' duration occurring in a case of acute norrhoea without apparent complication, in which the istence of a septicaemia was established by cultures om the blood. Of 10 cases of gonorrhoeal septicmia at the Johns Hopkins Hospital, in 6 the gonoccus was positively identified by cultures found in e blood *intra vitam*, from the local lesions at cropsy, or by both methods. In 1 case gonococci re found in the lesions, but no growth was present ordinary media. In 3 cases there was a mixed infection, but gonococci were found. In 2 others organisms were present on the valves, but the infection clearly followed acute gonorrhoea without other apparent cause. One patient, a man aged 28, with vague general symptoms of headache, backache, and general *malaise*, continued fever, a thickly-coated tongue, a palpable spleen, and suspicious rose-spots, these symptoms lasting seven weeks, was not unsuggestive of typhoid fever, but cultures from the blood and the course of the case showed it to be a gonorrhoeal septicaemia. There was a suspicion throughout of the existence of endocarditis, but at a subsequent examination, five months later, there was no evidence of cardiac disease. If endocarditis was present, it was so slight as to leave no permanent change. These cases show that the mild continued fever sometimes seen in gonorrhoea without complications is, in some instances at least, evidence of a true gonorrhoeal septicaemia. A true gonorrhoeal septicaemia in cases in which there is no evidence of local complications may run a course not unlike that of typhoid fever. In doubtful cases of continued fever with gonorrhoea, the possibility of gonorrhoeal septicaemia must be borne in mind. Further, there is evidence that an acute urethritis is by no means infrequently followed by an endocarditis, either of specific gonorrhoeal nature, or due to secondary or mixed infections which have found their portal of entry in the urethritis, and have entered late upon the primary infected valves.

347. Acute Primary Pulmonary Aspergillosis.

BACCARANI (*Gazz. degli Osped.*, April 20th, 1906) records 3 cases (2 fatal) of this disease occurring in one family. The forms of pseudo-tuberculosis may be grouped in four chief types: (1) Those due to foreign bodies—for example, lycopodium powder, cantharides, China ink, croton oil, etc.; (2) those due to animal parasites; (3) those due to bacteria other than the Koch bacillus; (4) those due to mycotic fungi. The author's cases were due to the *Aspergillus fumigatus*. Of the 3, 2 were girls aged 19 and 15, who presented symptoms of acute tuberculosis, wasted very rapidly, got into a tyhpoid state, and died in six or eight weeks. When the sputa were examined for tubercle bacilli no bacilli were found, but abundant spores of hyphomycetes and mycelium. On cultivation it was identified as the *Aspergillus fumigatus*. A brother, aged 9, about a fortnight after the death of his sisters, developed similar symptoms, but in a much milder degree, and was cured in fifteen days by good generous living and arsenical treatment. There was no history of exposure to those causes—for example, working amongst cereal grains—which usually excite aspergillosis. The Widal reaction was not tried, and no *post-mortem* examination was allowed, but the microscopic examination of the sputa served to diagnose the disease, and indeed is the only way of effectually recognizing this affection during life. In each case the disease was primary, and not secondary or associated (as it sometimes is) with tuberculosis.

SURGERY.

348. The "Ecchymotic Mask" in Cases of Thoraco-Abdominal Compression.

VILLEMIN (*Bull. et Mém. de la Soc. de Chir. de Paris*, No. 9, 1906) reports on a case communicated by Morestin, of the interesting and not very rare result of forcible compression of the trunk, known as the ecchymotic mask. All the recorded cases of this traumatic condition present a close similarity. The cause is invariably a sudden and forcible compression of the chest or of the abdomen, or of both together, which usually is of brief duration. The ecchymotic infiltration is produced instantaneously, the face and the upper part of the neck in front and back being suffused by a continuous violet coloration marked by numerous haemorrhagic spots of darker tint, which are also to be observed on the mucous membrane of the mouth, palate and pharynx. It has been stated that the ecchymosis ceases at a circular margin on a level with the shirt collar, but this, it is stated, was not observed in Morestin's case. Intraorbital effusions of blood have been occasionally noted. These occur in the fatty tissue behind the eyeball, and but very exceptionally in the retina. As a rule the ocular disturbances do not last long. Indications of cerebral and meningeal haemorrhage have never been observed either during life or on *post-mortem* examination. Death, when the result of the injury, is usually due to multiple lesions of the skeleton, or of the thoracic or abdominal viscera. In all other cases the symptoms, so alarming at first sight, soon disappear, the violet coloration rapidly fading and disappearing by the end of a few days. There can be no doubt, Villemin acknowledges, that violent compression of the large venous reservoirs of the abdomen may cause a forcible reflux of blood into the system of the superior vena cava, and the jugular veins being feebly protected by valves are more open to an attack by this reflux than the venous trunks in the limbs. But as this repletion, which is purely passive, is not sufficient in itself to explain the mechanism of the ecchymotic infiltration of the face, it is necessary to seek for some more energetic factor. Villemin accepts the view of the influence of strong personal action, and recognizes the violent though unconscious struggles of the patient to evade the forcible pressure to which he is subjected at the moment of the injury by making a considerable thoraco-abdominal effort. Under such circumstances the intravenous pressure is likely to overcome the resistance of the vascular coats. As a proof that the factor of strong personal effort plays an important part in the pathogenesis of the ecchymotic mask it is pointed out that peripheral vascular ruptures have been observed in cases of delivery, convulsions, vomiting, and whooping-cough. Histological examination in cases of ecchymotic mask has, it is stated, revealed enormous distension of the small veins and the capillaries of the skin, and, in one instance, vascular ruptures and minute haematomata. In conclusion, Villemin insists on the importance of a wide recognition of the existence and nature of this special lesion, in order that a faulty diagnosis of direct injury or of fracture of the base of the cranium may be thus prevented.

349. Malignant Tumour of Suprarenal Capsule in an Infant.

LAPOINTE AND LECENE (*Bull. et Mém. de la Soc. Anat. de Paris*, November, 1905) describe the histology of a tumour removed by the former, which was certainly malignant and seemed to be mixed, carcinomatous and sarcomatous elements being detected in different parts of sections made from the growth. The patient was a girl 19 months old, she had an abdominal tumour which was diagnosed as an embryonic adeno-sarcoma of the kidney, a frequent error, as renal tumours of that type are not rare in childhood. The operation was difficult from the beginning and was really incomplete. The tumour was reached through an anterior abdominal incision; it adhered to the left crus of the diaphragm and the abdominal aorta was wounded and required ligature. The child survived the operation for two hours. The tumour was of the size of two fists, multilobular, and for the most part firm in consistence. It extended into the left loin, pushing the left kidney outwards; during the operation it was not until the tumour had been freely enucleated that the kidney was discovered quite separate from the new growth. Then it began to be suspected that the suprarenal body was the seat of disease. At the necropsy this suspicion was verified, as the left suprarenal body was missing, its fellow and the two kidneys being normal. A part of the growth was found unremoved, it ran into a mass of infected pre-vertebral glands which extended upwards into the posterior mediastinum and adhered to the great vessels, especially to the wounded aorta.

350. Discission of Pleura in Chronic Empyema.

RANSOHOFF (*Ann. of Surg.*, April, 1906), in discussing the modern operative treatment of chronic empyema, points out that the practice of decortication of the lung, based on the fact that the lung tissue long buried in thickened pleura retains its capacity of expansion, is often met by insurmountable difficulties. The close adhesions and the depth at which the work has to be done sometimes render the removal *en masse* of the thickened pleura an extremely tedious procedure. In one of his early cases the author observed that an incision carried through the thickened pulmonary layer of pleura until the lung tissue is reached, as is evidenced by the bluish tint at the floor of the cut, widens out rapidly and in full view, until the rent, increasing with each respiration, becomes a well-marked groove. The most potent factor in this widening of the incision is believed to be the inherent tendency of divided scar tissue to retract under tension. Where one incision carried down to the lung tissue widens into a groove, so will a second and a third, and any number that may and can be made. Acting on this observation, the author has devised and practised an operation for releasing the confined lung, which he proposes to name discission of the pulmonary pleura, as a modification of the operation of decortication. The special feature of this new procedure consists in "gridironing" the pulmonary pleura with many parallel incisions removed from each other about a quarter of an inch, and of crossing these obliquely or at right angles by other parallel cuts. A further step towards liberating the lung is an incision cautiously carried through the length of the groove or angle of reflection of the costal and pulmonary layers of the pleura. If this incision be limited to the costal portion of the gutter, and carried towards the chest wall, there is no danger, it is stated, of wounding any large vessels or of opening the sound pleura above. The author asserts that the haemorrhage which attends discission is really slight and can be easily controlled.

OBSTETRICS.

351. Physiological Glycosuria of Pregnancy.

RUDAUX (*La Clinique*, May 15th, 1906) distinguishes between glycosuria and pregnancy. It is normal for sugar to exist in the urine of parturient women, of nursing women, and of a certain number of pregnant women. During pregnancy the hepatic gland secretes an abnormal amount of glucose, partly as the result of the hyperactivity of all its functions, which involves also the glycogenic function, and partly to supply the mammary gland with the materials which it requires for the exercise of its function. A systematic examination of urine during pregnancy shows that after the sixth month it is not uncommon to detect as much as 3 or 4 grams of glucose in the urine, and that as term approaches this glycosuria tends more and more to become lactosuria. The mammary gland is preparing for the active exercise of its function after parturition. If the liver only secretes a small quantity of glucose, it will be entirely transformed into lactose by the mammary gland, and as it is not yet utilized it will be reabsorbed by the blood and excreted in the urine. If an excess of glycogen is secreted, only part of it will be converted into lactose; the remainder will be eliminated in the urine at the same time as the lactose, and both glycosuria and lactosuria will be present. When there is hyperactivity of the glycogenetic function, the urine may contain as much as 20 grams of glucose without being accompanied by any of the other characteristic symptoms of diabetes. The proof that this glycosuria is physiological and not pathological lies in the facts that the pregnancy is normal, and that it disappears a few days after parturition, when the function of the mammary gland is established. The glycosuria of pregnancy is more common among multiparae, especially among those who have already nursed their offspring, and indicates that the mother will be able to nourish the child well. It is questionable whether women who have suffered during pregnancy from a severe or prolonged toxaemia of hepatic origin will be able to supply a milk containing sufficient lactose, for an inefficient liver must react equally upon the glycogenetic and the antitoxic functions.

352. Post-partum Gangrene of Lower Limb.

THE condition is very rare. Schuhl (*Prov. Méd.*, May 5th, 1906) reports a case which occurred in hospital. The woman suffered from eclampsia, but was safely delivered and beginning to recover when she developed a painful gangrene which involved the whole of the left leg and foot, and which proved fatal. In this case the gangrene was due to obliteration of the femoral artery. Puerperal gangrene is due either to arterial or to venous obliteration, or to a combination of these. Endarteritis is more common than phlebitis, and a bacteriological examination of the clot generally shows the presence of an organism—either staphylococcus, or streptococcus, or, as in the case reported, the *Bacillus coli*. *Post-partum* gangrene does sometimes occur without any previous elevation of temperature; in the above case the temperature did not exceed 37.5° or 37.6° C. Obstetrical trauma, artificial delivery, haemorrhage, albuminuria, and eclampsia may all be considered as causes of infection which have an etiological importance. Some hours before death this case developed intestinal haemorrhage with abdominal pain and vomiting; these symptoms were in all probability due to a haemorrhagic infarct of the intestine the result of puerperal infection. The pathology of this condition is similar to that of puerperal gangrene in a limb; the autopsy reveals a clot in an intestinal artery. The prognosis is serious, and chances of successful surgical interference depend upon the position of the clot. The rate of mortality among these cases is very high.

GYNAECOLOGY.

353. Chronic Inversion of Uterus.

E. J. Maclean (*Journ. of Obstet. and Gyn. of the Brit. Emp.*, April, 1906) describes a case of chronic inversion of the uterus of puerperal origin. The patient was a woman, aged 29, who had had three or four miscarriages and five full-time normal labours. At her last confinement, two and a half months before she came to the Cardiff Infirmary, the patient had been treated by an unskilled midwife; the placenta had been retained, and when it had been finally delivered, as a result of traction applied to the cord and of other manipulations, free *post-partum* haemorrhage accompanied with some collapse and local pelvic pain had occurred. The patient rallied from the collapse, but from that time she had continued to lose blood in varying amounts, and on admission to the infirmary she was profoundly anaemic. On examination per vaginam there was found a smooth, elastic, pear-shaped swelling, about 2¾ in. in length, springing by its narrower stalk from the antero-superior wall of the vagina, and presenting a slightly raised, collar-like rim on its circumference at the level at which it became continuous with the vaginal walls; there was no opening into which a sound could be passed. Bimanually, the body of the uterus could not be made out in the pelvic cavity, and a cup-like depression was felt, which led to the vaginal tumour. The diagnosis was that of inversion of the uterus. There was no ulceration of the inverted mucous membrane of the uterus, but even the gentlest handling caused considerable haemorrhage, and a promptly effective treatment appeared to be indicated. The patient was prepared for operation by either the vaginal or abdominal route, and was deeply anaesthetized. Steady centripetal pressure was first applied to the uterus by the hand on the vagina, and by this means the bulk of the tumour was somewhat diminished. Ordinary bimanual pressure and counter pressure was next tried, but proved ineffectual. Volsellae were now fixed in front and behind in the middle line, at the level of the rim which represented the junction of the cervical and vaginal mucous membrane, and pressure applied evenly as against these two fixed points caused a further demarcation of the rim, so that it became possible to affix four volsellae at equal intervals on the cervical lips. While assistants held these volsellae, the author, by steady forcible pressure with his thumbs over the fundus and the remaining fingers of both hands supporting the lateral walls of the uterus, was able in the course of a few minutes to bring about the reinversion of the uterus. The cavity of the uterus was douched with hot iodine lotion; iodized phenol was applied to the mucous membrane, a tight pack of sterilized gauze was inserted, and a silkworm gut suture was applied at either angle of the os uteri, the two last operations being undertaken in order to prevent recurrence of the inversion. The patient made an uninterrupted recovery. With respect to the treatment adopted the author states that he never uses a repositor, and that in this case the tendency to haemorrhage formed a contra-indication. Amputation was out of the question, because there was no local sepsis, sloughing, or ulceration. If the treatment above described had failed the author intended to open the abdomen and to divide the "cup" posteriorly from the peritoneal aspect as deeply as might be needed for reposition by bimanual manipulation. An example such as the present one of successful application of taxis in chronic inversion suggests the advisability of giving this treatment a fair trial before resorting to anterior or posterior colpo-hysterotomy or to abdominal section.

354. Threatened Rupture of Uterus: Caesarean Section versus Symphysiotomy.

Potocki (*Comptes Rendus de la Soc. d'Obstét de Gyn. et de Péd. de Paris*, April, 1906) recently read a report of a case which led to an instructive discussion. A woman, aged 24, was in danger of rupture of the uterus when in her third labour. Not only was the pelvis narrow, but the fetal skull was remarkably ossified. Caesarean section was performed, and a living male fetus 19½ in. long and 6¾ lb. in weight was extracted. The mother was saved, and the child was, like its parent, in very good condition when they left hospital five weeks after the operation. Potocki stated that, considering the contracted pelvis of the mother and the big, prematurely ossified cranium of the fetus, he would certainly have divided the symphysis, and then (after allowing the head to dilate the os, a process which would have probably taken but a few minutes) he would have applied the forceps, were it not that a very definite complication was present. The condition of the inferior segment was found on palpation to be very unsatisfactory, the cervix was rigid and undilated, and hence symphysiotomy would have been inadvisable. The older operation can be done more speedily. Pinard quite agreed with Potocki and regretted that he once did symphysiotomy when the rupture was just taking place. Both admitted that Caesarean section should be preferred, and performed at once, when, as in Potocki's case, there is oedema of the anterior lip of the cervix, tetanic contraction of the internal os, hourglass contraction of the uterus, and oedema of the lower segment. Champetier de Ribes, like Pinard, agreed with Potocki, having had reason to regret the adoption of the longer operation when rupture threatened.

THERAPEUTICS.

355. Pemphigus Treated by Diet Free from Salt.

Cassäet and Micheleau (*Arch. Gén. de Méd.*, January 16th, 1906) describe two cases of pemphigus, both of which were cured by the administration of a diet free from salt. The first case was a man, 54 years of age, who some years previously had suffered from attacks of hepatic colic; these attacks ceased four years ago, but since then he had been subject every two or three months to attacks of great prostration, stiffness in the back, followed by the appearance of a pemphigoid eruption between the fingers. The patient had noticed that these cutaneous eruptions were particularly prone to appear after the eating of fish and shellfish, and that they occurred regularly when he was living close by the sea. On admission to hospital, besides the cutaneous eruption, it was found that his liver was considerably enlarged, and that the quantity of chlorides excreted in the urine was diminished. On being given a diet free from chlorides, the eruption rapidly disappeared, and a month later the liver was found to have resumed its normal size, and the excretion of chlorides in the urine had considerably increased. On resuming an ordinary diet the liver again enlarged, and the excretion of urinary chlorides again diminished in quantity and it was feared that the cutaneous trouble might return. He was again placed on a salt-free diet, and when last seen was in excellent health. The second case was that of a man, 43 years of age, who had drunk freely and suffered from dyspepsia. Some days before admission to hospital he had suffered from tonsillitis, which was followed by swelling of the left arm and pain in the left elbow. These symptoms were shortly followed by the appearance on the wrists, hands, and fingers of an eruption of pemphigus. The urine was found to be greatly deficient in chlorides. A salt-free diet was instituted, and in the course of a few days the cutaneous eruption had disappeared, as had also the sore throat and dyspepsia; the urine, however, still showed a diminution in the excretion of chlorides. Three months later the daily quantity of chlorides excreted in the urine had become quadrupled, the pemphigus had not returned, and the patient was in excellent health. The authors conclude that the presence of sodium chloride in the food plays no very important part in the causation of these cutaneous affections; they consider that a toxic infection through the digestive tract favours the appearance of these skin affections, and that the diminution of chlorides excreted in the urine is evidence of such infection. In the treatment of these and similar skin affections the excretion of urinary chlorides should be assisted by every means at our command, and a diet free from chlorides should be given.

356. Massage in Neuritis and Polyneuritis.

Kouindjy (*Zeit. für phys. und diät. Therap.*, February, 1906), in dealing with the indications for massage in neuritis and polyneuritis, finds the indications in symptoms such as pain, hyperaesthesia of the skin and muscles, motor paralysis, atrophy of muscles, sometimes joint changes and vasomotor disturbances. The soothing action of massage upon pain has long been recognized. In hyperaesthesia the author employs especially superficial circular stroking, and gradually applies this in order to act upon the deeper tissues, while at the same time he lengthens the sittings. If the pain yields he proceeds to massage the nerve stems by means of longitudinal effleurage along the course of the nerves in the centripetal direction; in massage of the nerves no pushing movements nor tapotage are allowed. The massage, according to von Castex's investigations, has a curative action upon the nerve fibres as well as the merely sedative action. The second great symptom of neuritis which forms an indication for the use of massage is atrophy of the muscles. For this symptom more diverse forms of massage are useful, as, for example, effleurage, superficial and deep kneadings, tapotement, vibration massage. The author lays especial weight on the importance of massage of the atrophied muscles while the opposing contracted muscles are left untreated. Joint diseases form a fourth indication for methodical massage, and finally, trophic and vasomotor disturbances such as oedema, desquamation of the skin, ulceration, etc. It often happens that when the most severe symptoms of neuritis have been removed by means of massage, ataxia and disturbance of co-ordination remain. The author treats such symptoms by means of a series of exercises. Electrotherapy and hydrotherapy both are useful in addition to massage in cases of neuritis. Cases of neuritis which are not healed by massage are especially those in which the neuritis depends on a constitutional disease, as, for instance, gout, diabetes, tuberculosis, or cancer. The massage should be given by a trained hand. Massage as applied by the laity is often rough and brutal, and may lead to injury of the nerve fibres.

357. **Poisoning by Belladonna Plasters.**

DOLAND (*Amer. Journ. Med. Sci.*, April, 1906) records 3 cases of belladonna poisoning from the application of plasters, and he points out that, such plasters being frequently applied on the patient's own initiative, serious symptoms may develop before coming under observation. The first case was that of a man, aged 47, admitted to hospital in violent delirium, with pupils wildly dilated and inactive to light. There was a diffuse erythematous eruption on the chest and back, and on the shoulder, back, and abdomen were four belladonna plasters. The mouth and tongue were dry. Complete recovery in five days followed removal of the plasters, two of which had been worn for several days, but the remaining two had been applied shortly before admission after the back had been briskly rubbed with a coarse towel. The second case was that of a man who had worn two belladonna plasters over his back for several days. One night he became semiconscious, with muttering delirium, and developed an erythematous rash on the face and upper part of the body; but this with other symptoms subsided in two or three days after removal of the plasters. The third case was that of a female, upon whose chest a small belladonna plaster had been placed. Two hours later she became highly excited, with dilated pupils, dry mouth, and a diffuse erythematous rash on the face, shoulders, and chest. Removal of the plaster soon effected a cure. Since atropine is rapidly eliminated, removal of the plaster will generally be quickly followed by cure, but the administration of a physiological antidote may be required.

358. **Manganese as a Drug.**

L. BENEDETTI (*Bull. delle Sci. Med.*, January, 1906), after describing the chemical methods best employed for the quantitative estimation of manganese salts in the various organs of the body, describes the fate of manganese citrate injected subcutaneously into dogs. The metal is deposited within twelve hours, mostly in the liver, but also in the other organs. It is excreted most by the bile, less so by the intestine, least by the kidneys; excretion begins in forty-five minutes, and continues for a week or ten days. The subcutaneous injection of manganese citrate seems to increase the amount of iron retained by the organism.

PATHOLOGY.

359. **Etiology of Yellow Fever.**

MARCHOUX AND SIMOND (*Ann. de l'Inst. Pasteur*, January, 1906) have shown that the *Stegomyia fasciata*, the insect which is known to transmit yellow fever from man to man, can also transfer the *materies morbi* to its own offspring. Their earlier experiments on hereditary transmission through the *Stegomyia* were made in 1903 and yielded negative results. But on renewing their experiments in February, 1905, they secured a positive result, the details of which are as follows: A female *Stegomyia*, reared in the laboratory, laid its second batch of eggs on January 28th, after having bitten, three days previously, a patient suffering from a moderately-severe attack of yellow fever. These eggs were hatched out, and yielded fully-developed insects on February 16th. From these, two females were isolated and were fed on glucose until March 2nd. On that date—that is, fourteen days after their metamorphosis—these two insects were made to bite a human subject of Portuguese nationality who had never suffered from yellow fever. As no reaction followed, the investigators caused the same person, after an interval of eight days, to be again bitten by one of these two mosquitos, the other having accidentally died. Four days after the second bite he developed yellow fever, the attack, though mild, being thoroughly characteristic of the disease. Previous to the onset of the disease the patient had been living in the laboratory with one of the experimenters, and the authors can guarantee that he did not come into contact with any infective agents other than the two mosquitos which they caused to bite him. In order to remove any possible objection that the infection produced was not a genuine case of yellow fever, they caused the patient after his recovery to be bitten by five insects which had previously bitten, on the second day of the disease, a case of yellow fever which ran a fatal course. Their experimental subject did not suffer the slightest inconvenience from these bites. The experiment was then repeated with five mosquitos which had previously bitten a severe yellow fever case on the first day of the disease, and the result was again negative. The patient's subsequent immunity to the disease, therefore, confirmed the genuine nature of the attack which had been caused by the material transmitted through an insect's ovum. Hereditary infection of this kind in the *Stegomyia fasciata* is not regarded by MM. Marchoux and Simond as playing any very considerable rôle in the propagation of yellow fever. It must, however, be regarded as a possible cause of the recrudescence of the disease in a focus where it has recently been extinguished, and on that account must be borne in mind with a view to the organization of prophylactic measures. The authors think it possible that in the passage of the virus from one generation of *Stegomyia* to the next an attenuation of virulence may take place. As the result of further investigations into the paths of infection they find that the *Stegomyia fasciata* does not infect itself by absorbing either the blood which escapes in the haemorrhages common in the second stage of yellow fever, or the liquid present in the black vomit, or the dejecta. Even in captivity the insects do not absorb these materials unless compelled by hunger. The larvae of the insect, when cultivated in water containing the dead bodies of freshly-killed infected insects, do not contract the infection, and the adult parasites which develop are not virulent. When infected insects are kept at a temperature as low as 20° C., they appear to lose the power of transmitting the infection. This observation is of significance in association with the frequently recorded fact that during an epidemic a temporary lowering of the atmospheric temperature, due, for example, to a succession of rainy days, causes a marked diminution in the daily number of cases reported.

360. **The Meningococcus of Cerebro-spinal Meningitis.**

VANSTEENBERGHE AND GRYSEZ (*Ann. de l'Inst. Pasteur*, January, 1906) have studied the characters of a meningococcus, which they obtained by lumbar puncture, during life, from a case of cerebro-spinal meningitis which terminated fatally in two days. They found that the reaction of the coccus, when tested by Gram's stain, depended upon its condition of vitality and its virulence; it varied in different epochs of the life of the microbe, and, when the organism was placed under unfavourable conditions, the capacity to stain by this method rapidly disappeared. The Gram test, therefore, they consider unreliable for diagnostic purposes. Their organism was found to be highly virulent for laboratory animals. When inoculated under the meninges of rabbits or guinea-pigs, it produced a disease completely resembling human cerebro-spinal meningitis, with identical lesions and similar complications. The nervous tissue of the animals which died of this disease was found to be virulent, and preserved its virulence for a long time, though it was progressively diminished by slow desiccation. In the nasal fossae of man, both in health and disease, there is frequently found a microbe possessing the morphological and cultural characters of the meningococcus. This microbe may sometimes prove to be virulent even when taken from subjects not affected with cerebrospinal meningitis. When virulent, inoculation beneath the meninges of laboratory animals produces an infection analogous to that produced by the typical meningococcus. This germ, normally avirulent for man, appears to be the origin of the auto-infection known as cerebro-spinal meningitis, just as, under analogous conditions, the pneumococcus produces pneumonia.

AN EPITOME OF CURRENT MEDICAL LITERATURE.

MEDICINE.

361. Lumbar Puncture.

KOPETZKY (*Amer. Journ. of Med. Sciences*, April, 1906) reviews the value and applicability of lumbar puncture both as an aid to diagnosis, as a method of treatment, and for the production of anaesthesia. In the examination of the fluid, the pressure under which it is obtained, its coloration, bacteriological findings, cytodiagnosis, chemical composition, and cryoscopy are all considered, and it is pointed out that it is not so much any individual characteristic as the totality of the whole examination that is of value diagnostically, and that the results should always be considered in connexion with the clinical development of the case. A clear, normal, non-coagulable fluid indicates sinus thrombosis, brain abscess, simple serous meningitis, meningismus, hysteria, or occasionally a circumscribed meningitis. A fluid coming away in spurts under pressure increases the probability of serous meningitis, sinus thrombosis, or rarely brain abscess. A clear fluid without bacteria or coagulating elements probably indicates toxic or tuberculous meningitis. An opalescent or purulent fluid, forming a coagulum, with predominating polynucleosis and eventual presence of micro-organisms, points to acute diffuse meningitis, cerebro-spinal meningitis if Weichselbaum's meningococcus is present, or if the fluid has been aspirated it may indicate a circumscribed meningitis. Apart from clinical symptoms lumbar puncture fails in establishing a differential diagnosis between brain abscess, serous meningitis, meningismus, or sinus thrombosis. It is of more value in clearing up doubtful diagnosis than in substantiating probable ones. The data should invariably be considered with the clinical evidence, and when it becomes a question for or against surgical interference the patient should be given the benefit of the doubt. Therapeutically, lumbar puncture may be of value for the introduction of drugs into the spinal canal, and also it may act beneficially in the relief of pressure by withdrawal of excess of fluid and at the same time bringing about the removal of the causative foci of the disease. Any element of danger in this procedure is lessened by the horizontal position and the absolute condemnation of aspiration. The possibility of cerebral haemorrhage, especially when large amounts are removed, must be borne in mind, and the treatment is contraindicated in cases of vascular sclerosis and aneurysms of the cerebral vessels in all acute and chronic affections of the central nervous system without pressure symptoms arising from the spinal fluid. As a method of producing anaesthesia it is of value in selected cases, though deaths have been directly caused by the lumbar anaesthesia and intoxication from the drugs used, and many operators condemn its use. In order to modify the intoxication, a combination of cocainization, with artificially-induced congestive cerebral hyperaemia, has been recommended. Since cerebro-spinal fluid is rapidly drawn into the spinal canal when space is encroached upon —a condition which can be brought about by a congestive venous hyperaemia—the neck is bandaged tightly to produce cyanosis prior to the injection, and the bandage is left in place for some time after operation in order to prevent the danger of a sudden backflow of the cocainized cerebro-spinal fluid into the brain.

362. Paralytic Scoliosis.

NOVÉ-JOSSERAUD (*Prov. Méd.*, April 21st, 1906) describes six cases of scoliosis occurring in children and resulting from infantile paralysis. He finds that there is, as a rule, only one curve in the distorted spine, and has only on one occasion found a compensatory curve. The commonest seats for the curvature are the dorsal and the dorso-lumbar regions; sometimes the curvature is limited, at other times it may occupy the greater part of the spine. The convexity of the curve is generally to the left. Paralytic scoliosis, he finds, differs from ordinary scoliosis in the following particulars: The twist in the spine giving rise to the prominence at the back is generally less marked than in cases of ordinary scoliosis; the deformity remains supple much longer, and for a time even marked deformity may be remedied by compression of the thorax with the hands or by means of suspension. Later, however, fixation occurs, owing to secondary changes in the bones and ligaments; the thorax is strongly displaced towards the convexity of the curve. This form of scoliosis may develop very rapidly, even in the course of a few months, and its increase may be indefinite. The author does not consider the existence of cases of true static scoliosis as proved; he does not think that paralysis of the muscles of the upper limb can give rise to scoliosis, nor does he consider that shortening of a leg, sometimes found in patients who have suffered from infantile paralysis, is a cause of the scoliosis which may be found in such patients, and in proof of this latter statement he refers to three of his cases exhibiting curves in the same direction and in almost corresponding parts of the spine; in one of these the left leg was short and in the other two the right leg. Further he finds that his cases do not conform to the second class of cases of paralytic scoliosis as defined by Hoffa, namely, being dependent upon unilateral paralysis of the spinal muscles; in all but one of the author's cases the affections of the spinal muscles were bilateral and apparently equal on the two sides. From a consideration of his cases, the author concludes that there is a form of paralytic scoliosis in which paralysis of the trunk muscles exists to an equal extent on both sides, and which paralysis may affect varied muscle groups of the back and of the anterior abdominal wall; in cases such as these, he concludes that the curvature of the spine is a result of defective equilibrium of the trunk, and is assisted by the attitude which the patient takes to diminish the inconvenience of his paralysis. As regards treatment of these paralytic forms of spinal curvature, he advises that those muscles which are still healthy should be developed and utilized by means of gymnastics, electricity, and massage. To preserve the suppleness of the spine, movements similar to those made use of in cases of ordinary scoliosis should be employed. The thorax must be supported by suitable corsets, to maintain the body in the best possible attitude; and lastly, treatment must be carried out for a long time or perhaps indefinitely, to prevent the deformity becoming aggravated.

363. Nephritis and Tuberculosis.

THE kidneys may be affected in various ways in tuberculous patients. The paratuberculous lesions are the most interesting. Chauffard has made these the subject of investigation (Clinical Lecture, *Journ. de Méd. et de Chir. Prat.*, November 10th, 1905). The frequence of nephritis as a complication of tuberculosis has been variously estimated. The writer's own statistics give 8 to 10 per cent. of cases of nephritis in the presence of tuberculosis. The most common renal lesion is the amyloid kidney, but that to which Chauffard more particularly directs attention is nephritis presenting many of the signs of acute or subacute lesion, as copious albuminuria, haematuria, and casts. Haematuria may persist for long periods, and in one case it was noted that the erect posture had a marked influence in increasing the amount of blood. Chauffard records the interesting fact that nephritis appeared in a patient under his care who was being treated with tuberculin. There was an increase of albumen after each injection. He refers to the researches of Auclair, who found that two toxins are produced by the tubercle bacillus—one which causes caseous degeneration, the other having a sclerotic influence on the tissues. Chauffard suggests that if such be the case it may be possible to find an explanation for the recurrence of chronic interstitial nephritis in cases of tuberculosis.

364. Bile Ducts Compressed by Tuberculous Glands.

LENOBLE AND ATTILA (*Bull. et Mém. de la Soc. Anat. de Paris*, November, 1905). A man, aged 30, was admitted into hospital with fever and gastric irritation. He had been long under treatment for pulmonary phthisis, and there were cavities at both apices. Two days after admission the temperature fell and general jaundice was observed; the urine became so dark as to appear as though it contained blood as well as bile. Icterus gravis was suspected, but the physical signs in the thorax and the profuse sweats showed that acute phthisis was the primary complaint. There was sharp pain in the right hypochondrium, and the liver was enlarged and continued to swell. Compression of the ducts was therefore suspected. The patient died about a fortnight after admission; the jaundice had become intense. The lower parts of the lungs were found full of recent miliary tubercle, the upper parts were riddled with cavities and adhered to the pleura.

The liver was enlarged, softened, and bile stained, weighing four pounds. The gall bladder was distended and the cystic duct compressed by a large gland, a string of smaller diseased glands lay along the cystic and common duct; they were strongly adherent and completely obstructed the ducts by pressure.

SURGERY.

365. **The Removal of Naso-Pharyngeal Growths.**

Kuln (*Zentralbl. f. Chir.*, No. 9, 1906) describes a method of removing naso-pharyngeal growths which he has been led to believe by the results of his own experience will enable surgeons to overcome to a considerable extent the difficulties of this operation. The work of the operator is impeded by the situation and anatomical relations of the tumour, and deliberate and careful action, so necessary for radical removal of the disease, is rendered very difficult by free bleeding and incomplete anaesthesia. Except in cases of very small growth it is not easy to decide which is the least unsatisfactory of the three methods that have been devised. The nasal method. the author points out, affords insufficient room; the maxillary method, as in Langenbeck's operation, is objectionable on the score of mutilation and of the risk of facial paralysis; and in the oral method the troubles in arresting haemorrhage and in maintaining continuous and efficient anaesthesia are most marked. Almost exclusive preference is given to the last of these methods Inspection of a skull, it is held, should at once indicate that the cranial base is more readily accessible by the mouth than by any other way, that the oral operation is likely to be less severe than others, and that the wide natural cleft between the maxillae and the mandible allows of the freest possible approach to a large spheno-palatine growth. For the successful practice of this method, however, two conditions are necessary: the mouth must be opened as widely as possible, and kept so during the operation, and the communication of the oral cavity with the air-passages, and with the alimentary canal, must be temporarily suppressed, so that no blood can pass into the larynx, and vomiting can be prevented. The latter condition the author meets by peroral intubation of the glottis and by thorough packing of the pharyngeal cavity. The mouth having thus been rendered a freely accessible field of operation, the soft palate and the mucous membrane and periosteum of the hard palate are incised in the middle line, and the horizontal portion of the palate bone and as much as may be required of the palatine process of the maxilla are removed. In this way, it is asserted, sufficiently free access is afforded to the upper part of the naso-palatine cavity, so that any tumour therein situated can be thoroughly explored and eradicated. Peroral intubation the author has found useful also in cases in which it was found necessary to practise more extensive operations for the removal of large naso-pharyngeal sarcomata.

366. **Excision of Portions of the Chest Wall for Malignant Tumour.**

Rixford (*Annals of Surgery*, No. 1, 1906) reports five instances of resection of the chest wall for recurrent carcinoma of the breast in four patients. and one of removal of the clavicle and first rib, and portion of the sternum, for sarcoma. The artificial pneumothorax caused by such operations, if unilateral, presents, it is held, no dangers sufficient to constitute any contraindication to surgical treatment of this kind in patients who in other respects are well enough to tolerate radical measures. The fatiguing respiratory efforts which supervene when the chest is opened may be almost entirely done away with by the use of a wet towel covering the opening during the operation. In these 6 cases there was no operative mortality, although most of the patients were well advanced in years, the youngest being 40 and the oldest 70. Of the 4 cases of recurrent carcinoma, death occurred in the first four months after the operation; the second patient had further recurrence in the mediastinum after an interval of eight months; the third had further recurrence in the next lower intercostal space. for which a second resection was practised, and when this paper was written, six months later, remained free from further recurrence. The fourth patient remains free from recurrence, two years having passed since the date of operation. The subject of the extensive operation for the removal of a large sarcoma involving the first rib and the sternum and occupying the anterior mediastinum was well and strong when last seen. eleven months after the date of this treatment. The author, in concluding, points out that although life has been prolonged in these cases, it is still too soon to decide whether any of the three patients who, when last seen, were free from recurrence, will remain so.

367. **The Roentgen Ray and Growing Tissue.**

Försterling (*Zentralbl. für Chir.*, No. 19, 1906) publishes the results of a series of experiments on young animals and also on growing plants, which, he believes, prove that a single and transient application of the Roentgen rays less intense than when used for ordinary therapeutical purposes, is capable of causing a decided arrest of the growth of young and active tissues in the exposed parts of the body. The older the animal the less marked, the author finds, is the action of the rays in this respect; and with very young animals the effectual dose of the rays is much reduced. These results would seem to indicate that the therapeutical use of the Roentgen rays should in young children be restricted to cases only of malignant growth and leukaemia, and in these exceptional instances be made under strict precautions in regard to the thorough protection of the sound parts of the patient's body. Each sitting should be as brief as possible, and by reason of the cumulative action of the Roentgen rays, the treatment should not be frequently repeated. The minimum dose of the rays that might cause mischief has not yet, the author states, been determined.

368. **Complete Extirpation of the Stomach.**

B. Vassallo (*Semana Medica*, Buenos Aires, April 19th) records a successful case of total extirpation of the stomach performed by him in the Rosario Hospital. Various pylorectomies, more or less extensive, had been performed previous to 1897, but it was reserved for Schlater of Zurich to carry out in that year the first complete resection of the organ. Brooks Brigham of San Francisco was the next to attempt it. Vassallo, who has performed seventeen pylorectomies with only one death, and considers the gravity of stomach operations more apparent than real, did not undertake the present operation with the definite idea of gastrectomy, but on opening the abdomen the stomach proved so extensively involved by the carcinomatous growth that the only course was to remove it. The operation, which lasted thirty-eight minutes, and is described at considerable length, was unattended by any adverse occurrences, and proved completely successful. Four months later the patient returned to show himself in excellent health, and experiencing no pain or difficulty, with the exception of the inconvenience caused by having to eat somewhat frequently, and but little at a time.

OBSTETRICS.

369. **Freeing of the Arms in Turning the Fetus.**

Apfelstedt describes a method of freeing the arms in turning the fetus, which he considers improves the chances for the child considerably (*Berl. klin. Woch.*, December 11th, 1905). He points out that the high fetal mortality after version is largely contributed to by the accidental extension of the arms, and the time which is lost in bringing them down. The freeing of the first arm takes up the most time, and if it is possible to avoid having to manipulate with the arms after the version has been carried out, the risk of asphyxia, etc., will be materially lessened. He further considers that the operator has not fulfilled his duty by merely turning the fetus, when this is indicated, either from a vertex or a transverse presentation; he should attempt to avoid all complications in the birth. The choice of the hand with which he will turn, and the selection of the right foot, is of especial importance when the fetus has lost its fetal position, that is, its posture. The muscular tone of the fetus plays an important rôle. If the posture is maintained by a good muscular tone, the turning, even when the wrong foot is seized, offers a good chance for the child. Thus the result of turning depends partly on the fetal conditions (muscular tone, posture, etc.) and partly on the method and skill employed. In cases of a prolapsed arm, he finds that after version the arm remains in a favourable position, and does not, as a rule, call for any further manipulations. He goes as far as to state that the occurrence of this "complication" improves the chances for the child, since the version is easy and leads usually to a smooth delivery. It is unnecessary to tie a tape around the wrist. His method for all cases depends on this fact. First he carries out what he calls prophylactic freeing of the arm. The left hand, in the case of first presentations, is introduced into the vagina and through the os, while the right hand grasps the fundus. The membranes are then ruptured, and the nearest shoulder (in all cases save one) is sought, and the elbow and forearm of the fetus lie in the operator's hand. The arm is then passed over the front of the fetal trunk and brought down into the vagina, extended. It will then be placed abducted at right angles from the trunk. The arm is then held lightly for a few seconds in this position, and then the hand is again carefully introduced to seize the nearest leg—the same side as the arm—and this is likewise brought down into the vagina, the external hand assisting. As this is being done, the left hand feels if the arm retains its favourable position, and if it threatens to go upwards it is corrected early. The version is carried out in all other respects as usual. The exception mentioned above is met with in transverse presentations, with the abdomen toward the maternal front. In this case one should seek the upper and not the nearest arm, the latter being pushed upwards. The corresponding foot is then seized. The author has carried out this proceeding once when the fetus was in the first transverse position, and found it worked very well. While he does not feel justified in recommending the method without further experience of it, he thinks that it should be tried, and, if found as successful as he has found it and as it seems to promise, it should be adopted in regular midwifery practice. He considers the possible objections which could be raised, but finds them unimportant.

THERAPEUTICS.

370. Quinine Prophylaxis.

MORGENROTH (*Arch. fur Schiffs und Trop. Hyg.*, Bd. x, No. 5) gives his experiences of quinine prophylaxis in the case of the troops in South-West Africa. During the malarial season of 1904 and 1905 quinine was administered as far as possible to each of the men belonging to these troops. The drug was given in doses of 1 gram each Thursday and Friday. The time of day chosen was from eight to half-past eight o'clock at night, in order that the unpleasant side-effects might be got over during sleep. In spite of this precaution, in many cases the dose had to be reduced, the usual method being to give 1 gram on Thursday and ½ gram on Friday. Where even this amount could not be borne the dose was reduced to ½ gram on each of the days, but the protection obtained from the half dose was not adequate. Certain of the sanitary officers themselves took 1 gram of quinine every eighth and ninth day, in the morning before breakfast, and this method appeared to be satisfactory. Quinine taken at longer intervals—as, for instance, every tenth and eleventh day—did not give protection. At first many of the men, especially those who had already suffered from malaria, were unwilling to take quinine, but as it became evident that those who refused the treatment were the ones to contract malaria this unwillingness for the most part disappeared. Blackwater fever did not in any case develop as a result of taking quinine, but it was found that patients with recent scorbutus showed fresh and extensive haemorrhages into the skin and mucous membranes on the day after taking the quinine, and in the case of such patients the quinine prophylaxis was conducted with especial precautions. The different preparations of quinine differed greatly in solubility. Quinine sulphate in tablet form proved to be least soluble and could often be found in the stools almost unchanged after twenty-four hours. Quinine hydrochlorate in tablet form was found to vary greatly in solubility according to the method of preparation. The best result was obtained from the powdered quinine hydrochlorate given in cachets or dissolved in weak hydrochloric acid. Some cases of malaria developed even in the regiments where the quinine was taken. In most of these cases it appeared on inquiry that the quinine had not been taken regularly. In some few instances malaria developed even when the treatment had been carefully carried out, but the disease then usually ran a very mild course, and there was little or no tendency to relapse. These cases are probably to be accounted for as being cases in which the absorption of quinine was defective. The following are the conclusions to which the experiment led: (1) Quinine hydrochlorate given in powder is the best form of administration for prophylactic purposes; (2) prophylaxis can be more easily carried through if the bitter taste of the drug be hidden, and the use of cachets or gelatine capsules is therefore strongly recommended; (3) as a general rule, the dose of quinine should not be less than a gram, and it is only in the case of people who suffer severely from the side-effects that the dose may be diminished or may be replaced by 1.5 grams of euchinine; (4) in most neighbourhoods adequate protection is given if the quinine be taken every eighth and ninth day; and (5) the dose is best given, if it is convenient, in the morning before breakfast, when the powers of absorption are most active; (6) in the Northern States it must be left to the doctor to decide whether quinine should be given more frequently than every eighth and ninth day; (7) the keeping of a quinine calendar, in which the days for taking quinine are clearly marked, is advisable; (8) a specially stringent prophylaxis is needed for native troops; (9) the date for beginning the prophylaxis depends on the date of appearance of the *Anopheles* and on the prevailing temperature; frequent estimations of temperature are needed; (10) it is the duty of the different sanitary officers to decide in each case when the prophylaxis shall begin and shall end; (11) prophylaxis was found in the last year to be of very great value; (12) permanent injury from the long use of quinine was not in any case observed.

371. Life after Recovery from Phthisis.

ARBOGAST (*Zeit. für Tuberk.*, Bd. viii, Heft 3) points out the dangers which beset a phthisical patient after he has been dismissed from a sanatorium as being from a clinical point of view sound, and he comments on the habits of sanatorium life in order to decide which of them must be gradually abandoned and which must be to some extent always retained. Among those to be abandoned as harmful after recovery are: (1) Overfeeding, (2) excessive limitation of exercise, (3) excessive fear of fresh infection, (4) idleness. Continuous overfeeding is condemned as causing such diseases as fatty heart, gout, and indigestion. When combined with too little exercise for a long period the danger is more marked, and in any case constipation is likely to become a prominent symptom. Excessive fears are to be deprecated; the most difficult fear to lay is that of the bacillus, and we see patients who scent danger in every corner of a room or a carriage, in every carpet, and in every speck of dust. The resumption of work by the patient as soon as possible after recovery is of great importance both from the physical and the psychical points of view; naturally, however, occupations which have predisposed to the contraction of phthisis are not to be amongst those at once resumed. While, as we have seen, some of the sanatorium habits are to be discontinued, others should be carefully adhered to. The first of these mentioned is the daily rubbing down with cold water, to which the author attaches considerable importance. Again, regularity of life is a habit to be retained, although it should not be allowed to develop into pedantry. There should be great moderation in drinking and smoking, and while walks, mountain tours, and a certain amount of riding and driving cannot be too strongly recommended, games which lead to overstrain are to be avoided. The manner of life of the recovered patient must, of course, vary between wide limits. As a rule, the Sunday and perhaps one afternoon in the week should be given to recreation, the time for going to bed in an ordinary way should be between 10 and 11 o'clock at night, and early rising should be the rule.

372. The Treatment of Diabetes Insipidus.

C. POSNER says that the treatment of diabetes insipidus is not the most satisfactory part of medical science, and an etiological treatment is only possible when the disease depends on syphilis, and even then the treatment is not always successful. Strychnine is the drug which enjoys the first place in the medicinal treatment, but this only too often has no effect or only a temporary one (*Berl. klin. Woch.*, No. 44a, 1905). The dietetic means which can be employed in this disease are limited to a restriction of the amount of fluid taken, and in some cases this has led to actual cure, and not only to apparent improvement. This so-called "dry" treatment is only of use in primary polydipsia, and is even dangerous and harmful in polyuria. The attempts to cope with this disease have therefore to be chiefly symptomatic, and the symptoms which call for most energetic treatment are the thirst and the polyuria. The thirst causes disturbed sleep, and thus if this can be limited the night's rest will be improved and the excretion of urine diminished. The most striking abnormality, in this connexion, in diabetes insipidus is the dryness of the mouth and the paucity of saliva. In order to increase the secretion pilocarpin has been given, but the exhausting diaphoretic effect of this drug renders it little adapted for the treatment. It has long been known that the act of mastication produces an increased secretion of saliva; it has therefore been suggested to employ "mastication tablets," mostly made of rubber or tragacanth, which are chewed, and also dried plums, which also have the mechanical effect on the secretion. The effect of the chewing is striking in cases of pleural or ascitic effusions, when large quantities of fluid can be removed from the body. Posner has only had the opportunity of trying the "mastication tablets" in one case of real diabetes insipidus, and was fortunate in being able to remove the excessive thirst, improving the sleep and reducing the excretion of urine to normal. The specific gravity of the urine rose from 1004 to 1012, so that he claims to have an objective sign for the improvement. The nervousness which is so closely associated with the disease, however, was not influenced by the treatment. He states that the treatment has its disadvantages, in that the continual mastication is fatiguing to weakened patients; but nevertheless this suggestion may be found useful in some cases, and may prove of value in easing the distressing condition of a certain number of patients.

373. The Influence of Bitters on Digestion.

THE vegetable bitters have always been regarded as valuable weapons in the therapeutic armoury, but until recent times their mode of action has been imperfectly understood. Bonnani (*Arch. Ital. de Biol.*, March, 1906) has reinvestigated the question. He observed a dog in which, by the well-known Pawlow-Heidenhain operation, a portion of the stomach had been converted into an accessory organ, having an external opening near the nipple for the collection of gastric juice, and through which drugs could be directly applied to the secreting mucous membrane. Experiments were first performed with distilled water introduced into the real stomach by means of an oesophageal sound. The passage of the sound alone did not cause any secretion of gastric juice. Pawlow had stated that smaller quantities of water than half a litre did not cause a secretion, but in Bonnani's experiments it was found that 250 c.cm. of distilled water put into the large stomach brought about a flow of juice from the small stomach, commencing in about half an hour and lasting an hour and a half; 500 c.cm. caused a rather more copious secretion. After this point had been established by a series of fourteen experiments, aqueous solutions containing 5 per mille of gentian, quassia, or calumba, in each case added to an equal bulk of distilled water, were introduced by the sound into the stomach in quantities of 250 c.cm. A secretion followed from the small accessory stomach, but in its quantity, amount of solids, acidity, and time relations was identical with that produced by the same bulk of water. Moistening the mouth and the tongue of the dog with the bitter substance was then tried, and found to have no effect upon the production of gastric juice, neither when the bitter infusion was placed in contact with the lining membrane of the small stomach was there any result, except a slight secretion of mucus. It was found, however, that if the mouth and tongue were wetted with the bitter infusion and food given shortly afterwards a good flow of juice followed. Observations were then made to determine whether this flow was greater than that produced by food alone. With this object in view a dog was on one day given a meal of 100 grams of lean horseflesh, and on the following day the same quantity, with a previous moistening of the mouth and tongue with the bitter. The results showed that the quantity of gastric juice produced was always greater when the meal had been preceded by the administration in this way of gentian, quassia, or calumba. Of these three, the last named gave the best result. If, however, the solution were placed in the small stomach, and the food given after an interval, the secretion was less than when food was taken alone. These experiments confirm those of Borissow, and show clearly that the action of bitters is essentially due to their influence upon the nerves of taste, and not directly upon the gastric secretion, for the flow of juice which follows their introduction into the stomach can be attributed to the accompanying water. When bitters are taken into the mouth and followed by food, the contrast between the taste of the two substances is so greatly in favour of the latter that a lively desire for food arises, or in other words the appetite is increased. More gastric juice then flows, for, as Pawlow showed, appetite is a powerful excitant of that secretion. Bitters should therefore be given in cases in which there is loss of appetite. They should invariably be prescribed in a fluid form only, and administered immediately before a meal.

PATHOLOGY.

374. The Cultivation of Tubercle Bacilli.

FOR the last ten years Anzilotti (*Clin. Mod.*, An. 12, N. 12) has used a method of cultivating tubercle bacilli on glycerinated potato which he thinks gives better results as to constancy and virulence of culture than other methods. Carefully-selected cylindrical pieces of potato about 4 cm. in length are taken and sliced diagonally, washed in distilled water, and placed in a 6 per cent. alkaline solution of glycerine and boiled for about twenty minutes, care being taken to keep the solution alkaline. The potato is then placed in a test tube and kept about 2 cm. from the bottom of the tube, the space below being filled with the glycerine solution and the whole sterilized. It is then ready for insemination. The greyish-yellow granules of the culture begin to appear on the fourth or fifth day, and by the fifteenth day cover the whole surface. As time goes on the colour of the culture varies from grey to yellow or whitish, according to the species of potato used. Avian, bovine, and human tubercle each give good results. Cultures prepared in this way kept their vitality and virulence for three or four months in spite of differences in the surrounding temperature.

375. Formation of Mucus and Muco-Membrane in the Intestines.

RIVA (*Gazz. degli Osped.*, April 22nd, 1906) points out the difficulty in differentiating mucus that is merely condensed from that which is coagulated (that is, muco-membranous flakes). Ordinary mucus is miscible in dilute alkaline solutions, for example, lime water, from which it can be precipitated by acetic acid, whereas coagulated mucus (muco-membrane) cannot be dissolved in lime water. There are also differences in colour, consistence, and behaviour to staining reagents. Modern research supposes the existence of a ferment called mucinasis whose function is to coagulate mucin; it is probable there are other substances called antimucosis whose action is to prevent coagulation. The appearance of mucinasis concurrently with increased mucous secretion is a function of defence by which the organism meets attacks on the normal function of the intestinal canal. Such ferments are produced in the glands scattered along the digestive tract, in Peyer's patches as well as in the solitary follicles. The production of anticoagulating substances is most probably regulated and excited by the liver, and clinically one knows that colitis is frequently associated with biliary lithiasis. The formation of muco-membrane is due to an increase in the coagulating and a decrease in the anticoagulating ferments. The action of mucinasis prevails over the anticoagulating action of the bile only when there is mucous hypersecretion and extensive destruction of epithelial cells. The factors determining the presence of mucus or muco-membrane in the faeces are (1) mucous hypersecretion, (2) intestinal spasm, (3) inflammation of the intestinal walls, (4) abnormal peristalsis, and (5) variations in the anticoagulating substances.

376. Congenital Cysts of the Neck.

L. LENZI AND A. PELLEGRINI (*Lo Sperimentale*, No. 1, 1906) describe 14 cases of congenital cervical cyst; 8 were in the middle line of the neck, 6 were lateral. The patients varied from 1 to 54 years in age. The authors believe that any congenital cyst of the neck is either derived from the thyroid gland or is a branchial cyst proper; the former occurs mostly in the middle line, the latter are generally at the side. The lateral cysts contain both ectodermal and endodermal epithelium in their mucous lining, and so are generally derived from maldevelopment about the second branchial cleft; they may contain glandular lymphoid and follicular tissue in their walls, and have therefore been described as amygdaloid, and connected with congenital lateral fistulae of the neck. Others of them, again, have been shown to be dermoid branchial cysts, and these are similarly derivable from branchial fistulae. The median cysts all contain thyroid tissue; many of them (5 out of 8) are pathological developments of aberrant thyroid glands. Their walls often contain a great excess of blood vessels. Both median and lateral cysts show a marked tendency to recurrence if incompletely removed by the surgeon. An extensive bibliography is added.

The General Election.

In view of the general election about to take place, the following Memoranda and Questions on parliamentary subjects affecting the medical profession have been drawn up under the authority of the Medico-Political Committee of the Association, in pursuance of a special instruction of the Annual Representative Meeting, and copies have been issued by the Medical Secretary to the Honorary Secretaries of all Divisions in the United Kingdom.

The memorandum in each case is very brief, and appended to each is a question or questions which it is suggested that Parliamentary candidates should be asked to answer. Fuller memoranda on some of the matters have been prepared, and can be supplied on application to the Medical Secretary, British Medical Association, 429, Strand, London, W.C.

With regard to the method of approaching parliamentary candidates, it is suggested that each candidate should be requested to receive a deputation. In a Division which includes several constituencies it may be convenient to include one or two official representatives of the Division in every deputation, but each deputation should contain constituents of the Parliamentary Division for which the candidate approached is standing. Divisions which have already approached Parliamentary candidates have found it convenient to forward two copies, before the interview, of the questions which it was desired to submit, to explain at the interview any point on which it was particularly desirous to dwell, and to request the candidate to forward his answers in writing.

The reply of every candidate received by the Medical Secretary in time will be printed and circulated to all medical practitioners in the constituency for which the candidate is standing.

We are informed that in some cases Divisions are making definite recommendations as to the candidates to be supported, basing the recommendation on the replies received to the questions.

MEMORANDA AND QUESTIONS ON PARLIAMENTARY SUBJECTS AFFECTING THE MEDICAL PROFESSION, SUBMITTED FOR THE CONSIDERATION OF PARLIAMENTARY CANDIDATES.

I.—Medical Acts Amendment Bill.

MEMORANDUM—

At present, the statutory control of the medical profession is vested in the General Council of Medical Education and Registration (General Medical Council), which, under the reservation of certain privileges of the various licensing corporations, is also charged with the regulation of medical education. It has proved a source of serious dissatisfaction that the body of those actually practising medicine is so inadequately represented in the Council, and that the universities and corporations, whose individual interests are not always identical with those of the best medical education, appoint the large majority of this governing body. The historic privileges of some of the licensing bodies have also been invoked to impair the control of the Council over the education of the student. The difficulties which have been experienced in controlling the standard of the various qualifying examinations, conducted by the different bodies, have shown that it is desirable that there should be a State examination on the practical subjects of Medicine, Surgery, and Midwifery.

Under the present Acts, the only restriction on those who are not properly qualified to practise medicine or dentistry is that they shall not assume a title which implies that they are registered, and experience has shown that this is not sufficient to secure the purpose of the Acts, which is to provide means whereby the public is able to distinguish those who are qualified to practise. It has thus been proved necessary, in the public interest, to make the provisions more stringent.

QUESTIONS—

Would you support in Parliament a Bill for the amendment of the Medical Acts based upon the following general principles?

1. That at least half the members of the General Medical Council should be directly elected by the general body of medical and dental practitioners in the country, instead of the large majority, as at present, being appointed by the universities or corporations, bodies financially interested in the examining and licensing of students and practitioners.
2. That the General Medical Council should have complete control over the registration and education of medical and dental students, including fixing the standard of preliminary general education requisite for admission to medical study.
3. That there be a "one-portal" system for admission to medical and dental practice—namely, through a State Examination, conducted by the General Medical Council under the supervision of the Privy Council.
4. That the practice of medicine or dentistry by unregistered persons, or by companies, and the signing of medical certificates by unregistered persons be more completely prevented.

[I.—A full explanatory memorandum on the principles of the Bill is published below. The discussion on the subject at the Annual Representative Meeting at Leicester was reported in the SUPPLEMENT of July 29th, 1905, p. 119.]

II.—Death Registration and Coroners' Law.

MEMORANDUM—

The present Acts have proved an insufficient protection to the public against the risks of murder on the one hand, and against the possibility of premature burial on the other. For these reasons it is proposed that it should be illegal to dispose of a body until the death has been registered, and to base the registration on a certificate that the fact of the death has been verified by actual inspection by a medical practitioner.

The present Acts do not afford a trustworthy basis for the vital statistics necessary for sanitary legislation, and from the lack of the registration of Stillbirths give no protection against the wilful destruction of infant life, a matter of serious national anxiety.

QUESTIONS—

Would you support Parliamentary amendments of the law as to Death Registration based on the following principles?

1. That no body should be buried except upon the production of a Registrar's Certificate or a Coroner's Order, and that no death should be registered except upon production of medical certificates in statutory form of the fact that death has actually occurred and of its cause, or upon a Coroner's Order.
2. That the medical certificate of the cause of death be given by a medical practitioner who has been actually in attendance within a specified period, and the certificate of the fact of death be given by a medical practitioner who has satisfied himself of the fact after inspection of the body, and that a statutory fee be paid for each certificate.
3. That where medical certificates in compliance with the statute are not received by the Registrar, he shall report the death to the Coroner, and the Coroner shall instruct the practitioner who has been in attendance, if any, or the special district medical officer in conjunction with the medical practitioner in attendance, if any, to investigate, and if so directed to make a *post-mortem* examination, and that medical practitioners be paid a statutory fee for preliminary information furnished to a Coroner for his assistance in deciding as to the necessity of an inquest.
4. That Stillbirths be certified and registered in a manner similar to deaths.

[II.—The report of the Medico-Political Committee on Death Registration and Amendment of the Coroners' Law, together with the draft Bill, was printed in the SUPPLEMENT of May 27th, 1905, p. 251. The discussion on the subject at the Annual Representative Meeting at Leicester was published in the SUPPLEMENT of July 29th, 1905, p. 117.]

III.—Public Health Bill.

MEMORANDUM—

Experience has proved that for all medical officers whose duties may from time to time bring them into conflict with the interests or opinions of members of the local governing bodies, it is essential if the duties are to be performed in the interests of the community and not of the individual governor, that the medical officer should be afforded such security of tenure as is provided by requiring the consent of a Central Department, usually the Local Government Board, to his dismissal. In England this security is at present not given to Medical Officers of Health nor to Public Vaccinators, and in Scotland it is not given to Poor-law Medical Officers.

In the Public Health Bill dealing with England, advantage has been taken of the opportunity to provide a standard of qualification for Medical Officers of Health and for Sanitary Inspectors.

To afford a means by which officers of advancing years may be removed without hardship to the individual, a scheme of superannuation is necessary.

QUESTIONS—

Would you support in Parliament the following alterations of the law? namely:

1. That Medical Officers of Health and Sanitary Inspectors in England and Wales should have the same security of tenure as is at present enjoyed by Medical Officers of Health in Scotland and London, and by Poor-law Medical Officers in England and Wales, that is, that they should not be appointed for a limited period only, and that they should not be removable except with the consent of the Local Government Board.
2. That the qualification for Medical Officers of Health in England and Wales be raised to a standard analogous to that prescribed for Scotland, and that a qualification satisfactory to the Local Government Board be required for Sanitary Inspectors.
3. That Medical Officers of Health and Sanitary Inspectors be placed on the same footing as Poor Law Medical Officers as regards superannuation.

[III.—The text of the Bill and a full explanatory memorandum on its principles was printed in the SUPPLEMENT of May 27th, 1905, p. 269. The discussion on the Bill at the Annual Representative Meeting at Leicester was printed in the SUPPLEMENT of July 29th, 1905, p. 120.]

IV.—Revaccination Bill.

MEMORANDUM—

The provisional promise made after the Report of the Royal Commission on Vaccination, to the effect that the relief of the conscientious objector would be followed by provision for the increased public protection afforded by compulsory revaccination, has never been implemented, and the increasing experience of this and of foreign countries shows that such a measure is still urgently necessary.

QUESTION—

Would you support in Parliament the Revaccination Bill, of which the main provision is as follows?

That, subject to the same conditions of exemption as primary vaccination, all children should be revaccinated before the statutory age for leaving public elementary schools.

[IV.—The text of the Bill was printed in the SUPPLEMENT of January 14th, 1905, p. 11.]

V.—Reorganization of the Local Government Board in the Interests of Public Health.

MEMORANDUM—

In England the care of Public Health has been undertaken piecemeal by various departments as they happened to be interested in the particular question under which each item arose. Hence, the administration of public health is in a condition of greater disorder than that of much less important matters, and is distinctly less efficient than in Scotland. The subject was reported on by an Inter-Departmental Committee, but from the public health side the report was most inadequate, and the British Medical Association is convinced that the subject is of sufficient importance to justify an inquiry by Royal Commission.

QUESTIONS—

Would you support in Parliament the appointment of a Royal Commission to investigate the present central administration dealing with public health, having regard particularly to the following proposals?

1. That the central administration in matters affecting public health should be vested in a single Department of State which, in view of the necessarily important part played by local authorities, should be organized from the Local Government Board.
2. That the Department should be administered by a Board, meeting for the transaction of business, which should include amongst its members medical, engineering, legal, and Poor-law experts, and that the President of the Local Government Board should be placed on equality as regards status and emoluments with the Principal Secretaries of State.
3. That matters relating to public health, at present administered through the Privy Council Office, the Home Office, and the Foreign Office should be transferred to the reorganized Local Government Board.

[V.—Explanatory memoranda and the text of the Bill was printed in the SUPPLEMENT of May 27th, 1905, p. 245. The discussion on the matter at the Representative Meeting at Oxford was reported in the SUPPLEMENT of August 6th, 1904, p. 115.]

VI.—MIDWIVES ACT.

MEMORANDUM—

The Midwives Act has imposed on midwives a statutory obligation to call in registered medical practitioners in certain emergencies, the patient having no power of veto. The urgency of such calls allows the practitioner no time to satisfy himself as to payment, or to put into action the ordinary Poor-law machinery for medical relief to the very poor. Nevertheless, the employment of a medical practitioner is practically imposed by the State upon the patient, and it is submitted that the State should at least guarantee the payment of the practitioner's fee.

QUESTION—

Would you support in Parliament legislation to enable local authorities to make provision for the payment of medical practitioners called under the requirements of the Midwives Act to assist midwives in emergencies?

[VI.—An explanatory memorandum on the subject was published in the SUPPLEMENT of May 27th, 1905, p. 255. A report of the discussion on the matter at the Annual Representative Meeting at Leicester was printed in the SUPPLEMENT of July 29th, 1905, p. 119. The draft memorial prepared for submission to the Lord President of the Privy Council concerning the present position of members of the medical profession when called by midwives to their assistance was printed] in the SUPPLEMENT of July 15th, 1905, p. 54.]

VII.—INCIPIENT INSANITY.

MEMORANDUM—

Alienists are agreed, and public opinion also recognizes, that patients suffering from early or unconfirmed mental disease are often gravely injured by association with lunatics, or by being to their own knowledge regarded or treated as insane. They require special care and treatment for which the Scottish law affords facilities not at present possessed in England or Ireland.*

QUESTION—

Would you support a Bill to give in England the same power of dealing with cases of unconfirmed mental disease as has existed in Scotland since 1857?

[VII.—The recommendations of the Medico-Political Committee on this matter were printed in the SUPPLEMENT of July 15th, 1905, p. 57. The discussion at the Representative Meeting at Leicester on lunacy law amendment was reported in the SUPPLEMENT of July 29th, 1905, p. 121.]

VIII.—HABITUAL INEBRIETY AND DRUG HABITS.

MEMORANDUM—

Inebriety is increasingly recognized both by experts and by the community as a vice which, to be successfully combated, must be treated by methods applicable to disease rather than to crime.

At present, however, the requisite restraint can only be obtained through criminal procedure.

QUESTION—

Would you support a Bill to give power to deal with non-criminal inebriates, and the subjects of other drug habits, under a procedure analogous to that of the Lunacy Acts?

[VIII.—The recommendations of the Medico-Political Committee with reference to this matter were printed in the SUPPLEMENT of July 15th, 1905, p. 57.]

IX.—POOR-LAW MEDICAL OFFICERS.

In Scotland.

MEMORANDUM—

In England and Wales Poor Law Medical Officers, and in Scotland Medical Officers of Health, enjoy security of tenure in that they cannot be appointed for limited periods only, and are not removable without the consent of the Local Government Board.

It is desired to extend this necessary protection to Scottish Poor Law Medical Officers, and a Departmental Committee of the Scottish Local Government Board has already reported in favour of this reform.

QUESTION—

Would you support a Bill to give these officers such a security of tenure as is afforded by making them removable only with the consent of the Local Government Board?

In Ireland.

MEMORANDUM—

The Irish Poor Law Medical Service is at present seriously injured from the following causes:

(1) The recent enactment whereby the Imperial contribution to the salaries of the Medical Officers have been made invariable, and, therefore, the expense of any increase falls upon the local poor rate.

(2) The poverty of many parts of Ireland which cannot afford even a quota of the cost of an adequate medical service.

(3) Lack of appreciation both centrally and locally of the medical needs of the country, and consequent errors of administration.

The first steps in reform must be legislative:

(*a*) To remove the recent restriction on Imperial grants.

(*b*) To make provision for special assistance to necessitous districts.

QUESTION—

Would you support necessary legislative and administrative changes to provide adequate salaries and superannuation for Poor Law Medical Officers?

[IX.—The report of the Departmental Committee on Poor-law medical relief in Scotland was printed in the SUPPLEMENT of April 30th, 1904, p. 86. The three reports by the Special Commissioners of the BRITISH MEDICAL JOURNAL on the Poor-law medical service published in the JOURNAL of 1891, vol. ii, 1892, vol. i, 1895, vol. ii, 1896, vol. i, and the SUPPLEMENT of March 26th, 1904, have been reprinted in pamphlet form, price 6d.]

X.—MEDICAL INSPECTION OF SCHOOL CHILDREN.

MEMORANDUM—

Opinion is now practically unanimous as to the necessity for the systematic inspection of school children, both for the prevention of epidemic disease and for the health of the children individually. In Scotland the school authorities have no power at present to make provision for this, and in some other cases the authorities have not yet made provision.

QUESTION—

Would you support legislation giving the Central

---

* The following is the text of Clause XIII of the Lunacy Acts mendment (Scotland) Act, 1866, referred to, and of the Schedule iving the form of the medical certificate. The proviso at the end of he clause is printed in italics:

Reception of Lunatics into Private Houses.

XIII. Section Forty-one of the first-recited Act is hereby repealed: nd in lieu thereof, no person shall receive or keep any person as a matic for gain, without the order of the sheriff or the sanction of he Board; and any person who shall receive into or keep in his ouse any such person, or any person alleged to be a lunatic, shall, ithin fourteen clear days thereafter, make application for such der or sanction: provided always, that when the lunatic is a pauper natic, such application shall be made by the inspector of the poor, nd it shall be lawful in such case for the sheriff to grant his order n one medical certificate. And every such lunatic shall be visited, s often as the Board shall regulate, by a medical person, who shall nter in a book to be kept in such house the date of each visit, and he condition of the mental and bodily health of the lunatic at each ach visit: and any medical person who shall make any such entry ithout having visited the patient within seven days of making such ntry, or who shall knowingly make any false entry in such book, shall liable in a penalty not exceeding ten pounds for each offence. And shall be in the power of the Board to order such inspection and isitation of every such house from time to time as to them shall seem oper. And every person detaining or aiding in detaining any ch lunatic, or any person who on inquiry is found to be a natic, without the order of the sheriff or the sanction of the Board, after such order or sanction has been withdrawn, shall be liable in penalty not exceeding twenty pounds: *Provided that the enactments this Section shall not apply to any case where the person so received and it has been sent to such house for the purpose of temporary residence only exceeding six months and under the certificate of a medical person, ich certificate shall be in the form of Schedule G. to the first-recited Act nexed.*

SCHEDULE G.

L. M., a medical person duly qualified in terms of the Act (specify s Act), certify on soul and conscience, that C. D. (name and design patient) is afflicted (state the nature of the disease), but that the lady is not confirmed, and that I consider it expedient, with a view his recovery, that he should be placed (specify the house in which patient is to be kept) for a temporary residence of (specify a time, exceeding six months).

Education Authorities power to order, and the local authorities power to provide for, the medical inspection of school children?

[X.—Report of the Medico-Political Committee on this subject was printed in the SUPPLEMENT of May 27th, 1905, p. 265.]

XI.—PUBLIC VACCINATORS.

MEMORANDUM—

The Departmental Committee of the Local Government Board on Vaccination Expenses reported in favour of placing Public Vaccinators in the same position as English Poor Law Medical Officers in respect of security of tenure; that is to say, that they should not be appointed for limited periods only, and that they should not be removable without the consent of the Local Government Board.

QUESTION—

Would you support a Bill to give Public Vaccinators the same security of tenure as Poor-law Medical Officers?

[XI.—The report on this matter was printed in the SUPPLEMENT of May 27th, 1905, p. 240. The discussion on the subject at the Representative Meeting at Leicester was printed in the SUPPLEMENT of July 29th, 1905, p. 120.]

XII.—PENSIONS FOR ASYLUM WORKERS.

MEMORANDUM—

The Asylum Workers' Association, which comprises between three and four thousand members engaged in the care of the Insane, including Medical and other Officers, and Nurses and Attendants, is desirous of bringing under the notice of candidates at the ensuing Parliamentary Election the claims of the employés of all ranks in the service of Public Asylums to assured and adequate pensions on superannuation after a sufficient length of service. At present, under Section 280 of the Lunacy Act, 1890, such pensions are *optional* at the discretion of the Visiting Committee of each Asylum; it is desired that it be enacted (as proposed in 1898 by Lord Chancellor Halsbury) that "it *shall be the duty* of the Visiting Committee of every Asylum to grant Superannuation Allowances."

QUESTION—

Would you support in Parliament statutory provision (such as that proposed by Lord Halsbury, as above stated) for pensioning Asylum Workers?

MEDICAL ACTS AMENDMENT BILL.

EXPLANATORY MEMORANDUM.

I.—PRINCIPLES OF THE BILL.

A.—GENERAL REMARKS.

1. *Purpose and Form of the Bill.*—The Bill being framed for the amendment of the Medical Acts, is drafted in such form as to be construed with those Acts. From this principle of construction it follows:

(*a*) That it is not proposed to repeal any of the Medical Acts except so far as may be necessary to bring these Acts into agreement with the Bill.

(*b*) That provisions which are contained in the Acts are not repeated in the Bill except when needful for clearness, as, for example, certain provisions as to nomination of members of the General Council by the Crown.

(*c*) That terms, such as "the General Council," which are defined in the Acts, are used in the same sense in the Bill, without further definition.

2. *Provisions as to Dentists.*—In the Bill the precedents of the Medical Acts of 1858 and 1886, which included provisions affecting both the medical and dental professions, have been followed, in preference to that of the Dentists' Act, 1878, which affected one profession only. If this principle receives the approval of the British Medical Association, as it has that of the British Dental Association, and if it is sanctioned by Parliament, the legislation affecting the constitution, duties, and powers of the General Medical Council will be brought into more convenient form for practical purposes.

3. *Arrangement of the Bill.*—The Bill is divided, for convenience of reference, into Parts, each of which relates to a definite group of reforms. In each of the following Sections of this Memorandum one Part of the Bill is dealt with.

B.—CONSTITUTION OF THE GENERAL COUNCIL (PART I).

The principles underlying this Part of the Bill are:

1. That the representation of the Crown on the Council should remain unaltered.

2. That those existing universities which have medical faculties should be represented on the Council, and that, as such representatives sit on the Council primarily as educational experts to advise the Council in its duty of controlling medical education and examinations, each university should be permitted to appoint its representative in such manner as it may deem most expedient.

3. That inasmuch as the medical corporations, with one exception, are not educational bodies, and no longer discharge those functions on behalf of the medical profession for which their charters were originally conferred, they should not be represented on the Council on an equality with the universities, but that their historic positions should be recognized by representation in a reduced degree.

4. That the direct representation of the medical profession should equal that of all the bodies above named, and that, to secure adequate representation of every part of the United Kingdom, a topographical method of election should be adopted.

5. That the principle of direct representation on the Council should be extended to the dental profession.

Other amendments have been included in this part which are consequential on the foregoing, or will simplify the procedure of election.

Statutory provision is proposed for the election of a Vice-President of the Council.

C.—BRANCH COUNCILS AND FINANCE (PART II).

The objects of this Part of the Bill are:

1. To simplify the administration of the Council, and reduce expenditure by doing away with the cumbrous machinery consequent upon the Branch Council system provided by the Act of 1858. Experience has shown (*a*) that no advantage results from the division of the work of registration; (*b*) that apart from registration no duties devolve upon Branch Councils which could not be performed equally well by the Committees proposed under the Bill.

2. To simplify the financial arrangements of the Council and thus also promote economy in administration.

3. To give statutory powers to the Council to provide pensions or contribute to superannuation funds for its officers. (Section 6 is so drawn as to enable the Council to adopt any kind of superannuation scheme which may be found suitable.)

D.—REGISTRATION (PART III).

The provisions of this Part fall under two principa heads:—(1) Affecting the students' registers; (2) affecting the medical and dentists' registers.

1. The statutory creation of a students' register under the absolute control of the Council is provided for.

The necessity for such a register has long been recog nized by the General Medical Council, but the efforts o the Council to establish it have been thwarted by th determination of the English Royal Colleges to maintai against the Council what they conceive to be the privi leges conferred upon them by their charters.

The sections relative to the students' register woul further (*a*) confer upon the Council definite control ove preliminary examinations, thus securing a uniformity o standard in this most important matter; (*b*) fix the age of commencing medical study at seventeen as a minimum in accordance with the opinion already expressed by th British Medical Association.

2. With reference to the medical and dentists' register it is provided in this Part:

(*a*) That registration should be annual, the object bein to keep the register correct and to facilitate the detectio of unregistered practitioners, especially of those wh personate registered practitioners.

(*b*) That an annual fee of one pound should be pai instead of a single payment of five pounds, the objec being to raise the income of the Council to an adequat amount.

The necessity for this proposal is shown by the followin considerations:

(i) The present income of the General Medic Council is insufficient for its present expend ture, and even under the existing law the work of the Council is crippled by want of funds.

(ii) The provisions of the Bill as to the increase of direct representation, as to the conduct of final examinations by the Council (the "one-portal system"), and as to the prohibition of unqualified practice, making it the duty of the Council to protect the profession and the public by enforcing the penal clauses (Part V), will entail considerable increase of expenditure. Such expenditure will be in the interest of the profession as well as of the public, and the only funds out of which it can be defrayed are those derived from medical and dental registration fees.

(*c*) The privileges conferred by registration upon medical and dental practitioners in respect of their practice are clearly defined, the anomalies and injustice of the existing law being removed. Among the privileges of medical registration it is proposed to include the right to use the style of "doctor" as a prefix to the name, thus recognizing by statute the customary usage of the public in reference to medical practitioners, and doing away with distinctions which the great differences in status of nominally equal qualifying examinations have rendered arbitrary and unjust.

E.—EXAMINATIONS (PART IV).

The principal changes in this Part of the Bill are:

1. The institution of the "one-portal" system for admission to both the medical and dentists' registers, by means of final (State) examinations under the absolute control and sole management of the Council.

2. Definite statutory provision for complete control by the Council of the medical curriculum, beginning with the preliminary examination, and for the effective supervision and control of the intermediate examination, subject only to a possible appeal by examining bodies to the Privy Council.

F.—OFFENCES (PART V).

The provisions of this Part fall under the heads of (1) those affecting registered persons, whether students or practitioners, (2) those affecting unregistered persons.

(1) As regards offences by registered persons:

(*a*) It is sought under Sections 21 and 22 to extend or improve the powers and procedure of the General Council in certain matters, the importance of which has been shown by experience. These matters are:

- (i) That the Council be enabled to inflict minor penalties, and therefore to adjust penalties to offences.
- (ii) That the Council should be able to compel the attendance of witnesses, to take evidence on oath, and to award costs.
- (iii) That removal from the register should involve, under penalties, disuse of medical degrees (including diplomas, etc.)

(*b*) In view of the creation of a statutory students' register, students are brought within the disciplinary powers of the Council.

(*c*) Section 27, which prohibits certain acts of registered practitioners, is directed against abuses which tend to facilitate practice by unregistered persons.

(2) Other sections of this Part are designed for the more effectual protection of the public and the profession against various forms of unqualified practice, *Section* (23) definitely prohibiting medical or dental treatment for gain, and also habitual medical or dental practice, *Section* (24) dealing with invalid certificates, *Section* (25) with bogus "diplomas," and *Section* (26) with the objectionable use by traders of the names of medical or dental practitioners, while *Section* (30) provides against the growing abuses of company practice.

Sections 23 and 25 are to be read in connexion with the definition clauses in Section 31 (Part VI).

In Part VI, Section 34, the "second schedule" is referred to. It has been thought desirable to defer the preparation of this schedule, which is a highly technical matter, until the principles of the Bill have been definitely decided by the Representative Meeting.

EPITOME OF THE PRINCIPLES OF THE BILL.

(I) INTRODUCTORY.

The Bill proposes reforms:

(A) In the composition and mode of election of the General Medical Council.

(B) In the administrative arrangements of the Council.

(C) In the control of education by the Council.

(D) In the registration of medical and dental practitioners.

(E) In the disciplinary powers of the General Medical Council.

(F) In the legal position of the practice of medicine and surgery by unqualified persons, and the rights of registered practitioners.

(II) IT IS PROPOSED AS REGARDS:

(A) *Composition and Mode of Election of the Council.*

1. That the direct representation of registered medical and dental practitioners on the Council be increased so that direct representatives compose at least half the Council.

2. That the direct medical representatives be elected by constituencies topographically defined, each constituency electing one representative.

3. That those universities which have medical faculties continue to be represented on the Council by one representative each, elected in such manner as each body may determine.

4. That the Licensing Corporations be grouped to form three constituencies, one for England and Wales, one for Scotland, and one for Ireland, each constituency electing one representative.

(B) *Administrative Arrangements of the Council.*

1. That the Branch Councils be replaced as regards some of their functions by Committees of the Council.

2. That the financial administration be consolidated by transference to the Central Office of the Council.

(C) *Control of Education.*

1. That the Council have complete control over the standard of preliminary general education and over the medical curriculum.

2. That the registration of students be placed under the direct control of the Council.

3. That the minimum age of registration of students be 17.

4. That the intermediate examination remain in the hands of the universities or corporations under the supervision of the Council.

(D) *Registration of Medical and Dental Practitioners.*

1. That there be a one portal system of admission to the *Register*, through a State final examination controlled and managed by the Council.

2. That registration be annual.

3. That there be an annual registration fee of £1.

4. That the privileges conferred by registration be clearly defined.

5. That one privilege of registration as a medical practitioner be the right to use the prefix Dr.

(E) *Disciplinary Powers of the Council.*

1. That the Council have power to suspend a practitioner without absolutely removing his name from the *Register*.

2. That the disciplinary powers be extended to include Medical and Dental Students.

3. That the procedure be made more effective by increasing the powers of the Council in respect of witnesses, and in other ways.

(F) *Unqualified Medical or Dental Practice and Protection of Registered Practitioners.*

1. That the habitual practice of medicine or dentistry for gain by unregistered persons be definitely prohibited.

2. That the granting of bogus diplomas be constituted an offence.

3. That the signing of medical certificates by unregistered persons be made an offence.

4. That the improper use of the names of registered practitioners in connexion with the sale of drugs, appliances, etc., be made an offence.

5. That medical or dental practice by companies be prohibited.

PROPOSED CENTRAL EMERGENCY FUND.

At the meeting of the Central Council of the British Medical Association on December 13th, 1905, the following resolution was adopted:

> That a central emergency fund for dealing with disputes in cases of contract practice, and otherwise, under the management of the Medico-Political Committee, be created by voluntary subscription.

The Medico-Political Committee, on the recommendation of the Contract Practice Subcommittee, has prepared the following scheme for the purpose.

SCHEME OF CENTRAL EMERGENCY FUND.

1. The fund is created by voluntary subscription to assist members of the profession in various parts of the country in maintaining the interests of the profession against organized bodies of the community.

2. All members of the profession are invited to contribute. Any contribution may be earmarked for use in specified disputes or for application to special methods of carrying out the objects of the fund, and when not so earmarked shall be deemed to be given for disposal at the discretion of the Medico-Political Committee in carrying out the general objects defined in Clause 1. At the termination of any special dispute for which funds may have been earmarked, the balance (if any) shall be merged in the General Fund.

3. Subject to the conditions defined in this scheme, the fund shall be under the entire control of the Medico-Political Committee of the British Medical Association, and shall be vested in the names of the Chairman of the Committee and the Treasurer of the Association, as representing the Committee. Payments shall only be made on the authority of a resolution of the Medico-Political Committee, or of a Subcommittee of the Medico-Political Committee acting under powers specifically delegated by the Committee.

4. The fund may be applied for the promotion of the general objects stated in paragraph 1 in any of the following ways:

(*a*) By a grant or grants to any individual practitioner to assist him in maintaining any position in which the Association shall have decided to support him, or to compensate him for losses which he shall have incurred through taking action approved by the Association.

(*b*) By a grant or grants to any Division or Branch of the British Medical Association for its assistance in defraying expenses incident to the conduct of local disputes falling within the scope of the objects of the fund.

(*c*) By expenditure under direct supervision of the Medico-Political Committee or of a Subcommittee for the purpose of any action which the Medico-Political Committee may deem necessary or advisable for the promotion of the general objects of the fund.

The Emergency Fund is now opened, and contributions will be received by the Medical Secretary of such sums, and at such periods—yearly, quarterly, monthly, or weekly as may be convenient to the donors.

CONTRACT MEDICAL PRACTICE.

Notice as to Districts in which Disputes Exist.

A notice as to places in which disputes exist between members of the medical profession and various organizations for providing contract practice will be found among the advertisements, and medical men who may be thinking of applying for appointments in connexion with clubs or other forms of contract practice are requested to refer to the advertisement on page 87

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

Members are reminded that the Library and Writing Rooms of the Association are fitted up for the accommodation of the members in commodious apartments, at the office of the Association, 429, Strand. The rooms are open from 10 a.m. to 5 p.m. Members can have their letters addressed to them at the office.

☞ *To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.*

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Leinster Branch.—The annual meeting of the Leinster Branch will be held in the Royal College of Physicians, Kildare Street, Dublin, on Saturday, February 3rd, at 4.30 p.m.—Arthur H. White, Honorary Secretary.

Metropolitan Counties Branch: St. Pancras and Islington Division.—The next meeting will be held on Friday, January 19th, at University College Hospital, at 4 p.m., when Dr. Henry Kenwood, Medical Officer of Health of Stoke Newington, will open a discussion on Disinfection in Rooms occupied by the Infectious Sick.—Wynn Westcott, Honorary Secretary.

Metropolitan Counties Branch: Tottenham Division.—A meeting of the Division will be held at the Tottenham Hospital on Friday, January 26th, at 4 p.m. A discussion will be opened on Hospital Out-patients Departments, by Mr. R. F. Tomlin. Visitors are cordially invited.—Fred. Tresilian, Honorary Secretary, White Lodge, Enfield.

Metropolitan Counties Branch: Westminster Division.—A meeting of this Division will be held at 20, Hanover Square, on Thursday, January 18th, at 8.30 p.m. Mr. J. Bland-Sutton will be in the chair. Smoking. Agenda: (1) Minutes. (2) Correspondence. (3) Questions. (4) To receive Dr. Ewart's report on the Representative Meeting held at Leicester. (5) Mr. J. Smith Whitaker (Medical Secretary of the Association) will read a paper on The Association and the London General Practitioner. (6) Dr. Haslip will draw the attention of the meeting to the fact of members of the resident staff of Charing Cross Hospital having left the institution to inspect dead bodies in the vicinity, and he will move a resolution thereon. (7) To elect a Representative to act on the Metropolitan Branch Entertainment Committee. (8) Communications from the Medical Secretary *re* question of canvassing Parliamentary candidates on matters of importance and interest to the profession. (9) Communication from the Medical Secretaries of the Branch *re* the question of fees to be paid to medical men called in by midwives under the new Act. (10) Any other business.—W. Knowsley Sibley, M.D., Honorary Secretary.

South-Eastern Branch: Norwood Division.—A clinical meeting will be held on Thursday, January 11th, at 4 p.m., at the Cottage Hospital, Upper Norwood, Mr. W. Gandy, of Upper Norwood, in the chair. The staff have kindly promised to show cases. Agenda: (1) Minutes of last meeting. (2) To decide when and where the next meeting shall be held, and to nominate a member of the Division to take the chair thereat. Members desirous of exhibiting cases are requested to communicate with the Honorary Secretary at once. The Hospital is in Hermitage Road, ten minutes from Gipsy Hill (L.B. and S.C.R.) and ten minutes from Crystal Palace High Level (S.E. and C.R.).—Henry J. Prangley, Honorary Secretary; Arthur W. Soper, Assistant Honorary Secretary.

South-Western Branch.—The next meeting of this Branch will be held at the Royal Devon and Exeter Hospital, on Wednesday, January 10th, at 3 p.m., the President (Mr. G. Jackson, F.R.C.S., J.P.) in the chair. A Council meeting will be held on the same date and at the same place at 2 p.m. The following communications have already been promised:—Dr. W. Gordon: Advances in our Knowledge of Heart Diseases during the Past Year. Mr. Russell Coombe: (1) Notes of a Case of Ruptured Pyosalpinx with an unusual complication; (2) Notes on a Case of Haemorrhagic Pancreatis. Dr. R. V. Solly: Reports on Some *Post-mortem* Examinations, illustrated by Microscopic Specimens. Dr. Solly will also show Microscopic Slides of Gonococci and Pneumococci. Tea will be provided after the meeting, and gentlemen wishing to join the Branch are requested to communicate with Mr. G. Young Eales, 1, Matlock Terrace, Torquay, Honorary Secretary.

South-Western Branch: Truro Division.—A quarterly meeting of this Division will be held at the Miners' Hospital, Redruth, on Tuesday, January 9th, at 3 p.m. Agenda: (1) To read the minutes of the last meeting. (2) A short discussion on the question of the State Registration of Trained Nurses, to be opened by Dr. Walker, of Mevagissey. (3) Any other business. (4) To consider certain matters to be laid before candidates at the forthcoming election. (5) To arrange deputations for that purpose. Dr. Frank Hichens will read a paper on Remarks on Puerperal Eclampsia, especially as to treatment. The Honorary Medical Staff of the hospital will show cases of interest, on which discussion will be invited. Tea will be provided after the meeting.—Mark R. Taylor, Honorary Secretary.

South Wales and Monmouthshire Branch.—Nominaions for an elective member of the Central Council to fill the vacancy created by the death of Colonel Cresswell, C.B., must e made in writing, on or before January 6th, to Dr. Frank G. Thomas, 69, Walter Road, Swansea.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

DORSET AND WEST HANTS BRANCH:
BOURNEMOUTH DIVISION.

A MEETING of this Division was held in the Bournemouth Medical Society's rooms on Wednesday, December 20th, 1905, Dr. SNOW in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Co-ordination of the Scientific Work of the Association.—It was resolved:

> That co-ordination between the Division and the Bournemouth Medical Society was much to be desired, and the Secretary be instructed to write to the Honorary Secretary of the Society and ask him to bring the views of the Division before the members.

Representatives on General Medical Council.—The question of the election of representatives on the General Medical Council was left to the Branch.

Questions to Parliamentary Candidates.—The Secretary was instructed to submit the questions issued by the Association to the candidates in the three constituencies in the area of the Division.

Divisional Meetings.—A discussion as to whether business matters only should be discussed at Divisional meetings resulted in a unanimous decision that medical work should be encouraged at Divisional meetings.

Next Meeting.—The next meeting was fixed for March.

GLASGOW AND WEST OF SCOTLAND BRANCH:
LANARKSHIRE DIVISION.

A MEETING of this Division was held in the Royal Hotel, Hamilton, on Thursday, December 21st, 1905, at 3.30 p.m., Dr. BRUCE GOFF (Bothwell), Chairman, presiding.

The Medical Profession and Parliamentary Candidates.—The Division first proceeded to deal with the "Memoranda and Questions on Parliamentary Subjects affecting the Medical Profession, submitted for the consideration of Parliamentary Candidates." Considerable difference of opinion prevailed amongst the members of the Division, especially regarding the Medical Acts Amendment Bill, and it was moved by Dr. MACPHERSON, seconded by Dr. CRAWFORD, and unanimously carried:

> That no special committees be appointed meantime on account of the short time elapsing before the election.

Report of Ethical Committee.—The next item was the presentation to the Division by the Ethical Committee of their report and findings on a matter of complaint submitted to them by one of the members. The report having been read by the Secretary, it was moved by Dr. BRUCE GOFF and seconded by Dr. MILLER:

> That the report be approved, and that the case calls for no further expression of opinion from the meeting.

This was put to the meeting, and on a division was carried by a majority.

OXFORD AND READING BRANCH:
OXFORD DIVISION.

AN extraordinary meeting of the Division was held on December 21st, 1905, at the Radcliffe Infirmary, Oxford, Dr. BLOXSOME, Chairman, presiding.

Questions to Parliamentary Candidates.—The purpose of the meeting was to consider the list of questions to be submitted to parliamentary candidates at the next General Election. The SECRETARY read the minutes of the last Divisional Council meeting, at which it was decided to form and send deputations to candidates to discuss the questions submitted to them. Some discussion arose as to whether candidates should be asked to pledge themselves in writing on subjects of which they could only hear one side, but it was finally resolved that they should be requested to forward answers in writing. The questions were then taken in detail, and it was agreed that all of the questions under the ten headings should be submitted, with the following exception:

(*a*) Question I. Under the Medical Acts Amendment Bill. The meeting felt that the profession was not sufficiently organized at the present time to submit this question.

(*b*) Question VII. (Incipient Insanity). The meeting was not sufficiently informed as to the Scottish law.

(*c*) Question VIII. (Habitual Inebriety and Drug Habits). The meeting did not consider such a Bill justifiable under present conditions.

It was further decided not to put the question *re* Security of tenure of public vaccinators.

Special Parliamentary Committee.—Notice was given of the appointment of a special Parliamentary Committee by the Divisional Council; the three members elected were Mr. Drew, Mr. Parker, and Dr. Duigan (Honorary Secretary).

Members Present at Divisional Meetings.—After some further business connected with time limits for members showing cases, reading papers, and taking part in discussions at the general meetings of the Division, Dr. COLLIER proposed the following resolution:

> That the Council be requested to publish the members present at any Divisional meeting.

—Seconded by Mr. THOMPSON, and carried *nem. con.*

☞ *To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.*

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

East Anglian Branch: South Essex Division.—The next meeting will be held at the Victoria Hospital, Southend-on-Sea, on Tuesday, January 16th, at 4 p.m. Business: (1) Minutes of meeting of December 19th, 1905. Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 6,413 births and 5,199 deaths were registered during the week ending Saturday, December 30th, 1905. The annual rate of mortality in these towns, which had been 16.1, 17.0, and 17.8 per 1,000 in the three preceding weeks, declined again to 17.4 per 1,000 in the period under notice. The rates in the several towns ranged from 7.5 in King's Norton, 8.1 in Hornsey, 10.1 in York, 10.7 in Reading and in Walsall, 11.7 in Wallasey, and 11.9 Burton-on-Trent, to 21.5 in Burnley, 22.3 in Newcastle-on-Tyne, 22.4 in Tynemouth, 24.2 in Huddersfield, 24.8 in Preston, 24.9 in Liverpool, 25.4 in Merthyr Tydfil, and 30.6 in Hanley. In London the rate of mortality was 17.8 per 1,000, while in the seventy-five large provincial towns it averaged 17.2 per 1,000. The death-rate from the principal infectious diseases in the seventy-six towns averaged 1.3 per 1,000; in London this rate was equal to 1.6 per 1,000, while among the seventy-five other large towns the rates ranged upwards to 2.1 in Coventry, in Stockport, in Middlesbrough, and in Merthyr Tydfil, 2.4 in Blackburn, in Leeds, and in Newcastle-on-Tyne, 2.6 in Burnley, and 4.1 in Preston. Measles caused a death-rate of 1.2 in Blackburn, 1.7 in Leeds, and 3.6 in Preston; diphtheria of 1.1 in Middlesbrough and 1.5 in West Hartlepool; whooping-cough of 1.2 in Rochdale and in Newcastle-on-Tyne, and 2.6 in Burnley; "fever" of 1.1 in Stockport and 1.2 in Wigan; and diarrhoea of 1.1 in Oldham and in Middlesbrough, and 1.4 in Coventry. The mortality from scarlet fever showed no marked excess in any of the large towns. No fatal case of small-pox was registered in the week under notice either in London or in any of the large provincial towns, and no small-pox patients were under treatment during the week in the Metropolitan Asylums Hospitals. The number of scarlet fever patients in these hospitals and in the London Fever Hospital, which had been 3,888, 3,670, and 3,409 at the end of the three preceding weeks, had risen again to 3,446 on Saturday, December 30th; 295 new cases were admitted during the week, against 355, 341, and 295 in the three preceding weeks.

In seventy-six of the largest English towns, including London, 9,055 births and 5,548 deaths were registered during the week ending Saturday last, January 6th. The annual rate of mortality in these towns, which had been 17.0, 17,8 and 17.4 per 1,000 in the three preceding weeks, rose again to 18.3 per 1,000 last week. The rates in the several towns ranged from 9.0 in Walthamstow and in Rhondda, 9.6 in East Ham, 10.2 in Hornsey, 11.1 in Northampton, 11.2 in Reading, 11.5 in King's Norton, 12.4 in Hastings, and 12.9 in Swansea, to 21.5 in Leeds, 22.5 in Huddersfield, 23.3 in Burnley, 23.7 in Bootle, 23.9 in Liverpool, 24.2 in Smethwick, 24.9 in Bury, and 30.5 in Preston. In London, the rate of mortality was 19.4 per 1,000, while it averaged 17.8 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases in the seventy-six towns averaged 1.5 per 1,000; in London also this death-rate was equal to 1.5 per 1,000, while among the seventy-five large provincial towns the rates ranged upwards to 2.8 in Liverpool and in Merthyr Tydfil, 2.9 in Leeds, 3.1 in Hanley and in Leicester, 3.8 in Aston Manor and in Gateshead, 4.3 in Blackburn, and 5.4 in Preston. Measles caused a death-rate of 1.1 in Willesden, 1.2 in Blackburn, 1.7 in Leeds, 1.9 in Aston Manor, 2.1 in Wolverhampton and in Gateshead, 2.2 in Swansea, and 4.9 in Preston; scarlet fever of 1.0 in Sheffield, 1.1 in Liverpool, and 2.3 in Blackburn; diphtheria of 1.0 in Hull and 1.4 in Merthyr Tydfil; whooping-cough of 1.1 in Salford, 1.3 in Gateshead, 1.5 in Warrington and in Burnley, 1.6 in Stockport, 1.9 in Aston Manor, and 2.0 in Leicester; and diarrhoea of 1.1 in Walsall. The mortality from "fever" showed no marked excess in any of the large towns. No fatal case of small-pox was registered last week either in London or in any other of the large towns, and no small-pox patients were under treatment last week in the Metropolitan Asylums Hospitals. The number of scarlet fever cases in these hospitals and in the London Fever Hospital, which had been 3,670, 3,409, and 3,446 at the end of the three preceding weeks, had declined again to 3,299 at the end of last week; 291 new cases were admitted during the week, against 295 in each of the two preceding weeks.

HEALTH OF SCOTCH TOWNS.

DURING the week ending Saturday, December 30th, 1905, 929 births and 609 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 19.9, 18.2, and 17.4 per 1,000 in the three preceding weeks, rose again to 18.2 per 1,000 in week under notice, and was 0.8 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 15.2 in Paisley and 15.4 in Leith to 19.3 in Greenock and in Aberdeen and 22.9 in Dundee. The death-rate from the principal infectious diseases averaged 1.9 per 1,000, the highest rates being recorded in Dundee and Greenock. The 287 deaths registered in Glasgow included 15 which were referred to measles, 5 to diphtheria, 5 to diarrhoea, 3 to whooping-cough, and 2 to "fever." Three deaths from diarrhoea occurred in Edinburgh; 6 from measles, 2 from diphtheria, 2 from whooping-cough, and 3 from diarrhoea in Dundee; 2 from "fever" in Paisley; 3 from measles and 2 from diphtheria in Greenock.

During the week ending Saturday last, January 6th, 881 births and 680 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 18.2, 17.4 and 18.2 per 1,000 in the three preceding weeks, further rose to 19.8 per 1,000 last week, and was 1.5 per 1,000 above the mean rate during the same period in the seventy-six large English towns. The rates in the eight Scotch towns ranged from 13.2 in Paisley, and 16.5 in Aberdeen to 22.7 in Leith, and 26.2 in Dundee. The death-rate from the principal infectious diseases averaged 2.3 per 1,000 in these towns, the highest rates being recorded in Dundee and Greenock. The 335 deaths registered in Glasgow included 18 which were referred to measles, 6 to diphtheria, 2 to whooping-cough, and 11 to diarrhoea. Two fatal cases of diarrhoea were recorded in Edinburgh. Eight deaths from measles, 8 from whooping-cough, 4 from diarrhoea and 3 from diphtheria were registered in Dundee; 5 from measles in Greenock, and 2 from scarlet fever in Leith.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, December 23rd, 1905, 423 births and 358 deaths were registered in six of the principal Irish towns, as against 506 births and 334 deaths in the preceding period. The annual death-rate in these towns, which had been 19.9, 18.6, and 17.4 per 1,000 in the three preceding weeks, fell to 16.5 per 1,000 in the week under notice, this figure being 1.3 per 1,000 lower than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 7.8 in Waterford and 13.6 in Londonderry to 21.2 in Belfast and 22.3 in Dublin. The zymotic death-rate during the same period and in the same six Irish towns averaged 0.6 per 1,000, or 0.1 per 1,000 lower than during the preceding period, the highest figure (1.6) being recorded in Belfast, while Cork, Limerick, Londonderry, and Waterford registered no deaths under this heading at all.

During the week ending Saturday, December 30th, 1905, 452 births and 309 deaths were registered in six of the principal Irish towns, as against 423 births and 358 deaths in the preceding period. The annual death-rate in these towns, which had been 18.6, 17.4, and 16.5 per 1,000 in the three preceding weeks, fell to 15.3 per 1,000 in the week under notice, this figure being 2.1 per 1,000 lower than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 7.8 in Waterford and 11.2 in Londonderry to 18.0 in Belfast and 20.5 in Cork. The zymotic death-rate during the same period and in the same six Irish towns averaged 0.9 per 1,000, or 0.3 per 1,000 higher than during the preceding period, the highest figure, 2.1, being recorded in Cork, while Londonderry and Limerick registered no deaths under this heading at all.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

ASHTON-UNDER-LYNE UNION.—Junior Resident Medical Officer for the Workhouse. Salary, £100 per annum.

BIRMINGHAM AND MIDLAND EAR AND THROAT DEPARTMENT.—House-Surgeon. Salary at the rate of £70 per annum.

BIRMINGHAM: GENERAL HOSPITAL.—(1) House-Surgeon. (2) House-Surgeon for Special Departments. Salary £50 each.

BRIGHTON: ROYAL ALEXANDRA HOSPITAL FOR SICK CHILDREN.—(1) Physician in charge of Skin Department. (2) Dental Surgeon.

BURNLEY COUNTY BOROUGH.—Medical Officer of Health. Salary, £500 per annum.

CHELTENHAM GENERAL HOSPITAL.—Junior House-Surgeons. Salary, £60 per annum.

CHESTER GENERAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.

CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL AND DISPENSARY.—Junior House-Surgeon. Salary, £50 per annum.

GLASGOW CORPORATION.—Lady Medical Assistant. Salary, £160 per annum.

GREAT NORTHERN CENTRAL HOSPITAL, Holloway.—Two Anaesthetists. Honorarium 10 guineas per annum.

GREAT YARMOUTH HOSPITAL.—House-Surgeon. Salary, £90 per annum. £10 a year extra allowed for lectures to probationer nurses.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton.—Resident House-Physicians. Honorarium, £25 for six months.

SLINGTON: PARISH OF ST. MARY.—Medical Officer and Public Vaccinator for No. 9 District. Salary, £100 per annum and fees.

KING'S COLLEGE.—Sambrooke Surgical Registrar.

LIVERPOOL DISPENSARIES.—Assistant Surgeon. Salary, £100 per annum.

MIDDLESEX COUNTY ASYLUM, Napsbury, near St. Albans.—Assistant Medical Officer. Salary, £160 per annum.

MIDDLESEX HOSPITAL.—Casualty Medical Officer for six months. Salary, £50 per annum.

NATIONAL DENTAL HOSPITAL, Great Portland Street, W.—Deputy Anaesthetist.

NORTHAMPTON GENERAL HOSPITAL.—House-Surgeon. Salary, £90 per annum, increasing to £100.

ST. PANCRAS PARISH.—Junior Assistant Medical Superintendent of the North Infirmary, Dartmouth Park Hill. Salary, £75 per annum.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 3s. 6d., which sum should be forwarded in post-office orders or stamps with the notice not later than Wednesday morning, in order to insure insertion in the current issue.

BIRTH.

BOYD.—At Pretoria, Transvaal, on January 7th, the wife of Dr. J. J. Boyd, M.O.H. Pretoria, of a daughter.

MARRIAGE.

KNIGHT—CHADBORN.—On December 9th, 1905, at St. Stephen's, Durban, Natal, by the Rev. C. S. Mills, Wilfred Edwyne Knight, M.B., L.R.C.P.E., son of Charles Frederick Knight, M.D., of Mount Charles, Portobello, and Chambers Street, Edinburgh, to Evelyn Louisa, fourth daughter of the late John Chadborn, of Barton House, Gloucester. No cards.

DEATH.

WILLIAMSON.—On December 22nd, 1905, at Larnaca, Cyprus, Marion Helen, infant daughter of George A. Williamson, M.A., M.D.

DIARY FOR NEXT WEEK.

TUESDAY.

CHELSEA CLINICAL SOCIETY, Chelsea Dispensary, Manor Street, Chelsea, S.W., 8.30 p.m.—Communications: Dr. Vincent Dickinson on Recurrent Vomiting with Acetonaemia in Children; Dr. Eric Pritchard on The Training of Nerve Centres in Children.

PATHOLOGICAL SOCIETY, 20, Hanover Square, 8.30 p.m. Communications: (1) A. E. Wright and S. R. Reid, Notes on Two Cases of Coli-cystitis Treated by Inoculations of *B. coli*; (2) A. E. Wright, A Note on Phagocytosis of Red Blood Corpuscles; (3) L. Dudgeon, On a New Method of Distinguishing *B. typhi* and *B. coli*; (4) J. Freeman, On the Relationship of the Temperature to the Opsonic Curve in Acute Anthrax Infection.

THURSDAY.

WESTMINSTER HOSPITAL MEDICAL SCHOOL, Caxton Street, S.W., 5 p.m.—Lecture on Applied Physiology by Dr. Bertram Abrahams.

FRIDAY.

EPIDEMIOLOGICAL SOCIETY, 11, Chandos Street, W., 8.30 p.m.—Paper: Glanders in the Horse and in Man, by Wm. Hunting, F.R.C.V.S.

SOCIETY FOR THE STUDY OF DISEASE IN CHILDREN, 11, Chandos Street, W., 5.30 p.m.—Clinical Meeting: Cases and Specimens will be shown by Drs. R. Hutchison, C. O. Hawthorne, C. W. Chapman, T. G. Emanuel, L. Guthrie, E. Cautley, and Mr. N. Bishop Harman. Short papers by Drs. F. J. Poynton and Percy Lewis.

POST-GRADUATE COURSES AND LECTURES.

CHARING CROSS HOSPITAL.—Thursday, 4 p.m., Surgical Cases.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street, W.—The following clinical demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin; Tuesday, Medical: Wednesday, Surgical; Thursday, Surgical; Friday, Eye. Lectures at 5.15 p.m. each day will be given as follows: Monday, The Management of the Breasts and Infant during the Early Days of the Puerperium; Tuesday, Hemiplegia; Wednesday, How to Certify an Insane Patient; Thursday, Some Problems in Morbid Physiology.

MOUNT VERNON HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Central Out-patient Department, 7, Fitzroy Square, W.—Thursday 5 p.m., Modern Methods of Diagnosis and Treatment of Pulmonary Tuberculosis.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, Bloomsbury, W.C.—Friday, 3.30 p.m., Hereditary and Familial Maladies.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Tottenham Hospital, N.—The following are the arrangements for next week: Tuesday, 3.30 p.m. (at Colney Hatch Asylum, New Southgate), Demonstration on States of Mental Exaltation; Friday, 4.30 p.m., School Life as a Cause of Eye Disease.

SAMARITAN FREE HOSPITAL FOR WOMEN, Marylebone Road, N.W., Thursday, 3 p.m.—On Pain associated with Uterine Fibroid Disease.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.—The following arrangements have been made for next week, at 5 p.m. each day: Monday, Some Common Diseases of the Pharynx and Larynx, Treatment; Tuesday, Anaemia; Wednesday, Gynaecology; Thursday, Practical Surgery; Friday, Anaemia.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journal is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

BIRMINGHAM BRANCH:

CENTRAL DIVISION.

A SPECIAL and general meeting of the Division was held at the Medical Institute on December 12th, 1905, at 4 p.m., Mr. HASLAM in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read, confirmed, and signed.

Co-ordination of Scientific Work.—The following report of the Executive Committee on the Co-ordination of the Scientific Work of the Association, its Branches, and Divisions, was read by the HONORARY SECRETARY: "Your Committee begs to report to the Division that it has considered the question referred to it, and recommends as follows: That the report of the Science Co-ordination Committee be approved in its general sense. With regard to the questions of Library and Scientific Section, your Committee would point out that these advantages are already provided within the area of the Division by the Medical Institute and the Pathological and Clinical Section of the Branch. We support the suggestion that all local medical societies should, whenever feasible, be amalgamated into one body." It was proposed by Mr. NEAL, and seconded by Mr. MILLIGAN, and carried *nem. con.*, that the report be adopted.

Ambulance Work.—The report on ambulance work was read, and its adoption proposed by the HONORARY SECRETARY, seconded by Mr. OAKES. It was as follows: "Your Committee has considered the Medico-Political Committee's report on the relations of the medical profession to ambulance work, together with the approval given to that report by a resolution of the Annual Representative Meeting at Leicester. We recommend that a circular, stating the decision of this Division, that ambulance work should be treated as a matter of business and not philanthropy, and also the scale of fees, be sent to each member of the profession within the area of the Division. The decision of the Division as to the rate of payment is as follows: (1) The fee for each lecture should be £1 1s.; (2) the fee for each examination should be £1 1s. as a minimum; if more than twenty-one members, then 1s. per head; (3) the minimum fee for judging ambulance competitions should be £3 3s. Dr. POOLER moved as a rider that intimation be given also to the officials of the various societies which promoted the lectures. The rider was accepted, and the report, with the rider, was put to the meeting and carried.

Direct Representation on General Medical Council.—The CHAIRMAN then explained the process of nomination of Association candidates for election as direct representatives on the General Medical Council, and nominated, on behalf of the Executive Committee, Dr. Langley Browne, of West Bromwich, the Chairman of Council of the Association. The nomination was seconded by Mr. HALLWRIGHT, and supported by several members, put, and carried *nem. con.* No other nominations were received.

The Division and Parliamentary Candidates.—The HON. SECRETARY then proposed that the Executive Committee should be empowered to act for the Division in putting questions to candidates for Parliament at the forthcoming election. This was seconded by Mr. OAKES, and carried with one dissentient.

Contract Medical Practice.—The recommendations of the Medico-Political Committee with regard to Contract Practice were then considered. The HON. SECRETARY explained that the report on Contract Practice had been sent to every registered medical practitioner, and invitations to attend had been sent to all such residing in the area of the Division, in consequence of which there were present three non-members of the Division. Recommendation I, which was as follows:

> That the conditions upon which the medical practitioners in any district undertake Contract Practice should be prescribed by arrangement among themselves,

was carried *nem. con.*, having been proposed by Mr. MORRISON and seconded by the HON. SECRETARY. Recommendation II: That the control of the profession over the conditions of Contract Practice can only be effectually exercised under the conditions of a Public Medical Service, namely:

- (*a*) That the general control be in the hands of some organized local body representative of the profession, such as a Division of the British Medical Association.
- (*b*) That it be open to every medical practitioner in the district to take part in the work, should he desire to do so, and conform to the regulations of the profession.
- (*c*) That the details of administration be under the direct control of a purely Medical Committee representing both those who do and those who do not take part in contract work.

This was proposed by Mr. MILLIGAN and seconded by Mr. OAKES, and when put to the meeting, was carried. Recommendation III: That whenever, in the opinion of the local medical profession, the immediate institution of a public medical service is for any reason impracticable, the three main principles above stated should be carried into effect so far as possible. That is to say:—

(a) That, with regard to the conditions upon which they will accept Contract Practice, the medical practitioners of each district should collectively and individually enter into an agreement, in which the following matters are specifically prescribed:—

(i.) Rates of remuneration.

(ii.) Conditions of admission to attendance under contracts, including provisions with respect to the economic position, age, and health of candidates.

(iii.) Definitions of the services to be rendered under the contract.

(iv.) Where appointments are made by non-medical bodies, the forms of contract, tenure of office, and representation of the medical profession in the management of the medical service.

(b) That practitioners should cease to hold separate appointments or to carry on private clubs, and principle of distribution of Contract Practice among all practitioners in the district who desire to participate should be carried into effect.

(c) That organized forms of Contract Practice at present under the control of Non-medical Committees should gradually be brought under direct medical control.

This recommendation, having been put to the meeting, it was proposed by Mr. Neal and seconded by Mr. Hallwright, as an amendment, that clause (b) should be omitted. The amendment was carried. Recommendation IV: That agreements among local members of the profession with respect to contract practice should be effected through the agency of organized local bodies representative of the profession, the rulers of which should make agreements binding upon the members. This was carried unanimously. Recommendation V, namely: That the professional organizations referred to should in each case be a Division of the British Medical Association, was proposed for adoption by Mr. Whichello, seconded by the Honorary Secretary. Whereupon Mr. Neal moved its omission, and this was seconded by Mr. Hallwright, and its omission was carried. Recommendation VI: That to render professional co-operation as complete as possible the Division should endeavour to secure the inclusion of every practitioner in their membership, and should make their decisions binding by adopting rules such as have been suggested by the Ethical Committee. This recommendation was proposed by Mr. Milligan and seconded by Mr. Hallwright, whereupon Mr. Neal moved and Dr. Wilson seconded, that the word "Divisions" should read "Organizations," and all the words after "membership" should be omitted. The amendment was lost, and Clause VI, being put, was carried. Recommendation VII: That the Divisions be urged to establish a Public Medical Service in every area in which Contract Practice is believed by them to be necessary. This was carried *nem. con.* The meeting lasted an hour and three-quarters.

METROPOLITAN COUNTIES BRANCH:

HAMPSTEAD DIVISION.

A meeting of this Division was held on Friday, January 12th, at 4.45 p.m., at St. Peter's Hall, Belsize Square, Mr. F. R. Humphreys in the chair.

Minutes.—The minutes of the meeting of November 10th, 1905, were read and confirmed, and the minutes of December 16th, 1905, were taken as read. Arising out of the minutes of November 10th, 1905, Dr. Glover asked if a letter had not been received from Dr. Cook with regard to the proposed conference. The Honorary Secretary replied that the letter had been received, but could not be discussed at this meeting. Dr. Glover also asked whether the fifth resolution referred to in the last paragraph of the minutes of November 10th had not been "withdrawn" rather than "referred back." Mr. Armit explained that the phrase "referred back" was correct.

Letters of Apology.—Letters of regret were received from Dr. Ford Anderson and Dr. Pidcock for inability to be present.

Branch Entertainment Committee.—The Honorary Secretary explained that it was necessary to elect a representative to the Branch Entertainment Committee. Mr. R. H. Wellington, Vice-Chairman, had been nominated by the Committee. Mr. Wellington was then unanimously elected.

Diagnosis of Uterine Cancer.—The Chairman then called upon Dr. F. J. McCann to read his paper on the diagnosis of cancer of the womb. Dr. McCann then delivered a most instructive lecture, freely illustrated with exceptionally fine lantern slides of the various morbid conditions commonly found in early and advanced cases of uterine cancer, and explained how an early diagnosis could be made. A discussion followed, after which the cordial thanks of the meeting were conveyed to Dr. McCann for his address, and regret was expressed that more members were not present to hear it. Dr. McCann in reply, thanked Mr. Cunnington for kindly working the lantern.

The Division and Parliamentary Candidates.—Before the meeting broke up Mr. Armit stated that, at the request of the Committee and as a constituent of the Harrow (Parliamentary) Division of Middlesex, he had sought an interview with the two candidates for election (Messrs. Peel and Gibb). The Hon. W. Peel had spoken in general favour of the various measures of medical interest brought to his notice, but had declined to put anything on paper. Mr. J. Gibb had not answered his letter, so that he had sent a second letter to point out to him the possible effect of this want of attention on the medical section of the constituency.

SOUTHERN BRANCH:

WINCHESTER DIVISION.

A general meeting of this Division was held at the Royal Hants County Hospital, Winchester, on January 10th, at 3 p.m., Dr. Livingstone, Chairman, presiding.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

The late Mr. Langdon.—Dr. Harman proposed the following motion to be entered on the minutes:

> This Division, with deepest sorrow, record the very great and irreparable loss they have sustained by the death of their Chairman, Mr. T. C. Langdon, F.R.C.S., one of the founders of our Branch, and the originator and moving spirit of this Winchester Division; whose energetic and invaluable Secretary and Treasurer he was for twenty years. Among his many and onerous duties all this time Mr. Langdon always placed the British Medical Association in the forefront. He set a high example by his unswerving, upright, and unselfish professional conduct, and he perseveringly laboured to induce the medical fraternity to discard little differences and narrow views, and to join and work together in this great and beneficial Association for the honour and welfare of our profession as a whole. In every way he has won the highest esteem and regard of all those he came in contact with, especially the members of this Branch. They also desire to forward their collective expression of deepest sympathy and condolence to Mrs. Langdon and family in their great and inexpressible loss.

—This was seconded by Dr. Livingstone, and carried unanimously by the members standing.

Contract Practice.—It was proposed by Dr. Ritchie, seconded by Dr. Browne, and carried:

> That the proposals laid down in the Supplements of August 5th and July 22nd, 1905, be adopted.

Direct Representatives on General Medical Council.—It was proposed by Dr. Browne, seconded by Dr. Harman, and carried:

> That the proposals laid down in the Supplement of October 7th, 1905 (Medico-Political Committee), be adopted, and that Dr. Bullar (Southampton) and Dr. Straton (Wilton) be the candidates to stand as Direct Representatives on the General Medical Council on conditions laid down in the said Supplement.

Letters were read from Dr. Bullar (Southampton), and Dr. Straton (Wilton), accepting the invitation of the Division to stand as Direct Representatives on the General Medical Council on conditions laid down in the Supplement of October 7th, 1905.

The Division and Parliamentary Candidates.—It was proposed by Dr. Livingstone, seconded by Dr. England, and carried:

> That the proposals laid down in Supplement, November 18th, 1905, relating to Parliamentary Candidates, be adopted.

Co-ordination of Scientific Work.—It was proposed by Dr. Harman, seconded by Dr. Browne, and carried:

> That the proposals laid down in Supplement, September 30th, relating to the scientific work of the Association, be adopted and that the Secretary should report what arrangements can be made with the existing library at the Royal Hants County Hospital.

Annual Report.—The SECRETARY read the annual report for 1905, which is as follows:—

Three general meetings of the Division were held in 1905: One on April 19th at St. Patrick's Hall, Winchester; one on May 31st at Royal Hants County Hospital, Winchester; one on October 25th at Westbrooke House, Alton, Hants.

Three meetings of the Executive Committee were held n 1905: One on May 3rd at St. Patrick's Hall, Winchester; one on September 27th at St. Patrick's Hall, Winchester; one on November 30th at St. Patrick's Hall, Winchester.

The following new members have joined the Division: Dr. Ahrens, 79, Worthing Street, Basingstoke; Dr. F. J. Child, Kinellan, Winchester; Dr. William Kay, Bentley, Hants; Dr. L. W. Oliver, Ropley, Alresford, Hants; Dr. G. W. Wickham, 27, Southgate Street, Winchester; Dr. E. J. H. Rudge, Shawford, Winchester; Lieutenant Hoar, R.A.M.C., Princess Louise Hospital, Alton; Dr. S. Child, Royal Hants County Hospital; Dr. H. Scoones, Royal Hants County Hospital.

The following new members have removed into the Division: Captain Babington, R.A.M.C., Aldershot; Dr. F. W. Waters, Cove, Farnborough.

The following member has removed into the Division: Dr. W. B. Barclay (Mayfield, Aldershot).

The following deaths occurred in the Division: T. C. Langdon, F.R.C.S., Chairman; Dr. T. H. Griffiths (Preston andover, Hants); Lieutenant-Colonel Mulvany, R.A.M.C. Princess Louise Hospital, Alton).

Obituary notice and biography of Mr. T. C. Langdon was sent to the BRITISH MEDICAL JOURNAL, with photoraph, and appeared in the JOURNAL of January 7th, 1906.

At the annual meeting held May 31st, 1905, the various fficers appointed for the ensuing year were as follows: *Chairman*, T. C. Langdon, F.R.C.S.; *Vice-Chairman*, J. L. ivingstone, M.D. (Hursley); *Honorary Secretary and Treasurer*, H. J. Godwin, M.B., F.R.C.S. (35, Southgate treet, Winchester); *Representative for Representative Meeting*, D. Browne (Winchester); *Representatives on Branch ouncil*, J. F. Briscoe, G. F. A. England, F. W. Underhill; *Executive Committee*, J. F. Briscoe, G. F. A. England, W. M. Harman, T. C. Langdon, J. L. Livingstone, W. A. S. oyds, Thomas Wright, F. W. Underhill, H. J. Godwin.

Mr. T. C. Langdon resigned the post of Honorary ecretary and Treasurer at the commencement of the year. r. Langdon had held the post for upwards of twenty ears.

The following resolution was carried unanimously, and rdered to be entered on the minutes:

> The members of the Winchester Division of the British Medical Association having learnt with regret that the Honorary Secretary and Treasurer (Mr. T. C. Langdon) has determined to resign his office, desire to record their grateful thanks to Mr. Langdon for the valuable services he has rendered to the Division during the past twenty years, and trust that he may still continue to maintain his interest in the welfare of the profession in this neighbourhood.

Presentation to Mr. T. C. Langdon.—At the annual eeting, May 31st, 1905, a silver inkstand was presented Mr. T. C. Langdon, with the following inscription graved on it:

> Presented to T. C. Langdon, Esq., F.R.C.S., by the members of the Winchester Division of the British Medical Association in recognition of the valuable services he has rendered as Honorary Secretary and Treasurer for a period of twenty years, May 31st, 1905.

he following members subscribed to the Langdon testimonial: Drs. Harman, Loveless, Bevan, Ritchie, Browne, iscoe, James, Applebe, Bullar, England, MacNalty, vingstone, Curtis, Scott, Price, Wace, Jollye, Royds, aton, Allen, Colonel Moore, R.A.M.C., Godwin.

Matters referred to the Divisions during the year 1905 re considered at the meetings and the results recorded the minutes.

At the annual meeting, May 31st, 1905, the following eration to Rule 8*c* was made. The old rule read as lows:

> To arrange the date, place, and frequency of holding ordinary meetings.

e rule now reads as follows:

> To arrange the date, place, and frequency of holding ordinary meetings, *including the annual meeting.*

The following new rule was made at the annual meet-, May 31st, 1905:

> The time allowed for reading papers at the meetings is fifteen minutes, and every subsequent speaker is limited to five minutes.

The following papers have been read before the meetings during the year 1905: Mr. Bullar: On a Scheme for the Improvement and Organization of Contract Practice. Mr. Briscoe: On the Management of the Insane. Dr. Bevan: On a Case of Cirrhosis of the Liver, with Remarks on Causation and Treatment. Dr. Williams: On Cases of Addison's Disease. Dr. Harman: On Membranous Colitis. Mr. Godwin: On Prostatectomy. Captain Irvine, R.A.M.C.: On Self-Inflicted Wound of Larynx. Dr. Livingstone: On Belladonna Poisoning. Mr. Godwin: On Anthrax.

The following cases were shown at the meetings: (1) Tubercle of Lung; (2) Nephritis; (3) Aphasia; (4) Congenital Dislocation of Both Hip-joints; (5) Aneurysm of Abdominal Aorta; (6) Carcinoma of Larynx.

The year 1905 is memorable for the first time on record in which a general meeting of the Division has been held outside Winchester. The autumn meeting was held at Westbrooke House, Alton, by kind invitation of Dr. Briscoe. The meeting was an entire success, owing to the energies of Dr. Briscoe, and a vote of thanks to Dr. Briscoe was recorded on the minutes. It is now hoped that meetings will be held annually in various parts of the Division.

Financial Statement.—The following is the statement for the year 1905:

Receipts.	£	s.	d.	Expenditure.	£	s.	d.
Balance in hand from 1904	2	4	1	Printing and stationery	3	17	2
Grant for current expenses for the year ...	6	18	0	Hire of room and teas ...	1	17	9
				Annual subscription to B.M.A.	1	5	0
				Stamps	1	4	7
					£8	4	6
				Balance from 1905	0	17	7
	£9	2	1		£9	2	1

Communications.—Dr. BRISCOE (Alton) read a paper on professional advertisements, and an interesting discussion followed in which all the members took part.—Dr. THOMPSON read notes on an Obscure Case of Syphilis. The following members took part in the discussion: Drs. LIVINGSTONE, RITCHIE, CHILD, BROWNE, HARMAN, GODWIN, ROYDS.

Scale of Fees.—The following resolution was proposed by Dr. LIVINGSTONE, seconded by Dr. BRISCOE, and carried:

> That the Executive Committee do draw up a scale of fees for the guidance of members.

SOUTH-WESTERN BRANCH:

TRURO DIVISION.

A MEETING of this Division was held at the Miners' Hospital, Redruth, on Tuesday, January 9th, at 3 p.m.

State Registration of Nurses.—A resolution in favour of the State registration of trained nurses was passed.

The Division and Parliamentary Candidates.—It was decided that the questions to parliamentary candidates should be sent by post, it being impossible to arrange deputations satisfactorily.

Divisional Representatives and Branch Meetings.—It was resolved to suggest to the Branch that representatives of Divisions, when attending Branch meetings, be paid first-class return fares.

Indecent Advertisements.—A resolution in favour of sending the questions on indecent advertisements, etc., to parliamentary candidates was lost, the meeting deciding that such matters were better left to the Home Secretary.

Paper.—Dr. FRANK HICHENS then read a paper on puerperal eclampsia, and considerable discussion followed.

Demonstration of Cases in Hospital.—The Honorary Staff then took the members round the wards and showed cases of interest.

Tea.—Tea was then kindly provided by the matron and staff, to whom a vote of thanks was passed.

Next Meeting.—It was decided that the next meeting be held at Penzance.

YORKSHIRE BRANCH:

BRADFORD DIVISION.

A MEETING of this Division was held at the Eye and Ear Hospital, Bradford, on Tuesday, January 9th, at 8.30 p.m. Dr. MITCHELL, Chairman, presided.

The Division and Parliamentary Candidates.—Dr. Metcalfe reported that a subcommittee had interviewed the candidates for parliamentary election in the city, and they were generally in favour of the memorandum and questions submitted by the British Medical Association.

Contract Medical Practice.—The conclusions and recommendations of the Medico-Political Committee on Contract Practice were read and discussed. As any action determined on in Bradford could only be carried out by the unanimity of the whole of the profession in the Division, the following resolution was moved by the Chairman, seconded by Dr. Munro, and carried unanimously:

> That a meeting of the whole of the profession in the Bradford Division be called to consider the question, and that a copy of the conclusions and recommendations be sent to every medical practitioner.

Co-ordination of Scientific Work.—The report of the Science Co-ordination Committee was read and considered. On the proposition of Mr. Basil Hall, seconded by Dr. Little, it was agreed that the Division approved of the conclusions of the Committee. The meeting then terminated.

PAYMENTS BY CORONERS TO PATHOLOGISTS.

Mr. Cockerton, the District Auditor appointed by the Local Government Board to audit the accounts of the London County Council, has communicated to the British Medical Association in the following letter his decision in the matter of the objections of the Association to certain payments made by the London County Council to Mr. Troutbeck in respect of fees to a pathologist. The arguments in the case were reported in the Supplement to the British Medical Journal of November 4th, 1905, page 264, and December 2nd, 1905, page 312.

The Auditor has also promised to furnish the Association as soon as possible with a statement of the reasons for his decision. An appeal can be made from the District Auditor's decision at any time within six months.

11th January, 1906. 1, Pump Court, Temple, E.C.

Sir,—I have to inform you that I have carefully considered the objections of the British Medical Association and other ratepayers to certain payments made by the London County Council to Mr. John Troutbeck, one of the Coroners of the County of London.

These payments were made to the Coroner to reimburse him for fees paid to Dr. Louis Freyberger in respect of *post-mortem* examinations performed by direction of the Coroner.

The charges to which objection has been made have been classed under the following heads:

(*a*) Cases in which the medical man in attendance on the deceased before his death gave evidence before the Coroner, but was not directed to make any *post-mortem* examination.

(*b*) Cases in which the medical man in attendance on the disease during lifetime was neither summoned as a witness nor gave any evidence at all.

(*c*) Cases in which no medical man was engaged in attendance on the deceased either before or at or immediately after his death and in which the Coroner did not summon a medical practitioner in actual practice in or near the place where the death happened.

(*d*) Cases in which a medical man was requested to make a *post-mortem* examination and to give evidence, but although the Jury made no application under Section xxi of the Coroners Act, 1887, Dr. Freyberger was engaged to assist at the *post-mortem* examination.

The arguments on behalf of the objectors together with those in support of the payment by the London County Council were heard by me on two separate occasions and after reviewing the whole of the facts of the case and carefully considering the contentions on each side, I have come to the conclusion that I am bound to allow the whole of the payments in question in the accounts of the London County Council and I hereby decide and determine accordingly.

Whilst arriving at this decision, I desire to express my sympathy with those Members of the Medical Profession who are affected by Mr. Troutbeck's general mode of procedure, and I propose to refer to the matter in the Report which I shall make to the Council at the close of th Audit.

If requested to do so by any party interested in th matter, I shall be, of course, quite ready to enter a statement in writing for the reasons of my decision in th proper book of account in conformity with the requirements of the Public Health Act, 1875, which is mad applicable by the Local Government Act, 1888.

I am, Sir,
Yours faithfully,
T. Barclay Cockerton,
District Auditor.

Dr. Smith Whitaker,
Medical Secretary,
British Medical Association,
429, Strand, W.C.

To ensure the insertion of notices in this column the must be received at the Central Offices of the Associatio not later than the first post on Tuesday.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELI

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

FLEET-SURGEON J. LOWNEY has been placed on the retired list, at his own request, January 12th. He was appointed Surgeon-Major, August 20th, 1885, and was promoted to be Fleet-Surgeon, August 20th, 1901.

The following appointments have been made at the Admiralty: **WILLIAM J. COLBORNE**, Fleet Surgeon, to the *President*, for three months' hospital course, January 22nd; **ROBERT L. DICKINSON**, Surgeon, to the *President*, for three months' hospital course, January 11th; **SIDNEY ROACH**, Staff Surgeon, to the *Cormorant*, for Ascension, January 12th; **AUGUST J. WERNET**, M.B., Surgeon, to the *Cambridge*, January 12th; **FRANCIS E. MCCUNE**, M.B., Surgeon, to the *Berwick*, January 12th; **GEORGE WILSON**, Fleet Surgeon, to the *Nelson*, January 30th; **THOMAS AUSTEN**, Fleet Surgeon, and **FRANCIS F. LOBB**, Surgeon, to the *Albemarle*, January 30th; **GEORGE A. WATERS**, Fleet Surgeon, to the *Ramillies*, January 30th; **THOMAS W. PHILLIPS**, Staff Surgeon, to the *Iphigenia*, January 30th; **JOHN MACDONALD**, Surgeon, to the *Ringdove*, on commissioning, January 30th; **LIONEL C. E. MURPHY**, Surgeon, to the *Vivid*, additional, January 30th; **ALEXANDER C. W. NEWPORT**, Surgeon, to the *Victory*, for disposal, January 13th.

ARMY MEDICAL STAFF.

COLONEL W. B. SLAUGHTER, from the Royal Army Medical Corps, is promoted to be Surgeon-General, vice W. F. Burnett, retired, June 21st, 1905. Surgeon-General Slaughter entered the service as Assistant Surgeon, March 30th, 1872; became Surgeon, March 1st, 1873; Surgeon-Major, March 30th, 1884; was granted the rank of Lieutenant-Colonel, March 30th, 1892; made Brigade-Surgeon-Lieutenant-Colonel, July 6th, 1896; and Colonel, April 1st, 1902. He served in the Afghan war of 1878-80 (medal), and in the campaign on the North-West Frontier of India in 1897-8 (medal with clasp).

Colonel W. S. **PRATT**, M.B., from the Royal Army Medical Corps, is also promoted to be Surgeon-General, vice J. A. Clery, C.B., M.B., placed on temporary half pay, December 29th, 1905. Surgeon-General Pratt was appointed Surgeon, March 31st, 1874; Surgeon-Major, June 15th, 1885; granted the rank of Lieutenant-Colonel, September 30th, 1893; made Brigade-Surgeon-Lieutenant-Colonel, July 9th, 1896; and Colonel, April 1st, 1902. Surgeon-General Pratt was Assistant Surgeon with the Armée du Rhin, under Marshal Bazaine, in the Franco-German war of 1870-1, and was at the battles of Gravelotte and St. Privat; he was driven into Metz with the French army, and remained during the siege and until the surrender of the fortress from starvation. He was also with the Nile Expedition in 1884-5, was mentioned in dispatches, promoted to be Surgeon-Major, and received the medal with clasp, and the Khedive's bronze star.

Surgeon-General J. A. **CLERY**, M.D., C.B., is placed on temporary half pay on account of ill health, December 29th, 1905. He was appointed Assistant-Surgeon, April 1st, 1871; Surgeon, March 1st, 1873; Surgeon-Major, April 1st, 1883; granted the rank of Lieutenant-Colonel, April 1st, 1891; made Brigade-Surgeon-Lieutenant-Colonel, March 10th, 1895; Surgeon-Colonel, March 13th, 1899; and Surgeon-General, May 23rd, 1902. His war record includes: Soudan Expedition, 1884-5, in charge of Abu Dom Field Hospital (medal with clasp, and Khedive's bronze star); Nile Expedition, 1898 (mentioned in dispatches, British and Egyptian medals); South African war, 1899-1902, as a Principal Medical Officer on the Lines of Communication, including the relief of Ladysmith and operations in the Transvaal, the Orange River Colony, and on the Zululand Frontier of Natal (several times mentioned in dispatches, Queen's medal with six clasps, King's medal with two clasps, and appointed C.B.).

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT-COLONEL C. SEYMOUR, M.B., is promoted to be Colonel, vice W. B. Slaughter, promoted, June 21st, 1905. Colonel Seymour was appointed Surgeon, August 4th, 1878; Surgeon-Major, August 4th, 1890; and Lieutenant-Colonel, August 4th, 1898. He was in the Soudan Expedition in 1885 (medal with clasp, and Khedive's bronze star), and with the Soudan Frontier Field Force in 1885-6, including the action of Giniss. He was appointed Physician and Surgeon at Chelsea Hospital, June 3rd, 1904. He retains this appointment.

Lieutenant-Colonel G. W. **ROBINSON** is also promoted to be Colonel, vice C. Seymour, M.B., seconded, June 21st, 1905. Colonel Robinson's previous commissions are thus dated: Surgeon, March 6th, 1880; Surgeon-Major, March 6th, 1892; and Lieutenant-Colonel, November 16th, 1898. He was with the Momeik Column in the Burmese campaign in 1891 (medal with clasp); he was also in the Nile Expedition in 1898, including the battle of Khartoum (mentioned in dispatches, promoted to be Lieutenant-Colonel. British medal, and Egyptian medal with clasp).

Lieutenant-Colonel A. W. P. **INMAN**, M.B., also, is promoted to be Colonel, *vice* W. E. Webb, M.D., retired, July 22nd, 1905. Colonel Inman joined the department as Surgeon, March 6th, 1880; was made Surgeon-Major, March 6th, 1892; and Lieutenant-Colonel, March 6th, 1900. He has no war record.

Lieutenant-Colonel T. M. **CORKER**, M.D., is promoted to be Colonel, *vice* G. A. Hughes, M.B., D.S.O., retired, August 26th, 1905. Colonel Corker's previous commissions are dated: Surgeon, March 6th, 1880; Surgeon-Major, March 6th, 1892; Lieutenant-Colonel, March 6th, 1900. He was in the North-West Frontier of India campaign in 1897-8 with the Mohmand Field and Tirah Expeditionary Forces, was mentioned in dispatches, and received a medal with two clasps.

Lieutenant-Colonel C. A. **WEBB** is made Colonel, *vice* C. H. Swayne, D.S.O., retired, September 18th, 1905. Colonel Webb's previous commissions are simultaneous with those of Colonels Inman and Corker. He served with the Nile Expedition in 1898, and was at the battle of Khartoum; he was mentioned in dispatches, and received the British medal and the Egyptian medal with clasp.

Lieutenant-Colonel H. **MARTIN**, M.B., whose previous commissions also bear the same date as those of Colonels Inman and Corker, is promoted to be Colonel, *vice* A. W. Duke, M.D., retired, December 18th, 1905. He was with the Zhob Valley Expedition in 1884. He was also in the South African war in 1899-1902, being present in operations in Natal, including the actions at Elandslaagte, Rietfontein, and Lombard's Kop, and at the defence of Ladysmith; he afterwards had charge of a general hospital (several times mentioned in dispatches, Queen's medal with three clasps, and King's medal with two clasps).

Lieutenant-Colonel A. E. J. **CROLY**, F.R.C.S.I., is promoted to be Colonel, vice W. S. Pratt, promoted, December 29th, 1905. Colonel Croly's previous commissions also bear the same dates as those of Colonels Inman and Corker. He served with the Southern Afghanistan Field Force during the Afghan war in 1880, and with the Tirah Expeditionary Force in the campaign on the North-West Frontier of India in 1897-8, receiving the medal with two clasps.

Lieutenant-Colonel A. **PETERKIN**, M.B., has been appointed Senior Medical Officer, Mauritius.

Lieutenant C. J. **WYATT**, M.B., from the Seconded List, to be Lieutenant, January 1st. He was appointed on probation July 31st, 1905.

Lieutenant R. S. **SMYTH**, from the Seconded List, to be Lieutenant, January 2nd. He also was appointed on probation, July 31st, 1905.

Colonel H. R. **WHITEHEAD**, Principal Medical Officer, Abbottabad and Sialkot Brigades, is transferred as officiating Principal Medical Officer, 2nd (Rawal Pindi) Division.

Lieutenant-Colonel D. **O'SULLIVAN**, now at Rawal Pindi, is appointed to officiate as Principal Medical Officer, Abbottabad and Sialkot Brigades.

Captain J. E. **CARTER**, M.B., is promoted to be Major, December 2nd, 1905. He joined the department as Surgeon-Captain, January 31st, 1891; was placed on half pay, December 1st, 1901; and restored to the establishment, October 2nd, 1905. He was in the South African war in 1899-1900, and was in operations in the Orange Free State and at Paardeberg, where he was wounded. He has the Queen's medal with two clasps.

Lieutenant R. P. **NASH** resigns his commission, January 6th. He was appointed Lieutenant on probation, January 31st, 1905.

Colonel W. E. **SAUNDERS**, C.B., who is serving in Bengal, has been appointed to officiate as Principal Medical Officer, Eastern Command, India.

Lieutenant-Colonel J. R. **DODD**, M.D., who is serving at Mhow, Bombay, is appointed to officiate as Principal Medical Officer, Bareilly and Garwhal Brigades.

Major T. H. F. **CLARKSON**, Senior Medical Officer, Jersey, has been appointed Medical Officer at the Tower of London, from February 1st, vice Lieutenant-Colonel J. Meek, M.D.

Lieutenant A. J. **ARCH** resigns his commission, January 10th. He was appointed on probation, July 31st, 1905.

ROYAL HOSPITAL, CHELSEA.

COLONEL C. SEYMOUR, M.B., R.A.M.C., Physician and Surgeon, to retain his appointment on promotion, June 21st, 1905.

INDIAN MEDICAL SERVICE.

CAPTAIN G. Y. C. HUNTER, Bengal Establishment, is promoted to be Major, from November 17th, 1905. He was appointed Surgeon-Lieutenant, January 30th, 1893, and Surgeon-Captain, January 30th, 1896.

Captain J. A. **BARNES** is permitted to resign the service, from December 9th, 1905. His commissions are thus dated: Lieutenant, January 27th, 1900; Captain, January 27th, 1903.

Colonel G. J. **KELLIE**, Bengal, is appointed to officiate as Principal Medical Officer, 7th (Meerut) Division.

Lieutenant-Colonel (temporary Colonel) W. G. H. **HENDERSON**, Bombay Establishment, is promoted to be Colonel from November 11th, 1905. He was appointed Assistant Surgeon, March 31st, 1876, and became Surgeon-Lieutenant-Colonel, March 31st, 1896. He was in the Burmese campaign in 1887-8, was mentioned in dispatches, and received the Frontier medal with clasp.

ROYAL NAVAL VOLUNTEER RESERVE.

KENNETH H. BEVERLEY has been appointed a Surgeon, January 9th.

ROYAL GARRISON ARTILLERY (VOLUNTEERS).

SURGEON-CAPTAIN C. R. SKYRME, M.B., 2nd Cinque Ports, resigns his commission, December 30th, 1905.

WILLIAM E. HENDERSON to be Surgeon-Lieutenant in the 1st Fifeshire, January 10th.

Vital Statistics.

VITAL STATISTICS OF LONDON DURING THE FOURTH QUARTER OF 1905.

[SPECIALLY REPORTED FOR THE BRITISH MEDICAL JOURNAL.]

IN the accompanying table will be found summarized the vital statistics of the metropolitan boroughs and of the City of London, based upon the Registrar-General's returns for the fourth, or autumn, quarter of 1905. The mortality figures in the table relate to the deaths of persons actually belonging to the various boroughs, and are the result of a complete system of distribution of the deaths in public institutions among the several boroughs in which the deceased persons had previously resided.

The 30,454 births registered in London during the three months under notice were equal to an annual rate of 26.1 per 1,000 of the population, estimated at 4,684,794 persons in the middle of last year; in the corresponding quarters of the three preceding years the rates were 27.8, 27.4, and 27.2 per 1,000, the average rate for the fourth quarters of the ten years, 1895 to 1904, being 28.4 per 1,000. The birth-rates last quarter ranged from 12.0 in the City of London, 14.1 in Hampstead, 15.7 in the City of Westminster, 16.9 in Stoke Newington, 18.1 in Kensington, and 19.9 in Chelsea, to 31.6 in Bethnal Green, 31.9 in Shoreditch, 32.3 in Bermondsey, 33.1 in Stepney, 33.2 in Poplar, and 35.4 in Finsbury.

The 18,974 deaths of persons belonging to London registered during last quarter were equal to an annual rate of 16.2 per 1,000, against 17.2, 16.1, and 16.4 per 1,000 in the three preceding fourth quarters; in the corresponding periods of the ten preceding years the rate averaged 17.6 per 1,000. The death-rates last quarter ranged from 10.4 in Hampstead, 12.1 in Lewisham, 12.5 in Woolwich, 13.7 in Stoke Newington, and 14.0 in Wandsworth, to 19.4 in Stepney, 19.6 in Shoreditch, 19.8 in Finsbury, 20.4 in Bethnal Green, 20.9 in Southwark, and 21.1 in Bermondsey.

During the last quarter 1,547 deaths were referred to the principal infectious diseases; of these, 553 resulted from measles, 170 from scarlet fever, 158 from diphtheria, 279 from whooping-cough, 63 from enteric fever, and 324 from diarrhoea, but not any from small-pox, from typhus, or from ill-defined pyrexia. These 1,547 deaths were equal to an annual rate of 1.33 per 1,000, against an average rate of 1.84 per 1,000 in the corresponding quarters of the ten preceding years. The lowest death-rates last quarter from these principal infectious diseases were 0.37 in Hampstead, 0.46 in Stoke Newington, 0.49 in St. Marylebone and in Holborn, 0.57 in the City of Westminster, and 0.59 in Chelsea; the highest rates were 1.69 in Lambeth, 1.72 in Bethnal Green, 1.93 in Bermondsey, 2.04 in Stepney, 2.15 in Fulham, and 3.13 in Southwark. Measles showed the highest proportional

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Deaths occurring in Public Institutions during the Fourth Quarter of 1905.

fatality in Fulham, Islington, Stepney, Southwark, and Lambeth; scarlet fever in Finsbury, Bethnal Green, Poplar, Bermondsey, Battersea, and Deptford; diphtheria in Fulham, Stoke Newington, Poplar, Southwark, and Greenwich; whooping-cough in Fulham, St. Pancras, Shoreditch, Bethnal Green, Stepney, and Poplar; enteric fever in Fulham, Hackney, Holborn, Finsbury, and Southwark; and diarrhoea in Finsbury, Bethnal Green, Stepney, Poplar, Southwark, and Bermondsey.

During the three months under notice 1,824 deaths from phthisis were registered, equal to an annual rate of 1.56 per 1,000; the rates in the corresponding quarters of the three preceding years were 1.64, 1.64, and 1.79 per 1,000 respectively. Among the various boroughs the lowest death-rates from phthisis last quarter were recorded in Paddington, Hampstead, the City of London, Deptford, and Lewisham; and the highest rates in Stoke Newington, Holborn, Finsbury, Bethnal Green, Stepney, Southwark, and Bermondsey.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 130 per 1,000, against 155, 152, and 128 in the corresponding periods of the three preceding years; in the fourth quarters of the ten preceding years the rate averaged 147 per 1,000. The lowest rates of infant mortality last quarter were recorded in St. Marylebone, Hampstead, Holborn, Finsbury, and Lewisham, and the highest rates in Shoreditch, Bethnal Green, Stepney, Poplar, Southwark, and Bermondsey.

HEALTH OF ENGLISH TOWNS.

IN seventy-six of the largest English towns, including London, 9,193 births and 5,052 deaths were registered during the week ending Saturday last, January 13th. The annual rate of mortality in these towns, which had been 17.8, 17.4, and 18.3 per 1,000 in the three preceding weeks, declined again last week to 16.7 per 1,000. The rates in the several towns ranged from 6.1 in Northampton, 7.8 in Hornsey, 9.7 in Wallasey, 10.1 in Leyton and in Derby, 10.3 in Walthamstow, 10.7 in West Hartlepool, and 10.9 in Stockton-on-Tees, to 21.1 in South Shields, 21.2 in Liverpool, 21.3 in Sunderland, 22.0 in Preston, 22.1 in West Bromwich, 22.2 in Tynemouth, 23.5 in St. Helens, 24.3 in Merthyr Tydfil, and 25.9 in Burnley. In London the rate of mortality was 17.5 per 1,000, while it averaged 16.3 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.3 per 1,000 in the seventy-six towns; in London this death-rate was equal to 1.4 per 1,000, while among the seventy-five large provincial towns the rates ranged upwards to 2.4 in East Ham and in Smethwick, 2.6 in Barrow-in-Furness, 2.7 in Plymouth, 2.9 in Leicester and in Leeds, 3.3 in Handsworth (Staffs), 3.6 in Bury, and 5.8 in Preston. Measles caused a death-rate of 1.1 in Willesden and in Swansea, 1.2 in Blackburn, 1.3 in Gateshead, 1.8 in Leeds, 3.6 in Bury, and 5.4 in Preston; diphtheria of 1.3 in Norwich, 1.4 in Merthyr Tydfil, and 1.7 in Barrow-in-Furness; whooping-cough of 1.1 in Huddersfield, 1.3 in Reading, 1.6 in Smethwick, 1.8 in Plymouth and in Leicester, and 3.3 in Handsworth (Staffs); and diarrhoea of 1.2 in Blackburn. The mortality from scarlet fever and from enteric fever showed no marked excess in any of the large towns. No fatal case of small-pox was registered either in London or in any of the large provincial towns, and no small-pox patients were under treatment last week in the Metropolitan Asylums Hospitals. The number of scarlet fever cases in these hospitals and in the London Fever Hospital at the end of the week was 3,062, against 3,409, 3,446, and 3,299 at the end of the three preceding weeks: 257 new cases were admitted during the week, against 295, 295, and 291 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

DURING the week ending Saturday last, January 13th, 901 births and 610 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 17.4, 18.2, and 19.8 per 1,000 in the three preceding weeks, declined again t 17.8 per 1,000 last week, but was 1.1 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 11.4 in Paisley and 11.6 in Aberdeen to 19.2 in Greenock and 24.4 in Dundee. The death-rate from the principal infectious diseases averaged 1.8 per 1,000, the highest rates being recorded in Glasgow, Dundee, and Greenock. The 304 deaths registered in Glasgow included 20 which were referred to measles, 4 to diphtheria, 2 to "fever," and 9 to diarrhoea. Two fatal cases of diphtheria and 3 of diarrhoea were recorded in Edinburgh; 5 of measles and 3 of diarrhoea in Dundee; 2 of measles in Paisley; 2 of whooping-cough in Leith; and 2 of scarlet fever in Greenock.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, January 6th, 546 births and 371 deaths were registered in six of the principal Irish towns, as against 452 births and 309 deaths in the preceding period. The annual death-rate in these towns, which had been 17.4, 16.5, and 15.3 per 1,000 in the three preceding weeks, rose to 21.0 per 1,000 in the week under notice, this figure being 2.7 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 14.4 in Cork and 17.8 in Limerick, to 21.7 in Dublin and 31.2 in Waterford. The zymotic death-rate during the same period and in the same six Irish towns averaged 1.1 per 1,000, or 0.2, per 1,000 higher than during the preceding period, the highest figure, 1.9, being recorded in Waterford.

During the week ending Saturday, January 13th, 456 births and 347 deaths were registered in six of the principal Irish towns, as against 546 births and 371 deaths in the preceding period. The annual death-rate in these towns, which had been 16.5, 15.3, and 21.0 per 1,000 in the three preceding weeks, fell to 17.8 per 1,000 in the week under notice, this figure being 1.1 per 1,000 lower than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 8.7 in Londonderry and 13.6 in Waterford to 21.7 in Dublin and 30.1 in Limerick. The zymotic death-rate in the same six Irish towns averaged 0.3 per 1,000, or 0.8 per 1,000 lower than during the preceding period, the highest figure—1.3—being recorded in Belfast, while Cork, Londonderry, Limerick, and Waterford registered no deaths under this heading.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journal is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office. No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

SYDNEY AND NEW SOUTH WALES BRANCH.

THE regular monthly meeting of the Branch was held at the Royal Society's Rooms, Sydney, on November 24th, 1905, Dr. POCKLEY in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

New Members.—The PRESIDENT announced the election of the following members: Dr. W. Fisher, Weston; Dr. H. Chapman, Sydney University.

Communications.—Dr. W. J. MUNRO exhibited a preparation of the *Spirochaeta pallida*, an organism associated with primary and secondary syphilitic lesions, and read notes explaining the exhibit. Dr. WILKINSON made remarks.—Dr. EDWARDS read notes on the *Relation of Chronic Callus or Indolent Ulcer to Periostitis*, illustrated by skiagrams. Drs. HERSCHELL HARRIS, W. H. READ, and HANKINS made remarks, and Dr. EDWARDS replied.—Dr. CAMAC WILKINSON read a paper on *Pernicious Anaemia*, illustrated by 7 cases with microscopic demonstration. A discussion ensued, in which Drs. LITCHFIELD, FLASHMAN, SINCLAIR, GILLIES, and POCKLEY took part; Dr. WILKINSON replied.

SOUTH-EASTERN OF IRELAND BRANCH:
WATERFORD DIVISION.

A MEETING of this Division was held at the Town Hall, Clonmel, on January 3rd, at 4 o'clock, Dr. CREAN in the chair.

The Division and Parliamentary Candidates.—Deputations were appointed to interview parliamentary candidates. Many of the members, however, expressed small confidence in them, and showed a decided preference for paid parliamentary medical representatives.

Cases referred to Medico-Ethical Committee.—Two members having brought serious charges against one of the members of the Division, the matter was unanimously referred to the Central Council or the Medico-Ethical Committee.

Annual Representative Meeting.—The subjoined series of instructions were unanimously adopted for the Representative at the Annual Representative Meeting.—Proposed by Dr. LAFFAN and seconded by Dr. STEPHENSON and unanimously adopted:

1. That it be an instruction to our Representative to move at the annual meeting a motion to carry into effect our resolution asking for a representative on the Council of the Association for small Branches like ours where, as in our case, they represent interests different from and antagonistic to those of the predominant and associated Branch.
2. That he be instructed to move that the Association and its Council do bring to a practical conclusion the question of medical defence of the members of this Association, than which we conceive none to be more important to members of this Association, whether individually or collectively.
3. That the same be further instructed to move that such steps be taken to give practical effect to the Oxford resolutions, and to the whole trend of medical opinion, on the subject of the gratuitous or semi-gratuitous hospital treatment of the well-to-do as will place our profession in the same position as that of the law, and preserve us from further plunder and robbery.
4. That the same be further instructed to move that power be taken in the new Charter to subsidize a parliamentary representative or representatives.
5. That he be further instructed to give his warm support to any well-considered proposal for the reform on a representative basis of the General Medical Council.
6. That he be further instructed to take the sense of the meeting on the entire exclusion of the mass of the profession, and even of the majority of hospital staffs, from all share in medical teaching.
7. That he be further instructed to take the sense and pleasure of the meeting on the necessity for having all medical examinations duly advertised and open to the presence of every registered medical practitioner.
8. Further, that our Representative shall move at the annual general meeting, to be held in London in July next, that the Council be requested to appoint a Materia Medica Committee, whose duty it will be, with such professional aid as they can summon to their assistance, to investigate and pronounce on the uses and properties of all drugs which shall be used by the profession, and that in view of the grave injury inflicted on the public and on the profession alike by the present wholesale introduction of drugs by mere commercial firms, whereby the ground is being cut from under our feet, and the gullible public are induced to accept nostrums on the sole strength of mere assertions, that the hospitality of our museum and the pages of our JOURNAL shall be both shut out from giving any further aid to the wholesale advertisements of drugs and preparations the sole virtues of which have too often no existence save in the mendacity of their introducers.
9. Further, that our Representative shall move that, in the opinion of this meeting the BRITISH MEDICAL JOURNAL should more largely advocate the rights, interests, and claims of the medical masses in the future than it has done in the past.

The proceedings then terminated with a direction to Dr. Laffan to send forward the painful ethical matter.

SOUTH CONNAUGHT DIVISION.

A MEETING of this Division was held at 5 p.m. at Hayden's Hotel, Ballinasloe, on January 4th. Dr. W. M. RUTHERFORD was moved to the chair after the notice convening the meeting was read.

Appointment of Honorary Secretary.—Dr. Mills was appointed Honorary Secretary, and explained the need of organization to give effect to the demands of the profession as defined in the memorandum issued in view of the General Election.

Proposed Formation of Branch.—It was agreed that the Honorary Secretary should confer with the officers of the North Connaught and Mid Connaught Divisions with the view of forming a Connaught Branch.

Election of Officers.—The following were appointed officers of the Division:—*Chairman*, R. J. Kinkead, M.D.; *Vice-Chairman*, P. C. Gorham, M.D.; *Representatives on Branch Council*, T. B. Costello, M.D. (Tuam) and Dr. Joseph MacDonnell (Roscommon).

The Profession and Parliamentary Candidates.—The Division requested Drs. Costello, MacDonnell, Geraghty (Loughrea), R. J. Kinkead (Galway), P. C. Gorham (Clifden), and R. Reary (Woodford) to bring the Association memorandum before the parliamentary candidates in the two counties.

NOTICE OF THE FORMATION OF NEW BRANCHES OF THE ASSOCIATION.

NOTICE is hereby given of the following resolutions adopted on January 17th by the Central Council:

That a Branch be formed composed of the members of the Association resident in Egypt.

That the members of the Association resident in the province of Saskatchewan be constituted a Branch of the Association, having the name of the Saskatchewan Branch.

☞ *To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.*

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH: COVENTRY DIVISION.—The next meeting of this Division will be held at the Coventry and Warwickshire Hospital on Tuesday, February 6th, at 8.30 p.m. Agenda: (1) Dr. Phillips will show some clinical cases. (2) Specimen: Aortic Stenosis: Dr. Fenton. (3) Dr. Webster will move that the resolution of June 6th last (that in future no member of the profession in the area of the Division shall apply for the medical officership of a Friendly Society) be rescinded. (4) Dr. H. Brown will move: "That the resolution of March 7th last relating to the minimum fee for Friendly Societies be put in force not later than March 25th, 1906." (5) Dr. Snell will read a note on the operation of the Midwives Act in Coventry in 1905. (6) Report of the Foleshill and Bedworth Committee on the minimum fee desirable in their district for midwifery cases.—E. H. SNELL, Honorary Secretary.

EDINBURGH BRANCH.—The annual clinical meeting of this Branch will be held in the Royal Infirmary on Friday, February 16th. Fuller particulars will be announced later.—NORMAN WALKER and A. LOGAN TURNER, Honorary Secretaries.

LEINSTER BRANCH.—The annual meeting of the Leinster Branch will be held in the Royal College of Physicians, Kildare Street, Dublin, on Saturday, February 3rd, at 4.30 p.m.—ARTHUR H. WHITE, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.—A meeting of the Division will be held at the Hospital for Consumption and Diseases of the Chest, Brompton, S.W., on Tuesday, January 30th, at 5 p.m. Cases will be shown by members of the hospital staff.—CHARLES BUTTAR, Honorary Secretary, 10, Kensington Gardens Square, W.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS AND ISLINGTON DIVISION.—The next meeting will be held at the North-West London Hospital, Kentish Town Road, N.W., on Friday, February 23rd, at 4 p.m., when Dr. Knowsley Sibley will give an address on Chronic Constipation and Its Treatment.—WM. WYNN WESTCOTT, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: TOTTENHAM DIVISION.—A meeting of the Division will be held at the Tottenham Hospital on Friday, January 26th, at 4 p.m. A discussion will be opened on Hospital Out-patients Departments, by Mr. R. F. Tomlin. Visitors are cordially invited.—FRED. TRESILIAN, Honorary Secretary, White Lodge, Enfield.

SHROPSHIRE AND MID-WALES BRANCH: CLINICAL AND PATHOLOGICAL SECTION.—The next meeting of this Section will be held 5 p.m. on Tuesday, February 6th, at the Salop Infirmary. Members who wish to read communications, or show cases or specimens, are requested to communicate with the Honorary Secretaries before Tuesday, January 30th.—HAROLD H. B. MACLEOD, LEONARD J. GODSON, Honorary Secretaries, Clive House, Shrewsbury.

SOUTH-EASTERN BRANCH: DOVER DIVISION.—The next meeting will be held at the Grand Hotel, Dover, on Wednesday, February 14th, at 8 p.m., when Dr. Guy Bellingham Smith, Assistant Obstetric Physician, Guy's Hospital, has kindly consented to read a paper. Particulars later.—F. A. OSBORN, Honorary Local Secretary, Ennismore House, Dover.

SOUTH-WESTERN BRANCH.—An extraordinary meeting of the Branch will be held on Thursday, February 1st, at the Athenaeum, George Street, Plymouth, at 4.30 p.m., when Sir Victor Horsley, F.R.C.S., F.R.S., has kindly consented to deliver an address, entitled, The Diagnosis and Surgical Treatment of Diseases of the Pituitary Gland. Tea will be provided at 4 p.m. at Messrs. Risdon's Restaurant, George Street (opposite the Athenaeum). The Branch Council trust that members will make every effort to attend this meeting, and they invite members to bring with them any friends who are not members of the Branch. By order of the Council.—G. YOUNG EALES, Honorary Secretary, 1, Matlock Terrace, Torquay.

ULSTER BRANCH.—The winter meeting will be held in Belfast on Wednesday, January 31st. Members having papers or business to bring before the meeting will please notify me as early as possible, and not later than January 20th.—CECIL E. SHAW, M.D., Honorary Secretary, 18, College Square East, Belfast.

Vital Statistics.

ENGLISH URBAN MORTALITY IN THE FOURTH QUARTER OF 1905.

THE vital statistics of the seventy-six large towns dealt with in the Registrar-General's weekly returns are summarized in the accompanying table. During the three months ending December last, 103,404 births were registered in these towns, equal to an annual rate of 26.6 per 1,000 of the population, estimated at 15,609,377 persons in the middle of last year; in the corresponding quarter of the preceding year the rate had been 28.1 per 1,000. In London the birth-rate last quarter was 26.1 per 1,000, while it averaged 26.8 in the seventy-five other large towns, among which the rates ranged from 14.7 in Bournemouth, 15.7 in Hastings, 16.8 in Halifax, 17.8 in Hornsey, 18.5 in Northampton, 19.2 in Bradford, and 19.4 in Bury, to 31.6 in Middlesbrough, 31.8 in Liverpool, 32.2 in Gateshead, 32.7 in Sunderland, 34.1 in St. Helens, 34.3 in Rhondda, and 35.5 in Merthyr Tydfil.

During the quarter under notice 61,518 deaths were registered in these towns, equal to an annual rate of 15.8 per 1,000 living, against a rate of 17.5 per 1,000 in the fourth quarter of 1904. In London the rate of mortality was 16.8 per 1,000, while it averaged 15.4 in the seventy-five large provincial towns, and ranged from 7.6 in Hornsey, 8.9 in King's Norton, 10.7 in Hastings, 10.9 in Grimsby, 11.0 in Leyton and in Handsworth (Staffs), and 11.5 in Walthamstow, to 18.3 in Merthyr Tydfil, 18.5 in Huddersfield, 18.6 in Middlesbrough, 18.8 in Tynemouth, 19.3 in Preston, 20.3 in Bootle, and 20.4 in Liverpool.

The 61,518 deaths from all causes in the seventy-six towns last quarter included 4,952 which were referred to the principal infectious diseases; of these, 1,183 resulted from measles, 668 from scarlet fever, 726 from diphtheria, 844 from whooping-cough, 356 from "fever" (principally enteric), and 1,175 from diarrhoea, but not any from small-pox. The death-rate from these diseases, which had been 2.14, 1.66, and 1.57 in the corresponding quarters of the three preceding years, declined to 1.27 per 1,000 last quarter. In London the death-rate from the principal infectious diseases was 1.34 per 1,000, while it averaged 1.25 in the seventy-five other large towns, among which the rates ranged from 0.31 in Handsworth (Staffs), 0.34 in Brighton, 0.35 in Hornsey, 0.42 in Coventry, 0.46 in Burton-on-Trent, and 0.52 in Nottingham and in Stockport to 1.96 in West Hartlepool and in Gateshead, 2.02 in Swansea, 2.03 in Middlesbrough, 2.34 in Wolverhampton, 2.92 in Blackburn, and 3.98 in Preston. The 1,183 deaths from measles were equal to an annual rate of 0.30 per 1,000; in London the death-rate from this disease was 0.47 per 1,000, while it averaged 0.23 in the seventy-five other large towns, and was highest in Willesden, Wolverhampton, Blackburn, Preston, Barrow-in-Furness, Rhondda, and Swansea. The 668 fatal cases of scarlet fever were equal to an annual rate of 0.17 per 1,000; in London the scarlet fever death-rate was 0.15 per 1,000, while it averaged 0.18 in the seventy-five other large towns, among which this disease was proportionally most fatal in Liverpool, Bootle, Oldham, Rochdale, Blackburn, Rotherham, and West Hartlepool. The 726 deaths from diphtheria corresponded to an annual rate of

0.19 per 1,000; in London the death-rate from this disease was 0.14 per 1,000, while it averaged 0.21 in the seventy-five large provincial towns, among which the mortality from this disease was proportionally highest in Walthamstow, Portsmouth, Southampton, Reading, Hull, West Hartlepool, and Merthyr Tydfil. The 844 fatal cases of whooping-cough were equal to an annual rate of 0.22 per 1,000 in the seventy-six towns; in London the rate was 0.24 per 1,000, while it averaged 0.21 in the seventy-five other large towns, the highest rates being recorded in Birmingham, Aston Manor, Leicester, Bootle, Warrington, Burnley, Gateshead, and West Hartlepool. The 356 deaths referred to different forms of "fever" corresponded to an annual rate of 0.09 per 1,000; in London the "fever" death-rate was 0.06 per 1,000, while it averaged 0.11 in the seventy-five other large towns, and was highest in Wallasey, Wigan, Bolton, Bury, Salford, Preston, Middlesbrough, and Sunderland. The 1,175 fatal cases of diarrhoea were equal to an annual death-rate of 0.30 per 1,000; in London the death-rate from this disease was 0.28 per 1,000, while it averaged 0.31 in the seventy-five large provincial towns, among which this disease was proportionally most fatal in West Ham, Hanley, Wolverhampton, Walsall, Warrington, Salford, Oldham, and Middlesbrough.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 134 per 1,000 last quarter, against 166, 167, and 147 per 1,000 in the corresponding quarters of the three preceding years: in London the rate of infant mortality was 131 per 1,000, while it averaged 135 per 1,000 in the seventy-five other large towns, and ranged from 70 in Hornsey, 74 in Bournemouth, 76 in Burton-on-Trent, 80 in Hastings, 90 in Reading, 92 in Handsworth (Staffs), and 93 in Wallasey, to 170 in West Hartlepool, 172 in Rochdale, 174 in Blackburn, 175 in Middlesbrough, 177 in Burnley, 181 in Smethwick, and 216 in Hanley.

The causes of 704, or 1.1 per cent., of the deaths registered in the seventy-six towns last quarter were not certified, either by a registered medical practitioner or by a coroner. All the causes of death were duly certified in Croydon, Hornsey, Tottenham, East Ham, Hastings, Southampton, Great Yarmouth, Plymouth, Devonport, Derby, Oldham, York, West Hartlepool, Merthyr Tydfil, and Swansea; while the largest proportions of uncertified deaths were registered in Handsworth (Staffs.), West Bromwich, Liverpool, Bootle, St. Helens, Blackburn, Barrow-in-Furness, South Shields, and Gateshead.

EPIDEMIC MORTALITY IN LONDON.

THE accompanying diagram shows the prevalence of the principal epidemic diseases during the fourth, or autumn, quarter of last year. The fluctuations of each disease and its relative fatality as compared with the corresponding period of recent years can thus be readily seen.

Small-pox.—No fatal case of this disease was registered in London last quarter, and no small-pox patients were under treatment during the quarter in the Metropolitan Asylums Hospitals.

Measles.—The deaths from measles, which had been 354, 551, and 257 in the three preceding quarters, rose again last quarter to 553, and were 22 in excess of the average number in the corresponding periods of the ten preceding years. Among the various metropolitan boroughs this disease was proportionally most fatal in Fulham, Islington, Stepney, Southwark, and Lambeth.

Scarlet Fever.—The fatal cases of this disease, which had been 134, 119, and 126 in the three preceding quarters, further rose last quarter to 170, and slightly exceeded the corrected average. Scarlet fever showed the highest proportional mortality last quarter in Finsbury, Bethnal Green, Poplar, Bermondsey, Battersea, and Deptford. The number of scarlet fever cases in the Metropolitan Asylums Hospitals, which had been 1,999, 2,444, and 3,567 at the end of the three preceding quarters, had declined again to 3,410 at the end of last quarter; 5,553 new cases were admitted during the quarter, against 3,122, 3,778, and 5,139 in the three preceding quarters.

Diphtheria.—The deaths referred to diphtheria in London, which had been 162, 121, and 111 in the three preceding quarters, rose again last quarter to 159, but were 363 below the average number in the corresponding quarters of the ten preceding years. Among the various metropolitan boroughs this disease was proportionally most fatal in Fulham, Stoke Newington, Poplar, Southwark, and Greenwich. The number of diphtheria patients in the Metropolitan Asylums Hospitals, which had been 788, 715, and 730 at the end of the three preceding quarters, had declined to 701 at the end of last quarter; 1,395 new cases were admitted during the quarter, against 1,425, 1,219, and 1,342 in the three preceding quarters.

Whooping-cough.—The fatal cases of this disease, which had been 436, 530, and 260 in the three preceding quarters, rose again to 281 last quarter, and were 14 in excess of the average number in the corresponding periods of the ten preceding years. Among the various metropolitan boroughs whooping-cough was proportionally most fatal in Fulham, St. Pancras, Shoreditch, Bethnal Green, Stepney, and Poplar.

"*Fever.*"—Under this heading are included deaths from typhus, from enteric fever, and from ill-defined pyrexia. The deaths referred to these different forms of "fever," which had been 51, 51, and 78 in the three preceding quarters, declined again last quarter to 66, and were 170 below the corrected average number. No death from typhus or from ill-defined pyrexia was registered during the quarter. Enteric fever mortality was highest in Fulham, Hackney, Holborn, Finsbury, and Southwark. The Metropolitan Asylums Hospitals contained 78 enteric fever patients at the end of last quarter, against 68, 78, and 143 at the end of the three preceding quarters; 238 new cases were admitted during the quarter, against 173, 156, and 264 in the three preceding quarters.

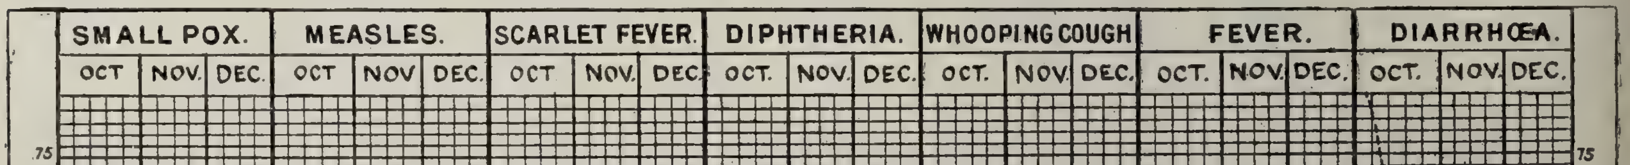
Diarrhoea.—The 331 deaths from diarrhoea in London last quarter were 81 below the average numbers in the corresponding quarters of the ten preceding years. Among the various metropolitan boroughs this disease was proportionally most fatal in Finsbury, Bethnal Green, Stepney, Poplar, Southwark, and Bermondsey.

In conclusion, it may be stated that the 1,560 deaths in London attributed to these principal epidemic diseases during the quarter ending December last were more than 26 per cent. below the corrected average number in the corresponding quarters of the ten preceding years. The lowest death-rates from these diseases last quarter were recorded in Chelsea, the City of Westminster, St. Marylebone, Hampstead, Stoke Newington, and Holborn; and the highest rates in Fulham, Bethnal Green, Stepney, Southwark, Bermondsey, and Lambeth.

HEALTH OF ENGLISH TOWNS.

IN seventy-six of the largest English towns, including London, 8,084 births and 4,800 deaths were registered during the week ending Saturday last, January 20th. The annual rate of mortality in these towns, which had been 17.4, 18.3, and 16.7 per 1,000 in the three preceding weeks, further declined last week to 15.8 per 1,000. The rates in the several towns ranged from 5.7 in Smethwick, 7.3 in Walthamstow, 8.6 in King's Norton, 8.9 in Burton-on-Trent, 9.4 in Willesden and in Portsmouth, and 9.6 in Hornsey, to 19.4 in Hastings, 19.5 in Merthyr Tydfil, 20.2 in Birmingham and in Liverpool, 21.1 in Newport (Mon.)., 22.1 in Swansea, 24.3 in Sunderland, and 28.2 in Preston. In London the death-rate was 15.5 per 1,000, while it averaged 16.0 per 1,000 in the seventy-five other large towns. The death-rate from

DEATHS FROM EPIDEMIC DISEASES IN LONDON DURING THE FOURTH QUARTER OF 1905.



NOTE.—The black lines show the *recorded* number of deaths from each disease during each week of the quarter. The dotted lines show the *average* number of deaths in the corresponding weeks of the ten preceding years, 1895-1904.

the principal infectious diseases in these towns averaged 1.2 per 1,000; in London also this death-rate was equal to 1.2 per 1,000, while among the seventy-five large provincial towns the rates ranged upwards to 2.2 in Tottenham, 2.3 in West Bromwich, 2.5 in Handsworth (Staffs) and in Gateshead, 2.6 in Reading, 3.5 in Blackburn, and 5.4 in Preston. Measles caused a death-rate of 1.0 in Leeds, 1.1 in Swansea, 1.3 in Tottenham, 2.3 in Blackburn, and 4.9 in Preston; diphtheria of 1.1 in St. Helen's, 1.6 in Wallasey, and 2.0 in Stockton-on-Tees; whooping-cough of 1.3 in Reading, in Plymouth, and in Gateshead, 1.5 in West Bromwich, 1.9 in Aston Manor, and 2.5 in Handsworth (Staffs); "fever" of 1.1 in Northampton; and diarrhoea of 1.0 in Middlesbrough. The mortality from scarlet fever showed no marked excess in any of the large towns. One fatal case of small-pox was registered last week in Bristol, but none in any other of the seventy-six large towns, and no small-pox patients were under treatment last week in the Metropolitan Asylums Hospitals. The number of scarlet fever cases in these hospitals and in the London Fever Hospital, which had been 3,446, 3,299, and 3,062 at the end of the three preceding weeks, had risen again to 3,066 at the end of last week; 328 new cases were admitted during the week, against 295, 291, and 257 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, January 20th, 943 births and 624 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 18,2, 19.8, and 17.8 per 1,000 in the three preceding weeks, rose again to 18.2 per 1,000 last week, and was 2.4 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 11.4 in Paisley and 13.9 in Leith, to 18.7 in Glasgow and 22.8 in Dundee. The death-rate from the principal infectious diseases in these towns averaged 1.5 per 1,000, the highest rates being recorded in Dundee and Perth. The 299 deaths registered in Glasgow included 19 which were referred to measles, 3 to diphtheria, and 5 to diarrhoea. Three deaths from measles and 8 from diarrhoea were recorded in Dundee; 4 from diarrhoea in Aberdeen; and 2 from diphtheria in Perth.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, January 20th, 471 births and 342 deaths were registered in six of the principal Irish towns as against 456 births and 347 deaths in the preceding period. The annual death-rate in these towns, which had been 16.5, 15.3, and 21.0 per 1,000 in the three preceding weeks, fell to 17.7 per 1,000 in the week under notice, this figure being 1.9 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 11.7 in Waterford and 13 6 in Londonderry to 20.1 in Dublin and 23 2 in Limerick. The zymotic death-rate during the same period and in the same six Irish towns averaged 1.3 per 1,000 or 1 0 per 1,000 higher than during the preceding period, the highest figure—2.5—being recorded in Londonderry.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

Fleet-Surgeon E. H. Saunders is placed on the retired list at his own request, with the rank of Deputy Inspector-General, January 16th. He was appointed Surgeon, March 31st, 1874; Staff Surgeon, March 31, 1886; and Fleet-Surgeon, October 1st, 1890. The *Royal Navy List* informs us that he was Senior Surgeon of the *Minotaur* during the Egyptian Campaign; landed in medical charge of sailors and marines after the bombardment of the forts of Alexandria; employed on shore with marine battalion landed from H.M.'s ships, attached to Sir E. Wood's Brigade, for the defence of Alexandria: present at the surrender of the forts of Rosetta and Aboukir (Egyptian medal, Khedive's bronze star); Sir Gilbert Blane's Gold Medal, 1893; elected Fellow of the Royal Institute of Public Health, October 14th, 1897: Fleet-Surgeon of H.M.S. *Blake* at Sierra Leone during the troubles there, and also during the insurrection in the hinterland, May 5th to June 5th, 1898; Fleet-Surgeon of H.M.S. *Niobe*, employed on Cape of Good Hope Station during the Transvaal war, November 25th, 1899, to January 31st, 1900; had medical charge of military sick from ss. *Issmore* when she was wrecked off St. Helena Bay, and until they were landed at Capetown; frequently attended sick and hurt aboard transports in Table Bay; landed for duty on shore in Cape Colony; volunteered for, and had medical charge of, sick and wounded (military) on passage home from Cape in transport *Kildonan Castle*.

The following appointments have been made at the Admiralty: James J. Walsh, Fleet Surgeon, to the *Blenheim*, January 18th; Robert T. Gilmour, Staff Surgeon, to the *Talbot*, temporary, January 22nd; James M. Rogers, Fleet Surgeon, to the Royal Victoria Yard, January 22nd; George A. P. Bell, Staff Surgeon, to the *Monmouth*, January 30th; Harry Spicer, M.B., Staff Surgeon, to the *Cornwall*, January 19th; Alexander C. W. Newport, Surgeon, to the *Gladiator*, January 19th; Hugh B. German, Surgeon, to the *Argyll*, January 30th; Charles G. Matthew, Fleet Surgeon, and Richard Willan, Surgeon, to the *Donegal*, February 6th; Jeremiah Sugrue, Fleet Surgeon, to the *Resolution*, February 10th; Walter K. Hopkins, Staff Surgeon, to the *President*, for three months' hospital course, January 19th; Gordon Moir, Surgeon, to the *Donegal*, February 6th, and to the *Nightingale* on commissioning, undated; William Jackson, Staff Surgeon, to the *Tenedos*, January 8th; Cecil R. Richard, Surgeon, to the *Fisgard*, January 8th.

ROYAL ARMY MEDICAL CORPS.

Colonel J. I. Routh is placed on temporary half-pay on account of ill-health, January 8th. Appointed Surgeon, February 3rd, 1878, he became Surgeon-Major, February 3rd, 1890: Brigade-Surgeon, February 3rd, 1898; and Colonel, December 3rd, 1904. He was with the Tirah Expeditionary Force in the campaign on the North-West Frontier of India, receiving a medal with two clasps.

Lieutenant-Colonel R. H. Forman, M.B., is promoted to be Colonel, vice Routh, January 8th. Colonel Forman's previous commissions are thus dated: Surgeon, March 6th, 1880; Surgeon-Major, March 6th, 1892; Lieutenant-Colonel, March 6th, 1900. He has no war record in the Army Lists.

Major J. H. Rivers, from the Seconded List, to be Major, January 17th. He was seconded for service with the Egyptian army, January 17th, 1899.

Captain H. G. F. Stallard, from the Seconded List, to be Captain, January 7th. He was seconded for service with the Egyptian Army, January 7th, 1899.

Lieutenant-Colonel A. Peterkin, M.B., is granted the local rank of Colonel while serving in Mauritius, November 22nd, 1905.

Lieutenant-Colonel G. D. Hunter, D.S.O., is granted the local rank of Colonel whilst employed with the Egyptian Army, January 24th.

COLDSTREAM GUARDS.

Surgeon-Lieutenant-Colonel W. E. Crooke-Lawless, M.D., is seconded for service on the staff of the Governor-General of India, November 2nd, 1905. [As already stated in the British Medical Journal (January 13th), Surgeon-Lieutenant-Colonel Crooke-Lawless has been appointed Surgeon to the Governor-General of India.]

INDIAN MEDICAL SERVICE.

Lieutenant-Colonel F. W. Wright, M.B., D.S.O., Bengal Establishment, is permitted to retire from the service from December 7th, 1905. He was appointed Assistant Surgeon, April 1st, 1873, and became Surgeon-Lieutenant-Colonel, April 1st, 1893. He was in the Afghan war of 1878-80, and was at the actions of Jugdulluck and Charasiah, in the march from Kabul to the relief of Kandahar and the battle on September 1st, and in the operations against the Marris (medal with clasp and bronze decoration). He also served in the Burmese expedition in 1886-8 (mentioned in dispatches, medal with clasp, and appointed D.S.O.), and in the China war in 1900 (medal).

Lieutenant-Colonel E. Cretin, M.B., Bengal Establishment, also retires, from December 31st, 1905. He joined the Department as Surgeon, March 30th, 1878, and was made Surgeon-Lieutenant-Colonel, March 30th, 1898. He served in the Afghan war in 1880, including the action of Kam Dakka, the Lughman Valley Expedition, and the action of Hissarik (medal); in the Burmese Expedition in 1885-7 (medal with clasp); in the Dongola Expedition in 1896 (British and Egyptian medals); and with the Tochi Force on the North-West Frontier of India in 1897-8 (medal with clasp).

ARMY MEDICAL RESERVE.

Surgeon-Captain J. M. Moir, M.D., to be Surgeon-Major, January 13th.

ROYAL ARMY MEDICAL CORPS (MILITIA).

Denis Murphy to be Lieutenant, January 24th.

IMPERIAL YEOMANRY.

Surgeon-Lieutenant R. L. Moorhead, M.B., Royal East Kent (the Duke of Connaught's Own), to be Surgeon-Captain, September 12th, 1905.

VOLUNTEER RIFLES.

Surgeon-Major D. Stewart, 1st Volunteer Battalion the Northumberland Fusiliers, is granted the honorary rank of Surgeon-Lieutenant-Colonel, December 30th, 1905.

Surgeon-Lieutenant-Colonel and Honorary Surgeon-Colonel G. Westby, 2nd Volunteer Battalion the King's (Liverpool Regiment) (Brigade-Surgeon-Lieutenant-Colonel, Senior Medical Officer Liverpool Volunteer Infantry Brigade), resigns his commission, December 30th, 1905; he retains his rank and uniform.

The undermentioned Surgeon-Lieutenant-Colonels are granted the honorary rank of Surgeon-Colonel, dated December 30th, 1905: F. J. Walker, 3rd Volunteer Battalion the Lincolnshire Regiment; R. B. Smith, 1st Volunteer Battalion the Leicestershire Regiment (Brigade-Surgeon-Lieutenant-Colonel, Senior Medical Officer Leicester and Lincoln Volunteer Infantry Brigade); C. Knott, 3rd (the Duke of Connaught's Own) Volunteer Battalion the Hampshire Regiment; and E. J. Hunter, 3rd (the Duke of Connaught's Own) Volunteer Battalion the Hampshire Regiment (Brigade-Surgeon-Lieutenant-Colonel, Senior Medical Officer Hampshire Volunteer Infantry Brigade).

Surgeon-Major E. J. Hunter, 3rd (the Duke of Connaught's Own) Volunteer Battalion the Hampshire Regiment (Brigade-Surgeon-Lieutenant-Colonel, Senior Medical Officer Hampshire Volunteer Infantry Brigade), is promoted to be Surgeon-Lieutenant-Colonel, June 13th, 1904.

Surgeon-Captain T. Forrest, M.D., 3rd Lanarkshire Volunteer Rifles, to be Surgeon-Major, December 30th, 1905.

Surgeon-Major T. Philip, M.B., 1st (Renfrewshire) Volunteer Battalion Princess Louise's (Argyll and Sutherland Highlanders), to be Surgeon-Lieutenant-Colonel, December 30th, 1905.

Surgeon-Lieutenant-Colonel E. M. Garstang, M.D., 2nd Volunteer Battalion the Loyal North Lancashire Regiment, is granted the honorary rank of Surgeon-Colonel, January 10th.

William Dyson to be Surgeon-Lieutenant in the 1st Volunteer Battalion the King's (Shropshire Light Infantry), January 10th.

ROYAL ARMY MEDICAL CORPS (VOLUNTEERS).

Supernumerary Surgeon-Captain W. B. Cockill, from the 2nd (Westmorland) Volunteer Battalion the Border Regiment, to be Captain Lancaster and Border Bearer Company, and to command, December 30th, 1905.

Captain C. T. D. Urquhart, M.B., London Companies, is seconded, under para. 90, Volunteer Regulations, whilst residing in South Africa, December 23rd, 1905.

Captain F. J. L. Warwick, M.B., London Companies (Transport Officer), resigns his commission, December 23rd, 1905.

Supernumerary Surgeon-Captain F.E.A. Webb, 3rd (Cambridgeshire) Volunteer Battalion the Suffolk Regiment, is absorbed into the establishment, November 1st, 1905.

Surgeon-Captain (Major Volunteers, retired) J. Chestnutt, 2nd Volunteer Battalion the East Yorkshire Regiment, is granted the honorary rank of Surgeon-Major, January 24th.

Charles J. Caddick and Thomas Hutchinson are appointed Surgeon-Lieutenants in the 2nd Volunteer Battalion the South Staffordshire Regiment, January 24th.

Supernumerary Surgeon-Major Q. Chalmers, 5th Glasgow (Highland) Volunteer Battalion the Highland Light Infantry (Brigade-Surgeon-Lieutenant-Colonel, Senior Medical Officer, Highland Light

Infantry Volunteer Infantry Brigade), to be Surgeon-Lieutenant-Colonel, remaining supernumerary, January 24th.

PETER MCFADYEN, M.B., to be Surgeon-Lieutenant in the 4th (Stirlingshire) Volunteer Battalion Princess Louise's (Argyll and Sutherland Highlanders), January 24th.

ROYAL GARRISON ARTILLERY (VOLUNTEERS).

SURGEON-CAPTAINS A. A. S. SKIRVING, M.B., C.M.G., and W. M. TAYLOR, M.B. (Honorary Lieutenant in the Army), 1st Midlothian, resign their commissions, January 24th.

CHANGES OF STATIONS.

THE following changes of stations amongst the officers of the Royal Army Medical Corps have been officially reported to have taken place during December, 1905:

	FROM	TO
Colonel W. E. Saunders, C.B.	Mussoorie	Naini Tal.
,, G. D. N. Leake	Naini Tal	Lucknow.
Lieut.-Col. A. W. P. Inman, M.B.	Meerut	,,
,, D. Wardrop, M.B.	Naini Tal	Netley.
,, J. R. Dodd, M.B.	Mhow	Bareilly.
,, D. F. Franklin	Chakrata	Calcutta.
,, B. T. McCreery, M.B.	Kinsale	Secunderabad.
,, L. W. Swabey	Calcutta	Sitapur.
,, W. Rowney, M.D.	Bareilly	Lucknow.
,, F. A. B. Daly, M.B., C.B.	Preston	Curragh.
,, G. W. Brasier-Creagh, C.M.G.	Fyzabad	Bareilly.
,, W. G. Macpherson, M.B., C.M.G.	—	War Office.
,, E. H. L. Lynden-Bell, M.B.	Lucknow	Fyzabad
,, R. J. Geddes, M.B., D.S.O.	Maryhill	Aldershot.
,, C. Birt	Pretoria	Millbank.
,, C. W. Johnson, M.B.	Darjeeling	Eastern Comd.
,, W. E. Berryman	—	Barrackpore.
,, R. E. Molesworth	Ranikhet	Lucknow.
Major J. B. W. Buchanan, M.B.	Darjeeling	Calcutta.
,, J. S. Edye	Ambala	Meerut.
,, G. F. H. Marks, M.D.	Sitapur	Darjeeling.
,, F. J. Morgan	Ambala	Netley.
,, S. F. Clark, M.B.	Wynberg	Bloemfontein.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office. No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

ANATOMY.

President: Professor ARTHUR ROBINSON, M.D., Birmingham.

Vice-Presidents: Professor ALEXANDER PRIMROSE, Toronto; D. E. MANDELL, M.D., Kingston; DONALD ARMOUR, F.R.C.S., London.

Honorary Secretaries: C. B. SHUTTLEWORTH, M.D., 45, Bloor Street E., Toronto; GAWNSHAW CLELAND, M.D., 730, Queen Street E., Toronto.

Dermatology.

President: Norman Walker, M.D., Edinburgh.

Vice-Presidents: Graham Chambers, M.D., Toronto; Harry B. Anderson, M.D., Toronto; Arthur John Hall, M.D., Sheffield; Ernest Solly, M.B., Harrogate.

Honorary Secretaries: D. King Smith, M.D., 311, Jarvis Street, Toronto; Donald Macgillivray, M.D., 12, Carlton Street, Toronto; John Campbell Rankin, M.B., 38, University Road, Belfast.

Laryngology and Otology.

President: J. Dundas Grant, M.D., London.

Vice-Presidents: George R. McDonagh, M.D., Toronto; H. S. Birkett, M.D., Montreal; John Macintyre, M.B., Glasgow; Hugh Edward Jones, M.R.C.S., Liverpool.

Honorary Secretaries: David J. Gibb Wishart, M.D., 47, Grosvenor Street, Toronto; Geoffrey Boyd, M.D., 167, Bloor Street, Toronto; Adam Brown Kelly, M.D., 26, Blythswood Square, Glasgow.

Medicine.

President: Sir Thomas Barlow, Bart., K.C.V.O., M.D., London.

Vice-Presidents: Professor Alexander McPhedran, M.D., Toronto; Professor James Stewart, M.D., Montreal; Alexander Napier, M.D., Glasgow; William Calwell, M.D., Belfast.

Honorary Secretaries: Robert D. Rudolph, M.D., 396, Bloor Street W., Toronto; John Taylor Fotheringham, M.D., 36, Carlton Street, Toronto; Robert Hutchison, M.D., 22, Queen Anne Street, London, W.

Obstetrics and Gynaecology.

President: A. H. Freeland Barbour, M.D., Edinburgh.

Vice-Presidents: Professor James A. Temple, M.D., Toronto; Professor Adam H. Wright, M.D., Toronto; Professor William Gardner, M.D., Montreal; T. Arthur Helme, M.D., Manchester.

Honorary Secretaries: Frederick Fenton, M.D., 75, Bloor Street E., Toronto; Kennedy C. McIlwraith, M.D., 54, Avenue Road, Toronto; Cuthbert Lockyer, M.D., 117a, Harley Street, London, W.

Ophthalmology.

President: Robert Marcus Gunn, F.R.C.S., London.

Vice-Presidents: George Herbert Burnham, M.D., Toronto; John W. Stirling, M.D., Montreal; Joseph Nelson, M.D., Belfast; Arnold Lawson, F.R.C.S., London.

Honorary Secretaries: James M. MacCallum, M.D., Toronto; Duncan N. McLennan, M.D., 126, Bloor Street W., Toronto; Frank Pearson Skeffington Cresswell, M.B., 24, Windsor Place, Cardiff.

Pathology and Bacteriology.

President: Professor J. G. Adami, M.D., F.R.S., Montreal.

Vice-Presidents: Professor J. J. Mackenzie, M.D., Toronto; Professor W. T. Connell, M.D., Kingston; Ingersoll Olmsted, M.D., Hamilton; Professor Robert Fraser Calder Leith, M.B., Birmingham.

Honorary Secretaries: Gideon Silverthorn, M.D., 266, College Street, Toronto; Harold C. Parsons, M.D., 72, Bloor Street W., Toronto; Frank George Bushnell, M.D., Sussex County Hospital, Brighton.

Pediatrics.

President: George Alexander Sutherland, M.D., London.

Vice-Presidents: H. T. Machell, M.D., Toronto; Allan M. Baines, M.D., Toronto; Otto Jackson Kauffmann, M.D., Birmingham; H. Betham Robinson, M.S., London.

Honorary Secretaries: E. Stanley Ryerson, M.D., 261, College Street, Toronto; Joseph S. A. Graham, M.D., 102, College Street, Toronto; Ralph Vincent, M.D., 1, Harley Street, London, W.

Physiology.

President: Professor Wm. Dobinson Halliburton, M.D., F.R.S., London.

Vice-Presidents: Professor A. B. Macallum, M.D., Toronto; Professor J. Wesley Mills, M.D., Montreal; Professor Charles Scott Sherrington, M.D., F.R.S., Liverpool.

Honorary Secretary: Herbert E. Roaf, M.D., 44, Upper Parliament Street, Liverpool.

Psychology.

President: Wm. Julius Mickle, M.D., London.

Vice-Presidents: N. H. Beemer, M.D., Toronto; Charles K. Clarke, M.D., Toronto; Reginald Langdon-Down, M.B., London.

Honorary Secretaries: A. T. Hobbs, M.D., Guelph, Ontario; Goldwin Howland, M.D., 540, Spadina Avenue, Toronto; John Turner, M.B., Essex County Asylum, Brentwood.

State Medicine.

President: F. Montizambert, M.D., Ottawa.

Vice-Presidents: E. P. Lachapelle, M.D., Laval University, Montreal; Charles Sheard, M.D., Toronto; Peter H. Bryce, M.D., Ottawa; Joseph Groves, M.B., Isle of Wight.

Honorary Secretaries: J. Langrill, M.D., Hamilton.

Surgery.

President: Sir Hector Clare Cameron, Professor of Clinical Surgery, Glasgow.

Vice-Presidents: Fred. L. M. Grasett, M.D., Toronto; Francis J. Shepherd, M.D., Montreal; A. B. Atherton, M.D., Frederickton, N.B.; T. K. Holmes, M.D., Chatham, Ontario.

Honorary Secretaries: H. A. Beatty, M.D., 207, Simcoe Street, Toronto; Frederick W. Marlow, M.D., 699, Spadina Avenue, Toronto; Sinclair White, F.R.C.S., Ranmoor, Sheffield.

Therapeutics.

President: Donald MacAlister, M.D., Cambridge.

Vice-Presidents: John L. Davison, M.D., Toronto; A. D. Blackader, M.D., Montreal; Sir Alan Reeve Manby, M.V.O., M.D., East Rudham; Professor J. Rose Bradford, M.D., F.R.S., London.

Hon. Secretaries: V. Henderson, M.D., University of Toronto; C. P. Lusk, M.D., 99, Bloor Street W., Toronto.

HONORARY LOCAL SECRETARIES.

Dr. F. N. G. Starr, The Medical Building, Toronto.
Professor J. J. Mackenzie, The Medical Building, Toronto.
Dr. J. Gibb Wishart, The Medical Building, Toronto.

COMMITTEE PATHOLOGICAL MUSEUM.

Professor J. J. Mackenzie, Toronto, *Chairman*; Dr. Maud Abbott, *Secretary*; Professor Gordon Bell, Winnipeg; Professor W. T. Connell, Kingston; Dr. A. R. Gordon, Toronto; Dr. J. A. McGregor, London, Ontario.

EXHIBITION COMMITTEE.

Chairman: Dr. Arthur Jukes Johnson, Toronto.

Secretaries: Dr. T. D. Archibald, Toronto; Dr. W. A. Young, Toronto.

HONORARY LOCAL TREASURER.

Professor J. W. Ross, Toronto.

TORONTO ARRANGEMENTS COMMITTEE.

Dr. Geo. A. Bingham, 68, Isabella Street, Toronto.
Dr. C. J. C. O. Hastings, 258, Wellesley Street, Toronto.
Dr. A. A. Macdonald, 341, Bloor Street West, Toronto.
Professor J. J. Mackenzie, Medical Laboratories, Toronto.
Dr. Alex. McPhedran, 151, Bloor Street West, Toronto.
Dr. R. B. Nevitt, 46, Bloor Street West, Toronto.
Dr. R. A. Reeve, *President-elect*, 48, Bloor Street E., Toronto
Dr. F. N. G. Starr, 112, College Street, Toronto.
Dr. J. Algernon Temple, 333, Bloor Street W., Toronto.
Dr. D. J. Gibb Wishart, 47, Grosvenor Street, Toronto.

PROGRAMME OF PROCEEDINGS.

Tuesday, August 21st, 1906.

9.30—12.30 a.m.—Meetings of Sections.
2.30 p.m.—Address on Obstetrics, Dr. W. S. A. Griffith

Mr. G. C. FRANKLIN, President.
Dr. WILLIAM COLLIER, Past-President.
Sir VICTOR HORSLEY, F.R.S., Chairman of Representative Meetings.
Dr. H. RADCLIFFE CROCKER, Treasurer.

Dr. JOHN FORD ANDERSON, London.
Dr. EDGAR G. BARNES, Eye.
Dr. T. R. BRADSHAW, Liverpool.
Dr J. BRASSEY BRIERLEY, Old Trafford.
Colonel DAVID BRUCE, C.B., F.R.S. (Cape of Good Hope Branch), London.
Dr. R. COCHRANE BUIST, Dundee.
Dr. W. A. CARLINE, Lincoln.
Mr. ANDREW CLARK, D.Sc., London.
Dr. JAMES CRAIG, Dublin.
Mr. E. J. DOMVILLE, Exeter.
Mr. GEORGE EASTES, M.B., London.
Professor DAVID W. FINLAY, M.D., LL.D., Aberdeen.
Dr. E. L. FOX, Plymouth.
Dr. JOHN H. GALTON, Upper Norwood
Dr. JOSEPH J. GIUSANI, Cork.
Dr. BRUCE GOFF, Bothwell.
Dr. DAVID GOYDER, Bradford.
Dr. T. DRUSLYN GRIFFITHS, Swansea.
r. J. GROVES, Carisbrooke.
Dr. T. ARTHUR HELME, Manchester.
r J. H. HUNTER, South SHIELDS.
Mr. R. H. KINSEY, Bedford.
r. C. W. MARRIOTT, Reading.
Dr. C. G. DRUMMOND MORIER, (South Australian Branch), London.
Professor J. T. J. MORRISON, M.B., Birmingham.
Mr. EDMUND OWEN, London.
Mr. C. H. W. PARKINSON, Wimborne Minster.
Dr. FRANK M. POPE, Leicester.
Dr. EDWIN RAYNER, Stockport.
Mr. H. JONES ROBERTS, Penygroes.
Mr. H. BETHAM ROBINSON, M.S., London.
Professor ROBERT SAUNDBY, M.D., LL.D., Birmingham.
Dr. E. MARKHAM SKERRITT, Clifton, Bristol.
Professor W. R. SMITH, M.D. (Malta and Mediterranean Branch), London.
Mr. W. D. SPANTON, Hanley.
Mr. C. R. STRATON. Salisbury.
Mr. JOHN LYNN THOMAS, C.B., Cardiff.
Dr. W. J. TYSON, Folkestone.
Mr. T. JENNER VERRALL, Brighton.
Dr. NORMAN WALKER, Edinburgh.
Dr. ARTHUR T. WEAR, Newcastle-on-Tyne.
Lieutenant-Colonel E. M. WILSON, C.B., R.A.M.C., Farnborough.

MINUTES.

The minutes of the last meeting having been printed nd circulated and no objection received, were taken as ead and signed as correct.

APOLOGIES.

Read letters of apology for non-attendance from Dr. M. everley, Dr. D. Burgess, Professor Byers, Dr. James amilton, Dr. R. McKenzie Johnston, Dr. C. H. Milburn, r. J. Murray, Dr. J. Maxwell Ross, and Fleet Surgeon Lloyd Thomas, R.N.

NEW MEMBERS OF COUNCIL.

The GENERAL SECRETARY reported that the South Wales and Monmouthshire Branch had returned Dr. T. D. Griffiths as its Representative on the Council vice Colonel Cresswell, C.B., deceased, and that the New Zealand Branch had returned Dr. Haines as its Representative on the Council.

Colonel David Bruce, C.B., F.R.S., Representative of the Cape of Good Hope (Eastern Province and Western Province) Branches, attended the Council for the first time.

ACKNOWLEDGMENT OF RESOLUTIONS OF CONDOLENCE.

Read acknowledgments to the resolutions of condolence passed at the last meeting of the Council relative to the deaths of Sir John Burdon-Sanderson, Bart., F.R.S., and Dr. Somerville, which were ordered to be entered upon the minutes.

ACKNOWLEDGMENT OF CONGRATULATORY RESOLUTIONS.

Read acknowledgments to the resolutions of congratulation to Sir James Barr, Sir Thomas Chavasse, and Sir Arthur Chance upon receiving the honour of Knighthood at the hands of His Majesty the King, which were ordered to be entered on the minutes.

TORONTO MEETING.

The consideration of the desirability or otherwise of the formation of a Section for Physical Therapeutics was referred to the officers of the Therapeutic Section.

LISBON MEDICAL CONGRESS.

The Treasurer, Professor Byers, and Mr. George Jackson were appointed delegates to attend the forthcoming International Medical Congress to be held at Lisbon from April 19th to 26th, 1906.

ELECTION OF MEMBERS.

The seven candidates whose names appeared on the circular convening the meeting were duly elected members of the British Medical Association.

JOURNAL AND FINANCE COMMITTEE.

The minutes of the Journal and Finance Committee having been received, it was moved by the TREASURER, seconded by the CHAIRMAN OF COUNCIL, and agreed

That the accounts for the quarter ending December 31st last, amounting to £11,161 0s. 5d., be received and approved, and the Treasurer be empowered to pay those remaining unpaid, amounting to £3,364 11s. 4d.

That a small Advisory Committee be appointed, consisting of Professor Cushny, Professor Wyndham Dunstan, F.R.S., and Mr. R. H. Kinsey, to assist the Editor in deciding what proprietary preparations should be noticed in the editorial columns of the JOURNAL. That Dr. Dawson Williams act as Secretary.

That it be an instruction to the officers concerned that in future all the "copy" for the *Year Book* be furnished by December 1st, and the *Year Book* be published on December 15th.

That Mr. J. Lynn Thomas, C.B., be elected to the Journal and Finance Committee vice Mr. W. Jones Morris, deceased.

That a grant of £100 be made to the Chloroform Committee.

PREMISES AND LIBRARY COMMITTEE.

Resolved: That the minutes of the Premises and Library Committee be received.

The following resolutions were duly approved by the Council at its meeting on December 13th, 1905:

1. That the Strand and Agar Street houses be demolished, and that the site be dealt with as a whole for the building of new premises up to a height of six stories.
2. That the whole of the ground floor and basement of the new premises be provided with separate entrances so that they may be let off at an estimated rent of £3,000 per annum.
3. That no special Council Room be provided, but the Library be so constructed that it may be conveniently used for meetings of the Council.
4. That the preparation of the plans for the new premises be thrown open to a limited competition, and that six architects be invited by the Committee to compete.
5. That a premium of 100 guineas and 50 guineas be offered to the first and second competitor respectively, and that an assessor be appointed to determine the relative merits of the plans submitted.

Moved by Mr. **Andrew Clark**, seconded by Dr. **Bradshaw**, and resolved:

That the report as to the accommodation required be approved, and that the Committee be empowered to invite competition for the erection of new premises, in accordance with the particulars contained therein.

Special Meeting of Journal and Finance Committee.

The minutes of the Journal and Finance Committee (with the Chairmen of Committees) having been received, the following recommendations were adopted:

1. That four more clerks be sanctioned for the Medical Secretary's department, to be appointed as required.
2. That the clerks of the central office be arranged in classes for the purposes of promotion and increase of salary.
3. That all clerks be recommended for appointment by the head of each department. Appointments shall be made by the General Secretary and Manager acting under the directions of the Journal and Finance Committee.
4. That all questions of promotion and increase of salary be recommended by the heads of departments and determined by the Chairman of Council and Treasurer in consultation with the General Secretary and Manager, and with reference to the Journal and Finance Committee, when necessary.
5. That all clerks be paid by the General Secretary and Manager.
6. That the Editor, the General Secretary and Manager, and the Medical Secretary be paramount in their respective departments. In all matters where expenditure is involved the General Secretary and Manager should be consulted, and if he object no further steps should be taken without the sanction of the Chairman of Council and Treasurer, who would, at their discretion, refer the matter to the Finance Committee.
7. That the Journal and Finance Committee annually present to the Council a detailed report upon the office staff in the various departments.

Organization Committee.

The minutes of the Organization Committee having been received:

New Branches Sanctioned.

On the motion of Mr. **Verrall**, the following resolutions were agreed upon:

That a Branch be sanctioned composed of the members of the Association resident in Egypt.

That the members of the Association resident in the Province of Saskatchewan be constituted a Branch of the Association, having the name of the Saskatchewan Branch.

Proposed New By-Law.

With reference to the following minute of the Representative Meeting, referred by the Council to the Organization Committee:

> *Minute* 185.—"That the Representative Meeting be given power to elect not less than four nor more than six members of the Central Council."

It was resolved:

That the Council submit the following draft By-law for the consideration of the next Representative Meeting:

> That the Representative Meeting shall have power to elect annually not more than six members of the Central Council.

That the Council report to the Representative Meeting that election under this By-law should be made subject to the same limitations as to duration of office as affect members of the Council elected by Branches, and that the Organization Committee be authorized to draft a By-law for submission to the Representative Meeting making such provision.

Grouping of Colonial Branches, 1906-7.

That the Colonial Branches already existing be grouped for representation on the Council for the year 1906-7 in the same manner as for the year 1905-6, and that the new Egypt Branch be grouped with the Malta and Gibraltar Branches, and the Saskatchewan Branch with the Toronto, Manitoba, and British Columbia Branches.

Draft Charter and Regulations.

That the Council authorize the Organization Committee to transmit the draft Charter and draft regulations thereunder direct to the Divisions as soon as prepared by them; that the Divisions be requested to give notice of any amendments that they desire to move not later than March 31st; that the draft be considered by the Council at its April meeting.

Hospitals Committee.

The minutes of the Hospitals Committee having been received, on the consideration of a recommendation asking for authority to carry out the resolution of the Joint Hospitals Committee to circulate certain printed matter to the Boards of Management and members of hospital staffs at an expense not exceeding £50,

An amendment was moved by Mr. **Domville**, seconded by Dr. **Fox**:

> That in consenting to allow the sum of £50 for the circulation of the recommendations of the Joint Hospitals Committee, this Council does not commit itself to the approval of the recommendations, and that a rider to this effect be appended to the recommendations.

The amendment having been put from the Chair, was declared carried (13—8).

The **Chairman of Council** then put the original recommendation of the Hospitals Committee, sanctioning the expenditure of a sum not exceeding £50, together with the rider of Mr. Domville, which was declared to be carried as a substantive resolution.

Irish Committee.

The minutes of the Irish Committee having been received, it was resolved:

That Dr. Kenny's name be added to the Poor-law Subcommittee.

Ethical Committee.

The minutes of the Ethical Committee having been received, it was resolved:

That the Rule submitted by the Gateshead Division be approved.

On the motion of Mr. **Kinsey**, seconded by Dr. **Goyder**, it was resolved:

That the travelling expenses be defrayed from central funds of all persons attending at the request of the Central Ethical Committee for the purpose of giving evidence in the investigation of cases of proposed expulsion or other cases coming before the Committee.

That in the opinion of the Council the proposal of the Scottish Committee would unduly restrict the work of the Central Ethical Committee, but that the principle formulated by the Central Ethical Committee, as the result of the previous consideration of this matter on March 18th 1904, be recommended as practicable:

> That ethical questions concerning individual members of the profession, where the facts are in dispute should in the first instance be referred by the Editor or by the Ethical Committee, to the Division within the area of which the practitioner affected resides and that no comments thereon should appear in the Journal until the local report has been received anc considered.

Scottish Committee.

The minutes of the Scottish Committee having bee received, it was moved by Dr. **Bruce Goff**, seconded b Dr. **Buist**, and resolved:

That the Council is of opinion that in small district as long as unselected lists of medical names appear a part of a directory in a newspaper no action is calle for. The Council is also of opinion that any practitione who objects to his name appearing in the list can us his influence with the editor of the newspaper to have i withdrawn.

Medico-Political Committee.

The minutes of the Medico-Political Committee havin been received, it was resolved:

That if a Bill be introduced into Parliament, as pro posed by the Spectacle-makers' Company, to create specially privileged class of sight-testing opticians, prope steps be taken to oppose it.

That such steps be taken as may be found practicabl with a view to maintaining the efficiency of the vaccina tion laws.

Matters Postponed.

The notices of motion, standing in the names of D

T. Arthur Helme and Dr. Brassey Brierley respectively, were postponed until the next meeting of the Council.

Also a letter relative to a proposal to hold in London a Section for Tropical Medicine, as to which Dr. Griffiths handed in formal notice of motion.

The Council rose at 5.45 p.m.

Proceedings of Committees.

MEDICO-POLITICAL COMMITTEE.

A MEETING of the Medico-Political Committee was held at the office of the Association on Wednesday, January 3rd, when there were present: Dr. R. C. BUIST (in the chair), Dr. H. Radcliffe Crocker (Treasurer), Mr. H. W. Armit, Dr. T. Arthur Helme, Dr. H. A. Latimer, Dr. J. A. Macdonald, Mr. C. H. Watts Parkinson, Dr. Cecil E. Shaw, Mr. C. R. Straton.

NEW MEMBER.

Dr. Helme, having been appointed by the Council to fill the vacancy on the Committee caused by the death of Mr. Jones Morris, was elected by the Committee a member of the Midwives and Parliamentary Subcommittees.

PARLIAMENTARY QUESTIONS.

The Medical Secretary was instructed to supply, for the use of those Division Secretaries who might apply for them, reprints of the memoranda and questions submitted to candidates for Parliament and addressed envelopes for issue, with the replies of the candidates (printed locally) to all practitioners within the area of each constituency. '

MIDWIVES ROLL.

With reference to Minute 206 (*a*) of the Representative Meeting at Leicester as follows:

> (*a*) That as no adequate provision is made for excluding ignorant women, the most fruitful causes of septic infection, up to the year 1910; and that as no adequate provision is made to ascertain that those put on the *Register* have any skill whatever, these should not be placed upon the same *Register* as those later ones who have presumably had some training, or, at any rate, have passed an examination.

It was decided on the recommendation of the Midwives Subcommittee to report to the Representative Meeting that the Midwives Roll could not conveniently be printed in two parts, and that the desired object was sufficiently attained by showing the qualification by virtue of which a midwife was registered in a separate column, as was already done by the Central Midwives Board.

PAYMENT OF MEDICAL MEN CALLED TO ASSIST MIDWIVES.

The Medical Secretary was instructed to make inquiry of medical officers of health as to the action, if any, which their respective authorities were taking, under Section 133 of the Public Health Act, in order to provide for the payment of medical men called to assist midwives.

As the result of the further consideration of the minute of the Representative Meeting concerning a scale of fees for the payment of medical practitioners called to assist midwives, the Midwives Subcommittee presented a report containing the following recommendations, which were adopted by the Committee:

> (*a*) That the Medico-Political Committee report to the Divisions that any legislation promoted or recommended by the Association with respect to the payment out of public funds of medical practitioners called to assist midwives should be in the form of conferring power on local authorities to pay or guarantee fees, and should not include any provision by schedule or otherwise specifying the fees to be paid.
>
> (*b*) That the schedule of fees should be prescribed by the Local Government Board.
>
> (*c*) That the scale adopted by the Metropolitan Counties Branch be recommended to the Divisions as a basis for adoption, subject to such modifications as may be necessary to meet local requirements.

With reference to the question of suitable fees to be paid to medical practitioners who may be called upon to act as inspectors of midwives, referred by the Committee to the Midwives Subcommittee, it was resolved, on the recommendation of the Subcommittee, that to the Memorandum to the Divisions already ordered to be sent be added a paragraph to the following effect:

> (*a*) That attention be drawn to the resolution of the Central Council that inspectors of midwives should be registered medical practitioners.
>
> (*b*) That the Committee has been asked to advise as to suitable fees for the purpose, but that in the opinion of the Committee these must depend upon local circumstances.
>
> (*c*) That the Divisions should therefore be prepared to advise any of their members by whom they may be consulted upon the matter.

CONTRACT PRACTICE SUBCOMMITTEE.

The report of the Contract Practice Subcommittee was received.

It was resolved:

> That the scheme for a Central Emergency Fund prepared by the Contract Practice Subcommittee be approved, and that immediate publication in the BRITISH MEDICAL JOURNAL be authorized.[1]

The report of the Contract Practice Subcommittee with respect to disputes at Ebbw Vale, Blaenavon, and Macclesfield was approved, and the action contemplated with respect to the formation of a Public Medical Service at Darlington and other neighbouring towns mentioned was also approved.

The Committee approved as a precedent the action taken in the matter of the appointment of a public vaccinator to fill a vacancy due to harsh dismissal of the previous officer.

DEPUTATION TO THE PRESIDENT OF THE LOCAL GOVERNMENT BOARD.

The CHAIRMAN of the Public Health Committee reported that a deputation had waited upon the President of the Local Government Board, on November 30th, with reference to the Public Health (Security of Tenure) Bill, but that in view of the change of Government it would now be necessary to arrange for another deputation.

DRAFT CLAUSE FOR INCLUSION IN THE MEDICAL ACTS AMENDMENT BILL.

A report was received from the Medical Secretary on the present position of negotiations with the Pharmaceutical Society concerning the insertion in the Medical Acts Amendment Bill of a saving Clause with reference to chemists, and it was resolved that the following clause be inserted in the final draft of the Medical Acts Amendment Bill:

> Nothing in this Act shall affect or modify the provisions of the Pharmacy Acts, 1862 to 1898, or render illegal any act or thing authorized by the said Acts to be done by any person in connexion with pharmacy.

INTRODUCTION BY THE SPECTACLEMAKERS' COMPANY OF A BILL INTO PARLIAMENT.

The MEDICAL SECRETARY reported information received as to the proposal of the Spectaclemakers' Company to introduce a Bill into Parliament to create a specially privileged class of sight-testing opticians, and it was resolved that such a Bill if introduced should be opposed.

IRISH COMMITTEE.

A MEETING of this Committee was held in the Shelbourne Hotel, Dublin, on January 6th, at 3 p.m., when there were present: Professor BYERS (Belfast), in the chair; Dr. R. B. Carey (Borris, co. Carlow), Dr. James Craig (Dublin), Dr. J. S. Darling (Lurgan), Dr. Joseph Giusani (Cork), Dr. J. M. Kenny (Granard), Dr. P. G. Lee (Cork), Dr. D. J. O'Connor (Cork), Dr. Cecil Shaw (Belfast), Dr. Denis Walshe (Graigue, co. Kilkenny), and Professor White (Dublin). The minutes of the previous meeting were read, amended, and confirmed as amended.

NEW MEMBER.

The HONORARY SECRETARY notified the election by the Leinster Branch of Dr. J. M. Kenny (Granard) as a member of the Committee.

POOR-LAW COMMISSION.

The HONORARY SECRETARY read correspondence in connexion with the formation of the Subcommittee. It was resolved to enter the two following letters on the minutes, and to agree to the request of the Poor-law Association for eight representatives on the Subcommittee.

---

[1] SUPPLEMENT to the BRITISH MEDICAL JOURNAL Jan. 6th, 1906, p. 6.

POOR-LAW ASSOCIATION OF IRELAND.

Castlecomer,
Co. Kilkenny,
December 10th, 1905.

Dear Sir,—In reply to your letter of the 24th ult., which came before our Committee, I beg to say that the Poor-law Association of Ireland will be most happy to co-operate with the B.M.A. and the I.M.A. on the subject of Poor-law Reform. I am, however, to state that in the opinion of the Committee, and on account of the large number of classes of officers concerned in the Poor-law Association, it should have a representation of at least eight members, and the following were suggested as the representatives:

> Dr. Patrick Donnellan, Castlerea; Dr. Richard Marlay Blake, Ravensdale; Dr. T. H. Moorhead, Cootehill; Messrs. J. R. Dagg, Clerk of Union, Baltinglass; D. J. Purcell, Clerk of Union, Nass; James Dooley, Master of Workhouse, North Dublin; Nicholas O'Carroll, Master of Workhouse, Ballinasloe; and Michael Connolly, Relieving Officer, Athenry.

If your Committee agree to this, please let me know when and where the conference is to take place, so that I can duly apprise representatives.

Yours very truly,
Denis O'Carroll,
Secretary.

Professor White,
Royal College of Surgeons,
Dublin.

IRISH MEDICAL ASSOCIATION.

Royal College of Surgeons, Dublin,
January 4th, 1906.

Dear Sir,—Your letter of November 24th, 1905, was read at the meeting on the 2nd instant, and the following resolution was passed:

> "That the Committee of Council be requested to nominate four members of the Association to act in conjunction with the Irish Branch of the British Medical Association and the Poor-Law Association in reference to the Royal Commission on the working of the Poor Law."

I am also to add that Dr. Donnelly, to whom your letter was addressed, was under the impression that he had acknowledged its receipt.

I am, yours faithfully,
Thomas Gick,
Secretary.

Professor White,
Hon. Sec.
Irish Committee,
British Medical Association.

The Committee adopted the following resolution:

> That in the opinion of the Irish Committee of the British Medical Association it is absolutely necessary, owing to the intricacy and importance of the subject to be inquired into, that an Irish medical man who is not a Government official should be added to the Poor-Law Commission,

and recommended that copies be sent by the Medical Secretary to the Prime Minister, the Secretary for Ireland, and the President of the Local Government Board for England.

Coroners Act Amendment Bill.

The following additions to the Bill were proposed by Dr. Walshe and seconded by Dr. Giusani, and unanimously agreed to:

> That Section xxxii of the Coroners Act, 9 and 10 Vict., c. 37, be and hereby is repealed.
>
> Provided also that, when upon death, illness, absence on sick leave, incapacity, or removal of any such coroner, the coroner of the adjoining district in the same county who shall be called upon to act as coroner in said vacant district, shall, for each inquest and for each adjourned inquest held by him in the said district, be paid, in addition to the sum of two pounds already allowed him under Section 3, 44 and 45 Vict., c. 35, mileage for each mile travelled, going to and returning from each such inquest or adjourned inquest, at the rate of sixpence per mile for each mile which he may have travelled in order to hold such inquest or adjourned inquest.

Notification to Divisions and Branches.

It was unanimously resolved:

> That in order to give Divisions and Branches the opportunity of submitting questions for the consideration of the Committee, a circular be sent before each meeting of the Committee to the Secretaries of the various Divisions and Branches in Ireland.

Resolved: That Dr. Kenny's name be added to the Poor-law Subcommittee.

Next Meeting.

The next meeting of the Committee was fixed for Saturday, March 31st, at 3 p.m.

SCOTTISH COMMITTEE.

A meeting of the Scottish Committee was held in the Station Hotel, Stirling, on Tuesday, December 19th, 1905, when there were present; Dr. **Bruce Goff** (in the chair), Dr. R. Cochrane Buist, Dr. R. Balfour Graham, Dr. R. McKenzie Johnston, Dr. J. E. Moorhouse, Dr. A. Trotter, Dr. Norman Walker.

The minutes of the Poor-law Subcommittee were received and approved.

The following recommendations were adopted:

> The Committee are of opinion that in small districts as long as unselected lists of medical names appear as part of a directory in a newspaper no action is called for. The Committee are also of opinion that any practitioner who objects to his name appearing in the list can use his influence with the editor of the newspaper to have it withdrawn.
>
> That in future complaints as to unprofessional conduct in Scotland should not be considered by the Central Ethical Committee until they have been reported on through the Secretary of the local Branch.

ETHICAL COMMITTEE.

A meeting of the Ethical Committee was held at the office of the Association on December 15th, 1905. Mr. R. H. Kinsey in the chair. The other members present being Dr. J. Ford Anderson, Mr. H. A. Ballance, Mr. G. H. Broadbent, Dr. G. W. Crowe, Dr. Bruce Goff, Dr. R. L. Langdon Down, Mr. W. D. Spanton.

Complaints against Members by Non-Members.

The Committee approved the reply which had been given to an inquiry from the Honorary Secretary of a Branch, advising that, though a non-member could not claim of right that the Association should consider a complaint from him against a member, there was nothing to prevent the Association, through any Division or Branch, from investigating at its discretion a question raised as to the conduct of a member. It was further advised that the inquiry could, as a rule, be carried out more conveniently in the first instance by a Division than by a Branch.

Proposed Expulsion of a Member.

The consideration of the recommendation of a Branch that a member of the Branch be expelled from the Association was deferred to a special meeting, which the member concerned and Representatives of the Division and Branch were to be requested to attend.

Assistance in Divisional Investigation.

The Committee approved the action of the Chairman in attending at the request of a Division, with the Medical Secretary, to assist the Division in investigating a case of special difficulty.

Trade and Other Advertisements and Newspaper Notices.

The Medical Secretary's report as to trade advertisements brought under notice since the last meeting, and as to newspaper notices dealt with since the last meeting, was received and approved.

Division Rules.

The following Rule submitted by the Gateshead Division was considered:

> When a practitioner is called to an urgent case, either of sudden or other illness, accident or injury, in a family usually attended by another, and is so informed, unless his further attendance is desired in consultation, when the emergency is provided for on the arrival of the attendant in ordinary, he should resign the case to the latter; but he is entitled to charge the family for his services.

The Council was recommended to sanction the adoption of the Rule by the Division.

Warning Notices by the General Medical Council against Canvassing and Advertising.

A communication was read from the General Medical Council stating the result of the application from the British Medical Association, made on the recommendation of the Central Ethical Committee, that a warning notice be issued against canvassing and advertising, the decision of the General Medical Council being to issue a warning notice.[1]

---

[1] British Medical Journal, December 9th, 1905, p. 1544.

The Committee expressed satisfaction at the result of the representations of the Association in the matter.

Another meeting of the Committee was held on Friday, January 5th, when there were present: Mr. R. H. Kinsey (in the Chair), Dr. H. Langley Browne (Chairman of Council), Dr. J. Ford Anderson, Mr. H. A. Ballance, Dr. A. G. Bateman, Mr. G. H. Broadbent, Dr. Bruce Goff, Dr. R. Langdon Down, Mr. W. D. Spanton.

Purchase of Practices.

The Committee approved the reply which had been given to an inquirer, to the effect that there is no objection to the purchase or sale of medical practices, apart from special regulations affecting those who hold certain diplomas.

Advertising by a Friendly Society.

A communication was read from a practitioner, concerning whom a complaint had been considered at the last meeting of the Committee, in respect of alleged advertising by a Friendly Society of which he was surgeon, and who now forwarded for the information of the Committee a copy of an undertaking by the Friendly Society not again so to advertise his name.

The undertaking was accepted as satisfactory.

Warning Notice as to Appointments.

The Committee considered and approved the recommendations of the Contract Practice Subcommittee (*a*) that the heading of the warning notice in the Journal should be henceforth: "Appointments Vacant: Warning Notice" instead of "Contract Practice and other Appointments"; and (*b*) as to the desirability of a standing reference to this notice in some conspicuous position in the Journal.

Travelling Expenses of Witnesses.

A communication from a Division, inquiring whether the expenses of representatives of the Division attending an inquiry in compliance with the request of the Committee would be defrayed from the central funds of the Association, was considered, and it was resolved:

> That it be recommended to the Council that the travelling expenses be defrayed from central funds of all persons attending at the request of the Central Ethical Committee for the purpose of giving evidence in the investigation of cases of proposed expulsion or other cases coming before the Committee.

Medical Officers and Insurance Companies.

A complaint from a member with respect to the alleged unprofessional action of the medical officer of an insurance company was considered. After consideration of the circumstances, the Committee adopted the following resolutions:

> (*a*) That having regard to the explicit statement, in Dr. B.'s first letter, of the conditions under which he asked for the information, namely (*a*) that the matter was settled as affecting the company, and (*b*) that the particulars were desired only for Dr. B.'s private records, he ought not to have asked Dr. A. subsequently for information about the case for the use of the company.
>
> (*b*) That Dr. A. would have been guilty of violating his professional obligation to his patient's family had he, otherwise than at their request, divulged, either to the company or to any one for the use of the company, the confidential information obtained by him as the medical attendant of Mr. X.
>
> (*c*) That the explicit statement of Dr. B., that the claim had been passed, is, in the opinion of the Committee, contradicted by his second letter and by the letter of the company's manager to Dr. A. The Committee notes that Dr. B. does not state that he made no suggestion to the manager which might have led him to apply to Dr. A. to "amplify his certificate." The Committee considers that an explanation should be given as to how the difficulty spoken of by the company's manager arose, which led to the reopening of a question stated by Dr. B. to have been settled.

Canvassing and Advertising in connexion with a Dispensary.

The Committee considered a complaint as to alleged canvassing and advertising, (*a*) by a provident dispensary, and (*b*) by a former medical officer of the same dispensary, and it was resolved:

> That, with regard to the dispensary, it be left to the Chairman, Medical Secretary, and Solicitor, in co-operation with the Executive Committee of the Division concerned, to take such action as may be found desirable.

It was further resolved to draw the attention of the former medical officer of the dispensary to the warning notice of the General Medical Council.

Advertisements of Home for Inebriates.

The Chairman reported the action taken by himself, with the Editor and Medical Secretary, in pursuance of a minute of the Committee on December 15th, 1905.

The Committee expressed satisfaction with the undertakings given by the proprietor of the home.

Advertising of Medical Practitioners by Newspapers.

The following resolution of the Scottish Committee on a question remitted to it by the Ethical Committee on October 6th was considered, and the Ethical Committee expressed its concurrence therein:

> That with reference to the question of advertising by the newspapers themselves of the names of medical practitioners in Scotland, the Committee find on inquiry that the practice is not common—only three instances having been ascertained. The Committee are of opinion that in small districts, as long as unselected lists of medical names appear as part of a directory, no action is called for. The Committee are also of opinion that any practitioner who objects to his name appearing in the list can use his influence with the editor of the newspaper to have it withdrawn.

The consideration of the case which had given rise to the reference to the Scottish Committee, and had been deferred in the meantime, was resumed, and it was resolved:

> That in the opinion of the Committee the publication of the names of medical practitioners in newspapers in the circumstances brought to the notice of the Committee in the present case is undesirable, but that, as the practice has been permitted by the profession in the district for so long a period, the Committee is not prepared to condemn any individual in respect thereof.

Ethical Cases in Scotland.

The following resolution of the Scottish Committee was considered:

> That in future complaints as to unprofessional conduct in Scotland should not be considered by the Central Ethical Committee until they have been reported on through the Secretary of the local Branch.

It was resolved:

> That in the opinion of the Ethical Committee the proposal of the Scottish Committee would unduly restrict the work of the Central Ethical Committee, but that the principle formulated by the Central Ethical Committee, as the result of the previous consideration of this matter on March 18th, 1904, be recommended as practicable.
>
> > "That ethical questions concerning individual members of the profession, where the facts are in dispute, should in the first instance be referred by the Editor, or by the Ethical Committee, to the Division within the area of which the practitioner affected resides, and that no comments thereon should appear in the Journal until the local report has been received and considered."

ORGANIZATION COMMITTEE.

A meeting of the Organization Committee was held at the office of the Association on December 12th, 1905, when there were present: Mr. T. Jenner Verrall in the chair, Mr. H. A. Ballance, Mr. Andrew Clark, Dr. Alfred Cox, Professor J. T. J. Morrison, Dr. E. Rayner, Professor A. H. White.

Connaught Branch.

An interim report from the Irish Committee was received, informing the Committee of the active steps which were being taken to organize the Connaught Branch.

Medical Secretary's Visits to Divisions and Branches.

The Committee approved the report of the Medical Secretary on visits to Divisions and Branches since the last meeting.

Proposed Formation of an Egyptian Branch.

The Committee decided to recommend the Council to approve the formation of a Branch composed of members of the Association resident in Egypt.

Forms of Annual Reports.

Forms of annual reports of Divisions to Branches and of Branches to the Central Council were considered, and after slight emendation approved.

Division and Branch Finance.

The Committee approved, with slight modification, a draft of an inquiry form to Divisions and Branches as to the present system of Division and Branch finance.

Alterations of By-Laws.

The Committee recommended the Council to adopt certain draft alterations of by-laws referring to the representation of the Representative Meeting on the Central Council, and as to grants to Branches and Divisions prepared by the Committee for submission to the next Representative Meeting in pursuance of the resolutions of the Representative Meeting at Leicester.

HOSPITALS COMMITTEE.

A meeting of the Hospitals Committee was held at the office of the Association on December 21st, 1905, when there were present: Dr. M. Beverley (Chairman) in the chair, Dr. H. Langley Browne (Chairman of Council), Dr. J. Ford Anderson, Dr. John R. Hamilton, Dr. E. B. Hastings, Dr. F. M. Pope, Dr. Lauriston E. Shaw, and Mr. E. F. White.

Fees from Hospital Patients.

The Committee approved advice which had been given on the subject of charges for treatment made to patients at a special hospital, namely, that the Division concerned should take action with a view to maintaining the principle laid down by the Association that no charge for the treatment of any hospital patient should be made.

Circulation of Proposals for Hospital Reform.

The Committee recommended the Central Council to approve the circulation to hospital boards throughout the country of the findings of the Joint Committee which had been sitting during the autumn composed of representatives of the Association and non-medical members of hospital boards nominated by the conference in March last.

Resignation of Chairman.

The Chairman having intimated his inability for personal reasons to continue in that office, the Committee accepted with much regret his resignation of the office in which he had rendered such great services to the Association, and deferred until its next meeting the appointment of a successor.

PREMISES AND LIBRARY COMMITTEE.

A meeting of the Premises and Library Committee was held at the office of the Association on January 9th. Mr. Andrew Clark, and afterwards Dr. H. W. Langley Browne (Chairman of Council) took the chair. The other members present were: Dr. H. Radcliffe Crocker (Treasurer), Dr. Edgar Barnes, Dr. J. H. Galton, Dr. Bruce Goff, Dr. E. Rayner, and Dr. E. Markham Skerritt.

Grant of Duplicate Books to Divisions.

Applications from the Divisions and Branches for a copy of the Duplicate List of the Central Library were considered, and the Librarian was instructed to forward the Duplicate List of Books in the order of receipt of application, and to request the Division Secretary to return the Duplicate List within fourteen days.

The General Secretary was instructed to prepare regulations for the consideration of the Committee, setting forth that all duplicate volumes acquired by the Divisions or Branches from the Central Library remain the absolute property of the Association.

Librarian's Report.

The Library accounts for the quarter were received and recommended for payment.

The Librarian reported that there had been 1,575 attendances in the Library during the last three months of 1905, as compared with 1,556 in the corresponding period of 1904. He also reported that a complete series of the *Thèses de Lyon* for 1904-5 (180 *Thèses*) and 83 of the new session (1905-6) of the *Thèses de Paris* had been received, and read a list of the books presented and purchased for the Library.

The Rebuilding of the Association Premises.

The Committee considered the steps to be taken as the result of the resolutions passed by the Council on December 13th, 1905, as to the rebuilding of the premises of the Association, and a special Building Subcommittee was appointed to supervise and settle all arrangements in connexion with the new building.

JOURNAL AND FINANCE COMMITTEE.

A meeting of the Journal and Finance Committee was held at the office of the Association on January 10th, when there were present: Dr. H. W. Langley Browne (Chairman of Council) in the chair, Sir Victor Horsley, F.R.S. (Chairman of Representative Meetings), Dr. H. Radcliffe Crocker (Treasurer), Dr. Edgar G. Barnes, Dr. W. A. Carline, Mr. Andrew Clark, Dr. J. H. Galton, Dr. J. Groves, Mr. R. H. Kinsey, Mr. C. H. W. Parkinson, Dr. Edwin Rayner, Dr. E. Markham Skerritt, Mr. T. Jenner Verrall.

Proprietary Preparations.

A memorandum from the Editor on proprietary preparations was received and adopted, and a small Advisory Committee, consisting of Professor Cushny, Professor Wyndham Dunstan, F.R.S., and Mr. R. H. Kinsey, was appointed to advise the Editor, with Dr. Dawson Williams as Secretary.

Chloroform Committee.

It was recommended that a grant of £100 be made to the Chloroform Committee.

Hospitals Committee.

It was recommended that the Hospitals Committee be empowered to incur an expenditure not exceeding £50 for the purpose of circulating certain printed matter to the Boards of Management and members of hospital staffs throughout the country.

Finance.

The accounts for the quarter having been submitted and explained by the Treasurer, it was recommended that he be empowered to pay those remaining unpaid.

New Member.

The Committee recommended that Mr. J. Lynn Thomas, C.B., be nominated to the vacancy on the Committee caused by the death of Mr. W. Jones Morris.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* Journal.]

BIRMINGHAM BRANCH:

Coventry Division.

A meeting of this Division was held at the Coventry and Warwickshire Hospital on December 6th, 1905.

Acute Rheumatism.—Dr. J. Orton read a paper on the pathology of acute rheumatism; this was followed by a paper by Dr. Kenderdine on the clinical characteristics of acute rheumatism. Dr. Wynn of Birmingham opened the discussion, which was followed by an interesting account of the bacteriology of acute rheumatism, and illustrated his remarks by specimens and slides. The subsequent discussion was joined in by Drs. Milner Moore, Hawley, Webster, McGlashan, Webb Fowler, Snell, and the Chairman. Drs. Orton and Kenderdine replied.

Charges for Private Midwifery Cases.—Dr. McGlashan proposed the following proposition:

> That the minimum charge for private midwifery cases in the area of the Division shall be one guinea; and when in exceptional circumstances this amount is not forthcoming, the medical services shall be given gratis.

This was seconded by Dr. RICE. To this Dr. CALLAGHAN proposed the following amendment:

> That the minimum charge for normal midwifery cases in the area of the Division shall be one guinea, and that an extra fee be charged for instrumental delivery.

This amendment, not being seconded, was withdrawn. Dr. J. ORTON then proposed the following amendment:

> That the minimum charge for midwifery cases except parish cases in the area of the Division *should* be one guinea.

This was seconded by Dr. WEBB FOWLER, and supported by Dr. WEBSTER. During the discussion which followed, Dr. MCGLASHAN, with the consent of his seconder and the meeting, agreed to modify his original proposition so that it should read:

> That the minimum charge for midwifery cases other than parish cases in the area of the Division shall be one guinea.

Dr. J. ORTON'S amendment, on being put to the meeting, was carried. On becoming the substantive resolution, Dr. RICE proposed the following amendment:

> That a committee be formed of the members of the Division resident in the areas of the parishes of Foleshill and Bedworth—the areas affected by the resolution—to meet and report to the Division on the subject of the minimum fee desirable.

This was seconded by Dr. MCGLASHAN and supported by Dr. CALLAGHAN. On being put to the meeting this amendment was carried *nem. con.* It was then put as the substantive resolution and carried *nem. con.*

Specimens.—Dr. Bankes Price showed a specimen of dermoid of ovary and ulcerated appendix from the same subject; and also an intra-ocular tumour.

HALIFAX AND NOVA SCOTIA BRANCH.

A MEETING was held on December 6th, 1905, at the City Council Chamber, Halifax.

Papers.—Dr. R. EVATT MATHERS read a paper on acute otitis media and its treatment. Dr. F. W. GOODWIN read notes on flavouring of medicines.

A further meeting was held on December 20th, 1905.

Papers.—Dr. D. A. CAMPBELL read a paper on aortic regurgitation, exhibiting *post-mortem* specimens. Dr. ROBERT KING read a statistical paper on lobar pneumonia, an analysis of several hundred cases treated in the hospitals at Montreal.

Health Act.—Dr. A. P. REID, Provincial Health Officer, addressed the Branch concerning his work.

Another meeting was held on January 3rd, 1906.

American Medico-Psychological Association.—It was resolved that this Branch concur with the Provincial Government in an invitation to the American Medico-Psychological Association to hold its next annual meeting at Halifax.

Paper.—The PRESIDENT introduced Dr. Wm. Rockwell, of River Hebert, N.S., who read a most interesting case, report and paper, on subdiaphragmatic abscess following operation for appendicitis.

LANCASHIRE AND CHESHIRE BRANCH:

SOUTH MANCHESTER DIVISION.

A GENERAL meeting of this Division was held on Friday, January 26th, at 3.15 p.m. in the schoolroom of the Holy Innocents' Church, Fallowfield. The meeting was thrown open to every medical man practising in the area of the Division. The HONORARY SECRETARY reported that, out of 121 medical men resident in the district, 89 are members of the Division, 13 are members of other Divisions, 19 are non-members.

Rusholme Provident Dispensary.—The meeting received a report of the action taken in the matter of the recently-established Rusholme Provident Dispensary, including the proceedings before the General Medical Council in November in connexion therewith.

Standard Minimum Rate for Midwifery Cases.—The question of a standard rate for midwifery was discussed, but no resolution adopted in reference thereto.

Contract Practice.—Dr. WILLIS moved, and it was duly seconded:

> That in view of the fact that the present system of contract practice fails to carry out the intention of its founders as to the relief of the sick poor, and that such practice is opposed to the best interests of the medical profession, this Division of the British Medical Association is of opinion that the Association should oppose all forms of contract practice except the medical relief afforded by the State through the Poor Law authorities.

Dr. MCDOUGALL moved as an amendment:

> That the members of the Division reaffirm the opinions they have already expressed as to contract practice.

The amendment was defeated by 6 to 3. Dr. WILLIS moved as a rider:

> That the system of medical relief afforded by the State through the Poor Law authorities requires radical amendment.

The resolution with the rider was carried by 6 to 3.

Warning Notice as to Canvassing and Advertising.—Dr. COTTERILL moved, and it was resolved:

> That this Division heartily welcomes the recent announcement of the General Medical Council with reference to canvassing and advertising, and will endeavour to obtain in this district loyal and strict observance of the principles therein involved.

Direct Representatives on General Medical Council.—Dr. J. M. Rhodes, Ivy Cottage, Didsbury, was unanimously selected as a candidate for nomination by the Association as Direct Representative on the General Medical Council.

STOCKPORT, MACCLESFIELD, AND EAST CHESHIRE DIVISION.

AN adjourned meeting was held at the Stockport Infirmary on Thursday, December 22nd, 1905, Dr. A. GODSON, President, in the chair.

Contract Medical Practice.—The recommendations of the Medico-Political Committee as to contract work were considered in conjunction with the paper read by Mr. B. W. Housman at the previous meeting, and the following resolutions were carried *nem. con.* as answers to the recommendations:

1. That experience in Stockport shows that contract work can be dispensed with, and that the energies of all the Divisions should be directed to the abolition of contract work.
2. That this Division views with concern the suggestion for the introduction of a "public medical service," and expresses its regret that such a matter has been brought forward by the Committee, considering that such a scheme is both undesirable and unnecessary.

Condition at Macclesfield.—It was resolved:

> That the Medical Secretary be requested to visit Macclesfield, and to advise on the condition there existing.

The Division and Parliamentary Candidates.—It was resolved:

> That the memoranda and questions circulated be forwarded to each parliamentary candidate for their consideration and replies.

METROPOLITAN COUNTIES BRANCH:

CITY DIVISION.

A GENERAL meeting of this Division was held at Salisbury House, E.C., at 4 p.m. on January 18th, Dr. J. W. HUNT in the chair.

Confirmation of Minutes.—The minutes of the last general meeting were read, confirmed, and signed.

Division and Branch Finance.—With reference to a letter from the Medical Secretary on this subject, it was resolved that this matter be referred to the next Executive Committee meeting.

Special Meeting.—At 4.15 the meeting was made a special one to consider a proposal to alter the quorum at general meetings from twelve to six. It was proposed as an amendment by Mr. BEDDOW, and seconded by Mr. F. WALLACE, that the number be eight instead of twelve. This was carried unanimously. The general meeting was then resumed.

Representative on Branch Entertainment Committee.—Mr. F. Wallace was unanimously appointed to represent the City Division.

Annual Representative Meeting.—Mr. F. WALLACE read his report of the business of the Representative Meeting at Leicester. A vote of thanks was heartily accorded to him for his services.

Association Library.—Dr. STUART HALLOWS proposed, and Mr. HOPE GRANT seconded, that

> The Library Committee be asked to keep the library of the

> Association open until 11 p.m., except on Saturdays, when it shall be closed at 1 p.m.

This was carried unanimously.

Facilities for Social Intercourse.—Dr. Stuart Hallows also proposed and Mr. Hope Grant seconded:

> That facilities be provided at head quarters for the better social intercourse of members, especially for those visiting London.

This was carried unanimously. It was proposed by Mr. Beddow and seconded by Dr. Stuart Hallows:

> That these two resolutions be communicated to the other Divisions of the Branch, with a request to bring them before their Divisions at an early opportunity.

This was agreed to unanimously.

Contract Medical Practice.—Dr. Major Greenwood proposed and Dr. Stuart Hallows seconded:

> That the recommendations and conclusions of the Medico-Political Committee on Contract Practice be accepted, but that a rider be added that in the opinion of this Division the question of a wage limit is not so important in London as in the provinces.

This was carried unanimously.

St. Pancras and Islington Division.

A meeting was held at University College Hospital on Friday, January 19th, Dr. Francis J. Buckell (Canonbury) in the chair.

Representative on Entertainment Committee.—The Vice-Chairman, Dr. Walter Smith, was appointed to represent the Division on the Entertainment Committee of the Metropolitan Counties Branch.

The Division and Parliamentary Candidates.—The Chairman and Secretary and Dr. Walter Smith gave reports of their canvass of the seventeen candidates for seats in Parliament to represent St. Pancras and Islington.

Measures in Parliament.—After discussion on medical politics, it was resolved on the motion of Dr. Buckell:

> That this Division urges the Council of the Association to take immediate steps to secure the introduction into Parliament of measures dealing with (*a*) the payment of medical men called in to the assistance of midwives, and (*b*) the security of tenure for medical officers of health and sanitary inspectors.

Lecture.—Dr. Kenwood (M.O.H. for Stoke Newington) read a lecture on disinfection applied to the rooms of the infectious sick, for which he received a hearty vote of thanks.

Tottenham Division.

A meeting of the Division was held at the Tottenham Hospital on Friday, January 26th, at 4 p.m. Dr. C. E. Hutt, Chairman, presided.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Abuse of Out-patient Departments.—Mr. R. F. Tomlin read a paper on abuse of out-patient departments of hospitals. A very good discussion followed, in which Drs. Ford Anderson, Walter Smith, Fuller, Winston, Tresilian, and Mr. Carson took part. It was proposed by Dr. Fuller, and seconded by Dr. Fogarty:

> That this Division observes with regret that the Hospitals Committee has not referred to the Divisions the resolutions of the Representative Meeting as was promised before October 31st, 1905, bearing on the question of the relation of provident dispensaries to out-patient departments.

This was carried and passed.

It was proposed by Dr. Fuller and seconded by Dr. Shoyer, on the subject now before the meeting—namely, the abuse of out-patient departments of hospitals—

> That this Division accept and adopt the decisions of the Hampstead Division as printed in the Supplement of the British Medical Journal, June 3rd, 1905, which are as follows:
>
> 1. That this meeting approves cordially of the twelve principles of reform for hospitals, as issued by the Central Council of the Association.
>
> 2. That this meeting, recognizing the grave defects in the conduct of out-patient departments of hospitals, is of opinion that those departments should be chiefly used for consultations and casualties, which, after receiving first aid, shall, if not suitable for hospital treatment, be referred in general terms to general practitioners, provident dispensaries, or the Poor-law relieving officer.
>
> 3. That there shall be an organized system of co-ordination between hospitals and provident dispensaries which are approved by the profession, so that the hospitals shall refer to the provident dispensaries suitable cases of those not retained for hospital treatment, and the provident dispensaries shall refer to the hospitals cases for consultation, as well as those requiring hospital treatment and nursing, or specially suitable for purposes of clinical instruction.
>
> 4. That cases sent to the hospitals by private practitioners, provident dispensaries, or by Poor-law medical officers for consultation should be exempt from the almoner's inquiries, and should have priority of consideration, with an opinion on the condition of the patient.

These clauses were adopted unanimously by the Division.

Representative on Entertainment Committee.—Dr. J. R. Fuller was elected as Representative of the Division to act on the Metropolitan Branch Entertainment Committee. The meeting then terminated.

Westminster Division.

A meeting of the Division was held at 20, Hanover Square, on Thursday, January 18th, at 8.30 p.m., Mr. J. Bland-Sutton in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Hospital Abuse.—A communication from the Hampstead Division was read drawing the attention of the members to Dr. Ford Anderson's paper on Hospital Abuse, which was published in the Supplement to the British Medical Journal of June 3rd, 1905, and asking for an opinion on the four resolutions passed by the Hampstead Division at the meeting at which this paper was read. It was decided to postpone the consideration of this subject to a future meeting.

Lupus Street Dispensary.—A communication from the Medical Secretary of the Association *re* a complaint received about the Lupus Street Dispensary and a late medical officer of that institution was read. It was decided to postpone this till further particulars had been obtained.

Proposed Conjoint Meeting.—A communication was read from the Wandsworth Division, asking this Division to co-operate for a meeting to be held on Thursday, April 19th, at 3 p.m., at the Battersea Town Hall. It was decided to accept the invitation.

Annual Representative Meeting.—Dr. Ewart then presented his report on the Representative Meeting held last year at Leicester, pointing out the chief points of interest and explaining the way he voted on the several motions. The Chairman proposed a hearty vote of thanks to Dr. Ewart. This was carried by acclamation.

The Association and the London General Practitioner.—Mr. J. Smith Whitaker addressed the meeting at some length on the Association and the London general practitioner. The Chairman afterwards proposed a hearty vote of thanks to Mr. Smith Whitaker for his able and interesting address. This was carried by acclamation. A short discussion then took place during which Dr. Forbes Ross said he failed to see any hospital abuse. Dr. Bruce Porter thought hospital tickets should be given to the medical profession and not to the laity to distribute. Dr. Haslip sometimes thought the Association attempted too much, and that they should pass one Bill—such as the Medical Acts Amendment Bill—at a time. Dr. Donald Baynes severely criticized the action of Guy's Hospital in accepting £6 from rich people for a course of electrical treatment. Dr. McCann suggested there should be a mass meeting of the profession to protest against hospital abuse. Dr. Walter Smith complained of the action of the New Hampstead Hospital in opening an out-patient department, which he considered quite unnecessary.

Dr. Haslip drew the attention of the meeting to the fact of members of the resident staff of Charing Cross Hospital having left the institution to inspect dead bodies in the vicinity, and he moved that:

> In the opinion of this Division it is not the duty of the resident hospital staff to leave the institution to inspect dead bodies.

This was seconded by Dr. Dauber and carried. The Honorary Secretary was instructed to write to the Secretary of Charing Cross Hospital, and to draw his attention to the reported facts and to inquire if this were in accordance with the hospital rules and regulations.

Representative on Entertainment Committee.—Dr. McCANN was elected as representative to act on the Metropolitan Branch Entertainment Committee.

It now being close on the hour of 11, it was decided to postpone the consideration of the remaining subjects for a future meeting.

QUEENSLAND BRANCH.

THE annual meeting of this Branch was held on December 1st, 1905, and was adjourned in token of respect for the memory of the late Honorary Secretary, Dr. David Wield.

Resolution.—A resolution expressive of the sympathy and sorrow of the Branch was passed at the meeting held on December 1st, 1905, the feelings of every one present at the meeting being that the late Dr. Wield would be missed greatly by every one.

Election of Officers.—The adjourned meeting was held on December 15th, 1905, when the following officers were elected for 1906: *President:* Dr. Turner. *Vice-Presidents:* Drs. Robertson and Love. *Treasurer:* Dr. Carvosso. *Curator:* Dr. Hawkes. *Council:* Drs. Halford, F. Macdonald, L'Estrange, Whishaw. *Honorary Secretary:* Dr. Brockway.

SOUTH-WESTERN BRANCH.

A MEETING of this Branch was held at the Royal Devon and Exeter Hospital on January 10th, the PRESIDENT (Mr. G. Jackson, F.R.C.S.), in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Vote of Condolence.—The PRESIDENT proposed a vote of condolence with Dr. Davy (Vice-President) in the great affliction sustained by him in the death of his wife, and also that the sympathy of members present be extended to him in the serious accident which had subsequently befallen him.

☞ To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH: COVENTRY DIVISION.—The next meeting of this Division will be held at the Coventry and Warwickshire Hospital on Tuesday, February 6th, at 8.30 p.m. Agenda: (1) Dr. Phillips will show some clinical cases. (2) Specimen: Aortic Stenosis: Dr. Fenton. (3) Dr. Webster will move that the resolution of June 6th last (that in future no member of the profession in the area of the Division shall apply for the medical officership of a Friendly Society) be rescinded. (4) Dr. H. Brown will move: "That the resolution of March 7th last relating to the minimum fee for Friendly Societies be put in force not later than March 25th, 1906." (5) Dr. Snell will read a note on the operation of the Midwives Act in Coventry in 1905. (6) Report of the Foleshill and Bedworth Committee on the minimum fee desirable in their district for midwifery cases.—E. H. SNELL, Honorary Secretary.

EDINBURGH BRANCH.—The annual clinical and pathological meeting of this Branch will be held in the Royal Infirmary on Friday, February 16th. The museum will be open from 11 a.m. onwards. Arrangements are being made for short cliniques and demonstrations by members of the staff in the forenoon. The demonstration of cases will take place at 4 p.m. Members who have patients, specimens, etc., for exhibition are requested to communicate with one of the Secretaries not later than February 7th. Members of the other Scottish Branches are invited to take part in the meeting and to show cases and specimens. The annual dinner will be held in the Royal British Hotel, Princes Street, at 6.30 p.m., Dr. Allan Jamieson, President, in the chair. Morning dress. Dinner ticket 5s.—NORMAN WALKER, 7, Manor Place, and A. LOGAN TURNER, 27, Walker Street, Honorary Secretaries.

LANCASHIRE AND CHESHIRE BRANCH: LEIGH DIVISION.—A meeting of the Scientific Section will be held iu the Co-operative Rooms, Ellesmere Street, Leigh, on Thursday, February 8th, at 3.30 p.m.—J. CLAY BECKITT, Honorary Secretary, The Lindens, Walmesley Road, Leigh, Lancashire.

LEINSTER BRANCH.—The annual meeting of the Leinster Branch will be held in the Royal College of Physicians, Kildare Street, Dublin, on Saturday, February 3rd, at 4.30 p.m.—ARTHUR H. WHITE, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS AND ISLINGTON DIVISION.—The next meeting will be held at the North-West London Hospital, Kentish Town Road, N.W., on Friday, February 23rd, at 4 p.m., when Dr. Knowsley Sibley will read a paper on the Treatment of Chronic Constipation.—WM. WYNN WESTCOTT, Honorary Secretary.

SHROPSHIRE AND MID-WALES BRANCH: CLINICAL AND PATHOLOGICAL SECTION.—The next meeting of this Section will be held 5 p.m. on Tuesday, February 6th, at the Salop Infirmary.—HAROLD H. B. MACLEOD, LEONARD J. GODSON, Honorary Secretaries, Clive House, Shrewsbury.

SOUTH-EASTERN BRANCH: DOVER DIVISION.—The next meeting will be held at the Grand Hotel, Dover, on Wednesday, February 14th, at 8 p.m., when Dr. Guy Bellingham Smith, Assistant Obstetric Physician, Guy's Hospital, has kindly consented to read a paper. Particulars later.—F. A. OSBORN, Honorary Local Secretary, Ennismore House, Dover.

SOUTH-EASTERN BRANCH: NORWOOD DIVISION.—The next clinical meeting of the Division will be held at the Seamen's Hospital (Dreadnought), Greenwich, on Thursday, February 15th, Dr. Guthrie Rankin, M.D., M.R.C.P., in the chair. The hospital is five minutes' walk from Greenwich stations, both L.C. and Dover Railway and S.E. Railway. It can also be reached by electric tram from New Cross. The staff have kindly promised to show cases and provide tea. The hospital will be open to inspection.—H. J. PRANGLEY, Honorary Secretary; A. W. SOPER, Assistant Honorary Secretary.

CENTRAL MIDWIVES BOARD.

A MEETING of the Central Midwives Board was held on January 25th, at 6, Suffolk Street, Pall Mall, with Dr. F. H. CHAMPNEYS in the chair.

Proposed Suggestions for the Guidance of the Medical Advisers of Local Supervising Authorities.

The suggestions made by Mr. Ward Cousins and published in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL of December 23rd, 1905, p. 361, were submitted to the consideration of the Board.

Mr. WARD COUSINS pointed out that the successful working of the Midwives Act depended on the co-operation of the local supervising authorities. He knew that the medical officers concerned would be glad to receive suggestions of the kind he proposed, and the Board had already passed certain suggestions for the consideration of local supervising authorities on a previous occasion.

After some discussion it was arranged that the suggestions proposed by Mr. Ward Cousins should be referred to Mr. Fordham, the representative of the Association of County Councils, in order to ascertain whether, in his opinion, they would be acceptable and helpful to the authorities interested in the matter.

The Board's Examinations.

A letter from Dr. Fothergill, on behalf of the Examiners of the Manchester Centre, conveying certain suggestions as to the examination system of the Board was considered; it was decided that a reply should be sent stating that the Board saw no reason for making any alteration.

A letter was read from the Privy Council transmitting a copy of a resolution passed by the guardians of the Lutterworth Union, suggesting the reduction from 20 to 7 of the number of cases qualifying a candidate to enter for the Board's examination. The Board directed that a reply be sent to the Privy Council intimating that the Board did not approve of the suggested reduction.

Certificate of having Attended a Course of Instruction.

A letter was received from Dr. A. J. Wallace asking the Board's opinion as to his right, under certain circumstances, to refuse to sign the certificate of instruction required by the regulations. After some consideration it was held that the matter was one that did not come under the Board's jurisdiction.

Exemptions from the Rules Framed under the Midwives Act.—Rule E. 21, framed under the Midwives Act, provides that nothing in Section E, regulating supervising and restricting the practice of midwives, shall apply to certified midwives exercising their calling in hospitals, workhouses, or Poor-law infirmaries under the supervision of a duly-appointed medical officer. Dr. Eustace Hill, County Medical Officer for Durham, wrote to the Board concerning the extent of the exemption conferred by this rule. The Board directed the Secretary to reply, referring Dr. Hill to the Midwives Act.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

INSPECTOR-GENERAL R. W. COPPINGER, M.D., is placed on the retired list at his own request, January 25th. He entered the service as Surgeon, November 12th, 1870; became Staff Surgeon, November 3rd, 1876; Fleet-Surgeon, February 22nd, 1885; Deputy Inspector-General, May 20th, 1896; and Inspector-General, March 13th, 1901. Whilst Surgeon, Dr. Coppinger served in the Arctic Expedition in 1875-6, for which he was promoted and received the Arctic medal. He is the author of the *Cruise of the "Alert" in Patagonian and Polynesian Waters, 1885.*

The following appointments have been made at the Admiralty: FREDERICK W. STERICKER, M.B., Fleet-Surgeon, to the *Dryad*, for Navigating School, January 30th; LESLIE C. R. ROBINSON, M.B., Surgeon, to the *Foresight*, January 25th; GEORGE O. M. DICKINSON, M.B., Surgeon, to the *Forward* (lent), January 25th; JOHN K. ROBINSON, Staff Surgeon, to the *Niobe*, January 29th; PATRICK W. MACVEAN, Surgeon, to the *Skirmisher* (lent), January 29th; MAURICE W. HAYDON, Surgeon, to the *Adventure* (lent), January 29th; RICHARD S. OSBORNE, Surgeon, to the *President*, for three months' course of hospital study, February 6th; ARTHUR LA T. DARLEY, Surgeon, to the *Ganges*, for the *Boscawen II.*, February 6th; JOHN STODDART, Surgeon, to the *Pembroke*, January 24th.

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT-COLONEL J. W. H. FLANAGAN is placed on retired pay, January 20th. He was appointed Surgeon, August 4th, 1878; Surgeon-Major, August 4th, 1890, and Lieutenant-Colonel, August 4th, 1898. He was with the Southern Afghanistan Field Force in the Afghan war in 1879-80, receiving the medal, and with the Zhob Valley Expedition in 1884.

INDIAN MEDICAL SERVICE.

THE following gentlemen were successful at the examination for admission to the Indian Medical Service held on January 23rd and the four following days:

	Marks.		Marks.
H. W. Pierpoint, F.R.C.S. ...	3.761	R. H. Lee, M.B.	3,217
W. D. H. Stevenson, M.B. ...	3,548	G. E. Malcomson, M.D. ...	3,178
H. P. Cook, M.B.	3,510	F. P. Wernicke, M.B.... ...	3,111
P. S. Mills, M.B.	3,501	P. Heffernan, M.B.	3,085
K. G. Gharpurey	3,492	W. A. Mearns, M.B.	3,085

R. S. Kennedy, M.B.	3,252	R. G. G. Croly, M.B.	3,034
C. A. Godson	3,249	W. B. A. K. Cullen, M.B. ...	2,988
B. Higham	3,248	J. McG. Skinner, M.B. ...	2,978
N. H. Hume, M.B.	3,222		

Forty-four candidates (twenty-nine of whom had University degrees) competed for the twenty-three vacancies.

ARMY MEDICAL RESERVE.

SURGEON-LIEUTENANT A. E. L. WEAR, M.D., to be Surgeon-Captain, January 16th.

HONORARY SURGEON TO THE KING.

SURGEON-GENERAL L. D. SPENCER, M.D., C.B. (retired), Indian Medical Service, is appointed Honorary Surgeon to the King, vice Surgeon-General J. M. Cunningham, M.D., C.S.I., deceased, January 27th.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN seventy-six of the largest English towns, including London, 8,891 births and 4,834 deaths were registered during the week ending Saturday last, January 27th. The annual rate of mortality in these towns, which had been 18.3, 16.7, and 15.8 per 1,000 in the three preceding weeks, rose again to 15.9 per 1,000 last week. The rates in the several towns ranged from 8.1 in Smethwick, 9.2 in West Ham, 10.0 in Northampton, 10.8 in Bournemouth, 11.4 in Hornsey and in Aston Manor, and 11.5 in King's Norton, to 20 8 in Stockton-on-Tees, 21.1 in Liverpool, 21.5 in Stockport, 21.6 in Sunderland, 22.2 in Tynemouth, 23.8 in Great Yarmouth, and 24.6 in Preston. In London the death-rate was 15 3 per 1,000, while it averaged 16.2 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.3 per 1,000 in the seventy-six towns; in London this death-rate was equal to 1.5 per 1,000, while among the seventy-five other large towns it ranged upwards to 2.1 in Wolverhampton, in Stockport, and in West Hartlepool, 2.3 in West Bromwich, 2.5 in Leicester and in Burnley, 2.6 in Leeds, 3.2 in Aston Manor, and 3.6 in Preston. Measles caused a death-rate of 1 3 in Aston Manor, 1.6 in Wolverhampton and in Leeds, and 2 7 in Preston; scarlet fever of 1.4 in West Hartlepool; diphtheria of 1.2 in Hornsey and 1.4 in Merthyr Tydfil; whooping-cough of 1.2 in Birmingham, 1.5 in Burnley, 1.8 in Leicester, 1.9 in Aston Manor, and 2.1 in Stockport; and "fever" of 1.5 in West Bromwich. No fatal case of small-pox was registered either in London or in any of the large provincial towns, and no small-pox patients were under treatment last week in the Metropolitan Asylums Hospitals. The number of scarlet fever patients in these hospitals, and in the London Fever Hospital, which had been 3,299, 3,062, and 3,066 at the end of the three preceding weeks, had declined again to 2,983 at the end of last week; 322 new cases were admitted during the week, against 291, 257, and 328 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

DURING the week ending Saturday last, January 27th, 943 births and 670 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 19.8, 17.8, and 18.2 per 1,000 in the three preceding weeks, further rose to 19.6 per 1,000 last week, and was 3.7 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 14.6 in Aberdeen and 17.0 in Leith to 21.1 in Perth and 29.7 in Dundee. The death-rate from the principal infectious diseases averaged 2.0 per 1,000 in these towns, the highest rates being recorded in Glasgow and Dundee. The 296 deaths registered in Glasgow included 25 which were referred to measles, 8 to diphtheria, 4 to whooping-cough, 2 to "fever," and 7 to diarrhoea. Two fatal cases of diphtheria were recorded in Edinburgh: 3 of measles, 2 of diphtheria, 2 of whooping-cough, and 2 of diarrhoea in Dundee; and 2 of measles in Paisley.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, January 27th, 554 births and 378 deaths were registered in six of the principal Irish towns, as against 471 births and 342 deaths in the preceding period. The annual death-rate in these towns, which had been 15.3, 21.0, and 17.7 per 1,000 in the three preceding weeks, rose to 18.8 per 1,000 in the week under notice, this figure being 2.9 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 13.6 in Waterford and 16.4 in Limerick, to 21.2 in Dublin and Cork and 23.3 in Belfast. The zymotic death-rate in the same six Irish towns averaged 0.9 per 1,000, or 0.4 per 1,000 lower than during the preceding period, the highest figure—2 1—being recorded in Cork, while no deaths under this heading were registered in Londonderry and Waterford.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2. Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office. No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

Every member is requested to preserve this "Supplement," which contains a matter specially referred to Divisions, until the subject has been discussed by the Division to which he belongs. BY ORDER.

MATTERS REFERRED TO DIVISIONS.

REPRESENTATIVE MEETING AT LONDON.

TUESDAY, JULY 24TH, AND FOLLOWING DAYS.

NOTICES OF MOTION.

THE following notices of motion have been received or discussion by the Annual Representative Meeting f the Association to be held at London, July 24th, 906, and following days.

ASSOCIATION ADMINISTRATION.

OFFICIAL REPORTS AND JOURNAL.

Title "Doctor."

By the GATESHEAD DIVISION (North of England Branch):

That in all official reports connected with the Association and in the columns of the BRITISH MEDICAL JOURNAL, the word Dr. be used as a title for every registered medical man unless he is either known to be practising as a consulting surgeon or has signified his desire to be called Mr.

MEDICO-POLITICAL.

NOMINATION OF CANDIDATES FOR GENERAL MEDICAL COUNCIL.

Declaration.

y the GATESHEAD DIVISION (North of England Branch):

That the second paragraph in the "Declaration by Candidates," in the Scheme for Selection of Candidates for the General Medical Council by the British Medical Association, be omitted as unnecessary.

ASSOCIATION ADMINISTRATION.

PREMISES.

Alterations.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That it be an instruction to the Central Council before arranging for any alteration of the present premises of the Association involving an outlay of over £200, or the obtaining at any time of premises elsewhere in London or the provinces, to first consult the members through the Divisions and obtain their wishes on the main principles involved.

By Direction of the Chairman of Representative Meetings,
J. SMITH WHITAKER, *Medical Secretary.*
February 8th.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

ULSTER BRANCH.

THE winter meeting of this Branch was held in the Medical Institute, Belfast, on Wednesday afternoon, January 31st. Dr. LAWLESS (Armagh), Vice-President, occupied the Chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Apology for Non-attendance.—A letter was read from the President, Dr. Leonard Kidd (Enniskillen), apologizing for non-attendance.

Report of Council.—The HONORARY SECRETARY (Dr. Cecil Shaw) read the report of Council, which stated that the following had been elected members of the Branch:—Drs. R. M. Beatty, T. McC. Phillips and R. W. Harper (Belfast), J. Wilson and Moore Betty (Enniskillen), H. Warnock (Clogher, co. Tyrone), F. C. Mann (Pomeroy, co. Tyrone), and R. J. Mayberry (Maghera, co. Derry).

Irish Poor-law Committee.—The Council authorized the payment of a sum not exceeding £10 towards the expenses of the Irish Poor-law Committee.

Royal Medical Benevolent Fund for Ireland.—The Council also authorized a donation of five guineas to the Royal Medical Benevolent Fund for Ireland.

☞ ***To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.***

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

EDINBURGH BRANCH.—The annual clinical and pathological meeting of this Branch will be held in the Royal Infirmary on Friday, February 16th. The museum will be open from 11 a.m. onwards. Arrangements are being made for short cliniques and demonstrations by members of the staff in the forenoon. The demonstration of cases will take place at 4 p.m. Members who have patients, specimens, etc., for exhibition are requested to communicate with one of the Secretaries not later than February 7th. Members of the other Scottish Branches are invited to take part in the meeting and to show cases and specimens. The annual dinner will be held in the Royal British Hotel, Princes Street, at 6.30 p.m., Dr. Allan Jamieson, President, in the chair. Morning dress. Dinner ticket 5s.—NORMAN WALKER, 7, Manor Place, and A. LOGAN TURNER, 27, Walker Street, Honorary Secretaries.

LANCASHIRE AND CHESHIRE BRANCH: LEIGH DIVISION.—The ordinary monthly meeting will be held in the Co-operative Offices, Ellesmere Street, on Thursday, February 15th, at 8.30 p.m. Agenda:—(1) Minutes. (2) Dr. Eugene Young, Manchester, will give a demonstration with patients on the following: (*a*) Meyer's Method of Demonstrating the Larynx and Intralaryngeal Operations; (*b*) a Method for Simplifying the Examination of the Throat and Nose; (*c*) a New Method of Tracheal Injection; (*d*) Dr. Barr's Procedure for Anaesthetizing the Membrana Tympani; (*e*) some New Models of the Throat and Ear. (3) Appointment of small Committee to report on Rules of Central Midwives Board. (4) Any other business.—MICHAEL J. HALTON, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS AND ISLINGTON DIVISION.—The next meeting will be held at the North-West London Hospital, Kentish Town Road, N.W., on Friday, February 23rd, at 4 p.m., when Dr. Knowsley Sibley will read a paper on the Treatment of Chronic Constipation.—WM. WYNN WESTCOTT, Honorary Secretary.

SOUTH-EASTERN BRANCH: DOVER DIVISION.—The quarterly meeting will be held at the Grand Hotel, Dover, on Wednesday, February 14th, at 8 p.m. Agenda: (1) Minutes. (2) A paper on Remarks on the Treatment of Accidental Haemorrhage and Eclampsia, which Dr. G. Bellingham Smith, Assistant Obstetric Physician, Guy's Hospital, has kindly promised to read. (3) Letter from Medical Secretary *re* the revision of the Rules of the Central Midwives Board. (4) Annual statement of accounts. (5) Other business, if any. Tea and coffee will be served during the meeting. All members of the South-Eastern Branch are invited to attend, and to introduce professional friends.—F. A. OSBORN, Honorary Secretary, Dover.

SOUTH-EASTERN BRANCH: ISLE OF THANET DIVISION.—A clinical meeting of this Division will be held at the Royal Sea-bathing Hospital, Margate, on Thursday, February 15th, at 4.15 p.m., W. G. Sutcliffe, F.R.C.S., in the chair. Agenda:—Dr. Coullie: The Vaccine Treatment of Tuberculous and other Bacterial Diseases regulated by the Opsonic Index. Cases of interest will be shown. Tea will be served during the meeting. All members of the South-Eastern Branch are invited to attend these meetings and to introduce professional friends.—HUGH M. RAVEN, Honorary Divisional Secretary, Broadstairs.

SOUTH-EASTERN BRANCH: NORWOOD DIVISION.—The next clinical meeting of the Division will be held at the Seamen's Hospital (Dreadnought), Greenwich, on Thursday, February 15th, at 4 p.m., Sir Dyce Duckworth in the chair. The hospital is five minutes' walk from Greenwich stations, both L.C. and Dover Railway and S.E. Railway. It can also be reached by electric tram from New Cross. The staff have kindly promised to show cases and provide tea. The hospital will be open to inspection.—H. J. PRANGLEY, Honorary Secretary; A. W. SOPER, Assistant Honorary Secretary.

SOUTHERN BRANCH.—A general meeting of the Branch is appointed to be held at the South-Western Hotel, Southampton, on Friday afternoon, February 16th, at 3.45. Agenda: (1) Professor A. E. Wright, St. Mary's Hospital, has kindly consented to deliver an address on the Principles of Therapeutic Inoculation. (2) Dr. J. Ward Cousins will read a paper entitled Puerperal Fever, its Prevention and Treatment. (3) General business. Dinner will be provided at 6 o'clock, the charge for which will be 5s. a head, wine not included. The Council hope that this meeting will be largely attended. If any member would prefer to stay the night at Southampton he should apply to either of the Divisional Secretaries, Dr Wade or Dr. MacKeith.—H. J. MANNING, Honorary Secretary

SOUTH WALES AND MONMOUTHSHIRE BRANCH: CARDIFF DIVISION.—An ordinary general meeting will be held at the Infirmary on Thursday, February 15th, at 3.15 o'clock. Agenda:—(1) Minutes. (2) To consider letters received from the South-West Wales Division concerning ethical and contract practice matters. (3) To discuss generally the ethical propriety of members of the profession in contributing autobiographies to publications intended for circulation amongst the general public. (The Executive Committee venture to recommend members who may have been invited to contribute to a publication of the kind referred to, to withhold or withdraw their consent until the Division has had this opportunity of considering the subject.) (4) Rules of the Central Midwives Board. To consider the Rules regulating: (*a*) The conditions of admission to the Roll of Midwives; (*b*) the obstetric apparatus which the midwife is required to provide; (*c*) the conditions of the mother and of the infant on the occurrence of which the midwife must decline to attend alone and must advise that a medical practitioner be sent for; (*d*) the form of the midwife's register of cases and the form of the record of sending for medical assistance; (*e*) the conditions under which midwives may be suspended from practice. Memorandum: In view of the impending revision of the Rules of the Central Midwives Board it is of importance that medical practitioners should express their opinions concerning them, especially with regard to those above indicated. A committee, nominated by the Chairman of the Division, will present a report to the meeting. (5) Paper by J. Lynn Thomas, C.B.: Has the Treatment of Fractures and Dislocations been Modified by *X*-ray Diagnosis? Members are asked to invite medical friends to be present and to take part in the discussion of the various items of the agenda, which are of important general interest to the profession. Tea will be provided.—EWEN J. MACLEAN, R. RUSSELL THOMAS, Honorary Divisional Secretaries.

SOUTH WALES AND MONMOUTHSHIRE BRANCH: MONMOUTH DIVISION.—A quarterly meeting of this Division will be held at Abergavenny on February 23rd, at 3 p.m.—W. J. GREER, R. J. COULTER, Honorary Secretaries, Newport.

CENTRAL MIDWIVES BOARD.

A SPECIAL meeting of the Central Midwives Board, under the provisions of the rules of procedure on the proposed removal of a name from the Roll of Midwives, was held on January 30th at 6, Suffolk Street, Pall Mall, with Dr. F. H. CHAMPNEYS in the chair.

MIDWIVES STRUCK OFF THE ROLL.

The following charges alleged against a certified midwife, Eliza Pugh, were heard:

That being in attendance on the confinement of a woman on October 12th, 1905, she was guilty of negligence and misconduct in the following respects: The perineum being ruptured she did not decline to attend alone, or advise that a registered medical practitioner should be sent for, as required by Rule E 17. On the occurrence of a rigor on October 16th she did not decline to attend alone, or advise that a registered medical practitioner should be sent for, as required by Rule E 17. On the arrival of Dr. T. H. Scott on October 17th she stated, in reply to a question by him, that the patient was not torn or injured, well knowing that the perineum was ruptured, and that an attempt had been made by an unqualified person to stitch it up. That she was habitually uncleanly in person, and did not obey the requirements of Rule E 1. That when called to a confinement she did not take with her the appliances required by Rule E 2.

The Board directed that the name of Eliza Pugh be removed from the Roll.

The hearing of the following charges alleged against a certified midwife, Jane Tween, was then proceeded with:

That being in attendance on the confinement of a woman on September 17th, 1905, and subsequent days, she was guilty of negligence and misconduct in the following respects: The placenta not having been expelled within an hour after the birth she did not decline to attend alone or advise that a registered medical practitioner should be sent for, as required by Rule E 17; both mother and child being ill, she did not decline to attend alone or advise that a registered medical practitioner should be sent for as required by Rule E 17; on the arrival of Dr. F. Pershouse on September 22nd she did not faithfully carry out his instructions as required by Rule E 6, but declined to attend the patient, or to administer a vaginal douche as ordered by him; being ordered by Dr. F. Pershouse to administer vaginal douches on September 23rd and 24th, she purported to comply with these orders by injecting the lotion per rectum; she did not give directions for securing the comfort and proper dieting of the child, as required by Rule E 11, but fed it on oatmeal and gin, thereby conducing to its death on September 24th; that she was habitually uncleanly in person, and did not wear a dress of washable material as required by Rule E 1; that when called to a confinement she did not take with her the appliances and antiseptics required by Rule E 2; that she did not keep a register of cases as required by Rule E 19.

The Board directed that the name of Jane Tween be removed from the Roll.

The following charges alleged against a certified midwife, Elizabeth Jacklin, were then heard:

That she was a person of intemperate habits, and in particular she was intoxicated at 5 p.m. on August 2nd, 1905, in her own house. That she was under the influence of drink on June 23rd, 1905, at the office of the Medical Officer of Health. That she was habitually uncleanly in person, and did not wear a dress of washable material as required by Rule E 1. That when called to a confinement she did not take with her the appliances required by Rule E 2. That she did not keep a register of cases as required by Rule E 19.

The Board directed that the name of Elizabeth Jacklin be removed from the Roll.

The charges alleged against a certified midwife, Esther Smith, were then heard:

That she was habitually uncleanly in person, and did not wear a dress of washable material as required by Rule E 1. That when called to a confinement she did not take with her the appliances or antiseptics required by Rule E 2. That she did not disinfect her hands and forearms previous to touching the genital organs or their neighbourhood, as required by Rule E 3. That she did not before making the first internal examination wash the patient's external parts with soap and water and then swab them with an antiseptic solution as required by Rule E 7. That she did not keep a register of cases as required by Rule E 19.

The Board directed that the name of Esther Smith be removed from the Roll.

The following charges alleged a certified midwife, Mary Ann George, were then heard:

That on January 27th, 1905, she was charged with felony at the City of Worcester Police Court, and, having pleaded guilty, was convicted thereof. That on October 27th, 1905, she was charged at the City of Worcester Police Court with having failed to notify the fact of her intention to practise to the Local Supervising Authority, in accordance with Section 10 of the Midwives Act, 1902, and, being convicted thereof, was fined £1. That when called to a confinement she did not take with her the appliances or antiseptics required by Rule E 2. That she did not keep a register of cases as required by Rule E 19.

The Board directed that the name of Mary Ann George be removed from the Roll and also gave instructions that the papers in this case be sent to the Public Prosecutor for his consideration of the facts concerning the signing of a certificate of good character of this midwife by a clergyman.

A Midwife Cautioned.

The following charges alleged against a certified midwife, Sarah Howe, were heard:

That she was uncleanly in person and did not wear a dress of washable material, as required by Rule E. 1. That when called to a confinement she did not take with her the appliances or antiseptics required by Rule E. 2. That she did not keep a register of cases as required by Rule E. 19.

The Board decided in this case that Sarah Howe was to be severely censured and cautioned as to her future conduct.

MIDWIVES AND MEDICAL PRACTITIONERS.

We learn from the *Islington Gazette* that at a meeting of the London County Council on January 30th a recommendation of the Parliamentary Committee was submitted that the necessary measures be taken for promoting legislation in the next session of Parliament to provide that the Council shall be authorized to pay the fee of a medical practitioner, called at the instance of a midwife, to a case of emergency as defined in the rules made by the Central Midwives Board under the provisions of the Midwives Act, 1902, such payment to be made only when the patient is unable to pay such fee; as well as to enable the Council to recover from the patient, or from any person liable by law to maintain her, the amount of such fee, or any portion thereof, should it be discovered after payment had been made that the patient, or any person liable by law to maintain her, was in a position to pay the whole or a portion of such fee; that the costs and expenses of promoting the legislation referred to in the foregoing recommendation be defrayed out of the County Fund.

Dr. Benton strongly supported the recommendation of the Committee.

Sir William Collins, M.P., and Dr. Farwood urged that the payments of fees should be confined to cases of "operative interference." The former asserted that the Midwives Act, 1902, required stringent revision.

Dr. Cooper, M.P., said that all that was proposed was to spend £500 a year on cases of poor women in a dangerous and difficult condition who could not in their extremity fly to a hospital or a workhouse. He could not understand members who had voted for losing £50,000 a year on steamboats and £25,000 on the Woolwich Tunnel choking at such a trifling sum as £500.

Mr. G. H. Radford, M.P., observed that since the Council, by the ruling of the Chairman, must either adopt or reject the action proposed by the Parliamentary Committee, the best course would be to vote against it. The whole difficulty had arisen out of certain regulations made by the Midwives Board. It was a most extraordinary proposition to ask for legislation for the removal of a difficulty or a grievance which could be done by the Board itself by the alteration or amendment of rules from time to time. The rule now in question proposed that a midwife in attendance on a case that might develop into an emergency was to leave the house to call in a doctor.

Sir W. Collins: No; advise that a doctor should be called in.

Mr. Radford said that, at any rate, the position was a terrible one. The midwife left the patient, a doctor could not be persuaded to attend, and the patient died. The rule as it stood was inhuman, and ought never to have been passed.

In the result, the motion was declared "not carried," for the reason that its supporters did not reach the number required by the Standing Orders.

CARE OF THE FEEBLE-MINDED.

The Royal Commission on the Care and Control of the Feeble-minded met on February 2nd, when further evidence was taken.

Mr. E. B. Whitcombe, Medical Superintendent of the Birmingham City Asylum, suggested that feeble-minded or defectives should be dealt with in separate institutions, on the cottage principle. Those who were capable of ordinary education might be taught to read and write, but the whole should be trained to some light, useful employment, making such institutions as far as possible self-supporting. Different trades should be taught, such as basketmaking, shoemaking, tailoring, carpentering, matmaking, and brushmaking. The arrangements should be made by the existing lunacy authority.

Dr. W. A. Potts, Lecturer on Pharmacology at the Birmingham University, said that at present the feeble-minded were ignored till a catastrophe occurred; then they were usually accommodated temporarily in an institution intended for those of average intelligence. Such care did little good to them, while they were a disturbing element to the ordinary inmates. There was urgent necessity for the segregation of the feeble-minded of both sexes. No other remedy would be effective except sterilization or a lethal chamber, neither of which was justified. A central authority must be instistuted to supervise the care of the mentally defective. He would recommend a Board of four or six members. Under these there should be local inspectors, who should visit the schools, prisons, common lodging-houses, and charitable institutions. But measures must be taken to check alcoholism, tuberculous disease, and other social evils. Otherwise the feeble-minded would continue to increase in spite of segregation.

Councillor Sayer, Chairman of the Joint Committee of the combined unions of Birmingham, Aston, and King's Norton, said the Committee came to the unanimous conclusion that in providing accommodation other than at the workhouse for epileptics and feeble-minded persons the cottage homes system was the right one to adopt. It was agreed to commence with 210 cases, keeping steadily in view the probabilities of that number being considerably increased. The plans provided for three houses for men and three for women, each house to accommodate 36 patients; for the provision of a laundry, and adapting some of the farm buildings as workshops for the men. The houses for men would be arranged in one group, and those for women in another group, and there were sites in each group for four more houses, thus giving a total accommodation for approximately 500 patients, but if necessary that number could be exceeded. Some of the men would be employed on the land, and others in workshops; the women would be engaged in laundry work, gardening, and possibly in fruit growing. The Committee were of opinion that power should be given the magistrates, on the application of Boards of Guardians, to make an order for the detention of feeble-minded persons for a fixed period of, say, twelve months, such order to be renewable, and they were also of opinion that a weekly grant of 4s. should be paid from Imperial sources in respect of each case maintained in an institution provided to the satisfaction of the central authority.

Mr. R J. **CURTIS**, Clerk to the King's Norton Board of Guardians, and also to the Birmingham, Aston, and King's Norton Joint Poor-law Establishment Committee, said those engaged in the administration of Poor-law relief were almost unanimous in the opinion that separate institutions in which proper and adequate classification and care and treatment could be secured were very desirable in order that the epileptic in his sane intervals might not be associated with imbeciles, that the feeble-minded might not be put in depressing contact with severer forms of disease, and that both might have such instruction and attention as might be best calculated to improve, if improvement was possible, and, if not, to render their lives as comfortable and as useful as possible. He explained the measures taken by the Birmingham, Aston, and King's Norton Boards of Guardians which led to the adoption of a scheme whereby the three Boards combined for the purpose of the provision and maintenance of homes for the reception and treatment of sane epileptics and feeble-minded persons. The Local Government Board approved of the scheme, and constituted a joint Committee of the combined unions to undertake the management of a workhouse for the reception of epileptics and feeble-minded persons who were chargeable to the unions. Admission to the colony was to be obtained upon the report of any medical officer, so that suitable cases could be received direct without entering the workhouse All institutions, whether voluntary or rate-provided, dealing with mentally-defective persons, should be registered and placed under inspection by medical men from a central department. Mentally-defective children (except those certified under the Idiots or Lunacy Acts) should be under the care and control of education authorities until 16 years of age, and be dealt with either in special day schools or in boarding schools, according to the requirements of the cases. Those who needed institutional care after 16 years of age should be detained under medical advice. If their parents could pay the full cost of maintenance, such patients should be classed as private cases and sent to some registered institution. The rest should be dealt with by the Board of Guardians.

Mrs **HUME PINSENT**, a member of the Birmingham Education Committee, Chairman of the Special Schools Subcommittee, and late Chairman of the After-care Committee, said many defective children were still in elementary schools. Repeated inspections of the schools demonstrated the necessity for the appointment of a permanent official. Dr. Caroline O'Connor had been appointed in Birmingham, and her work showed that there were over 600 mentally-deficient children needing education in a special school. But education authorities seemed slow to take up domestic and manual work, as it was more expensive than the ordinary curriculum, and far harder to organize. Little could be expected from special school education until every feeble-minded child over 12, and, in many cases, before that age, spent at least half its time working in a laundry, kitchen, garden. or workshop properly equipped and staffed. Mrs. Pinsent also referred to the urgent necessity for the immediate provision of industrial colonies, which had been continually emphasized by cases in which admission to any existing institution was impossible. Leaving such cases under such supervision as could be exercised in a working man's home was a grave danger to the child, to the family, and to society in general.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

MEMBERS are reminded that the Library and Writing Rooms of the Association are fitted up for the accommodation of the members in commodious apartments, at the office of the Association, 429, Strand. The rooms are open from 10 a.m. to 5 p.m., except on Saturdays, when they close at 2 p.m. Members can have their letters addressed to them at the office.

Vital Statistics.

THE REGISTRAR-GENERAL'S QUARTERLY RETURN.

[SPECIALLY REPORTED FOR THE BRITISH MEDICAL JOURNAL.]

THE Registrar-General has just issued his return relating to the births and deaths in the fourth quarter of last year, and to the marriages during the three months ending September last. The marriage-rate during that period was equal to 16.9 per 1,000 of the population, and was slightly below the average rate in the corresponding quarters of the ten preceding years.

The births registered in England and Wales during the quarter ending December last numbered 219,385, and were equal to an annual rate of 25.5 per 1.000 of the population, estimated by the Registrar-General at 34,152.977 persons in the middle of last year. In the fourth quarters of the ten preceding years the birth-rate averaged 28.0 per 1.000; the rate during the quarter under notice was lower than that recorded in the corresponding quarter of any preceding year. The birth-rates last quarter ranged in the several counties from 19.6 in Sussex, 20.1 in Carnarvonshire, 20.7 in Cornwall, 21.0 in Northamptonshire. 21.6 in Oxfordshire, and 21.7 in Bedfordshire, to 28.2 in Carmarthenshire, 28.6 in Staffordshire, 30.0 in Northumberland, 31.6 in Durham and in Glamorganshire, and 32.2 in Monmouthshire. In seventy-six of the largest English towns, including London, the birth-rate last quarter averaged 26.6 per 1,000; in London the rate was 26.1 per 1,000, while it averaged 26.8 in the seventy-five other large tows, and ranged from 14.7 in Bournemouth. 15.7 in Hastings, 16.8 in Halifax, and 17.7 in Hornsey, to 32.2 in Gateshead. 32.7 in Sunderland, 34.1 in St. Helens, 34.3 in Rhondda, and 35.5 in Merthyr Tydfil.

The births registered in England and Wales during the three months under notice exceeded the deaths by 91.639; this represents the natural increase of the population during that period. From returns issued by the Board of Trade it appears that 86,642 emigrants embarked during last quarter for places outside Europe, from the various ports of the United Kingdom at which emigration officers are stationed. Of these 86,642 emigrants, 36,816 were English, 7,093 Scottish and 8.115 Irish, while 34,618 others were of foreign nationality. Compared with the averages in the corresponding quarters of the three preceding years, the proportion of emigrants in the population of the several parts of the United Kingdom showed a decrease of 5.3 per cent. of English, 4.0 per cent. of Scottish, and 15.8 per cent. of Irish.

During the fourth quarter of the year the deaths of 127,746 persons were registered, equal to an annual rate of 14.8 per 1,000 persons living; this rate was 2.1 per 1,000 below the average rate in the ten preceding fourth quarters. The lowest county death-rates last quarter were 12.0 in Sussex, 12.3 in Middlesex and in Northamptonshire, 12.4 in Kent, 12.5 in Buckinghamshire, and 12.6 in Surrey; while the highest rates were 16.4 in Durham, 16.6 in Lancashire and in Monmouthshire, 16.7 in Herefordshire, and 16.8 in London. In seventy-six of the largest English towns, with an aggregate population of upwards of fifteen and a half millions, the mean rate of mortality was 15.8 per 1,000; in 141 smaller towns with an aggregate population of about four and three-quarter millions, the death-rate was 13.7 per 1,000: while in the remaining, and chiefly rural, parts of England and Wales the rate was 14.2 per 1,000. In the seventy-five large provincial towns the death-rate averaged 15.4 per 1,000, and ranged from 7.6 in Hornsey, 8.9 in King's Norton, 10.7 in Hastings, 10.9 in Grimsby. and 11.0 in Leyton and in Handsworth (Staffs), to 18.5 in Huddersfield, 18.6 in Middlesbrough, 18.8 in Tynemouth, 19.3 in Preston, 20.3 in Bootle, and 20.4 in Liverpool.

The 127,746 deaths from all causes in England and Wales last quarter included 8,985 which were referred to the principal infectious diseases; of these, 2,109 were attributed to diarrhoea, 1,876 to measles, 1,520 to diphtheria, 1,490 to whooping cough, 1,112 to scarlet fever, 874 to "fever" (principally enteric), and 4 to small-pox. The death-rate last quarter from these diseases in the aggregate was 1.04 per 1,000, or 0.69 per 1,000 below the average for the corresponding periods of the ten preceding years: the rates of mortality from all these infectious diseases were below the respective averages.

The rate of infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 120 per 1,000, against an average rate of 148 in the corresponding quarters of the ten preceding years. In the several counties the rates of infant mortality ranged from 70 in Herefordshire, 71 in Wiltshire, 80 in Somersetshire, 81 in Oxfordshire, 83 in Buckinghamshire, and 84 in Berkshire to 134 in Northumberland, 135 in Glamorganshire, 139 in Staffordshire, 143 in Lancashire. 144 in Carnarvonshire, and 148 in Durham. In the seventy-six large towns the mean rate was 134 per 1,000; in London the proportion was equal to 131 per 1,000, while it averaged 135 in the seventy-five other large towns, among which the rates ranged from 70 in Hornsey, 74 in Bournemouth, 76 in Burton-on-Trent, 80 in Hastings, 90 in Reading, and 92 in Handsworth (Staffs) to 172 in Rochdale, 174 in Blackburn, 175 in Middlesbrough, 177 in Burnley, 181 in Smethwick, and 215 in Hanley.

The mortality in England and Wales during the three months under notice among persons aged between 1 and 60 years was equal to an annual rate of 7.4 per 1,000 of the population estimated to be living at this group of ages, and was 1.3 per 1,000 below the mean rate in the ten preceding fourth quarters. In the seventy-six large towns the death-rate at this group of ages averaged 8.3 per 1,000: in London this death-rate was 9.0 per 1,000, while among the seventy-five large provincial towns the rates ranged from 3.3 in Hornsey. 4.0 in King's Norton, 5.1 in Ipswich, and 5.4 in Hastings and in Northampton, to 10.1 in Oldham and in Middlesbrough, 10.6 in Bury, 11.3 in Liverpool, and 11.7 in Bootle and in Preston.

Among persons aged 60 years and upwards the death-rate last quarter was equal to 69.3 per 1.000 of the estimated population at this age-period, and was 2.0 per 1.000 above the average rate. In the seventy-six towns the death-rate at this age-group averaged 75.0 per 1,000; in London the rate was 77.5, while among the seventy-five large provincial towns the rates ranged from 43.8 in Grimsby, 44.9 in King's Norton, 46.3 in Hastings, 48.1 in Leyton, 50.8 in Ipswich. and 54.3 in Hornsey, to 87.0 in Newport (Mon.). 88.3 in Manchester. 88.9 in Burnley, 91.5 in West Hartlepool, 93.0 in Huddersfield, and 101.1 in Tynemouth.

The mean temperature of the air during last quarter was below the average, the deficit varying from little more than half a degree in England North-East to more than one and a half degrees in England, East and South-West. The rainfall measured in London amounted to about 5 in., or 71 per cent. of the average. The duration of bright sunshine in London during the quarter was 157 hours, being eleven hours in excess of the average, but only 19 per cent. of the possible amount.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,557 births and 4,708 deaths were registered during the week ending Saturday last, February 3rd. The annual rate of mortality in these towns, which had been 16.7, 15.8, and 15.9 per 1,000 in the three preceding weeks, declined again to 15.5 per 1,000 last week. The rates in the several towns ranged from 7.9 in Hanley, 8.0 in Willesden, 8.2 in Handsworth (Staffs.), 9.2 in East Ham, 9.5 in Northampton, 10.2 in Coventry, and 10.5 in Wallasey, to 20.7 in Oldham, 20.8 in Plymouth, 20.9 in Stockport, 21.2 in Rhondda, 21.5 in Preston, 22.1 in West Bromwich, 23.2 in Newport (Mon.), 23.3 in Grimsby, and 25.7 in Merthyr Tydfil. In London the rate of mortality was 14.8 per 1,000, while it averaged 15.8 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases in the seventy-six towns was 1.2 per 1,000; in London this death-rate was equal to 1.1 per 1,000, while among the seventy-five other large towns the rates ranged upwards to 2.3 in Birmingham and in South Shields, 2.4 in Bootle and in Halifax, 2.5 in Derby, 2.7 in Bury, 3.0 in Stockton-on-Tees, 3.9 in Blackburn, and 4.5 in Preston. Measles caused a death-rate of 1.6 in Blackburn, 1.8 in Bury, and 3.6 in Preston; scarlet fever of 1.2 in Blackburn and 1.6 in Hanley; diphtheria of 1.0 in Hull, 1.3 in Aston Manor, 1.5 in Ipswich, 1.9 in Halifax, and 2.1 in Derby; and whooping-cough of 1.5 in Burnley, 1.6 in Bootle, and 2.0 in Stockton-on-Tees. The mortality from "fever" and from diarrhoea showed no marked excess in any of the seventy-six towns. One fatal case of small-pox was registered last week in South Shields, but not one in any other of the large towns, and no small-pox patients were under treatment during the week in the Metropolitan Asylums Hospitals. The number of scarlet fever patients in these hospitals, and in the London Fever Hospital, which had been 3,062, 3,066, and 2,983 at the end of the three preceding weeks, had further declined to 2,912 at the end of last week; 319 new cases were admitted during the week, against 257, 328, and 322 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, February 3rd, 929 births and 564 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 17.8, 18.2, and 19.6 per 1,000 in the three preceding weeks, declined again to 16.5 per 1,000 last week, but was 1.0 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 13.7 in Aberdeen and 15.9 in Glasgow to 19.0 in Dundee and 19.2 in Greenock. The death-rate from the principal infectious diseases in these towns averaged 1.4 per 1,000, the highest rates being recorded in Greenock and Perth. The 254 deaths registered in Glasgow included 12 which were referred to measles, 4 to whooping-cough, and 10 to diarrhoea. Four fatal cases of diarrhoea were recorded in Edinburgh; 3 of measles in Dundee; 2 of measles and 2 of diphtheria in Greenock; and 2 of diarrhoea in Perth.

HEALTH OF IRISH TOWNS.

During the week ended Saturday, February 3rd, 634 births and 376 deaths were registered in six of the principal Irish towns, as against 554 births and 378 deaths in the preceding period. The annual death-rate in these towns, which had been 21.0, 17.7, and 18.8 per 1,000 in the three preceding weeks, rose to 18.9 per 1,000 in the week under notice, this figure being 3.4 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 11.7 in Waterford and 15.1 in Cork to 24.4 in Dublin, and 21.6 in Limerick. The zymotic death-rate in the same six Irish towns averaged 1.1 per 1,000, or 0.2 per 1,000 higher than during the preceding period, the highest figure—5.0—being recorded in Londonderry, while Cork, Limerick, and Waterford registered no deaths under this heading.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following appointments have been made at the Admiralty: **Robert D. Jameson**, Staff Surgeon, to the *Eclipse*, on recommissioning, January 30th; **Moyle Breton**, Surgeon, to the *Attentive*, on commissioning, undated (since cancelled); **Charles C. MacMillan**, Surgeon, to the *Victory*, undated; **John St. J. Murphy** and **Francis J. L. P. M'Kenna**, Surgeon, to the *Victory*, for disposal; **Norman S. Meiklejohn**, Surgeon, to the *Pembroke*, for disposal, January 30th.

ROYAL ARMY MEDICAL CORPS.

The following were the successful candidates for commissions in the Royal Army Medical Corps at the recent examination in London for which seventy-four candidates entered:

	Marks.		Marks.
C. M. Drew...	595	E. M. O'Neill	509
A. A. Sutcliff	585	V. C. Honeybourne	507
A. G. Cummins	584	J. C. L. Hingston	504
A. S. Millard	577	G. B. Edwards	501
H. E. Gotelee	573	F. D. G. Howell	501
A. S. Littlejohns	568	C. R. M. Morris	499
F. A. McCammon	558	P. Sampson	499
W. R. Galwey	548	W. H. Gillatt	498
R. G. Archibald	543	J. W. L. Scott	498

E. W. M. Paine	513	L. G. Gibson	480
E. J. Porteous	511	P. S. Stewart	475

Captains M. **Boyle**, M.B., P. **Evans**, M.B., C. K. **Morgan**, M.B., John M. **Buist**, M.B., and G. St. C. **Thom**, M.B., are promoted to be Majors, January 29th. Major Byles's previous commissions are thus dated: Surgeon-Lieutenant, January 29th, 1894; Surgeon-Captain, January 29th, 1897. The commissions of the other officers named bear date: Surgeon-Lieutenant, July 28th, 1894; Surgeon-Captain, July 28th, 1897. Majors Morgan and Buist have no war record; that of the others named is as follows: Major Boyle, North-West Frontier of India campaign in 1897-8 with the Tirah Expeditionary Force (medal with two clasps). Major Evans, South African War, 1900-2, including operations in the Orange Free State, the Transvaal, and Cape Colony (Queen's medal with three clasps, King's medal with two clasps). Major Thom, South African war, 1900-2, including operations in the Transvaal, the Orange River Colony, and Cape Colony (mentioned in dispatches, Queen's medal with three clasps, King's medal with two clasps).

Lieutenant-Colonel G. W. **Robinson**, Commanding the Dépôt and Training School, Aldershot, has been appointed Administrative Medical Officer, and posted to London for duty in the Eastern Command.

Lieutenant-Colonel C. A. **Webb**, from Dover, has been appointed Administrative Medical Officer at Cork.

Lieutenant-Colonel H. **Martin**, M.B., from Shorncliffe, has been appointed Principal Medical Officer, Welsh and Midland Command.

EXAMINATION OF MAJORS FOR PROMOTION.

It has been announced from the War Office that, at the next examination of Majors of the Royal Army Medical Corps for promotion, to be held in May, there will be for the first time questions on "The Laws and Customs of War on Land," besides the usual technical questions.

INDIAN MEDICAL SERVICE.

Captain H. **Bennett**, M.B., Bombay Establishment, is promoted to be Major, from July 29th, 1905. He was appointed Surgeon-Lieutenant, January 29th, 1894, and Surgeon-Captain, July 29th, 1897. He was in the campaign on the North-West Frontier of India in 1897-8, including the operations on the Samana Range and the action of the Ublan Pass (medal with clasp), and afterwards with the Tirah Expeditionary Force (clasp).

Colonel S. H. **Browne**, M.D., C.I.E., Bengal Establishment, is permitted to retire from the service, from April 29th. He joined the department as Assistant-Surgeon, March 31st, 1874, and became Colonel, April 10th, 1903. During the Afghan war in 1879 he was with the Peshawur Valley Field Force, and was mentioned in dispatches, receiving a medal. He was appointed an Honorary Surgeon to the Governor-General of India, January 6th, 1899.

Lieutenant-Colonel G. M. E. **M'Kee**, Madras Establishment, also retires from the service, from March 14th. Entering as Assistant-Surgeon, October 2nd, 1880, he was made Lieutenant-Colonel, October 2nd, 1900. He served with the Burmese Expedition in 1885-7 (medal with clasp), and in the China war in 1900 (medal).

Colonel W. G. H. **Henderson**, Bombay Establishment, officiating Principal Medical Officer Aden Brigade, is confirmed in that appointment.

ROYAL GARRISON ARTILLERY (VOLUNTEERS).

Surgeon-Lieutenant R. **Crerar**, M.B., the Highland Regiment, is removed from the Volunteer force for failing to fulfil the prescribed conditions for efficiency, January 12th.

Surgeon-Major J. I. **Palmer**, 3rd Middlesex Regiment, resigns his commission, retaining his rank and uniform, January 15th.

VOLUNTEER RIFLES.

Surgeon-Lieutenant C. B. **Gunn**, M.D., 6th Volunteer Battalion the Royal Scots (Lothian Regiment), to be Surgeon-Captain, February 7th.

Supernumerary Surgeon-Captain (Honorary Captain in the Army) G. **Black**, M.B., 2nd Volunteer Battalion the Royal Sussex Regiment, is absorbed into the establishment, January 17th, 1901.

SERVICE WITH THE TIBET MISSION ESCORT.

It has been decided that service with the Tibet Mission Escort is to be considered as war service, and recorded in the Army List and elsewhere accordingly. The record will be as follows: "Tibet, 1903-1904, for all who served with the escort between December 13th, 1903, and September 23rd, 1904, followed, when necessary, by a reference to any of the particular operations specified in the case of those who actually took part in them—(1) action at Niari, June 26th, 1904; (2) operations at and around Gyangtse between May 5th and July 6th, 1904; (3) march to Lhasa, July 14th to August 3rd, 1904."

Vacancies and Appointments.

14 WEDNESDAY	CENTRAL COUNCIL, 2 p.m.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.–Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SPECIAL NOTICE TO MEMBERS.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

MATTERS REFERRED TO DIVISIONS.

HOSPITAL OUT-PATIENT DEPARTMENTS.

THE Annual Representative Meeting at Leicester, upon consideration of the following motion:

> That in the opinion of this meeting there should be no out-patient departments in hospitals, except for consultations and casualties, and that this opinion specially applies to hospitals whose staff are general practitioners,

Resolved:

> That it is inadvisable that this meeting should pass a resolution on the general principle of hospital out-patient departments before that principle has been submitted to the Divisions, and this meeting hereby decides that the question be remitted through the Hospitals Committee to the Divisions.

The Hospitals Committee, having considered this instruction, has decided that the Divisions should have placed before them for their assistance in dealing with the subject the following resolutions relative thereto which at different times have been adopted by the Committee.

The first twelve of these resolutions have already received the approval of the Annual Representative Meeting at Oxford. The remainder have not yet been considered, on behalf of the Association, by any body other than the Hospitals Committee.

Propositions already Approved by the Representative Meeting.

HOSPITAL ADMINISTRATION.

(1) That inability to pay for adequate treatment shall be the consideration for the admission of all patients for hospital treatment.

[This shall not apply to Poor-law cases.]

(2) That no charge for the treatment of any patient shall be made.

[This shall not apply to Poor-law cases.]

(The foregoing Clause (2) was rejected by 28 votes to 17 at the Conference with non-medical Representatives of Hospitals held by invitation of the Association on March 2nd, 1905. The Committee are still of opinion that no charge should be made, and regret that this Clause was not confirmed by the Conference. The "Rider" as to Poor-law cases has been subsequently added.)

(3) That the production of subscribers' letters shall cease to be compulsory, and that where possible the system shall be abolished.

(4) That some means of investigation into the circumstances of the applicants for relief by means of an almoner or other agent shall be employed in all medical charities.

(5) That the foregoing recommendations apply to both in- and out-patients.

(6) That, except in emergencies, sufficient evidence shall be obtained on two points: (*a*) that the patient is not in a position to pay for adequate treatment; (*b*) that the case is, from a hospital point of view, suitable for treatment,

(7) That all cases of serious accident and severe sudden illness shall be attended to on their first application, and, if deemed eligible for further treatment, shall be referred to the appropriate department of the hospital; but, if ineligible, shall then be referred for treatment elsewhere.

(8) That all cases of trivial accident or illness deemed ineligible for the casualty department shall, after having been seen, be referred for treatment elsewhere.

(9) That, on the first visit no patient be permitted to leave a hospital without having been seen by a registered medical practitioner.

(10) That where possible the number of new cases to be seen on any one day by an honorary medical officer shall be limited.

(11) That special hospitals shall treat only those cases that come strictly within the scope of their work.

(12) That in all hospitals there shall be an age-limit for the retirement of the medical officers.

Propositions not yet Considered by the Representative Meeting.

HOSPITAL ADMINISTRATION (ADDITIONAL).

(13) That no scheme for the reform of Out-patient Departments can be successful without co-operation and co-ordination between Hospitals themselves, especially those which operate in the same area.

THE RELATIONSHIP OF HOSPITALS TO PUBLIC MEDICAL SERVICES,[*] PROVIDENT DISPENSARIES, FREE DISPENSARIES, AND THE POOR-LAW MEDICAL SERVICE.

(*A.*)—RELATION OF HOSPITALS TO PUBLIC MEDICAL SERVICES AND PROVIDENT DISPENSARIES.

Scope of Out-patient and Casualty Departments.

1. That hospital out-patient and casualty departments shall be as far as possible consultative (*see* paragraphs 2, 3, and 5 following), but cases requiring immediate attention shall be seen once, and only cases requiring hospital treatment or specially suitable for clinical instruction shall be treated at the hospital.

Reference Elsewhere of Unsuitable Cases.

2. That the remaining cases shall be seen by an almoner and each referred, in general terms, to a medical practitioner, to a Public Medical Service, an approved Provident Dispensary, or to the Relieving Officer under the Poor Law.

By approved Provident Dispensaries shall be understood Provident Dispensaries the constitution and conduct of which are in accordance with such principles as may be formulated in reference thereto by the British Medical Association, or by Divisions of the Association with respect to Dispensaries within their respective areas.

Co-ordination of Public Medical Services and Provident Dispensaries with Hospitals.

3. That there shall be a system of co-ordination between Hospitals, on the one hand, and Public Medical Services and Provident Dispensaries on the other, so that the Hospitals shall refer to the Public Medical Services and Provident Dispensaries suitable cases, of those not retained for Hospital treatment (*see* paragraph 2 foregoing), and the Public Medical Services and Provident Dispensaries shall refer to the Hospital cases for consultation, as well as those requiring Hospital treatment and nursing, or specially suitable for purposes of clinical instruction.

Notices of Public Medical Services and of Provident Dispensaries in Hospitals and vice versâ.

4. That notices be posted in out-patient and casualty departments of Hospitals calling attention to Public Medical Services or approved Provident Dispensaries in the neighbourhood, and the Public Medical Services and Dispensaries advertise similarly in their premises that consultations with the staffs of Hospitals can be arranged when desirable.

Public Medical Service, Dispensary and Private Practitioners' Cases referred to Hospitals for special advice.

5. That a member of a Public Medical Service or Provident Dispensary, or other patient referred to a Hospital for consultation, with a note, or personally by a general practitioner in attendance, should be exempt from the almoner's inquiries, should have priority of consideration, and should be referred back to such medical attendant, with a statement of the opinion of the Hospital Physician or Surgeon on the condition of the patient. In such a case drugs should not be supplied by the Hospital.

(*B.*)—RELATION OF HOSPITALS TO FREE DISPENSARIES.

6. That it is desirable that Free Dispensaries should as soon as possible be merged into Public Medical Services or Provident Dispensaries.

(*C.*)—RELATION OF HOSPITALS TO THE POOR-LAW MEDICAL SERVICE.

7. That cases of obvious destitution, or cases already in receipt of Poor-law relief, shall, after they have been once seen in the casualty or out-patient department, be referred to the Poor-law relieving officer unless they should be retained for hospital treatment, and Poor-law patients may be referred to hospitals for consultation as in the case of Public Medical Service and Provident Dispensary patients. In these cases payment might be required from the Poor-law Guardians if deemed advisable.

PUBLIC NURSING HOMES AND PAY WARDS.

That it is desirable that Public Nursing Homes should be established for patients who, being ineligible for the voluntary hospitals, are yet unable to pay the charges usually made in private Nursing Homes.

That pay wards should not be established in connexion with general hospitals.

Management of Public Nursing Homes.

1. That the management should be vested in a Public Committee in which the medical profession is adequately represented.

2. That no patient should be admitted to a pay ward or pay bed without first producing a certificate of fitness for admission from a medical practitioner, who should whenever possible be the patient's usual medical attendant. If the signatory be not the patient's usual medical attendant, an explanation of the fact should be appended to the certificate.

3. That it shall be open to a patient to select any registered medical practitioner as his attendant.

4. That when the payment made by a patient is insufficient to cover the entire cost of maintenance, or when any question arises as to reduction or remission of fees for professional services, a statement of the financial circumstances necessitating such consideration shall be signed by the patient or near relative, countersigned by the usual medical attendant or some other responsible householder, and submitted to the Committee.

COTTAGE HOSPITALS.

1. That every qualified practitioner, willing to act, in the district served by the Cottage Hospital, be a member of the medical staff.

2. That except in cases of emergency, Cottage Hospitals be only open to persons who, not being in receipt of parochial relief, are at the same time unable to secure adequate treatment at home.

3. That all persons admitted to Cottage Hospitals contribute where possible towards their maintenance.

4. That a certificate signed by a medical practitioner within the area be a sufficient recommendation for admission.

Divisions are requested, upon consideration of these resolutions of the Hospitals Committee, to express their opinion upon the following question:

QUESTION.

That there should be no out-patient departments in hospitals except for consultations and casualties, and that this opinion specially applies to hospitals whose staff are general practitioners.

---

[*] The term "Public Medical Service" has been applied in certain districts to organizations for providing medical attendance and medicine for certain sections of the community in which the Service is under the entire control of the medical profession. In other districts services of exactly the same general type have been established under the title of "Provident Medical Associations"; but the generic designation of "Public Medical Service" is preferable, as avoiding confusion with organizations under non-medical control.

GENERAL MEDICAL COUNCIL.

ELECTION OF DIRECT REPRESENTATIVES FOR ENGLAND AND WALES, NOVEMBER, 1906.

Candidates Nominated by Divisions for Selection by the Representative Meeting on behalf of the Association.

The following members of the Association have been nominated by the Divisions named to be candidates for election, and have accepted nomination in accordance with the terms of the scheme published in the Supplement of the British Medical Journal for October 7th, 1905:

Name.	*Address.*	*Nominating Division.*
BROWNE, Henry Langley, M.D. ... ... (Chairman of Council of the Association.)	Moor House, West Bromwich	Central Birmingham.
BULLAR, John Follett, M.B.... ... ... (Member of Branch Council, Southern Branch.)	7, Carlton Crescent, Southampton	Winchester.
MORISON, James Rutherford, F.R.C.S. (Member of Branch Council and Chairman of Northumberland Committee, North of England Branch.)	14, Saville Row, Newcastle-on-Tyne	Consett.
RHODES, John Milson, M.D. ... ... (Chairman of South Manchester Division, Lancashire and Cheshire Branch.)	Ivy Lodge, Didsbury, Manchester	Manchester (South).
STRATON, Charles Robert, F.R.C.S.Edin.... (Member of Central Council, Medico-Political Committee and Colonial Committee.)	West Lodge, Wilton, Salisbury	Winchester.

As provided by the scheme, nominations can be received until March 31st, and will henceforth be announced as received.

By Direction of the Chairman of Representative Meetings,

J. Smith Whitaker, *Medical Secretary.*

February 15th.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* Journal.]

BIRMINGHAM BRANCH:

Coventry Division.

A meeting of this Division was held at the Coventry and Warwickshire Hospital on February 7th, Dr. Milner Moore being in the chair.

Cases, Specimens, etc.—Dr. Phillips showed a new chloride of ethyl inhaler designed by himself.—Dr. Phillips read notes of and exhibited the following cases: (1) A case of inversion of the uterus, which came late under his care, in which he was unable to reduce the inversion; he put on an *écraseur*, the bulk of the uterus came away, and the patient made a good recovery. (2) A case of retroflexion in which he performed ventrifixation. He also gave notes of a case of myoma, still in the hospital. These cases were discussed by Drs. Milner Moore, Webster, Hadley, Pickup, J. Orton, Kenderdine, and Harman Brown.—Dr. Fenton exhibited a specimen of aortic stenosis, which was commented on by the Chairman.

Medical Men and Friendly Societies.—Dr. Webster moved that the resolution of June 6th last (that no medical man in the area of the Division shall apply for the medical officership of a Friendly Society) be rescinded.—This was seconded by Dr. Hadley, and spoken against by Dr. Snell.—On being put, 5 voted for it, and 8 against (total present 21); it was therefore declared lost.

Minimum Fee for Friendly Societies.—Dr. Harman Brown proposed:

> That the resolution of March 7th last, relating to the minimum fee for Friendly Societies, be put in force not later than March 25th, 1906.

—Dr. Hird seconded, and it was carried unanimously.

The Midwives Act.—Dr. Snell read a note on the operation of the Midwives Act in Coventry in 1905.—The subsequent discussion was joined in by Drs. Webster, Phillips, Hawley, McGlashan, and Hadley.

Fees in Midwifery Cases.—A report was received from the medical men resident in the parishes of Foleshill and Bedworth as to the minimum fee desirable in their area in midwifery cases.

CAPE OF GOOD HOPE, EASTERN PROVINCE BRANCH.

An ordinary meeting was held at 8 p.m. on Friday, January 12th, at Steinman's Hotel, Grahamstown, Dr. C. E. Jones-Phillipson in the chair.

Confirmation of Minutes.—The minutes of the meeting of November 10th were read and confirmed.

Letter of Apology from President.—A letter was read from the President, Dr. J. Bruce-Bays, regretting that a professional call to the country prevented him from attending the meeting.

Presidential Address.—In the absence of the President, the Secretary read the presidential address on Medical Education. The paper dealt with the whole of the medical curriculum, and advocated a more stringent as well as a uniform entrance examination, less preliminary science, and that course to be taken in South Africa; more applied and less pure teaching of anatomy and physiology, more clinical work in the special departments of the hospitals, and a "one-portal" State examination to qualify a man for licence to practise. The paper evoked a warm discussion and not a few criticisms. All present, including the visitors by invitation, joined in the discussion, and a vote of thanks to the President was passed.

Letters.—Letters were read from Drs. Greathead and Batchelor, from the Prime Minister's and the Attorney-General's offices, and the Secretary of the Western Branch; the latter announced the acceptance of office by Colonel David Bruce, C.B. Letters were also read from Dr. Jones-Phillipson, on the subject of a pathological museum, and from Dr. C. J. Hill-Aitken, of East London, covering a draft of the proposed rules for the East London Division.

Specimen.—Dr. G. C. PURVIS showed a section of the wall of a gall bladder, from a case of a girl, aged 12 years, whose gall bladder when opened contained 10½ pints of hydatid fluid.

SPECIAL MEEING.

Branch and Division Rules.—A special meeting was then held finally to pass the rules of the Eastern Province Branch and of the Grahamstown Division respectively. In the case of the former three, and in the case of the latter no amendments had been received after the rules had been posted to every member of the Branch and of the Division. These were dealt with, and both sets of rules were ordered to be forwarded to the General Secretary of the Association for approbation of the Central Council.

METROPOLITAN COUNTIES BRANCH:

KENSINGTON DIVISION.

A MEETING of this Division was held at the Brompton Hospital for Consumption and Diseases of the Chest on Tuesday, January 30th. Mr. W. H. LAMB occupied the chair.

Representative on Entertainment Committee.—Mr. GEORGE EASTES was elected representative of the Division on the Entertainment Committee of the Metropolitan Counties Branch.

The late Dr. Campbell Pope.—The meeting passed a vote of condolence to the widow and family of the late Dr. Campbell Pope.

Clinical Cases.—Clinical cases were shown by the following members of the hospital staff: Drs. PERCY KIDD, MAGUIRE, HABERSHON, SCHORSTEIN, and WETHERED.

Vote of Thanks.—On the proposal of Mr. G. EASTES, seconded by Dr. RICE OXLEY, a hearty vote of thanks was passed to the hospital staff for their kind entertainment of the members of the Division.

SOUTH-EASTERN BRANCH:

BRIGHTON DIVISION.*

AN ordinary meeting of the Division was held at the Dispensary, Queen's Road, Brighton, on January 24th, Mr. T. JENNER VERRALL in the chair.

Confirmation of Minutes.—The minutes of the last ordinary meeting were read and confirmed.

Next Meeting.—It was decided to hold the next meeting at Hastings in conjunction with three other Divisions—namely, Hastings, Eastbourne, and Tunbridge Wells.

Division and Branch Finance.—An inquiry as to the present system of Division and Branch finance was submitted to the meeting for consideration.

☞ ***To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.***

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—A general meeting of this Division will be held on Thursday, February 22nd, at 4 p.m., at the Great Eastern Hotel (Lincolnshire Room), Liverpool Street, E.C. Agenda:—(1) Minutes. (2) Letters. (3) Questions. (4) Report of Medico-Political Committee on Provident Dispensaries. (See Contract Practice Report: SUPPLEMENT TO BRITISH MEDICAL JOURNAL, July 22nd, 1905, p. 30.) (5) Report of same Committee on Public Medical Service. (Ditto, p. 32.) (6) Question of the State Registration of Nurses. (Referred from the last Annual Representative Meeting.) (7) Nomination of candidates for election as Direct Representatives on General Medical Council. (See SUPPLEMENT, October 7th, 1905.) (8) Report on Outpatient Departments of Hospitals. (To appear in SUPPLEMENT of February 17th, 1906.) (9) The Honorary Secretary will bring forward two notices of motion for next Representative Meeting, on the subject of keeping the library of the Association open till 11 p.m., and on the facilities for the better social intercourse of members. (10) Any other business.—E. W. GOODALL, Eastern Hospital, Homerton, N.E., Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS AND ISLINGTON DIVISION.—The next meeting will be held at the North-West London Hospital, Kentish Town Road, N.W., on Friday, February 23rd, at 4 p.m., when Dr. Knowsley Sibley will read a paper on the Treatment of Chronic Constipation.—WM. WYNN WESTCOTT, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: TOTTENHAM DIVISION.—A meeting of the Division will be held on Friday, February 23rd, at the Hornsey Conservative Association Rooms, opposite Finsbury Park Station, at 9.15 p.m. Agenda: Paper by Mr. G. Vital Statistics.

HEALTH OF ENGLISH TOWNS.

seventy-six of the largest English towns, including London, births and 4,711 deaths were registered during the week end- Saturday last, February 10th. The annual rate of mortality in e towns, which had been 15.8, 15.9, and 15.5 per 1,000 in the three eding weeks, was again 15.5 per 1,000 last week. The rates in the ral towns ranged from 8.4 in Willesden, 8.6 in Walthamstow, n East Ham and in Reading, 9.3 in Leyton and in Hastings, and n Hornsey, to 20.0 in Rhondda, 20.5 in Coventry, 20.8 in Great nouth, in Plymouth, and in Burnley, 21.1 in Warrington, 21.2 in rpool, 22.8 in Preston, and 24.2 in Merthyr Tydfil. In London the of mortality was 14.9 per 1,000, while it averaged 15.9 per 1,000 in eventy-five other large towns. The death-rate from the principal tious diseases in these towns averaged 1.3 per 1,000; in London death-rate was equal to 1.2 per 1,000, while among the seventy- large provincial towns the rates ranged upwards to 2.7 in outh, 2.9 in Leicester, 3.0 in Rochdale, 3.1 in Croydon and reston, and 3.5 in Merthyr Tydfil. Measles caused a death- of 1.2 in Leeds and in York, 1.3 in Tottenham, 1.4 in Croydon, 2.2 in Preston; diphtheria of 1.3 in Reading, 1.4 in Hull, 2.1 in Merthyr Tydfil; whooping-cough of 1.2 in Rochdale, 1.3 in ingham, in Aston Manor, and in Gateshead, 1.5 in Warrington n Burnley, 1.8 in Plymouth, and 2.7 in Leicester; and diarrhoea in Rochdale. The mortality from scarlet fever and from enteric showed no marked excess in any of the large towns. No fatal of small-pox were registered last week in London or in any of arge provincial towns, and no small-pox patients were under ment last week in any of the Metropolitan Asylums Hospitals. number of scarlet fever cases in these hospitals and in the on Fever Hospital, which had been 3,066, 2,983, and 2,912 at the end of the three preceding weeks, had further declined to 2,839 at the end of last week; 283 new cases were admitted during the week, against 328, 322, and 319 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

DURING the week ending Saturday last, February 10th, 965 births and 577 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 18.2, 19.6, and 16.5 per 1,000 in the three preceding weeks, rose again to 16.8 per 1,000 last week, and was 1.3 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the rates ranged from 14.5 in Leith and 15.0 in Paisley to 20.6 in Dundee and 21.1 in Perth. The death-rate from the principal infectious diseases averaged 1.4 per 1,000 in these towns, the highest rates being recorded in Glasgow and Dundee. The 265 deaths registered in Glasgow included 14 which were referred to measles, 3 to scarlet fever, 2 to diphtheria, 3 to whooping-cough, 2 to "fever," and 6 to diarrhoea. Three fatal cases of diarrhoea were recorded in Edinburgh. Two deaths from measles and 5 from diarrhoea occurred in Dundee, and 2 from "fever" in Paisley.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, February 10th, 478 births and 377 deaths were registered in six of the principal Irish towns, as against 634 births and 376 deaths in the preceding period. The annual death-rate in these towns, which had been 17.7, 18.8, and 18.9 per 1,000 in the preceding weeks, rose to 22.7 per 1,000 in the week under notice, this figure being 7.2 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 20.5 in Dublin and 21.2 in Belfast to 23.4 in Waterford and 26.0 in Londonderry. The zymotic death-rate in the same six Irish towns averaged 2.2 per 1,000, or 1.1 per 1,000 higher than during the preceding period, the highest figure—7.4—being recorded in Londonderry, while no deaths under this heading were registered in Waterford.

ENGLISH URBAN MORTALITY DURING 1905.

[SPECIALLY REPORTED FOR THE BRITISH MEDICAL JOURNAL.]

IN the accompanying table will be found summarized the vital statistics of the seventy-six large towns dealt with in the Registrar-General's weekly returns. During the fifty-two weeks ending December 30th last 438,360 births were registered in these towns, equal to an annual rate of 28.2 per 1,000 of their aggregate population, estimated at 15,609,377 persons in the middle of last year; this rate was 0.9 per 1,000 below the mean rate in the preceding year. In London the birth-rate was 27.1 per 1,000, while it averaged 28.6 per 1,000 in the seventy-five other large towns, and ranged from 16.8 in Bournemouth, 17.7 in Hastings, 18.5 in Hornsey, 19.2 in Halifax, 20.9 in Northampton, and 21.1 in Bradford, to 33.8 in Wigan, 34.4 in Sunderland, 35.0 in Middlesbrough, 36.2 in St. Helens, 37.5 in Rhondda, and 38.3 in Merthyr Tydfil.

During the period under notice, 244,840 deaths were registered in these seventy-six towns, corresponding to an annual rate of 15.7 per 1,000, which was 1.5 per 1,000 below the rate in the preceding year. In London the rate of mortality was 15.6 per 1,000, while it averaged 15.8 in the seventy-five large provincial towns, among which the rates ranged from 7.6 in Hornsey, 9.1 in King's Norton, 10.1 in Handsworth (Staffs), 10.3 in Leyton, 10.8 in Walthamstow, and 11.5 in Burton-on-Trent, to 19.1 in Rhondda, 19.3 in Hanley and in Tynemouth, 19.6 in Liverpool, 21.0 in Middlesbrough, and 22.1 in Merthyr Tydfil.

The 244,840 deaths from all causes in these towns last year included 29,355 that were referred to the principal infectious diseases; of these. 51 resulted from small-pox, 6,058 from measles, 2,082 from scarlet fever, 2,528 from diphtheria, 4,507 from whooping-cough, 1,252 from "fever" (principally enteric), and 12,877 from diarrhoea. The death-rate from these diseases was equal to 1.88 per 1,000, or 0.61 per 1,000 below the corresponding rate for the preceding year. In London the death-rate from the principal infectious diseases was 1.71 per 1,000, while it averaged 1.96 per 1,000 in the seventy-five large provincial towns, among which the rates ranged from 0.46 in Hornsey, 0.50 in Bournemouth, 0.56 in Brighton, 0.63 in Handsworth (Staffs), 0 67 in Burton-on-Trent, and 0.78 in King's Norton, to 2.98 in West Ham, 2.99 in Middlesbrough, 3 14 in Wigan, 3 15 in Preston, 3.20 in Sheffield, 3.21 in West Bromwich, and 4.04 in Merthyr Tydfil. Of the 51 fatal cases of small-pox registered in these towns last year, 10 belonged to London, 7 to Bradford, 5 to Oldham, 4 to Southampton, 4 to Burnley, 4 to South Shields, 3 to Leeds, and 3 to Hull. The 6,058 fatal cases of measles corresponded to an annual rate of 0.39 per 1,000; in London the death-rate from this disease was 0.37 per 1,000, while it averaged 0.40 in the seventy-five other large towns, among which the highest rates were recorded in Portsmouth, Southampton, West Bromwich, Nottingham, Warrington, Barrow-in-Furness, Sheffield, Stockton-on-Tees, and Merthyr Tydfil. The 2,082 deaths from scarlet fever were equal to an annual rate of 0 13 per 1,000; in London the scarlet fever death-rate was 0.12 per 1,000, the highest rates among the seventy-five large provincial towns being recorded in Liverpool, Bootle, Salford, Oldham, Blackburn, Rotherham, and Merthyr Tydfil. The 2,528 fatal cases of diphtheria corresponded to a rate of 0 16 per 1,000; in London the mortality from this disease was 0.12 per 1,000, while it averaged 0.18 in the seventy-five other large towns, and was highest in East Ham, Portsmouth, Hanley, Salford, Rochdale, Hull, Middlesbrough, and West Hartlepool. The 4,507 deaths from whooping-cough were equal to an annual rate of 0.29 per 1,000, the rate in London being 0 32 per 1,000; among the seventy-five other large towns whooping-cough was proportionally most fatal in Tottenham, West Ham, Hanley, Grimsby, Preston, South Shields, and Tynemouth. The 1,252 deaths referred to different forms of "fever" corresponded to an annual rate of 0.08 per 1,000; in London the "fever" death-rate was 0 05 per 1,000, while it averaged 0.09 in the seventy-five other large towns, and was highest in Wigan, Bolton, Bury, Salford, Huddersfield, Middlesbrough, Sunderland, South Shields, and Merthyr Tydfil. The 12,877 fatal cases of diarrhoea were equal to a rate of 0.83 per 1,000; in London the rate was 0.73, while it averaged 0.87 in the seventy-five other large towns, among which this disease showed the greatest proportional mortality in West Ham, Grimsby, Bootle, Wigan, Burnley, Sheffield, and Rhondda.

Infant mortality, measured by the proportion of deaths among children under one year of age to registered births, was equal to 140 per 1,000 last year, against 160 in the preceding year. In London the rate was 131 per 1,000, while it averaged 143 in the seventy-five other large towns, ranging from 66 in Hornsey, 80 in Handsworth (Staffs), 83 in Bournemouth, 87 in Burton-on-Trent, 89 in King's Norton, and 94 in Leyton, to 173 in Burnley and in Middlesbrough, 174 in Norwich and in Grimsby, 193 in Merthyr Tydfil, 195 in Hanley, and 200 in Rhondda.

The causes of 2,759, or 1.1 per cent., of the deaths registered in the seventy-six towns last year were not certified either by a registered medical practitioner or by a coroner. In London the proportion of uncertified deaths was 0.2 per cent., while it averaged 1.5 per cent. in the seventy-five other large towns. All the causes of death were duly certified in Croydon, Hornsey, Tottenham, Southampton, Great Yarmouth, Devonport, and Derby: while the largest proportions of uncertified deaths were registered in Birmingham, Liverpool, Bootle, St. Helens, Warrington, Blackburn, Barrow-in-Furness, South Shields, and Gateshead.

THE PHTHISIS DEATH-RATE FOR ENGLAND AND WALES.

We are indebted to the courtesy of the Registrar-General, extended to us through Dr. Tatham, for the following statistics of the death-rate from phthisis in England and Wales for the years indicated in the table:

Year.	Rate per Million.
1902	1,233
1903	1,203
1904*	1,236

* Subject to correction.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journal is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office. No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SPECIAL NOTICE TO MEMBERS.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

GENERAL MEDICAL COUNCIL.

ELECTION OF DIRECT REPRESENTATIVES FOR ENGLAND AND WALES, NOVEMBER, 1906.

Candidates Nominated by Divisions for Selection by the Representative Meeting on behalf of the Association.

THE following members of the Association have been nominated by the Divisions named to be candidates or election, and have accepted nomination in accordance with the terms of the scheme published in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL for October 7th, 1905:

Name.	*Address.*	*Nominating Division or Divisions.*
BROWNE, HENRY LANGLEY, M.D. ... ... (Chairman of Council of the Association.)	Moor House, West Bromwich	CENTRAL BIRMINGHAM.
BULLAR, JOHN FOLLETT, M.B.... ... ... (Member of Branch Council, Southern Branch.)	7, Carlton Crescent, Southampton	WINCHESTER.
ACKSON, GEORGE, F.R.C.S. ... ... (President of the South-Western Branch, and Member of the Medico-Political Committee.)	10, Portland Villas, Plymouth	GATESHEAD.
MORISON, JAMES RUTHERFORD, F.R.C.S. ... (Member of Branch Council and Chairman of Northumberland Committee, North of England Branch.)	14, Saville Row, Newcastle-on-Tyne	CONSETT. GATESHEAD.
HODES, JOHN MILSON, M.D. ... ... (Chairman of South Manchester Division, Lancashire and Cheshire Branch.)	Ivy Lodge, Didsbury, Manchester	MANCHESTER (SOUTH).
TRATON, CHARLES ROBERT, F.R.C.S.EDIN.... (Member of Central Council, Medico-Political Committee and Colonial Committee.)	West Lodge, Wilton, Salisbury	WINCHESTER.

As provided by the scheme, nominations can be received until March 31st, and will henceforth be nounced as received.

MATTERS REFERRED TO DIVISIONS.

REPRESENTATIVE MEETING AT LONDON.

TUESDAY, JULY 24TH, AND FOLLOWING DAYS.

NOTICES OF MOTION.

THE following notices of motion have been received for discussion by the Annual Representative Meeting of the Association to be held at London, July 24th, 1906, and following days.

ASSOCIATION REGULATIONS.

AMENDMENT OF BY-LAW.

Grants to Divisions.

By the ALTRINCHAM DIVISION (Lancashire and Cheshire Branch):

To amend By-law 17 by adding to it the following words: "If a Division shall be of opinion that the grant annually made by the Branch Council in any year to the Division is insufficient to defray those expenses which are necessary for the proper conduct of the work of the Division, the Central Council may, upon representation having been made to it by the said Division to that effect, direct that such additional grant shall be made by the Branch to the Division as the Central Council shall deem necessary, and the Branch Council shall thereupon make such additional grant; provided that in no case shall a Branch be called upon by the Central Council to make a greater additional grant than will raise the total amount granted by the Branch to that Division for the year to three shillings per head of the membership of the Division."

AMENDMENT OF ARTICLE.

Expenses of Representatives.

By the NORTHAMPTONSHIRE DIVISION (South Midland Branch):

That the Representatives of Divisions be paid all out-of-pocket expenses incurred in attending Representative Meetings, etc.

By Direction of the Chairman of Representative Meetings,
J. SMITH WHITAKER, *Medical Secretary.*

February 22nd.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

EDINBURGH AND OTHER BRANCHES.

THE usual clinical and pathological meeting of the Edinburgh with other Scottish Branches was held in the Royal Infirmary, Edinburgh, on Friday, February 16th. A very full programme was provided.—At 11 a.m. Dr. ALLAN JAMIESON gave a lecture and demonstration on the treatment of eczema.—At 11 a.m. and 12 noon operations were performed by members of the surgical and gynaecological staff.—At 12 noon Dr. GEORGE MACKAY demonstrated cases and apparatus in the ophthalmic department, and Drs. DAWSON TURNER and HOPE FOWLER gave a demonstration in the electrical department.—At 1 p.m. Mr. ALEXIS THOMSON showed cases from the lock.—At 2 p.m. Dr. WEBSTER demonstrated recent modern appliances for the physical treatment of rheumatism.—At 3.15 p.m. Mr. WALLACE showed members over the new surgical out-patient department.

Museum.—The museum was as usual a striking feature of the meeting, and each year seems to be better than the last. From the programme appended it will be seen there was a great variety of specimens; curiously most of those contributed by the surgeons. The most interesting of the exhibits was the magnificent demonstration on renal pathology from the pathological department of the Royal Infirmary, supplemented from the museum of the Royal College of Surgeons. No fewer than 85 beautifully-mounted specimens were on view, and it was generally remarked that probably never before had there been so complete a demonstration on the subject.

Professor ANNANDALE: (1) Enlarged spleen, weighing 4½ lb., removed from a woman aged 19; microscopically, tuberculous; (2) dermoid cyst of ovary, containing hair and teeth, and portion of pedicle where acute torsion had occurred in the pedicle, and also in an adhesion to the apex of the bladder; married woman, aged 30; (3) lympho-sarcoma of ovary; patient was an unmarried woman, aged 18; (4) hernial sac, showing annular constriction opposite external abdominal ring; (5) epithelioma of bladder originating in a papilloma; patient was a man, aged 66; (6) calculus from bladder of a boy; (7) prepuce showing fringe of warts round orifice; (8) prepuce showing a very tight phimosis; (9) bones of elbow-joint removed for old-standing unreduced backward dislocation of elbow, with fracture of head of radius; (10) double compound depressed fracture of the skull; one large piece of bone was elevated; (11) myxo-fibro-adenoma of mamma; married woman, aged 35; (12) haematocele of prepatellar bursa; (13) paraffin epithelioma on forearm; (14) fracture of vertebral column in cervical region; (15) head of humerus excised; (16) series of specimens of tuberculous knee-joints; one shows a sequestrum in lower end of femur; (17) testicle with hernial sac; (18) supernumerary nipple on a mamma removed for scirrhous carcinoma; (19) appendices; (20) chondromata of hand, with Roentgen ray photograph; (21) simple apparatus for supporting flaps, or for lateral pressure after formation of new nose; (22) series of skiagrams. — Dr. MALCOLM CAMPBELL: Uterus and tubes showing pregnancy associated with tuberculous salpingitis; microscopic sections of tubes.—Dr. ROBERT A. FLEMING: Specimens from Hodgkin's disease, and spleno-medullary leucocythaemia, etc.—Mr. WALLACE, C.M.G.: (1) A series of prostates removed by suprapubic prostatectomy; (2) sections of the prostatic region after suprapubic prostatectomy; (3) kidney showing septic nephritis after operation on prostate; (4) twenty vesical calculi (carb. of calcium); (5) a series of vermiform appendices; (6) carcinoma of descending colon; (7) a split internal semilunar cartilage.—Mr. J. W. DOWDEN: (1) Hair ball from adult stomach; (2) tuberculous strictures of caecum, with stercolith; (3) gall bladder and gall stones; (4) plate of false teeth removed by oesophagotomy; (5) myeloma of lower end o femur; (6) tuberculous synovial membrane from arthrectomy of knee; (7) kidney removed with calculi.—Dr. MUNR MOIR: (1) Dermoid tumour of ovary, showing teeth an part of jaw; (2) sarcoma of jaw; (3) several specimen of uterine fibroids; (4) intraocular tumour.—Mr. GEORG CHIENE: Specimens and photographs (*x* ray and stereoscopic) illustrating various surgical conditions. — Mr CATHCART: (1) Three specimens of caecum (2 tuberculous, 1 malignant); (2) various forms of suction apparatus, invente by Dr. Klapp at Professor Bier's suggestion, for the treatmen of boils, carbuncles, etc.—Dr. NORMAN WALKER: Casts—(1 mycosis fungoides; (2) mycosis fungoides; (3) tinea circinata (4) dermatitis herpetiformis; (5) keloid; (6) impetigo contagiosa.—Mr. F. M. CAIRD: (1) Series of preparations t illustrate surgical affections of the kidneys; (2) fibro sarcoma from naso-pharynx; (3) large epitheliomatou ulcer of thigh.—Dr. JOHN THOMSON: Photographs an other illustrations of achondroplasia.—Mr. J. W. STRUTHERS Skiagraphs of fractures; other specimens.—Dr. A. BRUCE Two tumours of the pituitary body; brain showing di seminated sclerosis; microscopical sections: subacut poliomyelitis; photographs: two cases of partial doublin of the spinal cord; specimens from case of lymphadenoma.—Mr. J. M. COTTERILL: (1) Tumour of temporo-sphenoidal lobe (2) fibro-sarcoma of eighth nerve removed from left cerebello pontine angle; (3) kidneys from two cases of calculous pyone phrosis; (4) scirrhus of prostate, removed by suprapubi prostatectomy; (5) cases of senile hypertrophy of prostate removed by the suprapubic route; (6) series of diseased teste —tuberculous, cystic, sarcomatous, etc.; (7) various othe specimens from recent cases.—Mr. MILES: (1) Series of pr state glands, removed by prostatectomy; (2) kidney, showin advanced pyonephrosis, removed by nephrectomy; (3) sarcom of kidney in a child, aged 3½ years, removed by nephrectomy (4) three specimens of renal calculus, removed by nephr lithotomy; (5) two specimens of calculus impacted in urete removed by operation; (6) multiple calculi, removed fro bladder, prostatic urethra, and bulbous urethra by perinea route, man aged 23 years (patient showed at clinical meeting (7) calculi, removed from bladder by suprapubic cystotomy (8) carcinoma of stomach, removed by gastrectomy; (9) ca cinoma, involving body of stomach and transverse colo removed by operation; (10) caecum, ascending colon, and po tion of ileum excised for carcinoma; (11) unusual tumour liver, removed by operation; (12) other pathological specimen

-Dr. Logan Turner: Drawings and specimens illustrating ffections of the nose and throat.—Mr. Alexis Thomson: Microopic demonstration of lesions of the vermiform appendix.—r. Chalmers Watson and Dr. Geo. Lyon: The histological hanges induced in the kidney by a meat diet.—Dr. Chalmers Vatson: The structural changes of the thyroid gland associted with meat feeding.—Mr. E. Scott Carmichael: Specitens.—Mr. Scot-Skirving, C.M.G.: Photographs of patients ter inter-scapulo-thoracic amputations.—Dr. G. Lovell ulland and Dr. Geo. Lyon (from Chalmers's Hospital): (1) series of tumours of the brain; (2) a series of aneurysms of rta; (3) primary cancer of pancreas; (4) primary cancer of ll bladder; (5) thrombosis of left pulmonary artery and right illary artery; (6) hypertrophy of the kidney.—Drs. Shennan, tuart Macdonald, and Lyon:—Demonstration on renal thology from the pathological department of the Royal Inmary.—Mr. T. Shennan: Microscopical demonstration of irochaetes from syphilis.—Dr. Henry Wade: Demonstraon of photomicrographs, illustrating an experimental rearch on infective sarcoma in dogs.—Mr. Stiles: Various ecimens.

Clinical Meeting.

At the clinical meeting held in the large theatre, no wer than 57 cases were shown, and it is to the credit of e organization that these were got through without a tch in two hours. Mr. Stiles showed (1) three sisters, ed 6, 7, and 10 years respectively, each suffering from ultiple exostoses of congenital origin. The father hibited a similar condition. The youngest child was ought to the Royal Edinburgh Hospital for Sick ildren on account of a thickening in connexion with e upper end of the fibula, which was thought to have en caused by a blow. As the swelling resembled an ostosis rather than the callus of a fracture or any sease of the bone, the other long bones were examined, th the result that exostoses, more or less marked, were scovered on the clavicle, the scapulae, the humeri, the t radius, the femora, the tibiae, and several ribs. An amination of the two sisters showed that they presented ostoses with a distribution closely similar to those in e patient above referred to. (2) Child, aged 2½ years, ustrating early stage of myositis ossificans. The patient s exhibited at the corresponding meeting last year, ce when the disease has advanced considerably, so that e osseous thickenings about the back can now be stinctly felt. Radiograph by Dr. Rainy shows a distinct r of bone in the left erector spinae muscle. Thumbs and at toes show the deformity so frequently associated th the disease. (3) Girl, aged 17 years, after excision of ronchial fistula extending from suprasternal notch to sillar region of pharynx. Suffered from attacks of lammation, with intermittent discharge from lower ening ever since she can remember. In January, 1905, cessation of discharge was attended with pain on allowing and tenderness along the line of the carotid ssels. The fistulous tract was lined by mucous memne, outside which was a well-defined muscular wall. The ecimen exhibited resembled a small oesophagus. (4) Two ients, after operation for epithelioma of the floor of the uth and tongue. Billroth's modification of Regnoli's ration performed in one case; in the other, a recurrent e, the body of the jaw also removed. Tracheotomy in both es. Advantage of swabbing wound freely with turpene.—Sir Thomas R. Fraser showed a case of myxoedema, h photographs illustrating the case at different periods. r. Byrom Bramwell showed: (1) Case of infantilism own before—pancreas); (2) unusual case of angina toris; (3) case of aphasia and paragraphia.—Mr. orge Chiene: (1) patients after operations performed ler spinal anaesthesia; (2) a patient after appendicomy for haemorrhage from the lower bowel; (3) a ient after operation for long-standing separation of the er epiphysis of the tibia; (4) a patient after operation acute pancreatitis.—Dr. Francis D. Boyd, C.M.G., wed a case of Addison's disease.—Mr. Cathcart denstrated the method of applying Bier's congestion tment of acute suppurative inflammation.—Dr. James: Cases of localized paralysis following influenza; case of Klumpke's paralysis; (3) cases simulating ebitis, due to rheumatism.—Mr. Scot-Skirving, C.M.G.: after inter-scapulo-thoracic amputation, performed moist spreading gangrene of arm.—Dr. John Thomson: An infant cretin; (2) a child with achondroplasia.— Wallace, C.M.G.: (1) Patient after suprapubic statectomy. J. S., aged 68, had some micturitory ble for two years. Retention three weeks ago; catheterization required then and ever since. Usual suprapubic operation. Enucleation comparatively easy. Urine passed per urethram on twenty-sixth day; this later than usual, the average being about fifteen days. Now no difficulty with micturition, and patient states that he is much better in general health. The prostatic urethra was torn across at the operation, but, as in other cases, this has not impaired the power of retaining urine nor interfered with micturition. (2) Patients illustrative of the result of early movement and massage in fractures. Some years ago Lucas-Championnière advocated that movement after fracture should be used at much earlier periods than was customary. These cases are shown to illustrate the results of early movement in fractures of the radius (Colles), humerus, both bones of forearm, and the clavicle, and to demonstrate that massage and movement commenced within twenty-four or forty-eight hours do not interfere with satisfactory union, and permit the patients to use their injured limbs at a much earlier date than when rigid fixation is maintained for a longer period. Equally good results are obtained in fractures of the inferior extremity, more especially in Potts's fracture. The principle involved is to keep the fragments of the fractured bones completely at rest during the intervals between movement, and to carry out the movements and massage methodically.—Dr. F. Gardiner showed a case of adenoma sebaceum.—Mr. A. H. H. Sinclair showed: (1) Mrs. N., aged 27, who came under his care at the Edinburgh Eye Dispensary four years ago. Her vision was then reduced to "perception of light" in each eye. The eyes were of subnormal tension, the pupils occluded, and the cornea in each eye partially opaque. This condition resulted from an attack of double specific iritis, which had occurred two years earlier. The right eye was selected for operation, and, with a few weeks' interval between each interference, iridectomy, extraction of the lens, and, lastly, iridotomy were performed, with the result that useful vision ($\frac{6}{18}$) was restored. (2) Miss E. W., aged 24 years, came to Leith Hospital with congenital ptosis affecting the right eye. The eyelid drooped, so that only a small portion of the sclera at the lower part of the eyelid was seen as the patient looked straight forward. He performed Hess's operation, which has for its object the establishment of a connexion between the occipito-frontalis and the eyelid. The operation had been so recently performed that the amount of probable permanent effect could not be with certainty stated at present. (3) Andrew S., aged 35 years, came to Leith Hospital some weeks ago with a red indurated swelling about the size of a bean on the upper eyelid just above the inner canthus. The nature of this swelling was at first uncertain, but very soon the characters of a primary sore—hard chancre—became evident. Mr. Struthers confirmed Mr. Sinclair's opinion as to diagnosis, and is now treating the patient.—Dr. W. B. Drummond showed a case of congenital stenosis of the pylorus, recovering without operation.—Mr. Miles showed: (1) a man, aged 23 years, after operation for removal of multiple calculi from the bladder, prostatic urethra, and bulbous urethra, by perineal operation; (2) woman, after resection of stomach for carcinoma. —Mr. Caird showed: (1) Disarticulation at hip, under spinal anaesthesia, for large epitheliomatous ulcer; (2) patient after removal of fibro-sarcoma of nasopharynx. — Dr. Alex. Bruce showed a case of lupus treated with tuberculin by Wright's method.—Dr. A. Logan Turner showed patients after the mastoid operation for acute and chronic middle-ear suppuration. When the mastoid antrum and cells are opened for mastoid complications in acute middle-ear suppuration the perforation in the tympanic membrane heals, and the hearing is restored to normal. When the radical mastoid operation is deemed advisable in cases of chronic middle-ear suppuration the future hearing power is more difficult to estimate. These cases may be divided into three groups: (1) In which impairment in hearing remains unaltered after operation; (2) in which the hearing is made worse; (3) in which the hearing is improved. It may be stated generally that when hearing is good before operation, it is likely to be damaged by the radical procedure; if the hearing is only fair, improvement may follow.—Dr. Caverhill showed cases of pulmonary tuberculosis after sanatorium treatment. Capacity for work after one to six years' absence. These cases have already been shown at previous meetings. They have been treated in a high phthisis-free district. Full diet; rest; medical supervision; hill-climbing (nine to ten miles daily). Results in winter in Scotland more successful than in summer.—Dr. W. G. SYM showed: (1) Patient after excision of lachrymal sac; (2) patient after excision of lens for high myopia.—Mr. J. W. STRUTHERS showed patients after operation under local "regional" anaesthesia.—Dr. NORMAN WALKER showed cases of ringworm treated by x rays.

Dinner.—About ninety members and guests dined together at the Royal British Hotel. The PRESIDENT (Dr. Allan Jamieson) gave the loyal toasts. "The City of Edinburgh" was proposed by Dr. JAMES, and responded to by Baillie GIBSON, Convener of the Public Health Committee, who said that though the Corporations were often blamed for extravagance, he never heard any one complain of the cost of the Fever Hospital; and the toast of "The Association" was given by Sir HENRY LITTLEJOHN, who referred to his recollection of the early days of the Association in Scotland, and remarked on the contrast of the present attitude towards it; Dr. HAY, President of the Fife Branch, responded. "The Health of the President" was proposed by Dr. MACKIE WHYTE, President of the Dundee Branch.

LANCASHIRE AND CHESHIRE BRANCH:

LIVERPOOL (SOUTHERN) DIVISION.

AN ordinary meeting of the Division was held on February 13th at the Medical Institution, Dr. WESTBY in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

The late Dr. Cregeen.—A letter was read from the brother of the late Dr. Cregeen acknowledging the receipt of, and thanking the Division for, the vote of regret passed at the last meeting on his resignation.

Central Midwives Board.—The following modifications of the rules were suggested: In Chapter B, Rule 4, p. 7,

> That in the Roll of the midwives, their qualifications and how obtained shall be clearly set out, as is laid down and provided for in the Midwives Act.

In Chapter E, Rule 5, p. 14,

> A midwife, after attending a case of puerperal fever, must have the permission of the local supervising authority *in writing* before attending another labour. That all clothing should be sent to the local sanitary authority to be sterilized.

Ethical Rules.—The Central Ethical Committee having refused to accept the modifications suggested by this Division in the Draft Model Ethical Rules, it was resolved that the Division forego the alteration and pass them in their original form.

The Division and Parliamentary Candidates.—An account was given of the measures taken to bring the various questions of medical reform suggested by the Medico-Political Committee to the notice of the candidates at the recent general election, and a summary of their answers was given.

LEINSTER BRANCH.

THE annual meeting of the Leinster Branch of the British Medical Association was held on the afternoon of Saturday, February 10th, at the Royal College of Physicians, Kildare Street. Dr. J. M. FINNY presided, in the unavoidable absence of Sir Thomas Myles, the outgoing President.

Annual Report.—The annual report, which was adopted, mentioned the fact that 14 members were elected during the year, leaving the Branch membership on December 31st, 1905, at 340, while the balance at the close of the year was £22.

Election of Officers.—The following were elected officers of the Branch for 1906-7: *President,* James Craig, M.D.; *President-elect,* J. Lentaigne, F.R.C.S.; *Vice-Presidents,* J. Wallace Boyce, M.D., F. W. Kidd, M.D.; *Country Representative of Branch on Irish Committee,* J. M. Kenny, M.D., Granard; *Honorary Secretary and Treasurer,* Professor A. H. White.

President's Address.—Dr. CRAIG, the incoming President, delivered the annual address as follows: Gentlemen, I beg to tender you my sincere thanks for your kind indulgence in placing me in the honourable position of President of the Leinster Branch of the British Medical Association. I fully recognize that you have conferred this honour upon me in return for any small services you consider I may have rendered to the Branch during the seven years in which I acted as your Honorary Secretary and the three years in which
have been your representative on the Central Coun
of the Association. I have, however, to ask yo
further indulgence in listening to what on the prese
occasion is a poor companion to the many brillia
addresses which have been delivered from time to ti
by my predecessors in the chair. I shall venture, in t
first instance, to bring under your notice a rough summa
of the position which the Association occupies in rega
to its membership and finances, and I shall then endeavo
to touch on the work of the Association and the advantag
to be derived from its membership. The present memb
ship of the British Medical Association is 19,500, and
these 15,000 are resident in the United Kingdom. T
registered practitioners in Great Britain and Ireland
31,000, so that close upon 50 per cent. of these
members of the Association. The registered practition
in Ireland number 2,650, and of these 900, or, rough
speaking, one-third, belong to this Association. T
membership of the Irish Medical Association is actua
750, although on paper it reaches to something over 8
but of this total 380, or 50 per cent., are also allied
the British Medical Association. It would seem, th
that 900, *plus* 750, or 1,650 Irish practitioners, out o
total of 2,650, belong to either Association, but,
account of the overlapping to which I have referred,
will be seen that only 1,270, or considerably less th
50 per cent., belong to either or both Associations.
is hardly too much to say that in these unsatisfact
figures relating to Ireland there is ample evidence th
neither Association has up to the present offered su
cient inducement to medical men to join its ranks.
I have said elsewhere, the value to be received in li
of the subscription paid is the consideration whi
carries most weight with intending subscribers, and
have no hesitation whatever in stating that the apat
shown by medical practitioners in regard to joini
these Associations is due in a large measure to t
poor return which they consider they will recei
I have alluded to the membership of the Briti
Medical Association; let me now briefly refer
its financial position. Its total revenue for 1904 w
£51,000. Of this total about £30,000 was the appro
mate amount spent on producing and delivering t
JOURNAL, £13,000 went to Association expenses, £3,000 o
went to the Branches, and £5,000 were carried to reser
The assets of the Association are enormous. The freeho
property in the Strand, which is the home of the Assoc
tion in London, cost £86,000. The investments in Ba
of England Stock amount to some £15,000. The annu
subscriptions reach a total of something like £25,000, a
the amount received for the advertisements with whi
the JOURNAL is embellished reaches the respectab
figure of over £21,000 per annum. On the present oc
sion I do not hold any brief on behalf of the Irish Medi
Association, neither is it my purpose to injure its po
tion in any way, and I have alluded to its membership
order only to clear the air of a possible suggestion th
there is no room or sphere of usefulness in this count
for the British Medical Association when we have
powerful and well-supported Association of our own
existence. I do say, however, that the British Medi
Association has given in the past very substantial assi
ance to the medical profession in Ireland, and particula
to the cause of reform in the Poor-law Medical Servi
Let us not forget that the Association appointed
William Thomson as its special Commissioner to rep
on the condition of the service many years ago; that
the expenses in connexion with the preparation a
publication of that valuable report were met from t
finances of the Association; that in a like manner t
expenses incurred by the production of Surgeon-Gene
Evatt's report were also borne entirely by this Associati
And what greater service could the Association ha
rendered to the Irish dispensary doctors than that t
true state of their position should have been broug
within the searchlight of public opinion by a society a
by commissioners whose independence was unimpea
able? We in Ireland require the numerical support, t
moral support, and the financial support of the Briti
Medical Association, with its 19,500 members, and
yearly surplus balance of several thousand poun
Every year furnishes us with evidence that the Assoc
tion is anxious and willing to come to our assi

nce in our endeavours to improve our professional tatus. The democratic spirit which accomplished ie reorganization of the Association in 1902 was sponsible for the formation of the Branches into Divi- ons, so that the humblest member of the profession ight work for his own benefit in his Division and for ie Association at large through his representative at the nual meetings. To the local work of the Divisions were signed the following objects: (*a*) To promote by its eetings and in every way, union and good professional lations among the members of the medical profession ithin its area; (*b*) to afford to its members opportunities r discussing questions of medical science and kindred ibjects, and to promote, by this and other means, the lvancement of professional knowledge and skill; (*c*) to sist the members of the Division in maintaining standard of professional honour; (*d*) to maintain locally e interests of the profession, and to represent the pro- ssion in its relations with public bodies. If many of the visions in Ireland have failed so far to realize what an ganization drafted on these lines is capable of accom- ishing, the blame rests largely with the Divisions. But nay say here at once that in my opinion the Association ust spend some of its surplus funds in creating a greater terest among the Branches and Divisions that are merically and financially weak, and far removed from e influence of the parent body. There is a feeling adily growing in the minds of provincial members of e Central Council that the Association is spending too ich money in connexion with the offices in London, and t enough in the provinces. As already mentioned, the ehold property in the Strand cost the Association some 6,000. It is now proposed that a sum not exceeding 5,000 be expended on rebuilding and refitting this perty. Few will venture to object to this expenditure, the additional accommodation is urgently needed and property will be thereby enhanced in value. Then, in, the secretarial salaries and the cost of clerical istance are increasing at a rapid rate; but the increased enditure is spent entirely in London. The library, , is a splendid one; but, except where a few Divisions e asked for duplicate copies of volumes to be sent to m, this valuable asset is only of use to London mbers. It is felt that some of the work undertaken by highly-efficient Medical Secretary in his London office ght be carried on in the Branches themselves, greatly to advancement of the Association. I may say that in isting financially an energetic local practitioner I con- r organization could be carried out more efficiently in Branches and Divisions than is the case at present. nething also might be done to bring useful and modern lical literature within the reach of members who are removed from contact with medical libraries. The RNAL of the Association is not all that it might be, and tself is scarcely sufficient to form a library; but I am sfied that the Editor does not spare himself in his rts to provide information that is acceptable to the rent sections of his readers. At the same time, I w out the hint that some plan might readily be ised that would widen the scope of their possible ling for the outlying members. The Association is unmindful of the interests of science. In 1904-5 it nded £953 in research scholarships[1] and in grants rds scientific research. Of this sum £28 12s. 6d. e to Ireland—£20 went to workers in the laboratory Queen's College, Belfast, and £8 12s. 6d. to Dr. rhead, working in Trinity College Laboratory. In the ent year £44 were asked, and £29 granted, to four ibers in this country. How are we to apportion the ie for the lamentable state of affairs which these es bring to light? I find that in one case in the ent year £25 were asked for, and only £10 were ted, but in the case of the remaining three applicants ull amounts sought for were allowed by the Council , £5, and £10 respectively. If it were shown that the als for assistance from scientific workers in Ireland being ignored, or ruthlessly refused by the Science mittee and the Council of the Association, then it d become the obvious duty of the Irish members of Central Council to have this serious injustice to nd removed. However, until such proof be forth- ng, I fear we must conclude that the authorities of nedical schools in Ireland, who ought to encourage nal work, are mainly responsible for the miserable sum which reaches this country in the advancement of science. As one of the objects of the Association is to promote the advancement of medical knowledge, and as the Association seems perfectly willing to spend money in this direction, I trust that my criticism may have the effect of stimulating scientific workers in Ireland to seek for more material assistance. I pass on to speak of what, in my opinion, is the most important addition to its advantages in regard to Ireland which the Association has up to the present afforded us. At the annual meeting held in Leicester during the past year the Representative Meeting agreed to the formation of an Irish Standing Committee, to consist of the honorary secretaries of the various Branches, the Irish members of the Central Council, and an additional member elected by each Branch. This Committee will meet at least once a quarter, and the travelling expenses of its members will be defrayed by the Association itself, and not by the Branches. It might be thought that this Committee would interfere with the work of the Branches, and, indeed, it is even possible that some of the members may question the necessity for calling it into being. I say unhesitatingly that it will not interfere with the function of the Branches, and that it will strengthen immensely the influence of the Association in its relation to Irish affairs. The weakness of the Association in regard to Ireland has been due, not to any indifference on the part of the Council or the Representative Meeting, but chiefly to the inconvenience of travel, which prevented regular attendance on the part of Irish members of the Council; to the small number of Irish representatives on the Council, which has always been poorly represented on the governing body; and to the fact that, in the absence of concerted action, these representatives were not always in agreement when matters relating to Ireland were being discussed. Now, however, subjects requiring attention will be discussed by a Committee representing the different Branches and the various interests of the profession. The decisions arrived at will be the result of concerted action. The Branches or the Divisions may forward proposals to this Committee, and whatever propositions are finally adopted will go forward to the Central Council as the united wish of the Irish members, and the report of the Committee will be supported by the Irish members of the Council when it comes before that body for adoption. The members of the Committee must be selected, so that they will have the confidence and support of the Irish members of the Association, and this object can readily be achieved, as each member is elected by a general vote of his Branch to the position which gives him a seat on the Committee. If earnest, capable, and pacific men are chosen on this Irish Committee, we will have gained a step in managing our own affairs while still having the power of the Association behind us. The Committee has already decided to collect evidence on the Irish Poor-law system to be placed before the recently-appointed Poor-law Commission, and it has invited and secured the co-operation of the Irish Medical Association and the Poor-law Association of Ireland in undertaking this responsible work. If the British Medical Association gives financial assistance to the Irish Committee in carrying out this important work, as we have every hope it will, then the Association will have added a fresh claim for our support. The Council of the British Medical Association and the Irish Committee have each expressed dissatisfaction with the *personnel* of the Commission, and the latter has made strong representations through the Council that an Irish medical practitioner thoroughly conversant with the Poor-law service, but who is not a Government official, should be placed on this Commission. The matter is one of very serious importance, and no effort should be spared to have the request complied with. I do not propose to detain you longer, but when I say that one of your own members has been invited to deliver the popular lecture at the annual meeting to be held this year in Toronto, I think you have been given abundant proof that Ireland is not entirely neglected by the British Medical Association.

Vote of Thanks.—A vote of thanks to the President for his address was proposed by Surgeon-General EDGE, C.B., seconded by Dr. DENIS WALSHE and supported by Dr. MCWALTER, and passed with acclamation.

Additions to Rules.—A new rule and the additions to Rule 3 as under were adopted unanimously:

> That the country representative of the Branch on the Irish Committee shall be elected in the same manner and at the same time as are the officers of the Branch.

> *Additions to Rule 3.*
>
> (6) The Chairman of each Division.
>
> (7) The country representative of the Branch on the Irish Committee.

Nomination of Candidates.—On the motion of the HONORARY SECRETARY, seconded by Dr. HILLIS, it was unanimously resolved:

> That in future all candidates for election by the Council of this Branch to the membership of the Association shall be required to have their nomination papers signed by two members to whom they are personally known.

Irish Poor-Law Commission.—The HONORARY SECRETARY proposed and Dr. MCWALTER seconded the following resolution:

> That in the opinion of the Leinster Branch of the British Medical Association it is absolutely necessary, owing to the intricacy and importance of the subject to be inquired into, that an Irish medical man, who is not a Government official, should be added to the Poor-law Commission.

Dr. DELAHOYDE said nine-tenths of the Poor-law medical man's time was taken up in useless scribbling. In his opinion the Poor-law Commission would be of no earthly use. They had pressed before for an inquiry into the anomalies of the Poor-law medical service, but it was not granted because the Government would be ashamed of what would come out, and it would be shown that the system was indefensible, was deliberately mismanaged, and was worked by gentlemen who did not quite appreciate its meaning. He had been a long time in the service, and only now appreciated all he did not know about it. He suggested that the resolution should be altered, so as to ask to have a man appointed who "is or has been" in the service.—Dr. WALLACE BOYCE seconded the amendment.—Dr. MAGENNIS agreed as to the uselessness of Royal Commissions. There had been a Commission on University Education, which took the evidence of ecclesiastics and of the heads of schools, and did not take the evidence of the parents of pupils. In the last Commission (that of 1903) the medical branch had been ignored. It had now been sitting for two and a half years; it was still sitting; and, he added, "God knows when its report will be presented." Even then nothing will be done.—The amendment was lost, and the original resolution was subsequently carried.

Resolution from Torquay Branch.—A resolution from the Torquay Branch in reference to the JOURNAL was marked "read," and the meeting adjourned.

METROPOLITAN COUNTIES BRANCH:

HAMPSTEAD DIVISION.

A MEETING of this Division was held at the Central London Sick Asylum, Hendon, on Friday, February 9th, at 5 p.m., Mr. F. R. HUMPHREYS in the chair. By the kindness of the Medical Superintendent, Mr. Hopkins, the members were provided with tea and shown round the infirmary. Some cases of interest (thoracic aneurysm, locomotor ataxy, etc.,) were also shown by Mr. Hopkins. The two Secretaries were both unavoidably absent, and Mr. Farmer kindly acted as secretary *pro. tem.*

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Vote of Sympathy with Dr. Yeld.—A vote of sympathy was passed with Dr. Yeld, who was unable to attend owing to the illness of his father.

Letters of Regret.—Letters of regret for inability to be present were received from Dr. Lush and Mrs. Frazer Nash.

Resolutions from City Division.—A letter was received from the Honorary Secretary of the City Division in which three resolutions on the question of the Association Library were forwarded for consideration. These resolutions, which were recorded in the BRITISH MEDICAL JOURNAL SUPPLEMENT, February 3rd, 1906, pp. 37, 38, were then considered and adopted.

Financial Report.—The financial report for 1905 was then presented and unanimously approved.

Proposed Deputation to Parliamentary Candidate.—Mr. HUMPHREYS brought forward a proposal contained in a letter from Mr. Armit, that a deputation of local medical men should be formed to interview Mr. Gibb, the elect candidate for the Harrow Parliamentary Division Middlesex, with regard to various measures of medi interest. This question was, however, postponed for t present.

Offer of Journals.—A letter was received from Dr. Wea of Hampstead offering to the Division a number of bou volumes of the BRITISH MEDICAL JOURNAL, the *Lan* and the *Guy's Hospital Reports.* As the SECRETARY (I Yeld) had already formally thanked Dr. Weaver for l kind offer, the question was referred to the Committee further consideration.

Contract Practice.—The conclusions and recommen tions of the Medico-Political Committee of the Associati given in the report published in the SUPPLEMENT of Ju 22nd, 1905, were read to the meeting. The question medical men being prevented from holding private clu was raised by Drs. GLOVER and ANDREW, and the di culties that might arise were pointed out.—Dr. Fo ANDERSON explained that the aim of the Association w to establish eventually a "Public Medical Service." It w argued that there would always be a small minority medical men who would stand out of any combination the profession, and would derive all the more benefit fro being unfettered by any rules and being able to qu smaller fees.—The question of the arrangements betwe the local medical men and the Midland Railw employés was raised and discussed by Drs. Fo ANDERSON, ANDREW, and TURNER. Dr. Anders described the steps the Association was taking another district to reform the contract practice betwe the railway men and their medical officers.—Further d cussion was adjourned till the next meeting, the gene feeling being in favour of the recommendations of t Medico-Political Committee.

Central Midwives Board.—The rules were discussed as as Chapter E, Rule 17, and a letter was received from M Frazer Nash raising certain difficulties. No resoluti was brought forward, and the further consideration of t rules was adjourned.

Vote of Thanks.—A vote of thanks was passed to M Hopkins for his hospitality in receiving the meeting.

STRATFORD DIVISION.

A MEETING of this Division was held in the Alexan Hotel, High Street, Stratford, E., on Thursday, Febru 15th, at 9 p.m., Dr. STOCKER presiding.

Address.—Mr. PERCY FURNIVALL, F.R.C.S., delivere very interesting and practical address on Some Diseases the Rectum, which was greatly appreciated. He a answered a number of questions put by members of t Division, and was awarded a hearty vote of thanks for lecture.

Association Library.—It was unanimously decided support the recommendations of the City Division regard to the extension of the hours during which t Library of the British Medical Association should be k open.

SOUTH-EASTERN BRANCH:

ISLE OF THANET DIVISION.

THE fourteenth meeting of this Division was held at Granville Hotel, Ramsgate, on Friday, December 8th, 19 Dr. G. E. HALSTEAD in the chair.

Confirmation of Minutes.—The minutes of the l meeting (Broadstairs) were read, confirmed, and signed

School Certificates.—Dr. HALSTEAD read a summary the action of the Division in the matter of the signing school certificates, and read through the corresponde relating to the matter. The members unanimou adopted the resolution proposed at a former meetin namely, to refuse to sign medical certificates for the K County Educational Authority for a fee of less than h a crown.

Paper.—Mr. EDMUND OWEN read a paper entitled Ac Bone Disease in Children. The paper was discussed, a Mr. Owen replied.

Vote of Thanks.—Dr. TAMPLIN proposed a vote of tha to Mr. Owen for his paper, and this was unanimou carried. [The paper was published in the BRIT MEDICAL JOURNAL for February 3rd.]

The late Dr. C. J. Harnett.—The CHAIRMAN propo and Dr. SUTCLIFFE seconded:

> That a vote of condolence be passed and forwarded to

family of the late Dr. C. J. Harnett, who had been a member of the Division since he first came down to Thanet.

Norwood Division.

A clinical meeting of the Division was held at the Seamen's Hospital, Greenwich (*Dreadnought*), at 4 p.m., on February 15th, Sir Dyce Duckworth, M.D., LL.D., F.R.C.P., in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Next Meeting.—Dr. Annis proposed and Dr. Bigger seconded:

> That the next meeting should be held at the Queen's Hotel, Upper Norwood, on Thursday, March 8th, and that Dr. Henry Hetby, M.D., of Upper Norwood, be invited to take the chair thereat.

This was carried unanimously.

London School of Clinical Medicine.—Sir Dyce Duckworth welcomed the members and visitors, and drew special attention to the new London School of Clinical Medicine lately established in connexion with the hospital. He said that within the last few months the Seamen's Hospital had undergone somewhat radical changes. That institution had done excellent work in the past; but, like all institutions in a flourishing and prosperous country, it needed improvement and amendment as time went on. During the last few months the staff of the hospital had been materially increased. The purpose of what had been done was to create a body of men who were well qualified to give clinical teaching of a high order. They desired to add to the work of post-graduate education, which was already being done in London. He supposed there had never been in London a body that had been so qualified and so completely equipped for the purpose as that which was now organized there. That was a great step forward in the direction of supplying a want that had long been felt in London. Young members of the profession came from various parts of the world to England, and, not finding what they could find in Germany, Austria, or France, they supposed it did not exist, and, turning their backs on London, betook themselves to other countries. They were mistaken, but the fact remained that there had been no good organization for post-graduate teaching. That organization had gradually been brought about, and in several centres now in London there were good arrangements for men to carry on their studies and complete them, and study any branch of medicine and surgery. He thought they might fairly say that such arrangements had been set on foot there, together with an excellent equipment carried out with great kindness and spirit by the governing body of that hospital. That institution provided accommodation chiefly for sailors, and in connexion with the School of Tropical Medicine, of which it formed part, it provided for observation splendid examples of tropical diseases. They had examples of dysentery, beriberi, and all the diseases that were brought into that port day by day. Thus an excellent field was provided for observation by officers of the Navy and Army and those who were fitting themselves for Colonial practice. It was hoped that it would be fully taken advantage of by the many persons who required such teaching. Those connected with the hospital and school were full of hope and enthusiasm, believing that the work that had been organized there would not fail to prove useful to the whole realm of medicine.—Dr. Guthrie Rankin, in support, said the material that came to that hospital was not only varied but interesting from every point of view. It was true that their cases were limited to men; but in order to make that new school as useful as possible they had been lucky enough to get the Waterloo Hospital for Children and Women, the Royal Bethlem Hospital, and the York Road Lying-in Hospital to affiliate themselves with that hospital on conditions that would make it possible for every department of work that could not be undertaken at the Seamen's Hospital to be undertaken at those institutions. They looked forward to a day when, if they were supported by the public and by the governing body, work might be done in that school of the same type as that with which they were all familiar as coming from the Johns Hopkins University in America.

Demonstration of Cases.—The hospital and wards, including the new laboratories, were inspected, and an exceedingly interesting and instructive set of cases were shown and demonstrated by the members of the staff as follows: Sir Dyce Duckworth, aneurysm of aorta; Dr. Frederick Taylor, myoclonus; Dr. Tanner Hewlett, cerebritis; Dr. Guthrie Rankin, four nervous cases; Sir William Bennett, sarcoma of quadriceps; Mr. Mayo Robson, cholelithiasis, and gastric carcinoma; Mr. Turner, gumma of cervical vertebrae; Mr. McGavin, rodent ulcer, cured by x rays; Mr. Malcolm Morris, lupus; Mr. Cargill, eye cases; Dr. Russell Wells, heart cases; Dr. Ernest Jones, nervous cases; Mr. Burrows, pes cavus; Mr. E. Rock Carling, morbus coxae senilis, etc.

Tea was kindly supplied by the members of the staff.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.

Branch Contract Practice Committte.

The first meeting of the Branch Contract Practice Committee was held on February 15th, at the Castle Hotel, Neath. Present: Drs. D. J. Williams, Frank Thomas, H. Hanson, Coulter Elsworth, Owen Williams, Roderick, Edgar Davies, D. R. Price, T. R. Llewellyn, E. Naunton Davies, Leigh, Biddle, R. W. Jones, Naunton Morgan, Powell, D. T. Richards, Mulligan, Garrett Horder, Brook, Mitchell, and E. J. Maclean. Apologies for absence were sent by Mr. Whitaker and Mr. Greer. As convener of the meeting the Secretary of Branch took the chair in order to start the business.

Election of Chairman.—Dr. Mulligan proposed, and Dr. D. R. Price seconded, the name of Mr. D. J. Williams (Llanelly) as Chairman of the Committee. Mr. D. J. Williams was elected.—Mr. Williams having thanked the members of the Committee for the honour of election, and having pointed out the great importance of the work of this new Committee, took the chair.

Honorary Secretary.—Proposed by Mr. Frank Thomas, and seconded by Mr. Brook, that Dr. Maclean of Cardiff be appointed Honorary Secretary. Dr. Maclean was elected.

Appointment of Subcommittees.—(*a*) Works and collieries: Drs. Leigh, Mulligan, Mitchell, R. W. Jones, D. T. Richards, Owen Williams, Naunton Morgan, Brook, D. R. Price. (*b*) General contract: Drs. Garrett Horder, T. Wallace, J. O'Keefe, E. B. Evans, R. C. Elsworth, Biddle, T. R. Llewellyn, D. J. Roderick, J. Powell, O. E. B. Marsh, Trafford Mitchell, and the *ex-officio* members of the Contract Practice Committee.

Appointment of Honorary Secretaries of Subcommittees.—After some discussion it was agreed that to save complication at first no separate secretaries should be appointed, but that matters be left in Dr. Maclean's hands till further experience was gained.

Contract Practice Fund.—After much discussion, it was resolved, on the proposition of Mr. Frank Thomas, seconded by Mr. Maclean;

> That members of the Branch be asked to contribute to the Contract Practice Fund on the following lines:
> By: 1. An annual subscription of 5s. from all members willing to contribute.
> 2. Foundation donations, in order to at once establish an adequate fund. These might be payable in instalments spread over some years.
> 3. Promises of weekly payments, to be called for, only in case of emergency, and *pro rata* as the emergency might demand.

Circular Letter.—It was resolved that a circular letter to be drafted by a Subcommittee consisting of the Chairman, Honorary Secretary, and Mr. Frank Thomas, should be sent to each member of the Branch, after having been submitted to the Branch Council.

Ebbw Vale Dispute.—In the absence of Messrs. Smith Whitaker and Greer, Mr. Coulter reported on the position of affairs in the Ebbw Vale dispute.

Mr. Frank Thomas read a letter from Mr. Whitaker containing a resolution of the Central Contract Practice Committee and asking the Branch Committee if they thought fit to confirm their action. The resolutions were as follows:

1. That the Association should nominate one of the arbitrators, the Workmen's Committee nominating the second, and the two so nominated agreeing upon a third.

2. That the terms of reference to the arbitrators must be decided by previous agreement between the Association and the Workmen's Committee.

3. That in any terms of arbitration in the Ebbw Vale dispute the terms of reference to the arbitrators should be so drawn up that the decision in this matter could not prejudice the interests of the profession in other districts.

Resolved:

> That the form of arbitration as laid down by the Central Contract Practice Committee be heartily approved.

CARDIFF DIVISION.

AN ordinary general meeting of the Cardiff Division was held at the Cardiff Infirmary on February 15th, Dr. CHARLES VACHELL in the chair.

Confirmation of Minutes.—The minutes of the meeting held on January 18th were read and confirmed.

Ethical and Contract Matters.—Letters from the Secretary of the South-West Wales Division concerning ethical and contract practice matters were considered. The following resolution passed by the South-West Wales Division was read:

> That this Division does not approve of the scale of pay by the South Wales Clerks' Association as offered, nor of the principle that would justify the extension of contract practice to others than working men.

Some discussion took place in connexion with this; and, after hearing a statement from the Cardiff medical officer of the local Branch of the South Wales Clerks' Association, it was resolved that no action was called for by the Cardiff Division.

Medical Autobiographies.—The next item on the agenda—as to the ethical propriety of members of the profession contributing autobiographies to publications intended for circulation amongst the general public—evoked considerable discussion, which was joined in by Drs. TATHAM THOMPSON, J. LYNN THOMAS, HESKETH EVANS, WILLIAM MARTIN, H. C. ENSOR, WILLIAM SHEEN, T. WALLACE, CRAWFORD TREASURE, ALFRED REES, and the CHAIRMAN; and finally it was unanimously resolved:

> That, in the opinion of the members of this Division, it is not desirable that members of the profession in the Division area should contribute their photographs or biographies to autobiographical works circulated amongst the general public.

Central Midwives Board.—A report on these rules, drawn up by a Subcommittee, was presented to the meeting, and, after discussion, it was resolved that the matter be referred to the Subcommittee for further consideration.

Paper.—A paper on Has the Treatment of Fractures and Dislocations been Modified by X-rays Diagnosis? by Mr. J. LYNN THOMAS, C.B., was postponed until the next meeting.

☞ ***To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.***

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH.—The fourth ordinary meeting of the session will be held at the Museum, North Parade, Bath, on Wednesday evening, February 28th, at 8 p.m., Dr. J. Michell Clarke, President, in the chair. The meeting will be devoted to a discussion on Recent Advances in respect to Diseases of the Joints. To be opened by Professor Howard Marsh. The Bath Secretary will be glad to hear from members wishing to show cases in illustration of the discussion. Dr. A. Ogilvy will show a patient with large orbital exostosis. A Council meeting will be held at 7.55.—W. M. BEAUMONT, NEWMAN NEILD, Honorary Secretaries, Bath.

LANCASHIRE AND CHESHIRE BRANCH: ALTRINCHAM DIVISION.—The next general meeting will be held on Wednesday, March 7th, at the Greenbank Hotel, Northwich, at 4.45 p.m. Agenda: (1) Minutes of meeting of December 7th, 1905. (2) Minutes of Committee meetings of December 20th, 1905, January 18th, January 31st, and February 14th. (3) Confirm action of Committee in filling vacancy. (4) To prevent underselling, by adopting a uniform scale of fees. To be introduced by Dr. G. H. Smith. (5) A black list, or (alternatively) a local debt collecting union; by Dr. C. A. K. Renshaw. (6) Payment of medical men called in to assist midwives; by Dr. P. R. Cooper. (7) Any other business. Railway arrangements: The 3.40 train from Manchester will stop at Sale (3.50) on notice being given to the stationmaster by 3.45. The 4.33 express from Manchester will stop at Hale (about 4.43); arrives at Greenbank Station 5.10. Return trains from Greenbank at 6.59, 8.24, and 9.27 will all stop at Sale (in the case of the 6.59 notice must be given to the guard on joining the train). Dinner at 7 o'clock, price 4s.; wine extra; for those members (and guests) who send their names to the Honorary Secretary by Monday, March 5th. The Greenbank Hotel is next to the Hartford and Greenbank Station. Excursion fares on Wednesdays.—T. W. H. GARSTANG, Honorary Secretary, Altrincham.

NORTH WALES AND SHROPSHIRE BRANCH: NORTH CARNARVONSHIRE AND ANGLESEY DIVISION.—A meeting of this Division will be held on Wednesday, February 28th, at the British Hotel, Bangor.—H. JONES ROBERTS, Penygroes, Honorary Secretary.

SOUTH-EASTERN BRANCH: FOLKESTONE DIVISION.—A meeting of this Division will be held at the house of Dr. Calverley, 21, Earls Avenue, on Friday, March 2nd, at 8.30 p.m. Agenda: Minutes. Correspondence. To elect a new member on the Executive Committee in place of Mr. Powell, resigned. Dr. Percy Lewis will read a paper on Enuresis. Dr. Larking will give an account of the annual meeting of the British Medical Association, held at Leicester last year. Dr. Eastes will give a practical demonstration on the use of portable electric lights from the main. Members are asked to bring any portable electric lamps they may have. To consider the revision of the rules of the Central Midwives Board. All members of the South-Eastern Branch are invited to attend and introduce professional friends.—P. VERNON DODD, M.D., Honorary Secretary, Folkestone.

SOUTH-EASTERN BRANCH: NORWOOD DIVISION.—The next meeting of the Division will be held at the Queen's Hotel, Upper Norwood, on Thursday, March 8th, at 4 p.m.; exhibition of instruments will be ready by 3.30. Henry Hetley, M.D., of Upper Norwood, in the chair. Dinner at 8 p.m.; charge 7s., exclusive of wine. Agenda: (1) Minutes of last meeting. (2) To decide when and where the next meeting shall be held, and to nominate a member of the Division to take the chair thereat. (3) Letter from Wandsworth Division. (4) Invitation from Metropolitan Counties Branch to join in entertaining representatives. The following papers, etc., will be read: Dr. Guthrie Rankin: Suppressed Gout. Sir William Bennett: Stone in the Ureter, in relation to Pseudo-Appendicitis. Dr. Choyce: The treatment of Syphilis by Mercury, with special reference to the Hypodermic Method. There will be an exhibition of surgical instruments, etc., by Messrs. Allen and Hanbury, from 3.30. Members desirous of exhibiting specimens or reading notes of cases are invited to communicate at once with the Honorary Secretary. All members of the South-Eastern Branch are invited to attend and to introduce professional friends, but will be unable to vote on Divisional questions. N.B.—The Honorary Secretary would be much obliged if members would kindly inform him by post card, to reach him by the first post on the Tuesday before the meeting, whether they intend, if possible, to be present at the meeting, and if likely to remain to dinner. By so doing they will very materially facilitate arrangements and promote the success of the meeting.—HENRY J. PRANGLEY, Honorary Secretary; ARTHUR W. SOPER, Assistant Honorary Secretary, Tudor House, Anerley.

SOUTH-WESTERN BRANCH.—The next meeting of this Branch will be held on Tuesday, March 6th, at the White Hart Hotel, St. Austell, at 2.30 p.m. The President, Mr. G. Jackson, F.R.C.S., in the chair. Tea will be provided after the meeting. The following communications are already promised:—Mr. J. C. Walker: Notes on Therapeutic uses of Salicylates and allied Drugs. Mr. C. Hamilton Whiteford: A paper on Tubal Pregnancy, its diagnosis and treatment, with notes of three cases. Mr. W. Woollcombe: A paper on a Few Practical Points in Intestinal Obstruction. Dr. E. S. Fox will show a Heart from a case of Mediastinitis. Gentlemen desirous of joining the Association and Branch should communicate with Mr. G. YOUNG EALES, 1, Matlock Terrace, Torquay, Honorary Secretary.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

MEMBERS are reminded that the Library and Writing Rooms of the Association are fitted up for the accommodation of the members in commodious apartments, at the office of the Association, 429, Strand. The rooms are open from 10 a.m. to 5 p.m., except on Saturdays, when they close at 2 p.m. Members can have their letters addressed to them at the office.

THE SEVENTY-FOURTH ANNUAL MEETING
OF THE
British Medical Association,
TORONTO, CANADA, AUGUST 21st to 25th, 1906.

President: GEORGE COOPER FRANKLIN, F.R.C.S.Eng., Surgeon, Leicester Infirmary, Leicester.

Chairman of Council: HENRY WM. LANGLEY BROWNE, M.D., Ch.B., F.R.C.S.E., Consulting Surgeon, West Bromwich District Hospital.

President-elect: RICHARD ANDREWS REEVE, B.A., M.D., LL.D., Dean of the Faculty of Medicine, University of Toronto.

Treasurer: HY. RADCLIFFE CROCKER, M.D., F.R.C.P., Physician Skin Department, University College Hospital, London.

PROGRAMME OF BUSINESS.

An Address in Medicine will be delivered by Sir JAMES BARR, M.D., F.R.C.P., F.R.S.E.

An Address in Surgery will be delivered by Sir VICTOR HORSLEY, M.B., F.R.C.S., F.R.S.

An Address in Obstetrics will be delivered by WALTER SPENCER ANDERSON GRIFFITH, M.D., F.R.C.P.

THE SECTIONS.

There will be 13 Sections as shown in the subjoined list; they will meet on Tuesday, Wednesday, Thursday and Friday, August 21st, 22nd, 23rd and 24th, from 9.30 a.m. to 12.30 p.m.

The President, Vice-Presidents, and Secretaries of each Section constitute a Committee of Reference for that Section.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the BRITISH MEDICAL JOURNAL *without special permission.*

No paper must exceed 15 minutes in reading, and no ubsequent speech 10 minutes.

ANATOMY.

President: Professor ARTHUR ROBINSON, M.D., Birmingam.

Vice-Presidents: Professor ALEXANDER PRIMROSE, oronto; D. E. MANDELL, M.D., Kingston; DONALD RMOUR, F.R.C.S., London.

Honorary Secretaries: C. B. SHUTTLEWORTH, M.D., 5, Bloor Street E., Toronto; GAWNSHAW CLELAND, M.D., 30, Queen Street E., Toronto; J. HERBERT SANDERS, M.D., A, Palace Gardens Mansions, W.

DERMATOLOGY.

President: NORMAN WALKER, M.D., Edinburgh.

Vice-Presidents: GRAHAM CHAMBERS, M.D., Toronto; ARRY B. ANDERSON, M.D., Toronto; ARTHUR JOHN HALL, .D., Sheffield; ERNEST SOLLY, M.B., Harrogate.

Honorary Secretaries: D. KING SMITH, M.D., 311, Jarvis reet, Toronto; DONALD MACGILLIVRAY, M.D., 12, Carlton reet, Toronto; JOHN CAMPBELL RANKIN, M.B., 38, Uniersity Road, Belfast.

LARYNGOLOGY AND OTOLOGY.

President: J. DUNDAS GRANT, M.D., London.

Vice-Presidents: GEORGE R. McDONAGH, M.D., Toronto; S. BIRKETT, M.D., Montreal; JOHN MACINTYRE, M.B., asgow; HUGH EDWARD JONES, M.R.C.S., Liverpool.

Honorary Secretaries: DAVID J. GIBB WISHART, M.D., Grosvenor Street, Toronto; GEOFFREY BOYD, M.D., 7, Bloor Street, Toronto; ADAM BROWN KELLY, M.D., Blythswood Square, Glasgow.

MEDICINE.

President: Sir THOMAS BARLOW, Bart., K.C.V.O., M.D., ndon.

Vice-Presidents: Professor ALEXANDER McPHEDRAN, M.D., Toronto; Professor JAMES STEWART, M.D., Montreal; ALEXANDER NAPIER, M.D., Glasgow; WILLIAM CALWELL, M.D., Belfast.

Honorary Secretaries: ROBERT D. RUDOLPH, M.D., 396, Bloor Street W., Toronto; JOHN TAYLOR FOTHERINGHAM, M.D., 36, Carlton Street, Toronto; ROBERT HUTCHISON, M.D., 22, Queen Anne Street, London, W.

OBSTETRICS AND GYNAECOLOGY.

President: A. H. FREELAND BARBOUR, M.D., Edinburgh.

Vice-Presidents: Professor JAMES A. TEMPLE, M.D., Toronto; Professor ADAM H. WRIGHT, M.D., Toronto; Professor WILLIAM GARDNER, M.D., Montreal; T. ARTHUR HELME, M.D., Manchester.

Honorary Secretaries: FREDERICK FENTON, M.D., 75, Bloor Street E., Toronto; KENNEDY C. McILWRAITH, M.D., 54, Avenue Road, Toronto; CUTHBERT LOCKYER, M.D., 117A, Harley Street, London, W.

OPHTHALMOLOGY.

President: ROBERT MARCUS GUNN, F.R.C.S., London.

Vice-Presidents: GEORGE HERBERT BURNHAM, M.D., Toronto; JOHN W. STIRLING, M.D., Montreal; JOSEPH NELSON, M.D., Belfast; ARNOLD LAWSON, F.R.C.S., London.

Honorary Secretaries: JAMES M. MACCALLUM, M.D., Toronto; DUNCAN N. McLENNAN, M.D., 126, Bloor Street W., Toronto; FRANK PEARSON SKEFFINGTON CRESSWELL, M.B., 24, Windsor Place, Cardiff.

PATHOLOGY AND BACTERIOLOGY.

President: Professor J. G. ADAMI, M.D., F.R.S., Montreal.

Vice-Presidents: Professor J. J. MACKENZIE, M.D., Toronto; Professor W. T. CONNELL, M.D., Kingston; INGERSOLL OLMSTED, M.D., Hamilton; Professor ROBERT FRASER CALDER LEITH, M.B., Birmingham.

Honorary Secretaries: GIDEON SILVERTHORN, M.D., 266, College Street, Toronto; HAROLD C. PARSONS, M.D., 72, Bloor Street W., Toronto; FRANK GEORGE BUSHNELL, M.D., Sussex County Hospital, Brighton.

PEDIATRICS.

President: GEORGE ALEXANDER SUTHERLAND, M.D., London.

Vice-Presidents: H. T. MACHELL, M.D., Toronto; ALLAN M. BAINES, M.D., Toronto; OTTO JACKSON KAUFFMANN, M.D., Birmingham; H. BETHAM ROBINSON, M.S., London.

Honorary Secretaries: E. STANLEY RYERSON, M.D., 261, College Street, Toronto; JOSEPH S. A. GRAHAM, M.D., 102, College Street, Toronto; Ralph Vincent, M.D., 1, Harley Street, London, W.

Physiology.

President: Professor Wm. Dobinson Halliburton, M.D., F.R.S., London.

Vice-Presidents: Professor A. B. Macallum, M.D., Toronto; Professor J. Wesley Mills, M.D., Montreal; Professor Charles Scott Sherrington, M.D., F.R.S., Liverpool.

Honorary Secretaries: Herbert E. Roaf, M.D., 44, Upper Parliament Street, Liverpool; Gustav Mann, M.D., 25, Beechcroft Road, Oxford.

Psychology.

President: Wm. Julius Mickle, M.D., London.

Vice-Presidents: N. H. Beemer, M.D., Toronto; Charles K. Clarke, M.D., Toronto; Reginald Langdon-Down, M.B., London.

Honorary Secretaries: A. T. Hobbs, M.D., Guelph, Ontario; Goldwin Howland, M.D., 540, Spadina Avenue, Toronto; John Turner, M.B., Essex County Asylum, Brentwood.

State Medicine.

President: F. Montizambert, M.D., Ottawa.

Vice-Presidents: E. P. Lachapelle, M.D., Laval University, Montreal; Charles Sheard, M.D., Toronto; Peter H. Bryce, M.D., Ottawa; Joseph Groves, M.B., Isle of Wight.

Honorary Secretaries: J. Langrill, M.D., Hamilton.

Surgery.

President: Sir Hector Clare Cameron, Professor of Clinical Surgery, Glasgow.

Vice-Presidents: Fred. L. M. Grasett, M.D., Toronto; Francis J. Shepherd, M.D., Montreal; A. B. Atherton, M.D., Frederickton, N.B.; T. K. Holmes, M.D., Chatham, Ontario.

Honorary Secretaries: H. A. Beatty, M.D., 207, Simcoe Street, Toronto; Frederick W. Marlow, M.D., 699, Spadina Avenue, Toronto; Sinclair White, F.R.C.S., Ranmoor, Sheffield.

Therapeutics.

President: Donald MacAlister, M.D., Cambridge.

Vice-Presidents: John L. Davison, M.D., Toronto; A. D. Blackader, M.D., Montreal; Sir Alan Reeve Manby, M.V.O., M.D., East Rudham; Professor J. Rose Bradford, M.D., F.R.S., London.

Hon. Secretaries: V. Henderson, M.D., University of Toronto; C. P. Lusk, M.D., 99, Bloor Street W., Toronto.

HONORARY LOCAL SECRETARIES.

Dr. F. N. G. Starr, The Medical Building, Toronto.
Professor J. J. Mackenzie, The Medical Building, Toronto.
Dr. D. J. Gibb Wishart, The Medical Building, Toronto.

COMMITTEE PATHOLOGICAL MUSEUM.

Professor J. J. Mackenzie, Toronto, *Chairman*; Dr. Maud Abbott, *Secretary*; Professor Gordon Bell, Winnipeg; Professor W. T. Connell, Kingston; Dr. A. R. Gordon, Toronto; Dr. J. A. McGregor, London, Ontario.

EXHIBITION COMMITTEE.

Chairman: Dr. Arthur Jukes Johnson, Toronto.

Secretaries: Dr. T. D. Archibald, Toronto; Dr. W. A. Young, Toronto.

HONORARY LOCAL TREASURER.

Professor J. W. Ross, Toronto.

TORONTO ARRANGEMENTS COMMITTEE.

Dr. Geo. A. Bingham, 68, Isabella Street, Toronto.
Dr. C. J. C. O. Hastings, 258, Wellesley Street, Toronto.
Dr. A. A. Macdonald, 341, Bloor Street West, Toronto.
Professor J. J. Mackenzie, Medical Laboratories, Toronto.
Dr. Alex. McPhedran, 151, Bloor Street West, Toronto.
Dr. R. B. Nevitt, 46, Bloor Street West, Toronto.
Dr. R. A. Reeve, *President-elect*, 48, Bloor Street E., Toronto.
Dr. F. N. G. Starr, 112, College Street, Toronto.
Dr. J. Algernon Temple, 333, Bloor Street W., Toronto.
Dr. D. J. Gibb Wishart, 47, Grosvenor Street, Toronto.

PROGRAMME OF PROCEEDINGS.

Plans of steamers and all particulars will be supplied by Messrs. Stockwell on application.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

DEPUTY-INSPECTOR-GENERAL H. T. COX is promoted to be Inspector-General, January 25th. Appointed Surgeon, March 30th, 1872, he became Staff Surgeon, September 30th, 1883; Fleet Surgeon, November 12th, 1892; and Deputy-Inspector-General, January 1st, 1900. He served on shore throughout the Ashanti campaign in 1873-4, receiving the medal; and in the *Amethyst* during the engagement with the Peruvian rebel turret-ship *Huascar* off Ylo in May, 1877.

Surgeon H. A. JULIUS has been placed on the retired list, February 8th. He was appointed Surgeon May 15th, 1895.

The undermentioned have been appointed Surgeons in his Majesty's Fleet, dated February 10th: LEONARD WARREN, M.B., EWEN CAMERON, M.B., LOUIS L. GREIG, M.B., FREDERICK G. GOBLE, REGINALD C. P. MCDONAGH, PERCY F. MINETT, HERBERT A. BROWNING, PERCY C. WOOLLATT, and JOHN BOURDAS.

The following appointments have been made at the Admiralty: RICHARD E. BIDDULPH, Fleet Surgeon, to the *Cressy*, on recommissioning, March 5th; EDWARD T. MEAGHER, Staff Surgeon, to the *Berwick*, on recommissioning, March 6th; FRANCIS HERNAMAN-JOHNSON, Surgeon, to the *Berwick*, on completing, undated; LIDBROOK F. COPE, Surgeon, to the *Victory*, for disposal, February 15th (his recent appointment to the *Attentive* being cancelled); LESLIE C. ROWAN ROBINSON, Surgeon, to the *Victory*, for disposal, undated.

Fleet-Surgeon W. E. BENNETT is placed on the retired list, with the rank of Deputy-Inspector-General, February 17th. His commissions are dated: Surgeon, March 31st, 1874; Staff Surgeon, March 31st, 1886; and Fleet Surgeon, December 9th, 1890.

Deputy-Inspector-General W. G. RIDINGS has been awarded the Greenwich Hospital pension of £50 a year, vacant by the death of Deputy-Inspector-General W. C. F. Bartlett on January 14th. He entered the service as Surgeon, July 11th, 1856; became Staff Surgeon, September 22nd, 1866; Fleet Surgeon, May 3rd, 1877; and Deputy-Inspector-General on retirement, February 25th, 1888. From the *Royal Navy List* we learn that as Assistant Surgeon at Jamaica Hospital in 1859-62 he, with the rest of the staff, received the thanks of the Admiralty for services in yellow fever epidemic of H.M.S. *Icarus* and *Imaum*. Staff Surgeon in *Rinaldo*, 1866-70. Present at Kioto on March 23rd, 1868, where the Legation Guard was attacked, and received the thanks of H.M. Ministers for attendance on wounded. Was P.M.O. of expedition landed at Outing Poy Creek, Swatow, December, 1868, under Commodore O. Jones, for the destruction of three walled villages. Staff Surgeon of *Niobe* at bombardment of Omoa, 1873. Wrecked in *Niobe*, 1874. Fleet Surgeon of *Shannon*, 1877-81. In charge of zymotic and upper medical wards at Haslar, 1882-85. In medical charge of the R.M. Artillery, Eastney, 1885-88.

Fleet-Surgeon J. O'B. WILLIAMS, M.D., is promoted to be Deputy Inspector-General, January 25th. His previous commissions are dated: Surgeon, March 30th, 1878; Staff Surgeon, March 30th, 1890; Fleet Surgeon, November 16th, 1894. He was Surgeon of H.M.S. *Albacore* at Suakin during Osman Digna's operations against it in 1887-8, and received the thanks of the Egyptian Government for his valuable services, placed voluntarily at the disposal of the Senior Medical Officer of the Egyptian army, and for his action in assisting to dress the wounded after the action on March 4th, 1888.

---

[1] Carries only second-cabin and third-class (steerage) passengers.

ARMY MEDICAL SERVICE.

Lieutenant-Colonel W. G. Macpherson, C.M.G., M.B., Royal Army Medical Corps, to be a Deputy-Assistant-Director-General (attached to the Department of the Director of Military Operations), December 29th, 1905.

Lieutenant-Colonel T. J. R. Lucas, M.B., C.B., has assumed charge as Officer Commanding the Depot and Training School at Aldershot, vice Colonel G. W. Robinson, who has been transferred to London.

The undermentioned officers on retired pay have relinquished the medical charge of troops at the stations named: Lieutenant-Colonel A. Turner, Plymouth; Lieutenant-Colonel A. Asbury, Strensall; Major C. J. Holmes, M.D., Warrington.

WEST AFRICAN MEDICAL STAFF.

THE following appointments have recently been made to the West African Medical Staff: R. C. Hiscock, M.D., C.M.Canada, L.R.C.P. and S.Edin., *Lagos;* W. C. Bower, M.R.C.S., L.R.C.P., *Sierra Leone;* T. C. Caldwell, M.B., Ch.B.Edin., D.P.H.Edin. and Glasg., *Lagos;* H. L. Burgess, M.R.C.S., L.R.C.P., *Southern Nigeria;* H. Carlaw, L.R.C.P. and S.Edin., L.F.P.S.Glasg., *Gold Coast;* A. R. Rendle, M.R.C.S., L.R.C.P., *Southern Nigeria;* A. J. T. Swann, M.B., C.M. Glasg., *Northern Nigeria;* R. Cope, M.R.C.S., L.R.C.P., *Gold Coast;* J. C. Ryan, L. and L.M.R.C.P.I., L. and L.M.R.C.S.I., *Lagos;* J. J. Moore, L. and L.M.R.C.P.I., L. and L.M.R.C.S.I., *Sierra Leone;* J. C. S. McDonall, M.R.C.S., L.R.C.P., *Gold Coast.*

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN seventy-six of the largest English towns, including London, 8,903 births and 5.214 deaths were registered during the week ending Saturday last, February 17th. The annual rate of mortality in these towns, which had been 15.5 per 1,000 in each of the two preceding weeks, increased last week to 17.2 per 1,000. The rates in the several towns ranged from 8.4 in Hornsey, 9.0 in Grimsby, 9.3 in Leyton and in King's Norton, 10.4 in East Ham, 10.8 in Burton-on-Trent, and 10.9 in Willesden, to 21.5 in Walsall and in South Shields, 21.6 in Plymouth, 21.8 in Warrington, 22.0 in Stockport, 22.3 in Merthyr Tydfil, 23.7 in Bootle, 24.2 in Preston, and 25.8 in Swansea. In London the rate of mortality was 16.8 per thousand, while it averaged 17.4 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.5 per 1,000 in the seventy-six towns; in London this death-rate was equal to 1.4 per 1,000, while among the seventy-five other large towns the rates ranged upwards to 2.7 in Plymouth and in Blackburn, 2.9 in Leicester and in Derby, 3.0 in West Bromwich, in Oldham, and in Stockton-on-Tees, 3.6 in Burnley and in Preston, and 5.3 in Bury. Measles caused a death-rate of 1.1 in Swansea, 1.6 in Leeds, 1.7 in Tottenham, 1.9 in York, 2.1 in Wolverhampton, 2.7 in Preston, and 5.3 in Bury; diphtheria of 1.0 in Stockport and 1.1 in Oldham; whooping-cough of 1.5 in Bournemouth, in Warrington, and in Burnley, 2.0 in Reading, 2.2 in Leicester, and 2.3 in West Bromwich; and diarrhoea of 1.5 in Burnley. The mortality from scarlet fever and from enteric fever showed no marked excess in any of the large towns. No fatal case of small-pox was registered last week in any of the seventy-six towns. Two cases of this disease were admitted into the Metropolitan Asylums Hospitals during the week and remained under treatment on Saturday last, February 17th. The number of scarlet fever patients in these hospitals and in the London Fever Hospital, which had been 2,983, 2,912, and 2,839 at the end of the three preceding weeks, had further declined to 2,734 at the end of last week; 281 new cases were admitted during the week, against 322, 319, and 283 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

DURING the week ending Saturday last, February 17th, 946 births and 618 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 19.6, 16.5, and 16.8 per 1,000 in the three preceding weeks, further rose to 18.0 per 1,000 last week, and was 0.8 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 13.4 in Aberdeen and 13.6 in Perth to 22.1 in Dundee and 25.1 in Greenock. The death-rate from the principal infectious diseases averaged 1.9 per 1,000 in these towns, the highest rates being recorded in Glasgow and Dundee. The 288 deaths registered in Glasgow included 25 which were referred to measles, 5 to diphtheria, 2 to whooping-cough, 2 to "fever," and 4 to diarrhoea. Five fatal cases of measles were recorded in Edinburgh. Two deaths from measles, 2 from diphtheria, and 2 from whooping-cough occurred in Dundee; 4 from diarrhoea in Aberdeen; and 2 from measles in Paisley.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, February 17th, 534 births and 393 deaths were registered in six of the principal Irish towns as against 478 births and 377 deaths in the preceding period. The annual death-rate in these towns, which had been 18.8, 18.9, and 22.7 per 1,000 in the three preceding weeks, fell to 21.8 per 1,000 in the week under notice, this figure being 4.6 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 17.5 in Waterford and 18.6 in Londonderry to 26.0 in Belfast and 28.7 in Limerick. The zymotic death-rate in the same six Irish towns averaged 0.6 per 1,000, or 1.6 per 1,000 lower than during the preceding period, the highest figure—1.9—being recorded in Belfast and Waterford, while no deaths under this heading were registered in Cork, Londonderry, and Limerick.

VITAL STATISTICS OF METROPOLITAN BOROUGHS DURING 1905.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

IN the accompanying table will be found summarized the vital statistics of the City of London and of each of the metropolitan boroughs, based upon the Registrar-General's returns for the year 1905. The mortality figures relate to the deaths of persons actually belonging to the various boroughs, and are the result of a complete system of distribution of the deaths occurring in the public institutions of London among the various boroughs in which the deceased persons had previously resided.

The 126,620 births registered in London during 1905 were equal to an annual rate of 27.1 per 1,000 of the population, estimated at 4,684,791 persons in the middle of the year; this rate was lower than that recorded in any preceding year, and was 2.2 per 1,000 below the average for the ten years 1895-1904. Among the various boroughs the birth-rates last year ranged from 13.5 in the City of London, 16.2 in Hampstead, 16.8 in the City of Westminster, 19.3 in Kensington, 20.5 in Stoke Newington, and 21.3 in Chelsea, to 32.1 Poplar, 33.2 in Bethnal Green, 33.3 in Bermondsey, 33.5 in Shoreditch, 34.7 in Finsbury, and 35.3 in Stepney.

The deaths, of persons belonging to London, registered during the year numbered 70,442, and were in the proportion of 15.1 deaths annually per 1,000 persons living, against 17.2, 15.2, and 16.1 per 1,000 in the three preceding years; the mean death-rate during the ten years 1895-1904 was 17.8 per 1,000. The lowest death-rates last year among the various metropolitan boroughs were 9.3 in Hampstead, 11.7 in Lewisham, 12.6 in Wandsworth, 12.8 in Woolwich, 12.9 in Stoke Newington, 13.3 in Paddington, 13.4 in Greenwich, and 13.5 in the City of Westminster; the highest rates were 17.5 in Holborn, 17.6 in Poplar, 17.7 in Stepney, 18.5 in Southwark, 18.6 in Bethnal Green, 18.7 in Bermondsey, 19.0 in Finsbury, and 19.7 in Shoreditch.

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Deaths occurring in Public Institutions during 1905.

During the year under notice 7,894 deaths were referred to the principal infectious diseases; of these, 10 resulted from small-pox, 1,709 from measles, 549 from scarlet fever, 546 from diphtheria, 234 from enteric fever, 3 from ill-defined pyrexia, and 3,356 from diarrhoea. These 7,894 deaths were equal to an annual rate of 1.70 per 1,000; the rates from these diseases in the three preceding years were 2.21, 1.75, and 2.14 per 1,000 respectively, and the mean rate in the ten years 1895-1904 was 2.42 per 1,000. Among the several boroughs the death-rates last year from these principal infectious diseases ranged from 0.53 in Hampstead, 0.57 in the City of London, 0.81 in the City of Westminster, 0.95 in Lewisham, 1.02 in Woolwich, and 1.03 in Chelsea, to 2.21 in Bermondsey, 2.27 in Bethnal Green, 2.39 in Southwark, 2.58 in Stepney, 2.65 in Poplar, 2.71 in Fulham, and 2.96 in Shoreditch. Compared with the averages in the ten preceding years, the mortality from each of the principal infectious diseases showed a decline which in the aggregate amounted to more than 30 per cent. Of the 10 fatal cases of small-pox recorded during the year, 4 belonged to Lewisham, 2 to Hackney, 2 to Shoreditch, 1 to Islington, and 1 to Stepney. The number of small-pox patients admitted into the Metropolitan Asylums Hospitals during the year was 72, against 414 and 512 in the two preceding years; no cases remained under treatment at the end of last year. Measles showed the greatest proportional mortality in Fulham, Shoreditch, Stepney, Southwark, and Battersea. Scarlet fever was proportionally most fatal in Finsbury, Shoreditch, Bethnal Green, Stepney, and Poplar; 17,592 scarlet fever patients were admitted into the Metropolitan Asylums Hospitals during last year, against 15,133, 10,808, and 11,629 in the three preceding years; 3,410 cases remained under treatment at the end of the year, against 2,327, 1,606, and 3,610 at the end of the three preceding years. The greatest proportional mortality from diphtheria occurred in Hammersmith, Bethnal Green, Stepney, Poplar, and Southwark; the number of diphtheria patients admitted into the Metropolitan Asylums Hospitals was 5,380 last year, against 7,988, 6,158, and 5,783 in the three preceding years; 701 cases remained under treatment at the end of the year, against 927, 734, and 801 at the end of the three preceding years. Whooping-cough was proportionally most fatal in Hammersmith, Fulham, Shoreditch, Bethnal Green, Stepney, and Poplar. The highest "fever" death-rates last year were recorded in Kensington, Hackney, Holborn, Finsbury, Bethnal Green, and Stepney; there were 831 enteric fever patients admitted into the Metropolitan Asylums Hospitals last year, against 1,806, 1,247, and 1,008 in the three preceding years; 78 cases remained under treatment at the end of the year, against 210, 246, and 150 at the end of the three preceding years. Diarrhoea showed the highest proportional fatality in Fulham, Hackney, Shoreditch, Stepney, Poplar, and Bermondsey.

The 6,622 deaths from phthisis registered during the year were equal to a rate of 1.42 per 1,000, the rates in the three preceding years having been 1.60, 1.55, and 1.52 per 1,000. Among the various boroughs the death-rates from this disease ranged from 0 83 in Hampstead, 0.85 in Lewisham, 0.96 in Paddington, 1.02 in Wandsworth, and 1.14 in Kensington to 1.79 in Bermondsey, 1.96 in Shoreditch, 2.02 in Finsbury, 2.04 in Bethnal Green, 2.13 in Southwark, and 2.84 in Holborn. In the central and eastern groups of boroughs the mortality from this disease is much greater than in the other parts of London, the rate per 1,000 living ranging from 1.23 in the western, 1.29 in the northern, and 1.37 in the southern, to 1.77 in the eastern, and 2.20 in the central group.

Infant mortality in London last year, measured by the proportion of deaths among children under one year of age to registered births, was equal to 129 per 1,000, or 24 per 1,000 less than the average. The lowest rates of infant mortality were 88 in St. Marylebone, 92 in Holborn and in Lewisham, 94 in Hampstead, and 102 in Woolwich; and the highest rates, 148 in Southwark and in Bermondsey, 149 in the City of London, 151 in Bethnal Green, 153 in Poplar, and 167 in Shoreditch.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journal is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office. No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

GENERAL MEDICAL COUNCIL.

ELECTION OF DIRECT REPRESENTATIVES FOR ENGLAND AND WALES, NOVEMBER, 1906.

Candidates Nominated by Divisions for Selection by the Representative Meeting on behalf of the Association.

THE following members of the Association have been nominated by the Divisions named to be candidates for election, and have accepted nomination in accordance with the terms of the scheme published in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL for October 7th, 1905:

Name.	*Address.*	*Nominating Division or Divisions.*
BROWNE, HENRY LANGLEY, M.D. ... ... (Chairman of Council of the Association.)	Moor House, West Bromwich	CENTRAL BIRMINGHAM. CITY (LONDON).
BULLAR, JOHN FOLLETT, M.B.... ... ... (Member of Branch Council, Southern Branch.)	7, Carlton Crescent, Southampton	WINCHESTER.
CLARK, ANDREW, F.R.C.S., ... (Member and late Chairman of Central Council, and President of the Metropolitan Counties Branch)	71, Harley Street, W.	CITY (LONDON). ST. PANCRAS AND ISLINGTON.
JACKSON, GEORGE, F.R.C.S. ... ... (President of the South-Western Branch, and Member of the Medico-Political Committee.)	10, Portland Villas, Plymouth	GATESHEAD. PLYMOUTH.
MORISON, JAMES RUTHERFORD, F.R.C.S. ... (Member of Branch Council and Chairman of Northumberland Committee, North of England Branch.)	14, Saville Row, Newcastle-on-Tyne	CONSETT. GATESHEAD.
RHODES, JOHN MILSON, M.D. ... ... (Chairman of South Manchester Division, Lancashire and Cheshire Branch.)	Ivy Lodge, Didsbury, Manchester	MANCHESTER (SOUTH).
STRATON, CHARLES ROBERT, F.R.C.S.EDIN. ... (Member of Central Council, Medico-Political Committee and Colonial Committee.)	West Lodge, Wilton, Salisbury	WINCHESTER.

As provided by the scheme, nominations can be received until March 31st, and will henceforth be announced as received.

MATTERS REFERRED TO DIVISIONS.

REPRESENTATIVE MEETING AT LONDON.

TUESDAY, July 24th, and Following Days.

NOTICES OF MOTION.

The following notices of motion have been received for discussion by the Annual Representative Meeting of the Association to be held at London, July 24th, 1906, and following days.

ASSOCIATION REGULATIONS.

Amendment of Article xxvii.

Election of Representatives.

By the Wandsworth Division (Metropolitan Counties Branch):

For "three months" read "nine months."

Amendment of Articles and By-Laws.

Officers of Divisions.

By the Wandsworth Division (Metropolitan Counties Branch):

That it be an instruction to the Central Council to alter all Articles and By-laws so that "the Chairman of a Division" be called "the President of the Division"; and the "Executive Committee of a Division" be called "the Division Council."

ASSOCIATION ADMINISTRATION.

Management of Library.

By the City Division (Metropolitan Counties Branch):

That it be an instruction to the Council of the Association to make arrangements for keeping the Library of the Association open till 11 p.m. daily; except on Saturdays, when it shall be open till 1 p.m.

Facilities for Social Intercourse at Head Office.

By the City Division (Metropolitan Counties Branch):

That it be an instruction to the Council of the Association to provide facilities at the Association's premises in London for the better social intercourse of members, especially country members visiting London.

By Direction of the Chairman of Representative Meetings.
J. Smith Whitaker, *Medical Secretary.*

February 28th.

MEDICO-POLITICAL COMMITTEE.

NURSES' REGISTRATION REPORT.

In remitting the subject of Nurses' Registration again to the Divisions in accordance with the instruction of the Annual Representative Meeting at Leicester (Minute 220), the Medico-Political Committee presents the following Memorandum for the assistance of the Divisions:

The Memorandum consists of:

(a) A short history of the recent consideration of the subject by the Association.
(b) An abstract of the recommendations of the Select Committee of the House of Commons.
(c) Questions which it is suggested that the Divisions should answer.

(a) Recent Consideration by the Association.

The subject of Nurses' Registration was brought under the notice of the Medico-Political Committee in March, 1904, in connexion with the introduction into the House of Commons of two Bills for the State Registration of Nurses, one prepared and promoted by the Association for the State Registration of Nurses, and the other by the Royal British Nurses' Association.

The Medico-Political Committee prepared a report on these Bills, which was circulated to the Divisions on June 10th, 1904, for their assistance in discussing the subject preparatory to the decision of the ensuing Annual Representative Meeting thereon.

The matter was considered accordingly at the Annual Representative Meeting at Oxford, and the meeting resolved (Minute 66) that this meeting approves of the principle of the Registration of Nurses. The meeting also resolved (Minute 67) that the foregoing resolution be transmitted to the Select Committee of the House of Commons then sitting.

On the reappointment of the Select Committee, the Chairman of Representative Meetings, in accordance with Minute 67, transmitted the resolution of the Representative Meeting, and tendered himself as a witness on the subject on behalf of the Association. By request of the Medico-Political Committee, Dr. H. Langley Browne also attended to give evidence as a representative general practitioner.

The action so taken was reported to the Representative Meeting at Leicester and approved, and the Representative Meeting passed the following resolutions:

1. That the subject of the State Registration of Nurses be referred to the Divisions for further consideration (Minute 220).
2. That Registration of Nurses should include midwifery nurses who should have three years' training, of which one at least should be in a "lying-in hospital."

Pursuant to Minute 220, the matter is now referred to the Divisions; and as the report of the Select Committee of the House of Commons has in the meantime been published,[1] it is considered convenient to submit herewith a statement of its recommendations, as the most authoritative explanation of the meaning of the term "State Registration of Nurses."

(b) Recommendations of the Select Committee of the House of Commons on the State Registration of Nurses: and Nursing Homes.

(Abstract from the report of the Committee.)

Registration of Nurses.

1. That a *Register of Nurses* should be kept by a Central Body appointed by the State; and that, while it is not desirable to prohibit unregistered persons from nursing for gain, no person should be entitled to assume the designation of "Registered Nurse" whose name is not upon the *Register.*

2. That the Central Body should be set up by Act of Parliament, and that its constitution should be defined in the Act, as was done in the case of the Central Midwives Board.

3. That the Central Body should consist of matrons, nurses, and representatives of the medical profession, of training schools for nurses, and of the public.

4. That the number of representatives should not exceed fifteen.

5. That the Central Body should admit to the *Register of Nurses* such nurses as have had a training at a recognized training school of nurses for a period to be determined by such body, and have satisfied their training school, whose certificate they must hold, stating that they are equipped with the knowledge and experience requisite for nursing, and that they are of good character.

6. That the Central Body should decide what constitutes a recognized training school for nurses, taking into consideration the number of beds, the accommodation for probationers, the facilities afforded for learning, and the general standard and conduct of the examination; that for this purpose the Central Body should have the power of inspection. That the examination be held at and by the training school.

7. That for the purpose of defraying the expenses of the Central Body a registration fee should be charged, not exceeding one guinea.

8. That the minimum period of training should not be fixed by Act of Parliament, but should be left to the discretion of the Central Body, three years being suggested.

9. That there should be an annual publication of the *Register of Nurses*, and for this purpose the Central Body should make provision for striking off the *Register* the names of those nurses who have died or who have ceased nursing, and also of those nurses who, in the opinion of

---

[1] Supplement to the British Medical Journal, August 5th, 1905, page 157.

the Central Body, have been guilty of serious misconduct in the discharge of their duty, or of moral delinquency.

10. That existing nurses who can produce evidence satisfactory to the Central Body both as regards efficiency and character should be placed upon the *Register* on payment of the registration fee.

11. That it should be the duty of the Central Body at a date not later than four years after the passing of any Act for the Registration of Nurses to submit a Report to the Privy Council on the advisability of instituting a separate *Register of Nurses* whose training is of a lower standard than that laid down for "Registered Nurses."

12. That a separate Register of "Registered Asylum Nurses" should be kept by the Central Body, to which should be admitted the names of nurses who have served for not less than three years (in not more than two asylums), and have received the certificate of the Medico-Psychological Association, and can produce satisfactory certificates of good character.

Licensing of Nursing Homes and Institutions.

(Nursing homes are deemed to include all homes and places conducted for profit where patients are taken in for treatment. By nursing institutions are meant those societies or bodies which supply nurses to the public.)

13. That the licensing of such homes and institutions is highly desirable, that the licence be issued by the county or county borough authority in whose area the home or institution is situated, and that no such home or institution receive the licence unless it is conducted in conformity with requirements to be laid down by that authority; that the county or county borough authority be empowered to draft regulations to be approved by the Local Government Board, and to appoint inspectors who should have the right of entry and inspection; that it should be a condition of such licence that when a nurse employed in a nursing home or sent out by a nursing institution is not a "Registered Nurse" the fact shall be definitely stated.

(C) QUESTIONS SUBMITTED.

The Medico-Political Committee recommends that the Divisions should consider the following questions and present their opinion thereon as a convenient means of obtaining the views of the Association:

(1) Does the Division approve in general of the method of Registration for Nurses proposed by the Select Committee of the House of Commons?

(2) Does the Division approve of the separate Registration of Midwifery Nurses?

CONTRACT PRACTICE.

By F. R. Humphreys,

CHAIRMAN, HAMPSTEAD DIVISION.

Last year the Medico-Political Committee of the British Medical Association issued a report on Contract Practice, he result of two years' work; it appeared with the British Medical Journal for July 22nd.

It is based upon information received from practitioners n response to a series of questions issued by the Committee. In all, 856 replies, relating to 2,300 appointments, were received. In addition to these, much information was received from local medical societies, from Branches nd Divisions of the Association, and from other sources.

Special reports are included in it dealing with Provident nstitutions and Public Medical Services.

Contract Practice includes Private Clubs, organizations managed by non-medical bodies, Works Clubs, Medical Aid Societies, Friendly Societies, and Friendly Societies' nstitutes, with Provident Institutions and Public Medical ervices.

Following the recommendations of the Committee, given below, is a brief summary of them, and of the facts upon which they are based. It is hoped that it may prove seful at the present moment.

Recommendations.

1. That the conditions upon which the medical practitioners n any district undertake contract practice should be prescribed by arrangement among themselves.

2. That the control of the profession over the conditions of contract practice can only be effectually exercised under the conditions of a Public Medical Service, namely:
   (*a*) That the general control be in the hands of some organized local body representative of the profession, such as a Division of the British Medical Association.
   (*b*) That it be open to every practitioner in the district to take part in the work, should he desire to do so, and conform to the regulations of the profession.
   (*c*) That the details of administration be under the direct control of a purely medical committee representing both those who do and those who do not take part in contract work.

3. That whenever, in the opinion of the local medical profession, the immediate institution of a Public Medical Service is for any reason impracticable, the three main principles above stated should be carried into effect as far as possible. That is to say:
   (*a*) That, with regard to the conditions upon which they will accept contract practice, the medical practitioners of each district should collectively and individually enter into an agreement, in which the following matters are specifically prescribed:
      (i) Rates of remuneration.
      (ii) Conditions of admission to attendance under contracts, including provisions with respect to the economic position, age, and health of candidates.
      (iii) Definitions of the services to be rendered under the contract.
      (iv) Where appointments are made by non-medical bodies—the forms of contract, tenure of office, and representation of the medical profession in the management of the medical service.
   (*b*) That practitioners should cease to hold separate appointments or to carry on private clubs, and the principle of distribution of contract practice among all practitioners in the district who desire to participate should be carried into effect.
   (*c*) That organized forms of contract practice at present under the control of non-medical committees should gradually be brought under direct medical control.

4. That agreements among local members of the profession with respect to contract practice should be effected through the agency of organized local bodies representative of the profession, the rules of which should make the agreements binding upon the members.

5. That the professional organizations referred to should in each case be a Division of the British Medical Association.

6. That to render professional co-operation as complete as possible the Divisions should endeavour to secure the inclusion of every practitioner in their membership, and should make their decisions binding by adopting rules such as have been suggested by the Ethical Committee. (See Appendix G.)

7. That the Divisions be urged to establish a Public Medical Service in every area in which Contract Practice is believed by them to be necessary.

Comments.

1. That the conditions upon which the medical practitioners in any District undertake Contract Practice should be prescribed by arrangement amongst themselves.

2 and 3. These recommendations deal with the ways in which (1) can best be carried into effect.

2. Advises, as the only effectual means of control by the profession, the formation of a Public Medical Service, which should be similar to a Provident Institution, but, unlike it, entirely controlled by the Medical Profession.

3. Recommends that wherever the establishment of a Public Medical Service is impossible, the medical practitioners of the District should collectively and individually enter into an agreement as to the rates of remuneration, conditions of admission to benefits, and other details. In addition they should agree (*a*) to cease to run Private Clubs; (*b*) to hold separate appointments; (*c*) to support the principle of the distribution of contract practice amongst all practitioners in the district who desire it; and (*d*) that medical control should be substituted for non-medical committees in existing institutions and for contract practice.

Thus (2) replaces all existing clubs by the Public Medical Service under the sole control of the Profession; and (3) provides for the organization of the local profession in cases where local conditions prevent the formation of the Public Medical Service, though leading up to this ideal.

Both of these proposals, it is suggested, should be effected through the local Division of the British Medical Association, in order to obtain local cohesion and central support.

Below are given the disabilities connected with Contract Practice which have led to the above recommendations.

DEFECTS OF CONTRACT PRACTICE.

In General.

(*a*) The remuneration is inadequate for the services rendered. Some rates are absolutely inadequate, and fees for special services are not often given or are quite insufficient.

(*b*) Wage-limit provisions are non-existent or ineffective.

(*c*) Women and children are now largely admitted to organizations from which they were formerly excluded. The tendency of Societies is to include the whole of that portion of the community for which they cater, and to entirely do away with the family practice formerly attached to club practice.

(*d*) The rates for women and children are especially inadequate, both on account of their greater liability to illness and of the absence of economic restraint. The lower fee in the case of children is obviously wrong.

(*e*) The conditions of tenure of appointment are often unjust to the medical attendant.

Special Bad Effects upon Individual Doctors, the Profession, and the Community.

(*a*) On the medical attendant club practice is extremely bad and demoralizing, and is attended by grave dangers to his character and efficiency. The status of the "club doctor" is lowered by his acceptance of low remuneration, by the competition for club appointments, and by the occasional unworthy efforts to obtain the appointments.

(*b*) The effects upon the profession are those of organized (non-medical) bodies upon individuals. The inducements as to family practice, etc., held out by the organization, together with the fear of losing the appointment, enables the organization to enforce onerous terms. The pressure which results is shown by underselling by practitioners and canvassing and advertising by the organization.

(*c*) The effects on the community are those of inefficiency of medical service, and inferiority of or frequent change in the medical attendant.

The special evils connected with the different forms of contract practice are:

Friendly Societies.

1. The club doctor is at the mercy of a small but active minority of the members.
2. There is no restriction of benefits to the wage-earning class.
3. The formation of juvenile courts and the admission of women on unremunerative conditions. (Becoming very common.)
4. Remuneration in general inadequate.

Works Clubs.

1. No restriction of benefits to men on the works.
2. Loss of independence by the practitioner.
3. Remuneration inadequate.

Medical Aid Societies.

1. Government by non-medical, dividend-taking promoters.
2. Indiscriminate canvassing.
3. Admission of juveniles and of families.
4. Unremunerative fees.

Private Clubs.

1. Collector employed, resulting in canvassing; cards issued, in practice acting as advertisements.
2. Admission of women and children on unremunerative terms.
3. Severe downward competition between neighbouring practitioners.

CONCLUSIONS.

1. Contract practice appears to be necessary in certain districts.
2. The chief evils connected with the present system which require correction are (*a*) unremunerative and downward competition, (*b*) injustice to and loss of independence by medical men, due to their isolated position, (*c*) the non-limitation of benefits to wage earners, (*d*) the demoralizing effects of club practice upon club doctors, (*e*) the bad effects upon the community.

THE SEVENTY-FOURTH ANNUAL MEETING
OF THE
British Medical Association,
TORONTO, CANADA,
AUGUST 21ST TO 25TH, 1906.

THE CANADIAN GOVERNMENT AND THE BRITISH MEDICAL ASSOCIATION.

A MEDICAL deputation had a conference with Sir Wilfrid Laurier, Premier of Canada, recently with reference to a grant to the guarantee fund raised in Toronto in connexion with the Annual Meeting of the British Medical Association next August. The deputation, which consisted of Dr. Roddick, Past-President of the Association, Dr. R. A. Reeve, President-elect, Drs. Ross and Starr, Treasurer and Secretary respectively of the local Committee, and Drs. Powell and Prevost of Ottawa, was introduced to Sir Wilfrid Laurier by the Hon. Mr. Aylesworth. It is understood that the deputation met with a sympathetic reception.

Subsequently the same deputation had an interview with Mr. McDougald, Commissioner of Customs, in connexion with the admission free of duty of specimens and samples to be shown in the annual exhibition. Mr. McDougald subsequently informed Dr. F. N. G. Starr, the Honorary Local Secretary, that samples and printed matter entered for exhibition in the premises used for the annual museum may be distributed to members of the medical profession attending the annual meeting without customs duty.

RAILWAY TRAVELLING IN CANADA.

The Grand Trunk Railway.

We are informed that the Grand Trunk Railway has arranged to grant special reduced fares to members of the British Medical Association attending the Annual Meeting at Toronto next August. Round trip tickets will be issued to passengers from Europe between all points in Canada at one-half of the lowest one-way first-class railway fare from July 1st to September 30th, the final return limit being the latter date. These special tickets will be issued on presentation of a certificate prepared and signed by the Secretary of the Eastern Canadian Passenger Association and countersigned by the Secretary of the Canadian Committee or the General Secretary of the British Medical Association. Further particulars as to the Grand Trunk Railway System can be obtained from Mr. Frederick C. Salter, European Traffic Office, Grand Trunk Railway, 22, Water Street, Liverpool.

THE ATLANTIC PASSAGE.

IN the list of fares by the various liners, published in the SUPPLEMENT last week, p. 70, the fares by the *Empress of Britain* and the *Empress of Ireland*, of the Canadian Pacific Atlantic Line, should have been £16 to £90.

CIRCULAR TOURS FROM ENGLAND.

Messrs. Stockwell and Co., Limited, Shipping and Passenger Agents, 8-10, Beak Street, Regent Street, W., write with reference to the list of specimen tours received from them and published in the SUPPLEMENT of February 24th, p. 71, to state that owing to an alteration in the dates of sailing, the *Empress of Britain* will not sail on August 4th, but the *Empress of Ireland*, which is a sister ship, will leave Liverpool on August 11th.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH: COVENTRY DIVISION.—The next meeting of this Division will be held at the Coventry and Warwickshire Hospital on Tuesday, March 6th, at 8.30 p.m. Agenda: (1) Dr. Milner Moore will move that it be a Standing Order that no smoking be allowed at the meetings of the Division until 9.30 p.m., after which time it shall be in the power of any member to move that smoking be now allowed. (2) Dr. Harman Brown will read a note on the Radical Cure of Hernia in infants and young children, illustrated by cases. (3) Dr. Milner Moore will move the adoption of the recommendations of the Medico-Political Committee on Public Medical Services (SUPPLEMENT, July 22nd, 1905, p. 32). (4) Dr. Phillips will move that the minimum fee for midwifery in the area of the Division be one guinea.—E. H. SNELL, Honorary Secretary, Warwick Avenue, Coventry.

BORDER COUNTIES BRANCH: NORTH CUMBERLAND DIVISION.—A meeting of the North Cumberland Division of the Border Counties Branch will be held at Penrith on Friday, April 6th. The Honorary Secretary will be pleased to hear from members who wish to read papers, show cases or pathological specimens.—NORMAN MACLAREN, Honorary Secretary, 23, Portland Square, Carlisle.

EAST ANGLIAN BRANCH: SOUTH ESSEX DIVISION.—The next meeting will be held at the Victoria Hospital, Southend-on-Sea, on Tuesday, March 6th, at 8.30 p.m. Business: (1) Minutes of meeting of January 15th. (2) Cases will be shown by Dr. Forsyth, Dr. F. Silva Jones, and Dr. Smellie. (3) Dr. J. R. Pooler will read a paper on Some Points of Difference between Syphilis and Yaws, illustrated by plates and specimens.—W. CARDY BLUCK, Honorary Secretary, Southend-on-Sea.

LANCASHIRE AND CHESHIRE BRANCH: ALTRINCHAM DIVISION.—The next general meeting will be held on Wednesday, March 7th, at the Greenbank Hotel, Northwich, at 4.45 p.m. Agenda: (1) Minutes of meeting of December 7th, 1905. (2) Minutes of Committee meetings of December 20th, 1905, January 18th, January 31st, and February 14th. (3) Confirm action of Committee in filling vacancy. (4) To prevent underselling, by adopting a uniform scale of fees. To be introduced by Dr. G. H. Smith. (5) A black list, or (alternatively) a local debt collecting union; by Dr. C. A. K. Renshaw. (6) Payment of medical men called in to assist midwives; by Dr. P. R. Cooper. (7) Any other business. Railway arrangements: The 3.40 train from Manchester will stop at Sale (3.50) on notice being given to the stationmaster by 3.45. The 4.33 express from Manchester will stop at Hale (about 4.43); arrives at Greenbank Station 5.10. Return trains from Greenbank at 6.59, 8.24, and 9.27 will all stop at Sale (in the case of the 6.59 notice must be given to the guard on joining the train). Dinner at 7 o'clock, price 4s.; wine extra; for those members (and guests) who send their names to the Honorary Secretary by Monday, March 5th. The Greenbank Hotel is next to the Hartford and Greenbank Station. Excursion fares on Wednesdays.—T. W. H. GARSTANG, Honorary Secretary, Altrincham.

LANCASHIRE AND CHESHIRE BRANCH: LIVERPOOL AND BIRKENHEAD DIVISIONS.—It is proposed to hold a combined dinner on March 22nd, at 8 p.m., when an address upon the advantages of medical organization to the community at large, and the public duty thereby devolving upon members of the profession, will be given by Mr. J. Smith Whitaker, the Medical Secretary of the Association. The price of tickets is 5s. each, exclusive of wine, and the dinner will be open to all members of the profession. Applications are requested to be sent to the Honorary Secretary, Dinner Committee, Medical Institution, Liverpool.—JAMES BARR, President of the Branch, ARTHUR W. GERMAN, Honorary Secretary, Dinner Committee, Liverpool.

LANCASHIRE AND CHESHIRE BRANCH: LEIGH DIVISION.—A meeting of the Scientific Section will be held in the Co-operative Rooms, Ellesmere Street, Leigh, on Thursday, March 8th, at 3.30 p.m. Agenda: (1) Minutes. (2) Pathological specimens: (*a*) cancer of pancreas; (*b*) rupture of aorta into pleural sac. (3) Acromegaly. (4) Locomotor ataxy with Charcot's joint and prolapse iris after iridectomy.—J. CLAY BECKITT, Honorary Secretary of Section.

LANCASHIRE AND CHESHIRE BRANCH: LEIGH DIVISION.—The usual monthly meeting of this Division will be held on March 15th in the Co-operative offices at 8.30 p.m.—MICHAEL J. HALTON, Honorary Secretary, 95, Chapel Street, Leigh, Lancs.

METROPOLITAN COUNTIES BRANCH: HAMPSTEAD DIVISION.—A meeting of this Division will be held at the Hampstead Conservatoire, Swiss Cottage, N.W., on Friday, March 9th, at 5 p.m. Mr. C. B. Lockwood, F.R.C.S., will read a paper on The Modern Diagnosis of Tumours, and will include a demonstration of the rapid cutting of fresh sections during operations by Mr. E. Shaw. The Executive Committee of the Division wish to take this opportunity of inviting all members of the Association who are interested in the important subject to be present.—H. W. ARMIT, Honorary Secretary.

NORTHERN COUNTIES OF SCOTLAND BRANCH.—A clinical meeting of the Branch will be held at the Northern Infirmary, Inverness, on Saturday, March 24th. Particulars will be sent to members by circular later. Members desirous of exhibiting specimens, or reading notes of cases are requested to communicate at once to the Secretary.—J. MUNRO MOIR, M.D., Honorary Secretary, Ardross Terrace, Inverness.

SOUTHERN BRANCH: WINCHESTER DIVISION.—A special meeting of this Division (under Rule XII) will be held in St. Patrick's Hall, Trafalgar Street, Winchester, on Friday, March 2nd, 1906, at 3 p.m. Agenda: (1) To consider and if thought fit to pass a resolution, or resolutions, on the recent action of the Winchester Town Council regarding the appointment of Medical Officer of Health for the city. (2) To consider the report of the meeting of the town council in the *Hampshire Chronicle* and other papers which appeared on February 3rd, 1906, and also letters which have since appeared on the subject in the Press, and to pass resolutions on the same.—H. J. GODWIN, Honorary Secretary and Treasurer, Winchester.

SOUTH-EASTERN BRANCH: CROYDON DIVISION.—A meeting of this Division will be held at the Greyhound Hotel, Croydon, on Thursday, March 15th, at 4 p.m. Mr. St. George C. Reid in the Chair. Agenda: (1) Minutes of the previous meeting. (2) To decide when and where the next meeting shall be held, and to elect a Chairman. (3) Other business. The following papers will be read:—Dr. W. S. A. Griffith: Note on Excessive Lochia, and on After-pains. Dr. R. Hutchison: Treatment of the Various Forms of Diarrhoea in Infancy and Childhood. Dinner at 6 p.m. Charge 5s., exclusive of wine. Members intending to stay to dinner are kindly requested to send a postcard to the Honorary Secretary.—E. H. WILLOCH, Honorary Secretary, 113, London Road, Croydon.

SOUTH-EASTERN OF IRELAND BRANCH.—An ordinary meeting of this Branch will be held at the Club House, Carlow, on March 7th, at 5.30 p.m.—J. QUIRKE, Honorary Secretary, Piltown, co. Kilkenny.

SOUTH-EASTERN BRANCH: NORWOOD DIVISION.—The next meeting of the Division will be held at the Queen's Hotel, Upper Norwood, on Thursday, March 8th, at 4 p.m.; exhibition of instruments will be ready by 3.30. Henry Hetley, M.D., of Upper Norwood, in the chair. Dinner at 8 p.m.; charge 7s., exclusive of wine. Agenda: (1) Minutes of last meeting. (2) To decide when and where the next meeting shall be held, and to nominate a member of the Division to take the chair thereat. (3) Letter from Wandsworth Division. (4) Invitation from Metropolitan Counties Branch to join in entertaining representatives. The following papers, etc., will be read: Dr. Guthrie Rankin: Suppressed Gout. Sir William Bennett: Stone in the Ureter, in relation to Pseudo-Appendicitis. Dr. Choyce: The treatment of Syphilis by Mercury, with special reference to the Hypodermic Method. There will be an exhibition of surgical instruments, etc., by Messrs. Allen and Hanbury, from 3.30. Members desirous of exhibiting specimens or reading notes of cases are invited to communicate at once with the Honorary Secretary. All members of the South-Eastern Branch are invited to attend and to introduce professional friends, but will be unable to vote on Divisional questions. N.B.—The Honorary Secretary would be much obliged if members would kindly inform him by post card, to reach him by the first post on the Tuesday before the meeting, whether they intend, if possible, to be present at the meeting, and if likely to remain to dinner. By so doing they will very materially facilitate arrangements and promote the success of the meeting.—HENRY J. PRANGLEY, Honorary Secretary; ARTHUR W. SOPER, Assistant Honorary Secretary, Tudor House, Anerley.

SOUTH-WESTERN BRANCH.—The next meeting of this Branch will be held on Tuesday, March 6th, at the White Hart Hotel, St. Austell, at 2.30 p.m. The President, Mr. G. Jackson, F.R.C.S., in the chair. Tea will be provided after the meeting. The following communications are already promised:—Mr. J. C. Walker: Notes on Therapeutic uses of Salicylates and allied Drugs. Mr. C. Hamilton Whiteford: A paper on Tubal Pregnancy, its diagnosis and treatment, with notes of three cases. Mr. W. Woollcombe: A paper on a Few Practical Points in Intestinal Obstruction. Dr. E. S. Fox will show a Heart from a case of Mediastinitis. Gentlemen desirous of joining the Association and Branch should communicate with Mr. G. YOUNG EALES, 1, Matlock Terrace, Torquay, Honorary Secretary.

YORKSHIRE BRANCH.—The next meeting of the Branch will be held at the Station Hotel, York, on Wednesday, March 7th. Members intending to read papers, to propose new members, or to make any communication, are requested to write to the Secretary at once. Members will dine together at 6.30 p.m.—ADOLPH BRONNER, Honorary Secretary, Bradford.

CENTRAL MIDWIVES BOARD.

A MEETING of the Central Midwives Board was held on February 22nd at 6, Suffolk Street, Pall Mall, with Dr. F. H. CHAMPNEYS in the chair.

Constitution of the Board.

The following members constitute the Board at the present time: Dr. F. H. Champneys, Mr. J. Ward Cousins, F.R.C.S., Dr. W. R. Dakin, Mr. H. G. Fordham, Mrs. Latter, Miss Rosalind Paget, Sir William J. Sinclair, M.D., Miss Wilson, Dr. E. Parker Young.

Defective Training of Midwives.

A letter was read from Dr. Stookes, of Liverpool, as to the scope of the teaching prescribed by the Board on the subjects of sanitation and emergencies. A letter was read from Dr. J. H. Fairbairn and Dr. Hicks as to the defective training of a candidate at a recent examination of the Board, who, it was stated, had been taught to give a vaginal douche with a Higginson's syringe that she also used for giving enemas. A letter was read from Dr. Swayne, on behalf of the examiners for the Bristol Centre, drawing attention to the defective training of some of the candidates at the recent examination. The Board directed that these letters should be taken into consideration on the revision of the Rules of the Board.

Suggested Official Handbook for Midwives.

A letter was read from Dr. Fothergill on behalf of the examiners for the Manchester Centre suggesting the publication by the Board of an official handbook for midwives, with a view to securing uniformity of teaching. After some discussion it was decided to refer the letter to a meeting of the examiners of the Board for their consideration.

Nervous Candidates.

A letter was received from Mrs. Heywood Johnstone, Chairman of the Executive Committee of the Rural Midwives' Association, as to the difficulties experienced by women of the working class when appearing before the examiners. These women, though fitted by experience for the duties of a midwife, were unable through nervousness to do themselves justice at the examination. The Chairman of the Board, Dr. Champneys, announced that he would write to Mrs. Heywood Johnstone, and assure her that the greatest care was taken by the examiners to make all allowances for nervousness on the part of the candidates.

Midwives Working in Institutions.

A letter was read from the Clerk of the London County Council as to the extent of the exemption conferred by Rule E 21. This rule provides that nothing in Section E of the Rules of the Central Midwives Board regulating the practice of midwives shall apply to certified midwives exercising their calling in hospitals, workhouses, or Poor-law infirmaries under the supervision of a duly appointed medical officer. As the letter from the Clerk of the London County Council referred to a nursing home, the Secretary was instructed to reply that in the opinion of the Board the institution in question did not fall under Rule E 21.

Result of Examination for Midwives.

We have received through the courtesy of the Secretary of the Central Midwives Board a list of the names of the successful candidates at the examination on February 6th. The following is a classification of the places at which the successful candidates were trained:

Hospitals	160
Workhouse hospitals, workhouses, and infirmaries	23
Maternity charities	43
Trained nurses' institutes	2
District nurses' societies and associations	18
Nurses' homes	2
Mothers' homes	10
Missionary homes	3
Benevolent institutions	9
Private tuition	97
	367

From a statistical note appended to the return it appears that there were 486 candidates. The number rejected was 119, or 24.5 per cent.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,623 births and 5,248 deaths were registered during the week ending Saturday last, February 24th. The annual rate of mortality in these towns, which had been 15.5, 15.5, and 17.2 per 1,000 in the three preceding weeks, further rose last week to 17.3 per 1,000. The rates in the several towns ranged from 8.4 in Hornsey, 8.8 in East Ham, 9.0 in Walthamstow 9.8 in Willesden, 10.1 in Leyton, 10.8 in King's Norton, and 10.9 in Great Yarmouth, to 22.5 in Plymouth, 22.8 in Stockton-on-Tees, 23.0 in Stockport and in Merthyr Tydfil, 23.3 in Hastings, 24.5 in Middlesbrough, 28.2 in Preston, and 28.5 in Swansea. In London the rate of mortality was 17.5 per 1,000, while it averaged 17.2 per 1,000 in the seventy-five other large towns. The death-rate from the principle infectious diseases averaged 1.3 per 1,000 in the seventy-six towns: in London this death-rate was equal to 1.4 per 1,000, while among the seventy-five other large towns the rates ranged upwards to 2.5 in York, 2.7 in Bury and in Swansea, 3.0 in Great Yarmouth and in West Bromwich, 3.5 in Plymouth, and 4.9 in Preston. Measles caused a death-rate of 1.2 in Blackburn and in York, 1.3 in Tottenham, 2.7 in Bury, and 3.6 in Preston; scarlet fever of 1.5 in Oldham; diphtheria of 1.0 in Wolverhampton; whooping-cough of 1.2 in York, 1.3 in Southampton, 1.4 in King's Norton, 1.5 in Warrington, 1.6 in Handsworth (Staffs.) and in Stockport, 1.8 in Rochdale, 2.0 in Reading, 2.2 in Plymouth, and 2.3 in West Bromwich; and diarrhoea of 2.0 in Great Yarmouth. The mortality from enteric fever showed no marked excess in any of the large towns. No fatal cases of small-pox were registered last week in any of the seventy-six towns. Five small-pox patients remained under treatment in the Metropolitan Asylums Hospitals on Saturday last, February 24th, against 2 on the preceding Saturday; 3 new cases were admitted during the week, against 2 in the preceding week. The number of scarlet fever patients in these hospitals and in the London Fever Hospital at the end of the week was 2,689, against 2,912, 2,839, and 2,734 at the end of the three preceding weeks; 274 new cases were admitted during the week, against 319, 283, and 281 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, February 24th, 941 births and 671 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 16.5, 16.8, and 18.0 per 1,000 in the three preceding weeks, further rose to 19.6 per 1,000 last week, and was 2.3 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 9.1 in Perth and 14.3 in Aberdeen, to 22.9 in Greenock and 25.3 in Dundee. The death-rate from the principal infectious diseases averaged 1.6 per 1,000 in these towns, the highest rates being recorded in Dundee and Paisley. The 336 deaths registered in Glasgow included 16 which were referred to measles, 2 to whooping cough, and 3 to "fever." Four fatal cases of measles, 3 of scarlet fever, and 2 of whooping-cough were recorded in Edinburgh. Five deaths from whooping-cough, 2 from measles, 2 from "fever," and 2 from diarrhoea occurred in Dundee; and 5 from measles in Paisley.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, February 24th, 464 births and 432 deaths were registered in six of the principal Irish towns, as against 534 births and 393 deaths during the preceding period. The annual death-rate in these towns, which had been 18.9, 22.7, and 21.8 per 1,000 in the three preceding weeks, rose to 23.3 per 1,000 in the week under notice, this figure being 6.0 per 1.000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 17.5 in Waterford and 23.3 in Cork, to 24.6 in Limerick and 25.3 in Belfast. The zymotic death-rate in the same six Irish towns averaged 0.9 per 1,000, or 0.3 per 1,000 higher than during the preceding period, the highest figure (2.5) being recorded in Londonderry, while no deaths under this heading were registered in Cork, Limerick, and Waterford.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

Staff-Surgeons F. W. Parker, G. G. Borrett, W. H. S. Stalkartt, M.D.; G. A. S. Bell, and J. A. Keogh, M.B., have been promoted to be Fleet Surgeons, from February 21st. Their previous commissions, which are simultaneous, are thus dated:—Surgeon, February 21st, 1890; Staff Surgeons, February 21st, 1898. Fleet Surgeon Stalkartt, whilst Surgeon of the *Racer*, served with the Naval Brigade in the expedition up the Gambia in 1891-2, resulting in the capture of Tambi and Toniataba, receiving a medal with clasp. The other officers above mentioned have no war record.

ROYAL ARMY MEDICAL CORPS.

Exchange.

The charge for inserting notices respecting Exchanges in the Army Medical Department is 3s. 6d., which should be forwarded in stamps or post office order with the notice, not later than Wednesday morning, in order to ensure insertion in the current issue.

Major, R.A.M.C., one year home, will exchange for India, either for part tour or whole tour, but part tour preferred. Address: "Marshburgh," c.o. McGrigor and Co., 25, Charles Street, London, S.W.

INDIAN MEDICAL SERVICE.

In the Supplement of February 17th, p. 57, it was erroneously stated that Major W. Young, of the Bengal Establishment, had resigned his commission in the Indian Medical Service. The error appears to be due to the fact that Major Young has recently resigned his commission as Medical Officer of the Naini Tal Volunteer Rifles.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journal is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office. No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

GENERAL MEDICAL COUNCIL.

ELECTION OF DIRECT REPRESENTATIVES FOR ENGLAND AND WALES, NOVEMBER, 1906.

Candidates Nominated by Divisions for Selection by the Representative Meeting on behalf of the Association.

THE following members of the Association have been nominated by the Divisions named to be candidates for election, and have accepted nomination in accordance with the terms of the scheme published in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL for October 7th, 1905:

Name.	*Address.*	*Nominating Division or Divisions.*
BROWNE, HENRY LANGLEY, M.D. ... ... (Chairman of Council of the Association.)	Moor House, West Bromwich	CENTRAL BIRMINGHAM. CITY (LONDON). SWANSEA.
BULLAR, JOHN FOLLETT, M.B.... ... ... (Member of Branch Council, Southern Branch.)	7, Carlton Crescent, Southampton	WINCHESTER.
CLARK, ANDREW, F.R.C.S. ... ... (Member and late Chairman of Central Council, and President of the Metropolitan Counties Branch.)	71, Harley Street, W.	CITY (LONDON). ST. PANCRAS AND ISLINGTON.
JACKSON, GEORGE, F.R.C.S. ... ... (President of the South-Western Branch, and Member of the Medico-Political Committee.)	10, Portland Villas, Plymouth	GATESHEAD. PLYMOUTH.
LATIMER, HENRY ARTHUR, M.D. ... ... (Chairman and Representative of Swansea Division, Member of Medico-Political Committee.)	4, Belvoir Place, Swansea.	SWANSEA.
MORISON, JAMES RUTHERFORD, F.R.C.S. ... (Member of Branch Council and Chairman of Northumberland Committee, North of England Branch.)	14, Saville Row, Newcastle-on-Tyne	CONSETT. GATESHEAD. NEWCASTLE-ON-TYNE
RHODES, JOHN MILSON, M.D. ... ... (Chairman of South Manchester Division, Lancashire and Cheshire Branch.)	Ivy Lodge, Didsbury, Manchester	MANCHESTER (SOUTH).
STRATON, CHARLES ROBERT, F.R.C.S.EDIN.... (Member of Central Council, Medico-Political Committee and Colonial Committee.)	West Lodge, Wilton, Salisbury	WINCHESTER.

As provided by the scheme, nominations can be received until March 31st, and will henceforth be announced as received.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

HALIFAX AND NOVA SCOTIA BRANCH.

A MEETING of this Branch was held on January 17th.

Communications.—After routine business Dr. A. C. HAWKINS showed three cases of trachoma, emigrants about to be deported as incurables.—Dr. F. V. GOODWIN reported a case of phlebitis following pneumonia, which showed a peculiar eruption along the course of the internal saphenous vein.

Discussion.—The regular programme for the evening, a discussion on immunity, was then proceeded with, Drs. L. M. MURRAY and J. J. DOYLE taking up different phases of the subject.

A FURTHER meeting was held at the Nova Scotia Hospital, Dartmouth, on January 31st.

Paper.—Dr. H. K. MACDONALD read a paper, Cerebrospinal Meningitis, a brief account of an epidemic in Lunenburg county in 1905, with case reports. This paper was discussed at length by several of the members present.

Supper.—After adjournment the members of the Branch were entertained at supper by the Medical Superintendent, Dr. W. H. Hattie.

METROPOLITAN COUNTIES BRANCH:

CITY DIVISION.

A GENERAL meeting of this Division was held on Thursday, February 22nd, at 4 p.m., at the Great Eastern Hotel, Liverpool Street, E.C. In the absence of the Chairman (Dr. J. W. Hunt) through illness, the VICE-CHAIRMAN (Dr. Major Greenwood) presided.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed, and signed by the Chairman.

Letter from Chairman of Division.—The following, amongst several, were read: One from the Chairman, stating that he would not be able to be present on account of ill health. It was resolved that a letter be written to him expressing the regret of the meeting at his absence.

Letter from Chairman of Wandsworth Division.—A letter was read from the Chairman of the Wandsworth Division, addressed to the Chairman of the City Division, asking the Division to co-operate with certain other Divisions in sending two general practitioners to act on a Central Committee for the purpose of nominating general practitioners as representatives of the Branch on the Central Council. It was unanimously resolved that a reply be sent to the effect that, since some of the most important Divisions of the Branch were omitted from the list given in the letter, the City Division prefers to nominate its own candidates, unless an unanimity amongst all the Divisions on this matter can be attained.

Friendly Societies and their Medical Officers.—A member asked whether the Division would take any steps with respect to the action (which he specified) of a certain Friendly Society to which he was a medical officer. As it was deemed that the matter was one affecting many other members, it was referred to the Executive Committee for consideration and report.

Notices of Motion for Next Representative Meeting.—Two notices of motion were carried unanimously. They referred to the extension of the hours during which the Association Library was kept open, and to the advisability of providing for the social intercourse of members of the Association. These notices appeared in the SUPPLEMENT for March 3rd under the heading "Notices of Motion."

Provident Dispensaries.—The report of the Medico-Political Committee was considered paragraph by paragraph, and unanimously approved.

Public Medical Services.—The recommendations of the Medico-Political Committee were considered seriatim and unanimously agreed to.

State Registration of Nurses.—The two following resolutions were carried:

(1) That this Division approves of the State registration of nurses.
(2) That registration of nurses should include midwifery nurses, who should also have three years' training, of which one, at least, should be in a lying-in hospital.

Nomination of Candidates for General Medical Council.—Dr. MAJOR GREENWOOD proposed that Dr. Langley Browne, the Chairman of the Council of the Association, and Mr. FREDERICK WALLACE proposed that Mr. Andrew Clark be nominated by the City Division in accordance with the scheme of the Association. These propositions were duly seconded and carried unanimously.

Out-patient Departments of Hospitals.—The Hospitals Committee's report was discussed, and the thirteen propositions set out therein were approved *nem. con.*

Relationship of Hospitals to Public Medical Service.—The following resolution was carried *nem. con.*:

> That there be no out-patient departments in hospitals except for consultation and casualties, and that this opinion especially applies to hospitals whose staff are general practitioners.

Vote of Thanks.—A vote of thanks to the Vice-Chairman for presiding was carried unanimously.

STRATFORD DIVISION.

A MEETING of the Division was held at the Alexandra Hotel, High Street, Stratford, E., on Thursday, March 1st, at 9 p.m., Dr. STOCKER, presiding.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Paper.—Mr. FREDERIC EVE, F.R.C.S. (London Hospital), read a paper on gall stones and their surgical treatment, which proved to be of a very interesting and instructive character. Mr. Eve also showed some excellent specimens, and after answering some questions, was awarded a hearty vote of thanks.

Rules of Central Midwives Board.—Thereafter the CHAIRMAN opened a discussion on the recommendations relative to the Central Midwives Board, and on the motion of Dr. SANDERS it was unanimously resolved:

> That the Representative of the Division be instructed to watch and consider any proposed recommendations as to alteration of the rules of the Central Midwives Board at the Annual Representative Meeting.

Medical Practitioners and Midwives.—Dr. ROSE proposed, and Dr. FREDERICK seconded the following resolution, which was carried, namely:

> That this Division regrets that the Council of the British Medical Association have not taken more active steps to secure payment for medical practitioners called in to assist midwives.

Contract Medical Practice.—The discussion on Contract Practice was postponed till next meeting.

TOTTENHAM DIVISION.

A MEETING of this Division was held on Friday evening, February 23rd, at 9.15 p.m., at the Hornsey Conservative Association Rooms at Finsbury Park. Mr. C. E. HUTT, Chairman, presided.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Paper.—Mr. G. B. MOWER WHITE read a paper on pyelitis in its surgical aspect and treatment, and showed a variety of instruments used in diagnosis.—A hearty vote of thanks was passed to Mr. White for his interesting paper.

Public Vaccinators and General Practitioners.—In the absence of Dr. Leonard Grant, the SECRETARY opened a discussion on the relations of public vaccinators and general practitioners.—It was proposed, seconded, and carried:

> That this Division is opposed to security of tenure of office for public vaccinators, because it considers that every medical man ought to be an actual public vaccinator, working under authority and supervision, and under some such regulations as public vaccinators now are, as the present system creates a monopoly in each district of vaccination for one man only, and gives to him unfair advantages of introduction to other men's patients.

Fees for Insurance Examinations.—On the question of regulation of insurance fees for examinations the opinion of the members was:

> That a fixed tariff was impossible under present conditions.

SOUTH-EASTERN BRANCH:

BRIGHTON, TUNBRIDGE WELLS, EASTBOURNE AND HASTINGS DIVISIONS.

A COMBINED meeting of Brighton, Tunbridge Wells, Eastbourne and Hastings Divisions was held on Wednesday, February 21st, at the East Sussex Hospital, Hastings, at 5 p.m. The chair was taken by Dr. BATTERHAM, who entertained the members to tea.

Address.—Dr. FREDERICK SMITH, Physician to the London Hospital, gave an address entitled, Morbus Cordis Sine Bruits. The address was listened to with great interest and several members spoke upon the various points of the subject.

The Divisions and Parliamentary Candidates.—Dr. ALLFREY moved the following resolution:

> That this meeting of the Brighton, Tunbridge Wells, Eastbourne and Hastings Divisions, while admitting the desirability of giving full information concerning medical candidates for Parliament in the Association's JOURNAL, regrets the recent action of the Representative Meeting in causing individual members of the Association to be approached by letter in such matters.

The motion was carried.

Dinner.—After the meeting a number of the members dined together.

DOVER DIVISION.

THE quarterly meeting of the Division was held at the Grand Hotel, Dover, on Wednesday, February 14th, at 8 p.m., Dr. C. PARSONS in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Rules of Central Midwives Board.—A letter from the Medical Secretary *re* the revision of the Rules of the Central Midwives Board was read, when Dr. BEST moved:

> That it is desirable that the local supervising authority under the Midwives Act should yearly supply all medical practitioners in its area with an official list of those midwives entitled to practise, with any alterations in the *Register* that may have occurred during the twelve months.

Dr. KOETTLITZ seconded this resolution, which the Division then passed.

Statement of Accounts.—The annual statement of accounts was then rendered and passed by the Division.

Paper.—Dr. G. BELLINGHAM SMITH then read a most interesting paper, "Remarks on the Treatment of Accidental Haemorrhage and Eclampsia." After a number of questions had been put to Dr. Smith, the CHAIRMAN moved:

> That the Division pass a vote of thanks to Dr. Smith for his paper, and hope that he will have it fully published in the Association JOURNAL.

This the Division passed unanimously.

Vote of Thanks to the Chairman.—A vote of thanks to the Chairman then terminated the proceedings.

FOLKESTONE DIVISION.

A MEETING of the Folkestone Division was held at the house of Dr. Calverley, Earl's Avenue, on March 2nd, at 8.30 p.m.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Duplicate Books in Library.—A letter was read from the General Secretary of the British Medical Association in answer to one from the Honorary Secretary of the Folkestone Division, with reference to the duplicate books in the library of the Folkestone Medical Society.

Executive Committee.—Mr. Chambers was elected a member of the Executive Committee, in the place of Mr. Powell, resigned.

Paper.—Mr. PERCY LEWIS read a paper on enuresis.

Annual Representative Meeting.—Dr. LARKING gave a short account of the annual meeting of the British Medical Association held at Leicester last year.

Demonstration.—Dr. EASTES gave a practical demonstration on the use of portable electric lights from the main.

SOUTH MIDLAND BRANCH:

NORTHAMPTON DIVISION.

A MEETING of the Division was held at the Library, General Hospital, Northampton, on Tuesday, February 20th, at 3.30 p.m. Dr. BUSZARD took the chair until Dr. DUKES arrived.

Representative at Representative Meeting and Honorary Secretary.—The resignations of Mr. C. J. Evans as Representative, and Mr. E. H. Jones as Secretary, were received with regret, and a hearty vote of thanks was passed for their services. Mr. S. E. Baxter (Wollaston), was elected Representative, and Dr. Hichens (Northampton), Secretary and Treasurer.

Executive Committee.—Three vacancies were declared on the Executive Committee, and the following gentlemen were elected to fill them: Mr. C. J. Evans, Mr. Dryland, Dr. Maguire.

Annual Representative Meeting.—Mr. C. J. EVANS read notes and summaries of the discussions at the Representative Meeting held at Leicester last summer.

Surplus Divisional Funds.—The disposal of surplus divisional funds was then discussed. It was agreed that surplus funds should be devoted to purely divisional purposes, but that the exact mode of disposal should be left till after the next Representative Meeting.

MATTERS REFERRED TO DIVISIONS.

Contract Practice.—Mr. LINNELL moved, and Dr. MILLIGAN seconded, that the report published in the SUPPLEMENT, August 5th, 1905, be adopted.

Formation of Divisional Library.—On the proposal of Mr. LINNELL, seconded by Dr. MILLIGAN, this was left for the Executive Committee to discuss and formulate a scheme if possible. As a rider, Dr. BUSZARD proposed, and Mr. EVANS seconded, that arrangements should be made for four clinical afternoons at the hospital during the year.

Direct Representatives on Council.—Dr. Langley Browne and Mr. Rutherford Morison were supported.

Hospital Management.—It was proposed by Mr. DRYLAND and seconded by Mr. BAXTER:

> That there should be no out-patient department in small hospitals where the staff are general practitioners.

SOUTHERN BRANCH:

WINCHESTER DIVISION.

A SPECIAL meeting of this Division (under Rule XII) was held at St. Patrick's Hall, Winchester, on March 2nd, at 3 p.m., Dr. LIVINGSTONE, Vice-Chairman, being in the chair.

Appointment of Medical Officer of Health for Winchester.—The meeting was held to consider and, if thought fit, to pass a resolution, or resolutions, on the recent action of the Winchester Town Council regarding the appointment of Medical Officer of Health for the city.

Dr. FULLER ENGLAND opened the discussion, and pointed out some facts with regard to the appointment.

1. That the meagre salary of £275 a year is totally inadequate, in view of the fact that the M.O.H. is expected to give his whole time to the work of the Council in a city of the size and importance of Winchester. That there is no mention of a possible increase in the emolument. That there are no other combined appointments available to attract by reason of their additional salary, except the isolation hospital at a salary of £20, and supervising authority under the Midwives Act at a salary of £5, bringing the total salary up to £300 per annum. That no provision for, or means of, locomotion has been either included or suggested.

2. That the terms of probation (one year) is reprehensible and degrading in the highest degree when applied to a member of a learned profession, since security of tenure for a period of at least seven years is essential to the maintenance of a high standard of work.

Dr. England went on to say: It may be taken as an accepted fact that a whole-time M.O.H. will be appointed in this city, so it is no use for me to waste the time of this meeting in discussing the pros and cons, but I do maintain that to offer a medical man the sum of £275 per annum for an appointment on the proper carrying out of which the health and well-being of so large a community depends is quite inadequate. I may say that the city surveyor receives nearly £400 per annum, with means of locomotion provided, and the borough accountant £200 per annum, with a clerk at £50 per annum. The whole department of public health appears to me to be wretchedly underpaid, with a few exceptions, considering the importance of the public service rendered, and in my opinion the profession at large should, whenever and wherever possible, make a stand against what I can only describe as an imposition upon it. The fact that men will always apply for an appointment, even at a low salary, does not affect the principle; and here I wish to say that the new M.O.H. for Winchester will be welcomed and in no way treated as an outsider by the members of the profession here. Our only desire is to see him properly remunerated for his work and responsibilities. He will have the assistance of the sanitary inspector, who receives a salary of £150 per annum, but, after all, the M.O.H. is the man on whom onus would fall in the event of any failure to safeguard either the individual or the public. We must bear in mind that the duties of the M.O.H. include the charge of an isolation hospital with 32 beds, a mile out of the town, at the absurd salary of £20 per annum; and it would be only fair that a salary of £50 at least should be attached to it; at any rate, some provision should be made to enable him to visit this hospital as well as to get about other parts of his district.

I should like to refer you to a letter in the British Medical Journal of February 24th, 1906, p. 475 (Dr. England read the letter to the meeting). These extracts prove the necessity of security of tenure. In my opinion a year's probation is degrading, and how, I should like to ask, are the town council to judge as to whether their officer has carried out his duties satisfactorily? They are a lay body with one exception, and cannot be expected to understand the difficulties and details of sanitary matters; moreover they are only human, and apt to be swayed by personal prejudices, so that if the M.O.H. does not satisfy their ideas of what he ought or ought not to do, he is liable to dismissal at the end of a year, and his future, if not damned, at any rate his success is problematical in the extreme. Supposing he passes this ordeal he is then expected to engage himself for three years, making a total of four years at £300 per annum, during which time he is unable to take any steps to improve his position, since there is no suggestion of an increase of salary during that period.

A wise and graceful act on the part of the town council before making such a stipulation would have been to have consulted one or two of the senior members of the medical profession in this town on this and other details of the scheme before finally adopting it. The town council is doubtless actuated by the laudable idea of keeping down the rates, since by adopting a whole-time M.O.H. the Local Government Board agree to pay £150 towards his salary per annum, whereas in the case of a part-time man this body would only pay £75 per annum. This may be strict economy, but I fail to see why we should be made the victims of such parsimony.

Gentlemen, I maintain that these matters which I have briefly put before you fully warrant the calling of the present special meeting of this Division, and I will now formally move the following resolution:

> That this meeting regrets the decision of the Winchester Town Council to appoint a whole-time medical officer of health on terms wholly inadequate as regards salary and insecure as regards tenure.

This was seconded by Dr. Hoyle.

Mr. Wace moved that the following rider be added to the resolution:

> That the resolution be brought before the Southern Branch of the British Medical Association with a request that it be brought to the notice of the Local Government Board, and that no resolution should be sent to the Winchester Town Council.

This was seconded by Dr. Ritchie.

Dr. Browne proposed the following amendment:

> That the matter be dropped altogether.

This was not seconded. The following members spoke strongly supporting the resolution: Drs. Hoyle, Briscoe, Browne, Livingstone, Roberts, Wace, Hodgson, Royds.

On the motion of the Chairman, the visitors—namely, Dr. Ward Cousins (Portsmouth), Dr. Straton (Wilton), Dr. Groves (Carisbrooke)—were asked to speak, all speaking in favour of the resolution.

The Chairman then put the resolution, together with the rider:

> That this meeting regrets the decision of the Winchester Town Council to appoint a whole-time medical officer of health on terms wholly inadequate as regards salary and insecure as regards tenure. That the resolution be brought before the Southern Branch of the British Medical Association, with a request that it be brought to the notice of the Local Government Board, and that no resolution should be sent to the Winchester Town Council.

This was carried *nem. con.* The following members voted for the resolution: Drs. Livingstone, Harman, England, Scott, Wace, Ritchie, Hodgson, Jolly, Hoyle, Roberts, Briscoe, Ahrens, Royds, Mosse, Godwin. The following members did not vote: Drs. Browne and Child.

It was proposed by Mr. Wace and seconded by Dr. Hodgson that the Secretary do send a copy of the resolution direct to the Local Government Board and also to the Southern Branch. This was carried.

The following resolution was proposed by Dr. England to be recorded in the minutes:

> That this meeting desires to place on record a protest against the discourtesy shown to the gentleman temporarily fulfilling the duties of Medical Officer of Health by his exclusion from the proceedings of the Sanitary Committees, except for the express purpose of presenting his reports.

This was seconded by Dr. Hoyle.

Mr. Godwin was then asked to give the meeting an account of the treatment he had received at the hands of the Winchester Town Council.

Mr. Godwin replied.

The Chairman then put the resolution, which was carried unanimously.

The meeting may be considered an entire success, and a hearty vote of thanks to the members of the Southern Branch was given for so kindly attending the meeting, and it only proves that when a call to arms is made in the Winchester Division, or any Division of the Southern Branch, it is responded to by all the profession in Hampshire, as was noticed at this special meeting.

ULSTER BRANCH:

Portadown and West Down Division.

The winter meeting of this Division was held in the County Asylum, Armagh, on January 3rd, by invitation of the Chairman, Dr. Lawless, who kindly entertained those present.

The Division and Parliamentary Candidates.—The members undertook to interview and bring the memoranda of the Council before the candidates seeking Parliamentary honours in the various constituencies.

Chairman's Address.—The Chairman delivered the following address:—As this meeting is held in a lunatic asylum it would seem natural that cases illustrative of different forms of mental disorder should be exhibited and discussed, but such cases are not of very great interest to the ordinary medical man and might only prove wearisome. I have, therefore, decided that it might be more interesting to give you a short summary of the history of this Asylum, to trace its growth, and to give some information as to the numbers of the insane and their growth within comparatively recent years. Before entering on my subject, however, let me express the pleasure I feel at having this meeting here and at welcoming the members of the Branch to this Asylum which is one of the oldest of the Irish asylums. The Asylum was formally taken over by what were then called the "Local Commissioners of the Ash District Asylum for Lunatic Poor" on December 10th, 1824. Before the Asylum was opened all the lunatics were sent to the respective gaols in their districts where there were departments specially set aside for their detention and "treatment," if the term can be used in connexion with the barbarities practised upon these unfortunates in the early part of the last century, when "going to see the lunatics" was one of the amusements of the time. From the fact that lunatics were housed in gaols it was natural that lunatic asylums should be built in conformity with the gaol pattern, and such was the case when this asylum was built, as the vaulted corridors, strong doors reinforced by iron bars, the small windows placed high up in the walls of the sleeping-rooms and iron bars fixed up outside, abundantly testify. These surroundings must have helped to fix the idea in the unfortunate patient's mind of hopeless confinement rather than that of relief and cure. The authorities of the time could not have had much idea of the way in which insanity would increase, as when this asylum was built it was thought that it would be sufficient for the needs of no less than five counties with its accommodation for 104 patients. The accommodation provided for each county appears ludicrous, when the increase in the numbers of the insane is remembered. The counties and their proportion of accommodation are as follows: Tyrone, 87 patients; Donegal, 26; Armagh, 20; Monaghan, 18; Fermanagh, 13. However, very soon it was seen that the Armagh Asylum could not accommodate such a large district, and in 1829 the Derry Asylum was opened, and the patients chargeable to Donegal and Tyrone were sent there. This continued until 1853, when the asylum at Omagh was built, which relieved the Armagh district of the county Fermanagh, but added the county of Cavan. But still as time went on the numbers of insane progressively increased, and it was not until 1869 that the asylum at Monaghan was built to take the Monaghan and Cavan patients, leaving this asylum to take patients from the county Armagh alone. The accommodation of this asylum remained at 104 for about 40 years, until about 1864, when, owing to the number of applications for admission and the numbers resident being far in excess of its capacity, two extra blocks of buildings were added, which raised the accommodation to 162; even with this the numbers continued to increase. To remedy this, or to meet the difficulty, the counties of Monaghan and Cavan were taken off the district, but in about twenty years it was found that the numbers were still steadily increasing, and as there were no more counties to knock off the district some more buildings had to be erected, and the corridors were extended and new blocks added on to them. These were completed in the year 1885, and they increased the accommodation to 304. This was a considerable increase—from 162 to 304—and it must have been thought at the time that at last a large enough asylum had been built for all the lunatics that co. Armagh could produce; but we find that the numbers still continued to increase, and in five years—that is, in 1890—the house was again full and more than full, so, in order to meet this it was decided not to add any more to the old building, but to build a separate asylum detached entirely from the parent institution. This building was primarily intended to accommodate from 60 to 70 patients; but as time went on it was felt that it must take in more, and it was finally built to accommodate 150. This building was completed in 1898, and raised the total accommodation to 434. When it was completed it was at once filled from the excess contained in the old building. Since that time the numbers of inmates have steadily increased, so that on December 31st, 1905, there were 522 patients in the asylum, or close on 100 more than it should normally contain. Thus we see history repeating itself in the matter of numbers, and the problem of housing these ever-increasing numbers is yearly getting more pressing, and eventually, at no very distant date, something must be done to provide the additional accommodation which is even now necessary. The burden of the insane is getting heavier and heavier each year—not alone in Ireland, but everywhere where lunatic asylums are we hear of the ever-increasing number of lunatics, so that how to prevent this ever-increasing tendency to insanity will soon become a very acute social problem, not by any means easy of solution. In this connexion I might allude to the causes of this increase in insanity. There is, first of all, in Ireland a diminishing population, the cause of which is the emigration of the best and strongest of the members of families, leaving behind those less fitted for the battle of life; also the increased stress of life which obtains at the present day, poor and insufficient food, alcoholic intemperance, and excessive tea drinking; but by far the most important factor is hereditary influence, and this is fostered and encouraged by the existence of lunatic asylums—or hospitals for the insane, as some prefer to call them. This is a startling statement and requires explanation. In the year 1825, when this asylum was built, it could not be said that lunacy was rampant in the country, as, from the figures I have already mentioned, in that year it was considered that an asylum for 104 patients would be sufficient provision for the lunatics of five counties. I may say that those five counties now have no less than 2,786 patients. The treatment of lunatics at that time and earlier was anything but curative, the consequence being that the man or woman who became insane usually continued so and died unmarried, thus avoiding the transmission of the mental weakness or insane taint to possible offspring. Nowadays matters are very different, the man or woman becoming insane is placed early in an asylum under the most favourable hygienic surroundings, well fed and well cared for, wholesome work and recreation provided in order to effect a cure, and the record of discharges as cured are between 30 and 50 per cent. of the admissions. These people marry and transmit their taint to their children, and as these curative conditions have obtained for about three generations the natural and inevitable consequence is that the numbers of mentally infirm has enormously increased in that time, and if the present conditions continue, the increase in lunacy will also continue. It may be of interest to show the increase in this asylum in decades. In the year 1869, as I said, the patients belonging to Monaghan and Cavan were sent to the Monaghan Asylum, leaving 142 patients in 1870, all belonging to county Armagh. The population in 1871 was 179,260; proportion of insane, 79.21 per 100,000.

Year.	No. resident.	Population.	Proportion of Insane per 100,000.
1881	196	168,177 (11,083 less than in 1871)	116.54
1891	326	143,289 (24,888 less than in 1881)	227.51
1901	469	123,392 (19,897 less than in 1891)	380.08
1903	511	Estimated 117,806	433.76
1905	522	—	—

I have not estimated the population in 1905, but there can be little doubt but that there is still a progressive increase in the number of lunatics. You will remember that these figures refer to co. Armagh alone, but the same investigation of figures for other counties will give similar results. So far as this asylum and county are concerned, it will be seen that in a period of thirty-four years—a little over one generation—the numbers of the insane in this comparatively small county have increased from 142 to 522. In this connexion I might mention the figures relating to the whole of Ireland. In 1880 the population was 5,202,648; number of lunatics under care, 12,982; proportion per 100,000, 250. In 1904, population, 4,402,182; number of lunatics, 22,996; proportion per 100,000, 522; so that in twenty-four years the population has diminished by 800,466, and the lunatics have increased by 10,014; while the proportion of lunatics to sane per 100,000 has risen from 250 to 522; and, if idiots are added to the lunatics, it brings the figures to 610 per 100,000.

Communications.—The Chairman showed some cases of congenital deformity, Professor R. J. Anderson read short papers on (*a*) some points of contact and divergence between man and mammals; (*b*) latency after injury; (*c*) rest and fatigue. Dr. W. E. Hadden read notes of a very interesting case of duodenal ulcer observed through several years and finally cured by gastro-duodenostomy. The Chairman and Drs. Deane and Darling spoke to the paper, and Dr. Hadden replied.

BRITISH MEDICAL ASSOCIATION MEETING AT TORONTO, CANADA.

The Atlantic Passage.

We regret to have to state that the Canadian Pacific Railway Company have altered the dates of sailing of its boats from Liverpool to Quebec and Montreal. The sailing of the *Empress of Ireland* on August 11th has been cancelled; the *Empress of Britain*, announced to sail on July 28th, will leave Liverpool on August 4th. Mr. F. W. Flanagan, General Passenger Agent of the Canadian Pacific Railway in this country, 62, Charing Cross, London, S.W., informs us that members of the British Medical Association, with their wives and daughters, will be allotted accommodation in the *Empress of Britain* on August 4th at the following rates: £20 berths for £18; £22 10s. berths for £20; £25 berths for £22 10s.; and £2 10s. rebate off higher priced berths.

THE SEVENTY-FOURTH ANNUAL MEETING
OF THE
British Medical Association,
TORONTO, CANADA, AUGUST 21st to 25th, 1906.

President:
George Cooper Franklin, F.R.C.S.Eng., Surgeon, Leicester Infirmary, Leicester.

President-elect:
Richard Andrews Reeve, B.A., M.D., LL.D., Dean of the Faculty of Medicine, University of Toronto.

Chairman of Representative Meetings:
Sir Victor Horsley, F.R.C.S., F.R.S., Surgeon, University College Hospital; and Surgeon, National Hospital for Paralysed and Epileptic.

Chairman of Council:
Henry Wm. Langley Browne, M.D., Ch.B., F.R.C.S.E., Consulting Surgeon, West Bromwich District Hospital.

Treasurer:
Hy. Radcliffe Crocker, M.D., F.R.C.P., Physician Skin Department, University College Hospital, London.

PROGRAMME OF BUSINESS.

An Address in Medicine will be delivered by Sir James Barr, M.D., F.R.C.P., F.R.S.E.

An Address in Surgery will be delivered by Sir Victor Horsley, M.B., F.R.C.S., F.R.S.

An Address in Obstetrics will be delivered by Walter Spencer Anderson Griffith, M.D., F.R.C.P.

THE SECTIONS.

There will be 13 Sections as shown in the subjoined list; they will meet on Tuesday, Wednesday, Thursday and Friday, August 21st, 22nd, 23rd and 24th, from 9.30 a.m. to 12.30 p.m.

The President, Vice-Presidents, and Secretaries of each Section constitute a Committee of Reference for that Section.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the British Medical Journal *without special permission.*

No paper must exceed 15 minutes in reading, and no subsequent speech 10 minutes.

Anatomy.

President: Professor Arthur Robinson, M.D., Birmingham.

Vice-Presidents: Professor Alexander Primrose, Toronto; D. E. Mandell, M.D., Kingston; Donald Armour, F.R.C.S., London.

Honorary Secretaries: C. B. Shuttleworth, M.D., 45, Bloor Street E., Toronto; Gawnshaw Cleland, M.D., 730, Queen Street E., Toronto; J. Herbert Sanders, M.D., 1a, Palace Gardens Mansions, W.

Dermatology.

President: Norman Walker, M.D., Edinburgh.

Vice-Presidents: Graham Chambers, M.D., Toronto; Harry B. Anderson, M.D., Toronto; Arthur John Hall, M.D., Sheffield; Ernest Solly, M.B., Harrogate.

Honorary Secretaries: D. King Smith, M.D., 311, Jarvis Street, Toronto; Donald Macgillivray, M.D., 12, Carlton Street, Toronto; John Campbell Rankin, M.B., 38, University Road, Belfast.

Laryngology and Otology.

President: J. Dundas Grant, M.D., London.

Vice-Presidents: George R. McDonagh, M.D., Toronto; H. S. Birkett, M.D., Montreal; John Macintyre, M.B., Glasgow; Hugh Edward Jones, M.R.C.S., Liverpool.

Honorary Secretaries: David J. Gibb Wishart, M.D., 47, Grosvenor Street, Toronto; Geoffrey Boyd, M.D., 167, Bloor Street, Toronto; Adam Brown Kelly, M.D., 26, Blythswood Square, Glasgow.

Medicine.

President: Sir Thomas Barlow, Bart., K.C.V.O., M.D., London.

Vice-Presidents: Professor Alexander McPhedran, M.D., Toronto; Professor James Stewart, M.D., Montreal; Alexander Napier, M.D., Glasgow; William Calwell, M.D., Belfast.

Honorary Secretaries: Robert D. Rudolph, M.D., 396, Bloor Street W., Toronto; John Taylor Fotheringham, M.D., 36, Carlton Street, Toronto; Robert Hutchison, M.D., 22, Queen Anne Street, London, W.

Obstetrics and Gynaecology.

President: A. H. Freeland Barbour, M.D., Edinburgh.

Vice-Presidents: Professor James A. Temple, M.D., Toronto; Professor Adam H. Wright, M.D., Toronto; Professor William Gardner, M.D., Montreal; T. Arthur Helme, M.D., Manchester.

Honorary Secretaries: Frederick Fenton, M.D., 75, Bloor Street E., Toronto; Kennedy C. McIlwraith, M.D., 54, Avenue Road, Toronto; Cuthbert Lockyer, M.D., 117a, Harley Street, London, W.

Ophthalmology.

President: Robert Marcus Gunn, F.R.C.S., London.

Vice-Presidents: George Herbert Burnham, M.D., Toronto; John W. Stirling, M.D., Montreal; Joseph Nelson, M.D., Belfast; Arnold Lawson, F.R.C.S., London.

Honorary Secretaries: James M. MacCallum, M.D., Toronto; Duncan N. McLennan, M.D., 126, Bloor Street W., Toronto; Frank Pearson Skeffington Cresswell, M.B., 24, Windsor Place, Cardiff.

Pathology and Bacteriology.

President: Professor J. G. Adami, M.D., F.R.S., Montreal.

Vice-Presidents: Professor J. J. Mackenzie, M.D., Toronto; Professor W. T. Connell, M.D., Kingston; Ingersoll Olmsted, M.D., Hamilton; Professor Robert Fraser Calder Leith, M.B., Birmingham.

Honorary Secretaries: Gideon Silverthorn, M.D., 266, College Street, Toronto; Harold C. Parsons, M.D., 72, Bloor Street W., Toronto; Frank George Bushnell, M.D., Sussex County Hospital, Brighton.

Pediatrics.

President: George Alexander Sutherland, M.D., London.

Vice-Presidents: H. T. Machell, M.D., Toronto; Allan M. Baines, M.D., Toronto; Otto Jackson Kauffmann, M.D., Birmingham; H. Betham Robinson, M.S., London.

Honorary Secretaries: E. Stanley Ryerson, M.D., 261, College Street, Toronto; Joseph S. A. Graham, M.D., 102, College Street, Toronto; Ralph Vincent, M.D., 1, Harley Street, London, W.

Physiology.

President: Professor Wm. Dobinson Halliburton, M.D., F.R.S., London.

Vice-Presidents: Professor A. B. Macallum, M.D., Toronto; Professor Wesley Mills, M.D., Montreal; Professor Charles Scott Sherrington, M.D., F.R.S., Liverpool.

Honorary Secretaries: Herbert E. Roaf, M.D., 44, Upper Parliament Street, Liverpool; Gustav Mann, M.D., 25, Beechcroft Road, Oxford.

Psychology.

President: Wm. Julius Mickle, M.D., London.

Vice-Presidents: N. H. Beemer, M.D., Toronto; Charles K. Clarke, M.D., Toronto; Reginald Langdon-Down, M.B., London.

Honorary Secretaries: A. T. Hobbs, M.D., Guelph, Ontario; Goldwin Howland, M.D., 540, Spadina Avenue, Toronto; John Turner, M.B., Essex County Asylum, Brentwood.

State Medicine.

President: F. Montizambert, M.D., Ottawa.

Vice-Presidents: E. P. Lachapelle, M.D., Laval University, Montreal; Charles Sheard, M.D., Toronto; Peter H. Bryce, M.D., Ottawa; Joseph Groves, M.B., Isle of Wight.

Honorary Secretaries: J. Langrill, M.D., Hamilton.

Surgery.

President: Sir Hector Clare Cameron, Professor of Clinical Surgery, Glasgow.

Vice-Presidents: Fred. L. M. Grasett, M.D., Toronto; Francis J. Shepherd, M.D., Montreal; A. B. Atherton, M.D., Frederickton, N.B.; T. K. Holmes, M.D., Chatham, Ontario.

Honorary Secretaries: H. A. Beatty, M.D., 207, Simcoe Street, Toronto; Frederick W. Marlow, M.D., 699, Spadina Avenue, Toronto; Sinclair White, F.R.C.S., Ranmoor, Sheffield.

Therapeutics.

President: Donald MacAlister, M.D., Cambridge.

Vice-Presidents: John L. Davison, M.D., Toronto; A. D. Blackader, M.D., Montreal; Sir Alan Reeve Manby, M.V.O., M.D., East Rudham; Professor J. Rose Bradford, M.D., F.R.S., London.

Hon. Secretaries: V. Henderson, M.D., University of Toronto; C. P. Lusk, M.D., 99, Bloor Street W., Toronto.

HONORARY LOCAL SECRETARIES.

Dr. F. N. G. Starr, The Medical Building, Toronto.
Professor J. J. Mackenzie, The Medical Building, Toronto.
Dr. D. J. Gibb Wishart, The Medical Building, Toronto.

COMMITTEE PATHOLOGICAL MUSEUM.

Professor J. J. Mackenzie, Toronto, *Chairman;* Dr. Maud Abbott, *Secretary;* Professor Gordon Bell, Winnipeg; Professor W. T. Connell, Kingston; Dr. A. R. Gordon, Toronto; Dr. J. A. McGregor, London, Ontario.

EXHIBITION COMMITTEE.

Chairman: Dr. Arthur Jukes Johnson, Toronto.

Secretaries: Dr. T. D. Archibald, Toronto; Dr. W. A. Young, Toronto.

HONORARY LOCAL TREASURER.

Professor J. W. Ross, Toronto.

TORONTO ARRANGEMENTS COMMITTEE.

Dr. Geo. A. Bingham, 68, Isabella Street, Toronto.
Dr. C. J. C. O. Hastings, 258, Wellesley Street, Toronto.
Dr. A. A. Macdonald, 341, Bloor Street West, Toronto.
Professor J. J. Mackenzie, Medical Laboratories, Toronto.
Dr. Alex. McPhedran, 151, Bloor Street West, Toronto.
Dr. R. B. Nevitt, 46, Bloor Street West, Toronto.
Dr. R. A. Reeve, *President-elect*, 48, Bloor Street E., Toronto.
Dr. F. N. G. Starr, 112, College Street, Toronto.
Dr. J. Algernon Temple, 333, Bloor Street W., Toronto.
Dr. D. J. Gibb Wishart, 47, Grosvenor Street, Toronto.

PROGRAMME OF PROCEEDINGS.

Tuesday, August 21st, 1906.

9.30—12.30 a.m.—Meetings of Sections.
2.30 p.m.—Address on Obstetrics, Dr. W. S. A. Griffith.
4.30 p.m.—Garden Parties.
8 p.m.—Address of Welcome; Introduction of Guests, Delegates, etc.; and President's Address.
9.30 p.m.—Reception by the Lieutenant-Governor in the Parliament Buildings.

Wednesday, August 22nd.

9.30—12.30 a.m.—Meetings of Sections.
2.30 p.m.—Address on Medicine, Sir James Barr, M.D.
4.30 p.m.—Garden Parties.
8.30 p.m.—Address on Surgery, Sir Victor Horsley, F.R.S.
9.30 p.m.—Reception.

Thursday, August 23rd.

9.30—12.30 a.m.—Sectional Meetings.
4.30 p.m.—Garden Parties.
7.30 p.m.—Annual Dinner.

Friday, August 24th.

9.30—12.30 a.m.—Sectional Meetings.
2.30 p.m.—General Meetings.
4.30 p.m.—Garden Parties.
Excursions.
8.30 p.m.—Soirée.

Saturday, August 25th.

Excursions to Niagara Power Company's plant, through the courtesy of Sir Henry M. Pellatt.
Excursion to Muskoka.
Excursion to Lambton, through the courtesy of the President, Mr. Austin.

☞ ***To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.***

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Border Counties Branch: North Cumberland Division.—A meeting of the North Cumberland Division of the Border Counties Branch will be held at Penrith on Friday, April 6th. The Honorary Secretary will be pleased to hear from members who wish to read papers, show cases or pathological specimens.—Norman Maclaren, Honorary Secretary, 23, Portland Square, Carlisle.

East Anglian Branch *(Preliminary Announcement)*.—The spring meeting of the East Anglian Branch will be held at King's Lynn on Thursday, April 5th. Members wishing to show cases or specimens or read papers should communicate at once with Dr. Gardiner, Tuesday Market Place, King's Lynn.—B. H. Nicholson, General Secretary of Branch, East Lodge, Colchester.

Lancashire and Cheshire Branch: Liverpool and Birkenhead Divisions.—It is proposed to hold a combined dinner on March 22nd, at 8 p.m., when an address upon the advantages of medical organization to the community at large, and the public duty thereby devolving upon members of the profession, will be given by Mr. J. Smith Whitaker, the Medical Secretary of the Association. The price of tickets is 5s. each, exclusive of wine, and the dinner will be open to all members of the profession. Applications are requested to be sent to the Honorary Secretary, Dinner Committee, Medical Institution, Liverpool.—James Barr, President of the Branch, Arthur W. German, Honorary Secretary, Dinner Committee, Liverpool.

Lancashire and Cheshire Branch: Leigh Division.—The usual monthly meeting of this Division will be held on March 15th in the Co-operative offices at 8.30 p.m.—Michael J. Halton, Honorary Secretary, 95, Chapel Street, Leigh, Lancs.

Northern Counties of Scotland Branch.—A clinical meeting of the Branch will be held at the Northern Infirmary, Inverness, on Saturday, March 24th. Particulars will be sent to members by circular later. Members desirous of exhibiting specimens, or reading notes of cases are requested to communicate at once to the Secretary.—J. Munro Moir, M.D., Honorary Secretary, Ardross Terrace, Inverness.

South-Eastern Branch: Croydon Division.—A meeting of this Division will be held at the Greyhound Hotel, Croydon on Thursday, March 15th, at 4 p.m. Mr. St. George C. Reid in the Chair. Agenda: (1) Minutes of the previous meeting. (2) To decide when and where the next meeting shall be held, and to elect a Chairman. (3) Other business. The following papers will be read:—Dr. W. S. A. Griffith: Note on Excessive Lochia, and on After-pains. Dr. R. Hutchison: Treatment of the Various Forms of Diarrhoea in Infancy and Childhood. Dinner at 6 p.m. Charge 5s., exclusive of wine. Members intending to stay to dinner are kindly requested to send a postcard to the Honorary Secretary.—E. H. Willoch, Honorary Secretary, 113, London Road, Croydon.

South-Eastern Branch: Guildford Division.—The next meeting of this Division will be held at the Royal Surrey County Hospital, Guildford, on Friday, March 30th, at 4.30 p.m., the Chairman of the Division, Dr. J. P. A. Gabb, in the chair. Agenda: (1) Minutes of last meeting. (2) Adjourned discussion *re* contract practice. (3) Other matters referred to Divisions. (4) Mr. C. A. Ballance, F.R.C.S., Surgeon to St. Thomas's Hospital and to the National Hospital for the Paralysed and Epileptic, will give an address on The Surgery of Brain Abscess, illustrated by lantern slides. (5) Any other business. Tea will be provided during the meeting. Members desirous of showing cases or specimens are invited to communicate with the Honorary Secretary. All members of the South-Eastern Branch are entitled to attend and to introduce professional friends, and visitors are cordially invited.—E. J. Smyth, Honorary Secretary, Maythorne, Epsom Road, Guildford.

South Wales and Monmouthshire Branch: Cardiff Division.—The ordinary meeting of this Division, noted on the fixture card for March 15th, will be postponed to a date in April, which will be subsequently announced.

GENERAL MEDICAL COUNCIL.

Executive Committee.

A meeting of the Executive Committee of the General Medical Council was held on Monday, February 26th, when Dr. **MacAlister**, President, occupied the chair, and the following members were present:—Sir Hugh Beevor, Dr. Pye-Smith, Mr. Young, Mr. Tomes, Sir John Batty Tuke, Sir Patrick Heron Watson, Sir Christopher Nixon, Sir William Thomson.

Members.

The official notifications of the appointment of Sir Hugh R. Beevor, Bart., M.D., as representative of the Apothecaries' Society of London, and of Sir Thomas Myles as representative of the Royal College of Surgeons in Ireland, were read.

University of Wales.

A letter was read from the clerk to the Privy Council transmitting Article VIII of the draft charter of the University of Wales, and inviting the observations of the Council thereon.

Extract from the Draft Charter.

"VIII.—FACULTY OR FACULTIES OF MEDICINE AND SURGERY.

"Upon such terms and conditions as may be prescribed by Statute and notwithstanding anything hereinbefore contained the Court may by Statute establish a Faculty or Faculties of Medicine and Surgery and save as may be from time to time by Statute determined all that is provided by the Charter in respect of degrees diplomas certificates fellowships scholarships exhibitions and prizes in the Faculties of Arts or Letters Science Technical or Applied Science Law and Music shall apply equally to degrees diplomas certificates fellowships scholarships exhibitions and prizes in the Faculty or Faculties of Medicine and Surgery.

"Provided always that no person shall be admitted to a degree in the Faculty of Medicine or in the Faculty of Surgery or in the Faculty of Medicine and Surgery who has not pursued a course of study in that Faculty in one of the Constituent Colleges."

The Executive Committee adopted the following resolution:

> That the Executive Committee raise no objection to the proposed Supplemental Charter to the University of Wales, it being understood that the proposed Degrees in Medicine and Surgery do not confer registrable qualifications until an Act of Parliament amending the Medical Acts has been passed for that purpose.

Medical Practice in Nova Scotia.

Communications were read from the Colonial Office and Privy Council Office regarding the application of Part II of the Medical Act, 1886, to the Province of Nova Scotia. The following reply was directed to be addressed to the Lord President:

> The Executive Committee has heard with satisfaction of the request of the Government of Nova Scotia that Part II of the Medical Act of 1886 may be applied to that province. In the opinion of the Executive Committee the provisions of the Revised Statutes of Nova Scotia, 1900, with regard to the recognition of British qualifications are satisfactory, and afford a just basis for medical reciprocity. Should His Majesty in Council be pleased to grant the application, the General Medical Council will take all necessary steps for ascertaining what qualifications granted in Nova Scotia should be recognized for registration in the Colonial List of the British *Medical Register*.

Council Chamber.

The Executive Committee approved of steps being taken for the enlargement of the Council Chamber by the erection of an addition on the part of the site vacated by the Council's tenants.

Medical Practice in Swaziland.

A communication was read from the Colonial Office informing the Council that the Governor had issued a proclamation applying to Swaziland certain provisions of the Medical, Dental, and Pharmacy Ordinance 1904 of the Transvaal. The Ordinance vests in the Transvaal Medical Council and the Transvaal Pharmacy Board all the powers, authorities, jurisdictions, and duties in relation to Swaziland which are vested in each of them in relation to the Transvaal.

B.Sc. in Public Health, Glasgow.

Acting under authority given to it by the General Council on December 2nd, 1905, the Executive Committee instructed the Registrars to accept for registration as an additional qualification the degree of B.Sc. in Public Health of the University of Glasgow.

Apothecaries' Hall, Dublin.

A report on the final examination of the Apothecaries' Hall, Dublin, for their licence, held in January, 1906, was presented by the Examiners in Surgery, Sir **Henry G. Howse** and Mr. **Alexis Thomson**, acting as Inspectors of the whole examination. The Inspectors reported that they were satisfied with the methods by which the examination was conducted, and that the standard of knowledge required was sufficient.

Practice by Companies.

After a statement by the **President** the Committee adopted the following resolution:

> That the Executive Committee learn with satisfaction that Sir John Tuke is prepared to introduce into the House of Commons the Bills which have already been approved by the Council relating to the practice of medicine and of dentistry by limited companies, and requests the President, in consultation with the legal advisers of the Council, to confer with Sir John Tuke as to any amendments which may be necessary, and on behalf of the Council to agree to the same.

Sir William Thomson.

Sir **William Thomson** having intimated his resignation as a member of the Committee, the **President** expressed from the chair, on behalf of the Executive Committee, its regret at the retirement of Sir William Thomson, and its high appreciation of the services that he had rendered to the Council.

The Committee co-opted Sir Thomas Myles to fill the vacancy thus created.

Dental Business.

The Treasurers laid before the Committee the audited statement of receipts and expenditure of the Dental Fund for the year ending December 31st, 1905.

Dentistry in Hong Kong.

A communication from the Colonial Office as to a draft ordinance to regulate the registration of dentists in Hong Kong was read. The Committee adopted a resolution expressing satisfaction that provision was made therein for the prevention under penalties of dental practice by unqualified persons and by joint stock companies.

NOTICE OF ACCIDENTS BILL, 1906.

A BILL to amend the law relating to returns and notifications of accidents in mines, quarries, factories, and workshops, and under the Notice of Accidents Act, 1894, was introduced into the House of Commons by Mr. Herbert Samuel, Parliamentary Under-Secretary, Home Department, on February 21st, 1906. The following is the memorandum prefixed to the Bill:

Memorandum.

This Bill carries out, as far as regards mines and factories, certain recommendations contained in the report of the Departmental Committee appointed in 1901 to inquire into the notification of industrial accidents (Cd. 998 of 1902).

As regards mines, the chief effect of the Bill is, first, to make more definite the existing requirements as to reporting accidents causing serious personal injury; secondly, by requiring annual returns of all accidents which disable for more than fourteen days, to bring a much larger number of accidents than at present under the notice of the Department. Some further classes of accidents—for example, overwinding and electric shock, are added to those of which notice is required when any injury whatever is caused, and power is given to the Secretary of State to add other classes. The report is in future to be made in a prescribed form.

As regards factories, an alteration is proposed in the period of disablement which makes an accident reportable. At present an accident is reportable if it prevents the workman, on any one of the three days following the day of the accident, from being employed for five hours on his ordinary work. In the case of the special classes of accidents reportable both to the inspector and to the certifying surgeon, the Bill, with a view to simplifying the existing requirement, makes one whole day's absence, *whenever it occurs*, the standard. In the case of accidents reportable to the inspector only, with a view to relieving inspectors of the task of examining large numbers of casual and unpreventable accidents, and enabling them to concentrate their attention on grave or preventable accidents, fourteen days is made the standard. Power, however, is given to the Secretary of State to require report, after one day's disablement, of other classes of accidents besides those specified in the Bill. The position of the certifying surgeons is left untouched. The report is to be made in a prescribed form. The maximum penalty for failure to report is increased from £5 to £10.

It appears unnecessay to reprint the whole Bill, but the following is the text of the Clause 4 (1) which affects the position of the factory surgeons. As is pointed out elsewhere the words in italics added at the end of the Clause meet the representations made to the Home Office on behalf of the British Medical Association and the Association of Certifying Factory Surgeons:

4. *Notices of Accidents in Factories and Workshops.*—(1) Where any accidents occur in a factory or workshop which is either—

(*a*) An accident causing loss of life to a person employed in the factory or workshop; or

(*b*) An accident due to any machinery moved by mechanical power, or to molten metal, hot liquid, explosion, escape of gas or steam, or to electricity, and so disabling any person employed in the factory or workshop as to cause him to be absent throughout at least one whole day from his ordinary work; or

(*c*) An accident due to any other special cause which the Secretary of State may specify by order, and causing such disablement as aforesaid; or

(*d*) An accident disabling for more than *fourteen days* a person employed in the factory or workshop from working at his ordinary work,

written notice of the accident in such form and accompanied by such particulars as the Secretary of State prescribes, shall forthwith be sent to the inspector of the district *and also in the case of the accidents mentioned in paragraphs* (a) *and* (b) *of this subsection, and* (*if the order of the Secretary of State specifying the special cause so requires*) *of accidents mentioned in paragraph* (c) *to the certifying surgeon of the district.*

METROPOLITAN HOSPITAL SUNDAY FUND.

INCREASE OF OUT-PATIENTS.

AT a meeting of the Council of the Metropolitan Hospital Sunday Fund on March 2nd, the following report from the Committee of Distribution was adopted:

The Committee of Distribution beg to submit the following report resulting from their inquiries respecting the increase in the number of out-patients at the various hospitals.

At a meeting held on July 27th, 1905, the following resolution was unanimously passed:

> This Committee is of opinion that the serious increase in the number of out-patients (many of whom have trivial complaints) is detrimental to the welfare of the hospitals and patients, inasmuch as they are a burden to the funds of the hospitals, and prevent the hospital staffs from giving the necessary attention to serious cases.

A copy of this resolution was forwarded to eighty hospitals having out-patient departments, inviting the opinions of their Committees on the question, and asking if they could suggest any remedy. Their replies have been received, and their suggestions tabulated.

It would seem from the reports furnished to the Committee by the hospitals that the number of general out-patients is decreasing, but the attendances at the special departments cause an increase in the actual figures.

Subsequent meetings of the Committee were held on November 30th and December 14th, 1905, and January 11th and February 15th, 1906. At the meeting on December 14th, a deputation was received from the East London Medical Society, who submitted a memorandum stating their views, to which the Committee have given every consideration.

Suggestions have been made to the Committee that after the first visit, patients should not be allowed to attend a second time without a certificate from a medical man in the neighbourhood that the case is a proper one for treatment at a hospital. The Committee cannot see their way to agree to this proposition, but they are of opinion that if such cases could be referred to a private practitioner, or to a self-supporting dispensary (provided sufficient of these could be established), nothing but good would result, especially if the dispensaries were attended, not by a few medical men in the district, but by the whole of the general practitioners in the immediate neighbourhood, such dispensaries to be affiliated to the nearer general hospitals.

The Committee recognize that the constituents of the Fund have for the first time decided to make grants to "district nursing associations, employing fully-trained hospital nurses" (there are about 300 of them engaged throughout the metropolitan area) and as these nurses work only under the direction of local medical men, the Committee are of opinion that some sort of affiliation should be made, and that casualty patients might be recommended to apply to the superintendents of these associations after receiving "first aid" at the hospital, and thus come under the professional care of local medical men.

The Committee are of opinion:

(*a*) That notwithstanding the large number of attendances in the out-patient departments of the general hospitals, the hospitals have hitherto increased their accommodation and qualified staffs to an extent sufficient to enable them to cope with all such cases.

(*b*) That there is not any serious abuse of the out-patient departments in the general hospitals, and that any which may exist at the present time can be met by an efficient system of investigation, conducted by a competent staff in the out-patient department, who should visit the homes of the patients, and for that purpose the addresses of all out-patients should be taken.

The Committee has considered it advisable to confine its investigation to the general hospitals only, and not to the special ones.

W. S. CHURCH,
Chairman.

February 22nd, 1906.

ROYAL COMMISSION ON THE CARE AND CONTROL OF THE FEEBLE-MINDED AND EPILEPTIC.

THE Royal Commission on the Care and Control of the Feeble-minded met to receive further evidence on February 19th.

Dr. T. W. HIME (Bradford) was of opinion that it would be most desirable for the Board of Education to make obligatory the possession by school medical officers of special knowledge of their important work. Medical officers of schools should be appointed for areas sufficiently large to give full employment for their whole time, and at salaries commensurate with the importance of their work. In the case of medical officers of health, their appointment must be approved by the Local Government Board, which also had power to pay half their salary; similarly the appointment of a school medical officer should be subject to the approval of the Board of Education, which should have power to pay half his salary, and to define the general conditions of his appointment. One of such conditions should be the possession of special knowledge of the work about to be undertaken, and another security in office, so long as the duties were performed satisfactorily and no serious grounds for dismissal arose. When the Central Board paid half the salary its approval should be necessary before a medical officer was dismissed. The necessity for extreme care and skill in the selection of children for special classes was obvious. The boarding-out of defective or feeble-minded children was much to be recommended, unless in very exceptional circumstances.

Dr. E. S. **PASMORE**, Medical Superintendent of the Lunatic Asylum for the County Borough of Croydon, stated his belief that two factors stood out prominently in the causation of insanity and feeble-mindedness, (1) heredity, (2) environment. Heredity was a most potent factor in the production of insanity and congenital imbecility. His opinions on heredity were based not only on over 500 cases which he had examined at the London County Lunatic Asylum at Banstead, but also upon 718 patients who had been admitted into Croydon Mental Hospital since its opening in 1903 to January this year. On whatever lines fresh legislation was based for the future care, training, and control of the feeble-minded, the following two great principles should be borne in mind, and measures directed to their fulfilment: (1) economical housing; (2) the prevention of the propagation of the feeble-minded.

AT a further sitting of the Royal Commission on the Care and Control of the Feeble-minded, held on February 23rd, the evidence received included that of Dr. Henry Maudsley and Dr. J. Macpherson, Commissioner in Lunacy, Edinburgh.

Dr. **MAUDSLEY**, speaking of his experience as a Lord Chancellor's Visitor, said it was practically certain that at present feeble-minded persons might be kept under private care and control in unlicensed houses without those who received them running any serious risks should a prosecution be instituted for breach of the law. His experience as a practising physician had often impressed him with the difficulty of dealing with weak-minded persons when, being possessed of, or entitled to, property exceeding £2,000 in value, it was desirable to protect it and themselves. In order to prove that such an one was incapable of managing himself and his affairs it appeared to be necessary to institute an inquiry in lunacy before the master, or the master and a jury if a jury be demanded on behalf of the person. When the inquiry was before the master alone, the procedure was comparatively simple and inexpensive, but if a jury be demanded and the person was defended by solicitor and counsel, then the inquiry might last for two or three days or longer, and great expense be incurred, and in the end the result was uncertain. In spite of what might be said to the contrary, a jury was apt to be influenced by a suspicion that the object was to deprive the unfortunate person of his property and to confine him as a lunatic. In one case of this sort, in which he and others gave evidence of weakness of mind with criminal tendencies, the inquiry went on for two days; in the result the jury by a majority pronounced the person to be of sound mind and capable of managing his affairs. Within a fortnight after the verdict the unfortunate youth was committed to prison for a criminal offence. One naturally hesitated, when consulted in troublesome and painful cases of the kind, to recommend an inquiry the publicity of which was so much dreaded, the expense so great, the result so uncertain.

Dr. **MACPHERSON** said the present administrative machinery in Scotland, whereby the mentally unsound of all classes were dealt with under the Lunacy Acts, was admirable; but it required some amendment and extension, so that all persons who on account of mental impairment or deficiency required care and treatment should receive it. Mentally unsound persons who were not properly looked after by their friends or relatives were not contemplated in the following summary of recommendations: (1) All neglected cases, and all cases apprehended by the police, should be subjected to examination as to their mental condition by an expert in mental diseases. (2) Observation wards, similar to those now in existence in Glasgow should be established in every large centre of population, and all cases regarding whom there was any doubt ought to be sent there for observation. (3) Persons who were manifestly insane ought to be certified in the usual way and sent to asylums. (4) Persons who were morally, though not to a marked degree intellectually, insane should be committed by the sheriff to a State institution of the "village" asylum type for such terms as might be thought advisable, at the expense of their own parishes. (5) It should be made obligatory on parish councils to undertake the care of all neglected imbecile children in the same way as they at present dealt with the ordinary insane. (6) A wider recognition of insane conduct as a sign of insanity and as a basis of certification was urgently required.

THE HEALTH OF THE NAVY.

THE Statistical Report of the Health of the Navy for the Year 1904, just issued,* states that the returns for the total force serving afloat during the year 1904 may be considered very satisfactory. With a *personnel* increased by 7,470 as compared with the previous year, there are decreases in the ratios of cases, invalidings, and deaths as compared with the average of the last seven years. Contrasted with 1903, the case and invaliding ratios show a reduction; on the other hand, the death ratio shows a fractional increase.

Total Force Afloat.

The total force serving afloat, corrected for time, in the year 1904 was 110,570. Arranged according to age in decennial periods, the numbers were as under:

63,790, or 57.69 per cent., were between 15 and 25 years of age.
36,160, or 32.7 per cent., were between 25 and 35 years of age.
9,350, or 8.45 per cent., were between 35 and 45 years of age.
1,270, or 1.14 per cent., were 45 years and upwards.

Total Cases of Disease and Injury.

The total number of cases of disease and injury entered on the sick list was 83,447, which is in the ratio of 754.69 per 1,000, being a decrease of 118.07 per 1,000 as compared with the average ratio of the last seven years. The average number of men sick daily was 3,467.25, giving a ratio of 31.35 per 1,000, and showing a decrease of 5.22 in comparison with the last seven years' average. The total days' sickness on board ship and in hospital was 1,269,015, which represents an average loss of service from disease and injury of 11.47 days for each person, which is a decrease of 1.84 in comparison with the average of the last seven years.

Invalidings.

The total number of persons invalided was 2,511, which is in the ratio of 22.7 per 1,000, and shows a decrease of 7.28 in comparison with the average of the last seven years. Of the above total 1,756 persons were finally invalided from the service (149 of these refused surgical operation, giving a ratio of 15.88 per 1,000 for the whole force, or 69.93 per cent. of the number invalided, thus showing a decrease of 1.16 per 1,000 when contrasted with 1903). The ratio of cases per 1,000 of force shows a reduction on all stations except Pacific as compared with the average ratio for the last seven years. The invaliding ratio of the total force, namely, 22.7 per 1,000, shows a decrease of 7.28 in comparison with the average for the last seven years.

Death-rate.

As regards the death-rate, the ratio per 1,000 was 4.45, showing a decrease of 1.01 per 1,000 when contrasted with the last seven years' ratio. The death-rate from disease alone was 3.14 per 1,000. The highest invaliding and death-rates were on the East Indies Station.

---

* London: Printed for His Majesty's Stationery Office by Eyre and Spottiswoode, Printers to the King's Most Excellent Majesty. And to be purchased, either directly or through any bookseller, from Wyman and Sons, Limited, Fetter Lane, E.C., and 32, Abingdon Street, Westminster, S.W.; or Oliver and Boyd, Edinburgh; or E. Ponsonby, 116, Grafton Street, Dublin. Price 1s. 11d.

General Diseases.

One fatal case of *yellow fever* is returned, contracted at amaica. One case of *plague* occurred in the person of a ascar on the East Indies Station. Twelve cases of *small-pox* re recorded, with no deaths. Two hundred and forty cases of *ow-pox* occurred. One thousand five hundred and eighty-six ases of *influenza* are recorded, a considerable decrease in the atio as compared with preceding years. The Irregular Force eturns one death. The cases are distributed as follows: Home Station, 1,083 cases; Mediterranean, 311; Irregular Force, 93; China, 37; Australia, 31; South Atlantic, 16; North America, 11; Pacific, 4. Two fatal cases of *cerebro-spinal fever* occurred, 1 on the Home Station (this case had been discharged to hospital during the previous year as a case of sore hroat), 1 in China. One thousand and thirty-five cases of *simple continued fever* are returned, with 2 invalidings and no deaths. The Mediterranean Station returns 401 cases; East Indies, 310; China, 126; Irregular Force, 84; Home, 54; Cape of Good, 27; North America, 11; South Atlantic, 14; Pacific, 5; and Australian, 3. Two hundred and twenty-six ases of *enteric fever* are recorded, with 35 invalidings nd 39 deaths. The ratio of entries for this disease per 1,000 of strength shows a decrease of 0.58; of nvalidings, a decrease of 0.12; and of deaths a derease of 0.17 as compared with the average ratio of the previous seven years. The cases were distributed as follows: Mediterranean Station, 61 cases; Home, 51; China, 49; North American, 25; Irregular Force, 17; Australian, 9; East ndian, 6; Cape of Good Hope, 5; and Pacific, 3. Of *typhus ever* 1 case is returned from the China Station. Of *scarlet ever* 179 cases, of *measles* 118, of *rubella* 47, of *chicken-pox* 29, nd of *mumps* 140 occurred. Of *diphtheria* 29 cases are eturned, with 1 death. Of *dengue* there were 26 cases. Four undred and thirty cases of *Mediterranean fever* occurred, iving 191 invalidings and 9 deaths. This gives a decrease f entries per 1,000 of strength of 0.37, of invalidings of 0.14, but an increase of deaths of 0.03, as compared with the verage ratios for the previous seven years. The Mediterranean tation gives 333 cases; Home, 59; Irregular Force, 22; China, 12; North American, Cape of Good Hope, East ndian, and Australian, 1 each. In all probability the great majority, if not all, the cases reported, from stations other han the Mediterranean were relapses, or cases which had actually contracted the disease when passing through the Mediterranean. One hundred and thirty-three cases of *ysentery*, with 12 invalidings and 9 deaths, are recorded. Forty cases are returned from East Indian Station, 36 from hina, 23 from Irregular Force, 16 from Pacific, and 1 from ape of Good Hope. These *malarial fevers* contribute a total f 693 cases, with 16 invalidings and 5 deaths. This is a ecrease in ratio per 1,000 of strength of 11.03 as regards ases, of 0.74 as regards invalidings, and of 0.05 as regards eaths, compared with the average ratio of the previous even years. The Home Station gives 167 cases; East ndian, 122; South Atlantic, 115; China, 105; Cape of ood Hope, 69; Mediterranean, 45; Irregular Force, 29; orth American, 27; Australian, 11; and Pacific, 3. Four undred and fifty-six cases of *tubercle* are recorded, with 367 nvalidings and 64 deaths. This is an increase in ratio, per 000 of strength, of 0.83 as regards cases, 0.91 as regards nvalidings, and 0.09 as regards deaths, compared with the verage ratios of the previous seven years. The Home Station urnished 272 cases; the Mediterranean, 75; China, 39; rregular Force, 21; Australia, 17; Cape of Good Hope, 10; orth America, 9; South Atlantic, 9; Pacific, 4; and East ndies, 1. The total number of cases of *venereal disease* corded is 12,258, namely, *primary syphilis*, 3,669 cases; *condary syphilis*, 2,500 cases, with 112 invalidings and 10 eaths; *gonorrhoea* and its sequelae, 6,039 cases, with 69 validings. *Primary syphilis* shows a decline of 5.02 per 000 of strength as compared with the average ratio of the revious seven years. *Secondary syphilis* shows a decline 1.23 per 1,000 as regards cases, 0.5 per 1,000 as regards eaths. *Gonorrhoea* and its sequelae show a decrease 10.53 per 1,000 as compared with the previous seven ears' ratio. The returns from South Atlantic, Cape Good Hope, and East Indies, show an increase in the tio for primary disease; the remaining stations show a ecrease as compared with the previous year; 117 cases of *oisoning* are recorded, 41 of these were due to lead, giving invalidings, the remaining 76 were due to various other oisons, of which 2 died; 86 cases of *alcoholism* are returned, th two deaths; 2,361 cases of *rheumatism* are returned, iving 93 invalidings and 1 death. The ratio of cases per 1,000 strength shows a decrease of 9.66, of invalidings a decrease 0.46, and of deaths a decrease of 0.03, as compared with the erage ratios for the previous seven years. The average duraon of each case was 18.68 days, and the number of men daily effective 120.51; 150 cases of *gout* are recorded, with 1 validing. Of *non-malignant new growths* 153 cases are corded, giving 6 invalidings; of *malignant*, 9 cases me under notice, 8 of which proved fatal; 8 cases of *abetes* are returned, with 4 invalidings and 2 deaths. Four ases of *beri-beri* are recorded—3 from the East Indies, and 1 rom the Cape of Good Hope Station. No deaths are recorded der this heading. Of *septic diseases*, there were 34 cases, th 12 deaths. Of other *general diseases*, 73 cases are eturned, with 13 invalidings and 4 deaths. Included under this heading were 2 of *leucocythaemia* (Home Station); 2 of *tetanus*, both fatal (Home Station 1, East Indies 1); 1 of *Hodgkin's disease* (Home Station); 2 of *purpura*, 1 fatal case (Home Station 1, Pacific 1); and 1 of *pernicious anaemia* (a fatal case, Home Station).

Parasitic Diseases.

Under this head there are 4,289 entries; of these 4,041 were cases of scabies, of which 3,354 occurred in the Home Station. Other parasitic affections numbered 248.

Local Diseases.

One thousand and sixty-five cases of *diseases of the nervous system* are recorded, with 336 invalidings and 27 deaths. Of the total, 131 cases, with 126 invalidings and 2 deaths, are classified as mental diseases, and 934 cases, with 210 invalidings and 25 deaths, as nervous diseases. The ratio of cases under this heading shows a slight decline as compared with the average ratio for the previous seven years. Eight hundred and fifty-three cases of *diseases of the eye* are returned, with 88 invalidings. There were 568 cases of *other organs of special senses*, with 117 invalidings and 4 deaths. Six hundred and fifty-one cases are recorded of *diseases of the circulatory system*, giving 252 invalidings and 35 deaths. Nine thousand six hundred and fifty cases of *diseases of the respiratory system* are returned, with 122 invalidings and 55 deaths. The ratios per 1,000 of strength show a decrease as regards cases of 15.18, of 1.62 as regards invalidings, and 0.34 as regards deaths, compared with the previous seven years' ratios, a very satisfactory condition of affairs. *Catarrh* is responsible for 7,818, or 81.01 per cent., *bronchitis* for 583, or 6.04 per cent., and *pneumonia*, 478 cases, or 4.95 per cent. of the total number. Under the heading *phthisis*, 152 cases are recorded, with 66 invalidings and 9 deaths. It is considered as more than probable that the great majority of these cases of *phthisis* should have been returned as *tuberculosis*. The East Indies, Cape of Good Hope, and Home Stations, in the order given, show the highest case ratio, while the highest invaliding ratios are from Pacific, East Indies, and Cape of Good Hope. The vessels of the training service in home waters return 1,385 cases, giving a ratio of 171.83 per 1,000 of strength, a decrease of 5.33 as compared with last year's return. The steady annual decline of this ratio in these ships is notable. *Catarrh* furnishes 1,122 cases, or 81.01 per cent. of the total number. The number invalided was 7, a ratio of 0.86 per 1,000 of strength, also a decrease compared with the average ratio of the last few years. The causes of invaliding are thus summarized: *Phthisis*, 1; *pneumonia*, 2; *bronchitis*, 3; and *pleurisy*, 1. Three deaths are returned—a ratio of 0.37 per 1,000 of strength—all from *pneumonia*. This ratio also shows a decrease. Thirteen thousand two hundred and sixty-four cases of *diseases of the digestive system* are recorded, giving 268 invalidings and 29 deaths. This is a decrease of 10.3 per 1,000 as regards cases, of 0.93 per 1,000 as regards invalidings, but an increase of 0.04 in the ratio of deaths, as compared with the previous seven years' ratio. *Sore throat* and *tonsillitis* contributed 6,521 cases, and *diseases of the stomach and intestines*, 5,195 cases; 149 cases of *hernia* were invalided, the majority of these having declined operation for the radical cure of this complaint. Seven hundred and fifty-nine cases of *diseases of the lymphatic and glandular system* are returned, giving 14 invalidings. *Non-venereal bubo* furnishes 595 cases, 2 invalidings. Nine hundred and twenty-one cases of *diseases of the urinary and generative systems* are returned, with 92 invalidings and 21 deaths. There were 183 cases of *diseases of the kidneys*, with 50 invalidings and 19 deaths. The remaining deaths are due to disease of *bladder* and *urethral stricture*, 1 each. Seven hundred and fifty-eight cases of *diseases of the organs of locomotion* are entered, giving 82 invalidings. *Diseases of the joints* furnished 330 cases, with 27 invalidings. *Diseases of the bursae*, 217 cases. Thirteen thousand one hundred and thirty cases of *diseases of the connective tissue and skin* are recorded, with 36 invalidings and 1 death—a general decline as compared with the ratio for the previous seven years.

Wounds and Injuries.

Sixteen thousand eight hundred and seventy-nine cases of injuries of various kinds occurred during the year, with 172 invalidings and 135 deaths. Of this total, 338 cases with 9 invalidings and 117 deaths were due to *general injuries;* 16,527, with 156 invalidings and 15 deaths to *local*, while there were 14 *wounds in action*, with 7 invalidings and 3 deaths. The ratio per 1,000 of strength of *general injuries* shows a fractional decrease as compared with the ratio for the previous seven years; for *local injuries* there is a decrease of 14.57 per 1,000 in the case ratio, with a fractional decrease in the invaliding and death ratios. The deaths under *general injuries* were caused by *burns and scalds*, 9; *heat stroke*, 4; *multiple injury*, 32; *suffocation from submersion*, 72. The *local injuries* comprise 1,284 *burns and scalds*, and 15,243 *wounds, fractures, dislocations, contusions, etc.*

Suicide.

Ten persons committed suicide during the year, a fractiona decrease on the ratio for the previous seven years.

APPENDIX.

The Appendix contains several papers on Mediterranean fever. Fleet Surgeon P. W. Bassett-Smith discusses the etiology of the disease, and its distribution in the fleet; Staff Surgeon E. A. Shaw deals with the agglutination reaction in the disease; and Fleet Surgeon J. D. McNabb with its treatment and symptoms. Staff Surgeon R. T. Gilmour contributes a report on the year's work in the laboratory of the Royal Naval Hospital, Malta. The rest of the contents include communications by Fleet Surgeon E. P. Mourilyan on compressed air illness and its treatment by the inhalation of oxygen; by Fleet Surgeon J. L. Barrington on caisson disease; by Staff Surgeon Oswald Rees on a case of splenic anaemia; by Fleet Surgeon P. B. Handyside on cases resembling a case of dermatitis repens; by Staff Surgeon P. Hamilton Boyden on Ningpo varnish disease; and by Fleet Surgeon Vidal G. Thorpe on the radical cure of inguinal hernia.

BRITISH MEDICAL ASSOCIATION LIBRARY.

List of Books, etc., Presented.

CALENDARS, Transactions, and Reports have been received from the following bodies:

Scientific Memoirs by Officers of the Medical and Sanitary Departments of the Government of India. Nos. 19 and 20. 1905.

University College, London, Calendar. 1905-6.

Victoria University, Manchester, Calendar. 1905-6.

West Kent Medico-Chirurgical Society Proceedings. Vol. 49. 1905.

BOOKS NEEDED TO COMPLETE SERIES:

The Librarian will be glad to receive any of the following volumes, which are needed to complete series in the Library:

American Climatological Transactions. Vols. 1, 4, 5, 6.

——— Dermatological Association Transactions. Vols. 5, 7, 8, and 11.

——— Journal of the Medical Sciences. New series, vols. 4, 5, 1842-3; vols. 14, 15, 1847-8; vols. 18-30, 1850; vol. 33, 1857; vol. 46, 1864-5; vol. 59; or any parts of these vols.

——— Journal of Ophthalmology. Vols. 1-9.

——— Laryngological Association. Transactions. Vols. 1-6, 8-9.

——— Medical Association. Transactions, 1-28, 30, 31.

——— Otological Society. Transactions. Vol. 3, part 2, 1883.

——— Public Health Association. Transactions. Any vols.

Analyst. Vols. 1-24.

Archiv für Dermatologie und Syphilis. Prior to 1874, 1892, and 1893.

Annals of Surgery. Vols. 11, 13-16, and 26, 27.

Archives Générales de Médecine. 1831-9 inclusive; 1846-55 inclusive; 1857-64 inclusive; 1871.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

eventy-six of the largest English towns, including London, 8,530 s and 5,288 deaths were registered during the week ending rday last, March 3rd. The annual rate of mortality in these s, which had been 15.2, 17.2, and 17.3 per 1,000 in the three pre- ng weeks, further rose to 17.4 per 1,000 last week. The rates in several towns ranged from 8.9 in Northampton, 9.7 in Wallasey, in Newport (Mon.), 10.8 in King's Norton, 11.4 in Handsworth fs.), and 11.6 in East Ham, to 22.2 in Liverpool and in Blackburn, n Gateshead, 23.3 in Warrington, 23.5 in Stockport, 23.7 in Merthyr il, 24.9 in Bury, 25.8 in Nottingham, and 27.7 in Bournemouth. In London the rate of mortality was 16.6 per 1,000, while it averaged 17.8 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.4 per 1,000 in the seventy-six towns; in London also this death-rate was equal to 1.4 per 1,000, while among the seventy-five other large towns the rates ranged upwards to 2.4 in Leeds, 2.5 in York, 2.6 in Reading, 2.7 in Huddersfield, 2.8 in Liverpool, 3.1 in Preston, 3.9 in Bournemouth, 4.3 in West Hartlepool, and 6.2 in Bury. Measles caused a death-rate of 1.2 in Hornsey, 1.3 in Tottenham and in Leeds, 1.4 in Liverpool, 1.9 in Blackburn, 2.2 in Preston, and 6.2 in Bury; scarlet fever of 2.1 in West Hartlepool; diphtheria of 1.1 in Huddersfield and 2.1 in Merthyr Tydfil; and whooping-cough of 1.1 in Birmingham, 1.2 in Brighton, in York, and in Rhondda, 1.3 in Gateshead, 1.4 in West Hartlepool, 1.6 in Leicester, 2.0 in Reading, 2.2 in Southampton, and 3.1 in Bournemouth. The mortality from enteric fever and from diarrhoea showed no marked excess in any of the large towns. No fatal case of small-pox was registered last week either in London or in any of the seventy-five other large towns. The number of small-pox patients under treatment in the Metropolitan Asylums Hospitals, which had been 2 and 5 on the two preceding Saturdays, had further risen to 6 on Saturday, 3rd inst.; 1 new case was admitted during the week, against 2 and 3 in the two preceding weeks. The number of scarlet-fever patients in these hospitals and in the London Fever Hospital at the end of the week was 2,628, against 2,839, 2,734, and 2,689 at the end of the three preceding weeks; 273 new cases were admitted during the week, against 283, 281, and 274 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

DURING the week ending Saturday last, March 3rd, 928 births and 661 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 16.8, 18.0, and 19.6 per 1,000 in the three preceding weeks, declined again to 19.3 last week, but was 1.9 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among the Scotch towns the death-rates ranged from 10.7 in Leith and 13.6 in Perth to 21.4 in Greenock and 27.5 in Dundee. The death-rate from the principal infectious diseases averaged 1.8 per 1,000 in these towns, the highest rates being recorded in Dundee and Paisley. The 320 deaths registered in Glasgow included 16 which were referred to measles, 4 to diphtheria, 6 to whooping-cough, and 6 to diarrhoea. Two fatal cases of measles were recorded in Edinburgh. Five deaths from diarrhoea, 3 from measles, and 2 from whooping-cough occurred in Dundee; and 4 from measles in Paisley.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, March 3rd, 590 births and 431 deaths were registered in six of the principal Irish towns as against 464 births and 432 deaths in the preceding period. The annual death-rate in these towns, which had been 22.7, 21.8, and 23.3 per 1,000 in the three preceding weeks, rose to 25.1 per 1,000 in the week under notice, this figure being 7.7 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 16.1 in Londonderry and 23.3 in Cork to 27.3 in Limerick and 35.1 in Waterford. The zymotic death-rate in the same six Irish towns averaged 1.1 per 1,000, or 0.2 per 1,000 higher than during the preceding period, the highest figure, 2.5, being recorded in Londonderry, while no deaths under this heading were registered in Limerick and Waterford.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journal is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St Martin-in-the-Fields, in the County of Middlesex.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

BIRMINGHAM BRANCH:

COVENTRY DIVISION.

A SPECIAL meeting of this Division was held on February 15th at the Coventry and Warwickshire Hospital, Dr. MILNER MOORE occupying the chair.

Contract Medical Practice.—Dr. MILNER MOORE introduced a discussion on the report of the Medico-Political Committee of the Association on Contract Practice. He said: The reconstruction of the British Medical Association having now existed for three years, the members have had sufficient experience to enable them to see what benefits they have derived from it. Contrasting the conditions of the profession in Coventry before that era with its present state I am led to form the opinion that there is greater unanimity, more forbearance, and a greater desire to act in an ethical manner to each other, than then. The time seems, therefore, propitious for opening a discussion upon a topic which must interest all medical men in a community such as Coventry, which contains as its principal population thousands of wage earners and others below the middle class, who consider that they ought to have medical attendance and medicine for the smallest sum that they can induce the doctors to provide them. There is no necessity to disguise the fact that circumstances have arisen during the last month which render it incumbent on the members of the profession to make their views upon contract practice of all kinds known to each other, in order that some concerted action may be taken and a clear line of conduct laid down for all members of the Division. I propose this evening, as briefly as I can, to give you a digest of the investigation on contract practice published on July 22nd last, and to ask you to discuss and arrive at some definite conclusion as to what systems are advisable and to be followed, and what are prejudicial to the welfare and honour of the profession. When 12,000 circulars were sent out to practitioners there resulted a variety of opinions as to the utility or otherwise of the inquiry: for while some approved, others considered the inquiries impertinent: but the majority expressed their acquiescence. To these 12,000 circulars, 1,548 replied, 692 of whom were not engaged in any form of contract practice, but yet tendered their experience on the subject: 856 have given their personal experience, and in addition information has been obtained from various medical societies, the Divisions and Branches of the Association, and from the Medical Secretary, who has visited various districts. The term contract practice includes Friendly Societies, works clubs, medical aid societies, provident dispensaries, public medical services, and private clubs, but excludes the public services and private arrangements with individual patients, such as contracting to attend a certain family for a settled sum a year. These may be subdivided into those managed by doctors and those by a lay body; to the former belong public medical services and private clubs, while the latter comprise Friendly Societies, works clubs, medical aid societies, and provident dispensaries. Another difference exists amongst the latter group, for while the Friendly Societies provide other benefits besides medical attendance, the others do not (unless allied to some insurance scheme). Now, broadly, what are the objections to contract practice generally? It must, I suppose, be granted that under existing circumstances some form for providing medicine and attendance on the wage-earning class must be continued, and it should be the aim of those who undertake it to see that the contracts are so made and carried out as not to injure a brother practitioner by unfair competition in underselling, or advertising. It has been asserted by some of those who replied to the queries that the system of rendering medical aid under contract is attended by grave dangers to the character and efficiency of the medical practitioner concerned; inducing in him habits of hasty and careless diagnosis and routine, perfunctory and ineffective treatment, and that these in time so pervade all his practice that he becomes professionally demoralized, and the status and reputation of himself and the profession suffer in consequence. In addition to what I have already said as to objections, it must be granted that the remuneration is inadequate, the beneficiaries are in many instances well-to-do, there is inefficient provision for special services, the terms of contract are unfair, and there is greater inducement for medical practitioners to compete for club appointments, thus giving rise to canvassing and underselling. As contract practice exists, and for the present, apparently, must continue, it behoves the profession to institute such reforms as will minimize, if not altogether abolish, the dangers, and take care that contracts by medical practitioners shall be continued with such safeguards as the profession may devise against acknowledged abuses. Private clubs, although managed by medical men themselves, are prejudicial, because the practitioner is competing against his neighbours, and the rules have to be made under pressure, as it were, while the power of non-medical organizations to impose unsatisfactory conditions on the medical profession increases; moreover, a collector must be employed, and whether or not he be paid by salary, there is the element of canvassing present, no matter how ingeniously it may be veiled. Public medical services are managed by the profession, and in sympathy with the profession in the neighbourhood. A proper wage limit being fixed, only the poorer members of the community are admitted members and any medical man, after a certain term of residence, may join the staff. All the other forms of contract practice are managed by lay members, and the medical staff are the servants, and liable to be dismissed for what may be considered by the managers any dereliction of duty. Friendly Societies, the medical officership of which was at one time thought to be an introduction to practice among the wives and children of its members, have in late years introduced juvenile lodges, and in some cases made clubs for their wives and children. These and provident dispensaries have been found most opposed to reform, and have rejected all interference on the part of the profession. The question whether the professson is to sit down quietly and allow its business to be controlled by a body of tradesmen, who for their own benefit impose on it certain conditions, is a most important one, and must be answered in no uncertain manner. The means of doing this must be by agreement among local members of the profession, with respect to contract practice, through the instrumentality of a Division of the British Medical Association. A rule should be established that all practitioners should be included in the membership, and they should bind themselves to adopt the Bradford rules. Then there must be an agreement on the following matters: rates of remuneration; conditions of admission to attendance under contracts, including provision with respect to the economic position, age, and health of candidates; definition of services to be rendered; tenure of office, and representation of the medical profession in the management. Practitioners should cease to hold private clubs, and the principle of distribution of contract practice among all practitioners in the district who desire to participate should be carried into effect. And organized contract practice, at present under the control of non-medical persons or committees, should gradually be brought under medical control. Works clubs and medical aid societies are likewise unsatisfactory, as they are both managed by non-medical committees and tend, especially in the case of the medical aid societies, to the underselling of other practitioners and of canvassing. Gentlemen, the analysis of this investigation which I have endeavoured to give is not, I am sorry to say, so clear as I could have wished, but I have been rather hurried owing to various circumstances. I hope, however, that it will suffice for the purpose for which it was undertaken. The investigation was most complete and elaborate, and well deserves careful and thoughtful perusal. I ask you therefore first to discuss all the points I have touched upon, and decide upon the wisest course to pursue with regard to all kinds of contract practice, subdividing them as I have endeavoured to do into those which are managed by committees, and those properly controlled by medical men. On page 29 of the report you will find the conclusions and recommendations of the Medico-Political Committee, and I now propose that those recommendations be adopted by that Division. On page 30 you will find the special report on provident dispensaries, and this, on behalf of your Committee, I beg to recommend for your adoption with certain modifications.

The motion was seconded by Dr. CALLAGHAN, discussed by Drs. J. ORTON, PICKUP, RICE, KENDRICK, and others, and carried unanimously.

Provident Dispensaries.—Dr. MOORE proposed, on behalf of the Committee of the Division, the adoption of the special report on provident dispensaries, with certain modifications; these were discussed seriatim, and the whole of the principles and rules were adopted, with the following clauses substituted for those in the SUPPLEMENT, July 22nd, pp. 30 and 31:

(*a*) (4) Inasmuch as the system of provident dispensaries is a form of contract practice, it should be a fundamental principle of their constitution that every medical practitioner in the district for which the dispensary provides, who wishes so to act, and who is not engaged in other contract practice (not including Poor-law or other suchlike appointments) should be a medical officer of the dispensary, provided that he conforms to the rules thereof. Provided always that there shall be a time limit of residence during which a newcomer who does not buy a practice cannot claim to be put on the staff.

(*b*) (2) That Friendly Societies be admitted at 4s. per member per year.

(*b*) (13) That all payments of provident members shall be made at an office provided for the purpose, and visiting collectors shall not be employed except if paid by salary.

(*b*) (16) (*c*) That no member of the staff shall be dismissed except by the vote of three-fourths of the Committee, and likewise by the approval of the Executive Committee of the Division of the British Medical Association.

The following rule was also added:

That no assistant shall be employed for dispensary work except for the temporary absence or illness of the principal.

SOUTH MIDLAND BRANCH:

AYLESBURY DIVISION.

MEETING of this Division was held in the Board-room of the Royal Bucks Hospital on Monday, February 26th, at 30 p.m., Dr. EAGLES in the Chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Hospital Abuse.—The HONORARY SECRETARY explained the attitude of the Board of the Royal Bucks Hospital in respect of the question of hospital abuse, and this was considered satisfactory.

Rules of Central Midwives Board.—It was decided to write to the Medico-Political Committee *re* any alteration rules of Central Midwives Board by the Privy Council, and inform them that this meeting is unanimous in its request for adequate payment for medical men called in assist midwives under the Midwives Act, 1902, and that payment could best be made through the Poor-law authorities.

YORKSHIRE BRANCH.

MEETING of the Yorkshire Branch was held at the Station Hotel, York, on Wednesday, March 7th, Dr. BLACK, President, in the chair.

New Members.—The following gentlemen were elected members of the Association: Drs. and Messrs. Elliston, rgus, Horsfall, Kennedy, McBride, Nesfield, and wley.

SPECIAL MEETING.

Proposed Modification of By-law.—At a special meeting he Branch the following modification of By-law 5 was posed by Dr. SWANSON (York), seconded by Dr. GOYDER adford), and carried:

o Division shall be entitled to more than one representative on the Central Council.

o that:

o cumulative voting for election of Branch members on the Central Council be allowed.

nnual Report and Financial Statement.—The annual ort and financial statement of the Branch were read, the reports of the various Divisions. The membership is about 770. Expenditure, including grants to the ous Divisions, £77 15s. 6d. Balance in hand, December , 1905, £177 18s.

ommunications.—Dr. CHURTON (Leeds) read notes on emarkable heart murmur, illustrated by two cases. . SWANSON, GOYDER, BLACK, and LEE took part in the discussion, and Dr. CHURTON replied.—Dr. CAMPBELL (Bradford) read a paper on some remarks upon diet. He drew attention to the great danger of "faddism" in diet, and to the tendency of the present age to restrict diet to certain kinds of food, irrespective of age, occupation, or habits. He thought it was important that the medical profession should point out to the public the great danger in following out these fads. Drs. PETCH, SWANSON, and GOYDER took part in the discussion.—Mr. MOYNIHAN (Leeds) read notes on operation upon the lower part of the common bile duct, with a series of cases, illustrated by numerous lantern slides.—Mr. JALLAND (York) read notes on a case of removal of one lobe of the thyroid. A large horseshoe-shaped incision was made.

Dinner.—After the meeting fifteen members dined together at the Station Hotel.

THE SEVENTY-FOURTH ANNUAL MEETING

OF THE

British Medical Association,

TORONTO, CANADA,

AUGUST 21ST TO 25TH, 1906.

THE ATLANTIC PASSAGE.

THE DOMINION AND OTHER LINES.

THE White Star Line informs us that members proposing to attend the annual meeting of the British Medical Association at Toronto who take return tickets by the Dominion Line will have the option of returning by that line or from New York or Boston by any one of the following: American Line (New York to Plymouth and Southampton), Atlantic Transport (New York to London), Leyland Line (Boston to Liverpool), Red Star Line (New York to Dover). In addition to this, passengers with return tickets travelling to Canada via New York and Boston by any of the above lines can, if desired, return from Canada by the Dominion Line. A discount of 10 per cent. on the homeward portion will be allowed on return tickets issued on payment of the combined outward and homeward journey.

The following list shows dates of sailing by ships of the various lines referred to, with first-class passage for the single journey. Further particulars can be obtained on application to the Passenger Department, White Star Line, 1, Cockspur Street, London, S.W.

AMERICAN LINE.

Southampton to New York.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Birmingham Branch.—The annual meeting of the Birmingham Branch will be held at the Medical Institute on Thursday, June 14th, at 3.30 p.m., and nominations for offices should reach the Honorary Secretary not later than May 23rd.—T. Sydney Short, Honorary Secretary, 35, Newhall Street, Birmingham.

Border Counties Branch: North Cumberland Division.—A meeting of the North Cumberland Division of the Border Counties Branch will be held at Penrith on Friday, April 6th. The Honorary Secretary will be pleased to hear from members who wish to read papers, show cases or pathological specimens.—Norman Maclaren, Honorary Secretary, 23, Portland Square, Carlisle.

East Anglian Branch *(Preliminary Announcement).*—The spring meeting of the East Anglian Branch will be held at King's Lynn on Thursday, April 5th. Members wishing to show cases or specimens or read papers should communicate at once with Dr. Gardiner, Tuesday Market Place, King's Lynn.—B. H. Nicholson, General Secretary of Branch, East Lodge, Colchester.

Lancashire and Cheshire Branch: Liverpool and Birkenhead Divisions.—It is proposed to hold a combined dinner on March 22nd, at 8 p.m., when an address upon the advantages of medical organization to the community at large, and the public duty thereby devolving upon members of the profession, will be given by Mr. J. Smith Whitaker, the Medical Secretary of the Association. The price of tickets is 5s. each, exclusive of wine, and the dinner will be open to all members of the profession. Applications are requested to be sent to the Honorary Secretary, Dinner Committee, Medical Institution, Liverpool.—James Barr, President of the Branch, Arthur W. German, Honorary Secretary, Dinner Committee, Liverpool.

Metropolitan Counties Branch: Walthamstow and City Divisions.—A conjoint meeting of these Divisions will be held at the Walthamstow Hospital, Walthamstow, on Tuesday, March 27th, at 4 p.m. Dr. Mitchell Bruce will read a paper on the Natural History of Tuberculosis.—Herbert Alexander, Honorary Secretary, Walthamstow Division; E. W. Goodall, Honorary Secretary, City Division.

Northern Counties of Scotland Branch.—A clinical meeting of the Branch will be held at the Northern Infirmary, Inverness, on Saturday, March 24th. Particulars will be sent to members by circular later. Members desirous of exhibiting specimens, or reading notes of cases are requested to communicate at once with the Secretary.—J. Munro Moir, M.D., Honorary Secretary, Ardross Terrace, Inverness.

South-Eastern Branch: Canterbury and Faversham Division.—The next meeting will be held at Sittingbourne on Thursday, March 22nd, at 3 p.m., Dr. Wm. Gosse presiding. The Chairman invites members to lunch at Westdene, London Road, at 1.45 p.m., and will be glad if those accepting will write to him not later than Tuesday, March 20th. Agenda: Clinical Meeting—Dr. T. Colcott Fox, Physician to the Skin Department, Westminster Hospital, will give a clinical demonstration on Skin Cases at Dr. Gosse's Surgery, 113, High Street, where members will kindly ask their patients to attend at 2.45 p.m. Medico-Political Meeting: At the termination of the clinical meeting a Medico-Political Meeting will be held at 1a, Crescent Street—(1) To read minutes of last meeting; (2) time and place of next meeting; (3) Nurses' Registration Report (vide Supplement, March 3rd, 1906; also papers sent by Honorary Secretary); (4) Hospital Out-patient Department (vide Supplement, February 17th, 1906): "That there should be no out-patient departments in hospitals except for consultations and casualties, and that this opinion specially applies to hospitals whose staff are general practitioners"; (5) to consider a communication from the Central Ethical Committee in reference to a resolution passed by the Ethical Committee of the Canterbury and Faversham Division (Herne Bay case); (6) the President of the South-Eastern Branch, Dr. Whitehead Reid, will probably have something to communicate with reference to police emergency fees; (7) any other business. It is hoped that members will bring up as many interesting skin cases as they can to the meeting, and kindly send the Honorary Secretary a few particulars of each one to facilitate matters and for Dr. Colcott Fox's use.—A. R. Henchley, Honorary Secretary and Treasurer, 1, London Road, Canterbury.

South-Eastern Branch: Guildford Division.—The next meeting of this Division will be held at the Royal Surrey County Hospital, Guildford, on Friday, March 30th, at 4.30 p.m., the Chairman of the Division, Dr. J. P. A. Gabb, in the chair. Agenda: (1) Minutes of last meeting. (2) Adjourned discussion *re* contract practice. (3) Other matters referred to Divisions. (4) Mr. C. A Ballance, F.R.C.S., Surgeon to St. Thomas's Hospital and to the National Hospital for the Paralysed and Epileptic, will give an address on The Surgery of Brain Abscess, illustrated by lantern slides. (5) Any other business. Tea will be provided during the meeting. Members desirous of showing cases or specimens are invited to communicate with the Honorary Secretary. All members of the South-Eastern Branch are entitled to attend and to introduce professional friends, and visitors are cordially invited.—E. J. Smyth, Honorary Secretary, Maythorne, Epsom Road, Guildford.

West Somerset Branch.—The spring meeting of this Branch will be held at the Taunton and Somerset Hospital on Tuesday, March 27th, at 3.30 p.m., when the President, Mr. Gordon Henry, will take the chair. Mr. H. T. S. Aveline, Superintendent of the Bath and Somerset Asylum, Cotford, has kindly promised to read a short paper and open a discussion on the Care and Treatment of the Feeble-minded. The Hospitals Committee of the Association also asks for an expression of opinion from the Branch with regard to the following resolution: "That, in the opinion of this meeting, there should be no out-patient departments in hospitals, except for consultations and casualties, and that this opinion specially applies to hospitals whose staff are general practitioners." Will any member wishing to bring any other matter before this meeting kindly give me early notice? Tea will be provided after the meeting.—W. B. Winckworth, Honorary Secretary, Taunton.

Yorkshire Branch: Bradford Division.—A joint meeting of the Division and the Bradford Medico-Chirurgical Society will be held at the Bradford Royal Infirmary on Tuesday, March 20th, at 8 p.m. The meeting will be devoted exclusively to the exhibition of pathological specimens and papers dealing with pathological subjects.—James Metcalfe, Lynthorne Hey, Frizinghall, Bradford, Andrew Little, 114, Manningham Lane, Bradford, Honorary Secretaries.

THE REGISTRATION OF NURSES.

Deputation to the Lord President.

On March 8th a deputation on the registration of nurses waited on the Earl of Crewe, Lord President of the Privy Council. The deputation, which was introduced by Mr. H. J. Tennant, M.P., consisted of Viscount Morpeth, M.P.; Sir John Dickson Poynder, M.P.; Mr. Munro Ferguson, M.P.; Mr. C. Hobhouse, M.P.; Sir James Crichton-Browne; Dr. Bedford Fenwick; Dr. Langley Browne; Lady Helen Munro Ferguson; Mrs. Garrett Fawcett, LL.D.; Miss E. S. Haldane, Chairman Scottish Registration Committee; Mrs. Bedford Fenwick, Honorary President International Council of Nurses; Miss S. F. Hampson, President Irish Nurses' Association; Miss Peter, late General Superintendent Queen Victoria's Jubilee Institute for Nurses; Miss H. L. Pearse, Matron Great Northern Hospital; Miss Mollett, Matron Royal South Hants Hospital, Southampton; Miss

Barton, Matron Chelsea Infirmary; Miss C. Forrest, Matron Victoria Nurses' Institute, Bournemouth; and Miss M. Breay, Honorary Secretary Matrons' Council. We are indebted to the *British Journal of Nursing* for advance proofs of a full report of the proceedings, only a brief summary of which need be given here.

After some introductory remarks by Mr. TENNANT, Sir JAMES CRICHTON-BROWNE, representing the Royal British Nurses' Association, said the time had come when the regulation of the education, supervision, and registration of nurses should be undertaken by the State. Nursing was no longer a domestic affair; it was a fine art, demanding special skill, technical ability, and cultured insight as well as sympathy. Of the possession by a nurse of these qualifications the public had no means of judging; this, registration would afford. The establishment of a State register would be evidence that those whose names were found upon it were properly trained and of good character.

Dr. LANGLEY BROWNE, who was next called upon, said that the large majority of medical men were in favour of a system of registration of nurses. The British Medical Association had twice in annual meeting endorsed this principle, *nemine dissentiente*, and by the wish of the last annual meeting it had been referred to the Divisions, which were now considering the subject in detail. Only one Branch had objected to the decision of the annual meeting on this question. Registration of nurses would be of great advantage to the medical profession. They would be able to ascertain from a State Register that a nurse had had three years' training. The nurses were now a large body, and were entitled to take rank, as the medical profession does, as a self-governing profession. Years ago there were good nurses, but since ladies took up and organized nursing the great improvement which had taken place had been universally acknowledged. At the present time, however, many hospitals maintained different standards. A Central Council was needed to regulate and assimilate the training, and arrange for examinations at its conclusion. One of the duties of the Central Board would be to test the knowledge of candidates for registration. The bare fact of registration, if it did not carry with it this power, would be of very little use. On that body nurses should have the control. It was they who had made their profession what it was, and they ought to have the numerical control when it was formed. They should elect their own representatives. In the case of the election of the direct representatives on the General Medical Council, the necessary expense entailed only amounted to about £500 every five years, so that it was not a costly matter. Personally he would prefer that all members of the Board should be elected by the nurses.

Mrs. GARRETT FAWCETT looked to the influence of a Central Nursing Board to set up higher standards of both professional and general education for nurses, as well as professional standards of honour. The disciplinary effects of the General Medical Council had been good, and she had no doubt the same results would be attained in the case of a General Nursing Council.

Miss M. MOLLETT, Mr. C. HOBHOUSE, M.P., Lady HELEN MUNRO FERGUSON, Dr. BEDFORD FENWICK, and Miss S. E. HAMPSON also spoke.

Lord CREWE, in reply, said it was of national importance hat the efficiency of the nursing profession should be ncreased, and that its members should be of high haracter. The history of the demand for registration howed that it was not seriously suggested that registration of nurses should be compulsory. It was important, if any legislation was to be effected, that there hould be general concurrence between nurses, the medical profession, and the public. From a study of the evidence iven before the Select Committee it was apparent hat while absolute agreement was not reached, there was strong preponderance of opinion in favour of the scheme. There was general agreement that on the Central Body set up under a Registration Act nursing should be represented to a very considerable extent. It was presumable hat such a body would exercise control over the training of nurses. He was not sure that the hospitals would be altogether pleased with this supervision. The Government had a full programme of legislation, and he could ot hold out a hope that they would take the matter up uring the present session. It might, however, be possible to secure discussion of the subject in the House of Commons. Another course remained to be considered, that was the introduction of a Bill into the House of Lords, in which case it would receive the benevolent attention of the Government and full discussion. In any case, it could not be long before the subject occupied the serious attention of Parliament.

ROYAL COMMISSION ON THE CARE AND CONTROL OF THE FEEBLE-MINDED AND EPILEPTIC.

THE Royal Commission on the Care and Control of the Feeble-Minded met on March 2nd to receive further Scottish evidence.

Mr. RICHARD BROWN of Edinburgh described the system under which the Court of Session in Scotland appoints persons to whose care, under the supervision of the Court, is entrusted the management of the estates and interest of persons who are insane or otherwise incapable. Speaking generally, any male person, 21 years of age, in solvent circumstances, and not disqualified by incapacity or interest, could be appointed *curator bonis.* This system had worked smoothly and with satisfaction to all concerned, while it appeared to have sufficient elasticity to cover all ordinary cases. If habitual drunkards or even spendthrifts were certified to the Court as incapable of managing their own affairs, possibly the present law in Scotland might be sufficient to enable the Court to appoint a curator of their estates, and he had no doubt that the system would be found perfectly suitable to all such cases.

Dr. CHARLES MACPHERSON, Deputy Commissioner in Lunacy for Scotland, dissented from the suggestion that all weak-minded people should be consigned to institutions for life, and that by this means a decided increase in the production of defective families would be brought about. In Scotland practically all persons who showed mental defects were under the supervision of the Lunacy Board either in asylums or boarded out, and were so well cared for that risk was reduced to a minimum. Though a large number of defective children were not educable, he believed that many of them could be trained to a small amount of usefulness, to be smarter, tidier, and more obedient, if suitable classes, entirely separate from the other scholars, were provided for them.

Mr. JAMES RUSSELL MOTION, Inspector of Poor in Glasgow, thought the existing provision for the care of imbecile children of an educable character was hardly sufficient. Under the authority of the Local Government Board there should be combinations of parishes for the erection, equipment, and maintenance of training schools for the care of "defectives" and imbeciles. There should be no overlapping authority in connexion with the care and treatment of any class of person within the verge of pauperism. The parish council should enclose within its net the insane, the defective, the vagrant, the tramp, and every one who was disabled by poverty, destitution, mental defect, or otherwise. Labour colonies of quite simple character would be of some use in stopping the flow of epileptics and certain other defectives to asylums if such colonies were not converted into institutions almost as expensive in their equipment and maintenance as lunatic asylums.

Dr. JOHN CARSWELL, Certifying Physician in Lunacy to the Glasgow Parish Council, advocated further powers of compulsory control over the person and property of habitual inebriates, and the extension of such powers to the case of habitual drunkards who were a danger to themselves and others, but might have not committed any police offence or crime. "Habitual drunkards" should include the habitual users of narcotic drugs.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following appointments have been made at the Admiralty: JOHN A. KEOGH, M.B., Fleet Surgeon, to the *Spartiate*, March 10th; ROBLEY H. J. BROWNE, Fleet Surgeon, to the *Albion*, on recommissioning, April 3rd; EDWARD H. MEADEN, Fleet Surgeon, to the *Illustrious*, on completing, April 3rd; JOHN A. L. CAMPBELL, Staff Surgeon, to the *Repulse*, on recommissioning, March 24th; SAMUEL H. FACEY, Surgeon, to the *Pembroke*, additional, for disposal, April 3rd; DAVID H. VICKERY, Surgeon, to the *Illustrious*, on commissioning, March 24th; Patrick W. M'Vean, M.B., Surgeon, to the *Tyne*, on recommissioning, March 13th.

The notice which appeared in the *London Gazette* of February 20th relative to the appointment of Percy C. Woollatt to be a Surgeon in His Majesty's Fleet has been cancelled.

Civilian Dental Surgeons B. H. Martin, A. Harris, and V. E. Mills have been reappointed for the year from April 1st.

Civil Practitioner F. J. H. Cann, M.B., has been appointed Surgeon and Agent at Dawlish, March 8th.

ROYAL ARMY MEDICAL CORPS.

The undermentioned Majors are promoted to be Lieutenant-Colonels, dated January 30th, 1906: M. T. Yarr, F.R.C.S.I., C. H. Melville, M.B., B. L. Mills, M.B., F.R.C.S.Edin., H. Cocks, M.B., J. B. Wilson, M.D., J. Kearney, M.D., F. W. G. Hall, M.B., A. Kennedy, H. P. G. Elkington, J. B. W. Buchanan, M.B., H. M. Adamson, M.B., T. G. Lavie, H. H. Brown, M.B., T. H. Corkery, J. J. O'Donnell, M.B. The last-named officer joined as Surgeon, January 30th, 1886, and was made Surgeon-Major, March 25th, 1898; the previous commissions of all the others cited are dated: Surgeon, January 30th, 1886; Surgeon-Major, January 30th, 1898. Their war records are as follow:—Lieutenant-Colonel Yarr—South African war, 1899-1901 (Queen's medal with four clasps). Lieutenant-Colonel Melville—Hazara Expedition, 1888 (medal with clasp). Lieutenant-Colonels Mills and Wilson—North-West Frontier of India campaign in 1897-8, including the capture of the Tanga Pass (medal with clasp); South African war, 1899-1901 (Queen's medal with five clasps). Lieutenant-Colonel Kearney—South African war, 1899-1902, including the defence of Ladysmith and operations in the Transvaal and Orange River Colony (Queen's medal with four clasps, King's medal with two clasps). Lieutenant-Colonel Elkington—Hazara Expedition, 1891. Lieutenant-Colonel Buchanan—South African war, 1899-1901, including the relief of Ladysmith, actions at Colenso, Pieter's Hill, and Laing's Nek, and operations in Natal, the Transvaal, and Orange River Colony (mentioned in dispatches, Queen's medal with seven clasps). Lieutenant-Colonel Adamson—Burmese campaign, 1887-9 (medal with clasp); Nile Expedition, 1898, including the battles of the Atbara and Khartoum (twice mentioned in dispatches, Egyptian medal with two clasps, British medal). Lieutenant-Colonel Lavie—South African war, 1900-02 (slightly wounded), including operations in the Orange River Colony and the Transvaal (twice mentioned in dispatches, Queen's medal with three clasps, King's medal with two clasps). Captain (Surgeon-Captain, Army Medical Reserve) S. M. Sloan, M.B., Glasgow Companies, Scottish Command, resigns his commission, March 14th.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,849 births and 5,076 deaths were registered during the week ending Saturday last, March 10th. The annual rate of mortality in these towns, which had been 17.2, 17.3 and 17.4 per 1,000 in the three preceding weeks, declined again last week to 16.7 per 1,000. The rates in the several towns ranged from 6.0 in Barrow-in-Furness, 9.6 in Hornsey, 9.7 in Croydon, 10.7 in West Hartlepool, 10.9 in Ipswich, 11.3 in Willesden, 11.4 in Handsworth (Staffs.), and 11.5 in King's Norton, to 21 1 in Newport (Mon.), 21.3 in Bootle, 21.6 in Merthyr Tydfil, 22.0 in Brighton and in Preston, 22.6 in Liverpool, 24.1 in Warrington, and 29.9 in Tynemouth. In London the rate of mortality was 16.2 per 1,000, while it averaged 17.0 per 1.000 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.6 per 1,000 in the seventy-six towns; in London this death-rate was equal to 1 5 per 1,000, while among the seventy-five large provincial towns the rates ranged upwards to 2.5 in Derby, 2.6 in Liverpool and in Middlesbrough, 2.7 in Southampton, 2.8 in East Ham, 2.9 in Newcastle-on-Tyne, and 3.1 in Tottenham and in Plymouth. Measles caused a death-rate of 1.1 in Liverpool and in Swansea, 1.3 in Leyton and in Plymouth, 1.6 in Leeds and in Newcastle-on-Tyne, 1.7 in Walthamstow, 1.8 in Bury and in Preston, and 2.2 in Tottenham; scarlet fever of 1.0 in Wolverhampton and 1.4 in West Hartlepool; whooping-cough of 1.0 in Birmingham, 1.1 in Leicester, 1 2 in Newcastle-on-Tyne, 1.3 in Reading, in Plymouth, and in Gateshead, 1.4 in King's Norton, 1.6 in Handsworth (Staffs), and 2.7 in Southampton; "fever" of 1.2 in Wigan; and diarrhoea of 1.4 in Newport (Mon.), 1.6 in Middlesbrough, and 1.7 in Barrow-in-Furness. The mortality from diphtheria showed no marked excess in any of the large towns. No fatal case of small-pox was registered last week, either in London or in any of the large provincial towns. There were 6 small-pox patients under treatment in the Metropolitan Asylums Hospitals on Saturday last, March 10th, against 2, 5, and 6 on the three preceding Saturdays; 1 new case was admitted during the week, against, 2, 3, and 1 in the three preceding weeks. The number of scarlet fever cases in these hospitals and in the London Fever Hospital, which had been 2,734, 2,689, and 2,628 at the end of the three preceding weeks, had further declined to 2,545 at the end of last week; 268 new cases were admitted during the week, against 281, 274, and 273 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, March 10th, 961 births and 622 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 18.0, 19.6, and 19.3 per 1,000 in the three preceding weeks, further declined to 18.2 per 1,000 last week, but was 1.5 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the rates ranged from 13.8 in Paisley and 14.9 in Aberdeen to 22.7 in Perth and 22.8 in Dundee. The death-rate from the principal infectious diseases averaged 1.7 per 1,000 in these towns, the highest rates being recorded in Dundee and Paisley. The 304 deaths registered in Glasgow included 10 which were referred to measles, 7 to diphtheria, 7 to whooping-cough, 2 to "fever," and 4 to diarrhoea. Six fatal cases of measles were recorded in Edinburgh; 2 of measles, 2 of whooping-cough, and 2 of diarrhoea in Dundee; and 4 of measles in Paisley.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, March 10th, 518 births and 412 deaths were registered in six of the principal Irish towns, as against 590 births and 431 deaths in the preceding period. The annual death-rate in these towns, which had been 21.8, 23.3, and 25.1 per 1,000 in the three preceding weeks, fell to 22.2 per 1,000 in the week under notice, this figure being 5.5 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 19.1 in Limerick and 19.5 in Waterford to 24.0 in Cork and 24.6 in Dublin. The zymotic death-rate in the same six Irish towns averaged 1.0 per 1,000, or 0.1 per 1.000 lower than during the preceding period, the highest figure—3.7—being recorded in Londonderry, while no deaths under this heading were registered in Cork, Limerick, and Waterford.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

THE British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the BRITISH MEDICAL JOURNAL is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the BRITISH MEDICAL JOURNAL for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office, No, 429, Strand, in the Parish of St Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, MARCH 24TH, 1906.

British Medical Association.

PROPOSED APPLICATION FOR ROYAL CHARTER.

REPORT OF ORGANIZATION COMMITTEE ... 109
EXPLANATORY MEMORANDUM 109
ESTIMATE OF PROBABLE COST 112
DRAFT CHARTER 113
DRAFT ORDINANCES 119
DRAFT BY-LAWS 126

REPORT

ON

ACTION TAKEN IN THE PREPARATION OF THE DRAFT CHARTER.

The Council has taken into consideration the following resolutions of the Annual Representative Meeting at Leicester:

> "That the Representative Meeting issue the necessary authority for application on behalf of the Association to be made to the Privy Council, praying His Majesty to grant a Royal Charter of Incorporation to the Association."
>
> "That the Central Council be instructed to submit the draft of the application for a Royal Charter to the Divisions as soon as possibie, with an estimate of the probable cost, and with an explanatory memorandum."

Preparation and Circulation of Drafts.

The Council delegated to the Organization Committee he duty of taking the detailed steps which were necessary o give effect to the instructions contained in the above esolutions. The Committee accordingly consulted Counsel Mr. T. R. C. Dill), under whose advice have been prepared he draft Charter, draft Ordinances, and draft By-laws which are presented herewith.

Regard being had to the time which the preparation of ocuments of such importance and complexity has ecessarily occupied, and to the desire of the Representative Meeting that the requisite drafts should be submitted o the Divisions at the earliest possible moment, the Council has further authorized the Organization Committee to circulate the drafts, as settled by Counsel, to the Divisions before they are considered by the Council.

Replies of Divisions.

Divisions in the United Kingdom are requested to give otice not later than May 14th, 1906, of such amendments s may be deemed by them desirable.

Divisions and Branches not in the United Kingdom are quested to take the matter into their consideration and o report thereon at the earliest opportunity.

Explanatory Memorandum.

The Council has further delegated to the Organization Committee the duty of preparing the Explanatory Memorandum, with estimate of probable cost, desired by the Representative Meeting, as stated in the second resolution above cited.

The Organization Committee has accordingly prepared and submits a Memorandum herewith.

(Signed) T. JENNER VERRALL,
Chairman of Organization Committee.
(Signed) J. SMITH WHITAKER,
Medical Secretary.

EXPLANATORY MEMORANDUM

(Prepared pursuant to Minute 54 of the Representative Meeting at Leicester, to accompany the draft Charter, draft Ordinances, and draft By-laws, now submitted to the Divisions).

CONTENTS.

In this Memorandum are stated;

I. History of circumstances which have led to the present application for a Charter.

II. The advantages and possible disadvantages of incorporation under a Charter.

III. General principles observed by the Organization Committee in preparing the Draft Charter, and comparison with the present Regulations.

IV. Legal opinions obtained upon certain important matters.

I. HISTORY OF CIRCUMSTANCES WHICH HAVE LED UP TO THE PRESENT APPLICATION.

The possibility of obtaining incorporation of the British Medical Association by Royal Charter has been considered at various times in the history of the Association, from the period of the deliberations which resulted in its incorporation in 1873 under the Companies Acts down to 1901, when the changes were under consideration which resulted in the adoption of the present Constitution.

The Constitution Committee of 1900-1 had before it the results of previous inquiries into this matter. That Committee was advised by the then legal advisers of the Association that it was open to considerable doubt whether a Charter would be granted, and that the necessary procedure would be tedious and expensive. It appeared to the Committee that such a procedure should not be undertaken without the prospect of some more definite advantage than was then apparent, and the Committee reported accordingly.

It is to be observed that the questions with which the inquiries and deliberations of the Constitution Committee were, in accordance with its reference, specially concerned, related to the *mode of government and administration* of the Association, and the expediency of applying for a Charter at that stage was considered with reference to those questions.

The present reconsideration of the proposal of incorporation by Royal Charter is primarily due to the necessity which is felt of extending the *Objects* of the Association, and to the fact, which appears not to have been fully appreciated at the time when the extension of the Objects was last under consideration, namely, in 1896, that under the Companies Acts the granting of such an extension as appears to be desired by the Association would be fraught with such legal difficulties as could probably only be surmounted by the formation of a new Company.

The Annual Representative Meeting at Oxford in 1904 directed the Council to take the legal steps necessary to obtain such alteration of the present Memorandum of Association as would give effect to that which was desired in expansion of the Objects of the Association. The Council, in proceeding to carry out this instruction, was legally advised that it was exceedingly doubtful whether the requisite extension of the Memorandum of Association would, or even could, be granted by the High Court, and that therefore the only procedure for carrying out the wishes of the Association under the Companies Acts would be to wind up the present Company and form a new one.

One of the Counsel consulted, however, Mr. F. B. Palmer, a recognized authority on Company Law, made the following important suggestion, in an opinion, dated May 16th, 1905, which was reported to the Annual Representative Meeting at Leicester:

> "It occurs to me that it would be expedient for the Association to consider, before taking any further steps in regard to the alteration of the objects, whether the time has not now come to apply for a Royal Charter. The Association is one of great magnitude, and with interests in all parts of the world, and I cannot but think that there would be little difficulty in obtaining a Charter. The advantage of obtaining a Charter would be very great, for not only would the Association be free from the somewhat troublesome restrictions under the Companies Acts but its powers for good would become much greater. It would be freed, for all practical purposes, from the trammelling rules of the Courts in regard to what is and what is not *ultra vires*, and thus, as the undertaking develops, so could the operations be extended without the necessity for seeking for express provision among the objects.
>
> "A Chartered Corporation, even though constituted for specified objects, is not in point of law limited by those objects."

The Committee to which the matter had been referred thereupon instituted an inquiry as to the likelihood of the Association being granted a Royal Charter, and found that the practice of the Privy Council had changed somewhat in recent years as regards advising His Majesty to grant Charters, these being granted now more readily than formerly. The information obtained on this and other points was so encouraging that the Council adopted *nemine contradicente* the conclusion of the Committee that the Representative Meeting should be recommended to authorize an application being made to the Privy Council praying His Majesty to grant a Royal Charter, and that, pending the decision of His Majesty, no further steps should be taken to move the Courts for an alteration of the Memorandum. The Representative Meeting adopted this recommendation, and instructed the Central Council to submit the draft of the application for a Royal Charter to the Divisions as soon as possible with an estimate of the probable cost and with an explanatory Memorandum.

II. ADVANTAGES OF INCORPORATION UNDER A CHARTER.

The prospective advantages to the Association resulting from incorporation by a Royal Charter, instead of under the Companies Acts, are to some extent indicated in the account of the circumstances which have led up to the present further consideration of the matter, and also in the comparison, in Part III of this Memorandum, of the Constitution of the Association on that basis with that now existing. The Organization Committee considers, however, that it will be of assistance to the Divisions to be furnished with a separate collected statement of the advantages which are anticipated to be attendant upon the grant of a Charter.

1. *Wider Definition of the Objects of the Association.*

The primary reason in favour of applying for a Charter has already been stated, namely, that it is believed that the Association could thus secure a wider definition of its objects than could be obtained by any alteration of the present Memorandum of Association which would be likely to be sanctioned by the High Court.

2. *Greater Freedom of Action.*

In the opinion of Mr. F. B. Palmer cited in the first part of this Memorandum it is expressly stated as follows:

> "The Association would be freed for all practical purposes from the trammelling rules of the Courts in regard to what is and what is not *ultra vires*, and thus, as the undertaking develops, so could the operations be extended without the necessity for seeking for express provision among the objects. A Chartered Corporation, even though constituted for specified objects, is not in point of law limited by those objects."

3. *Extension of Representative Principle.*

The Constitution of a Chartered Corporation depends entirely upon the terms of the Charter, and is therefore not subject to the limitations imposed by the Companies Acts upon a Company registered thereunder. Under a Charter, therefore, it will be possible to transfer to the Representative Body those powers, as regards the consideration of the Annual Financial Statement, the appointment of auditors and other matters, which the Constitution Committee in 1901 and 1902 found it necessary in compliance with the Companies Acts to leave in the hands of the General Meeting. The Representative Meeting at Leicester instructed the Council, in framing the draft Charter, to provide for the transfer of financial business from the General Meeting to the Representative Meeting. This has been provided for in the accompanying draft Charter.

4. Alterations of Regulations under a Charter.

The Committee has carefully considered the possibility, which has been suggested, that under the Charter there would be special difficulties in effecting those changes in the Regulations of the Association which must be expected to be constantly necessary in order to meet its varying requirements. Specific questions on this subject have been submitted to Counsel (Mr. Dill), who has advised that it is possible to frame many of the Regulations of the Association as By-laws which can be altered exactly as under the present Constitution; that the Privy Council would probably require, however, that the more important of the Regulations should be in the nature of Ordinances which could be from time to time amended by the Representative Meeting, subject to the approval of the Privy Council.

Counsel, moreover, advised that, in such circumstances, the Privy Council would not be likely to refuse its sanction to what was clearly desired by the majority of the Association, that the process of obtaining approval of such changes would not occupy more than a few weeks, and that no fee would be payable to the Privy Council Office. Inasmuch as, under the present Constitution, the analogous provisions—namely, those contained in the Articles of Association—can only be changed by the cumbersome procedure of passing a Special Resolution, the difficulty of changing the important Regulations of the Association would, on the whole, appear to be materially decreased under a Charter.

5. Specific Question put to Counsel.

Having regard to the importance in the working of the Association of the utmost attainable freedom, the Committee submitted to Counsel (Mr. Dill) the following specific question:

> "In general terms, is it probable that the alteration from the present Constitution, with Memorandum of Association, Articles, and By-laws, to that under a Charter will give the Association greater freedom of action and elasticity as regards adaptation of its Regulations to its varying requirements from time to time?"

Counsel answered this question in the affirmative.

III. GENERAL PRINCIPLES OBSERVED BY THE ORGANIZATION COMMITTEE IN PREPARING THE DRAFT CHARTER, AND COMPARISON WITH THE PRESENT REGULATIONS.

Form of Draft.

The Organization Committee, on undertaking the duty referred to it by the Central Council of carrying out the instruction of the Annual Representative Meeting to prepare a draft application for a Charter, ascertained from Counsel that an application for a Charter must be accompanied by a draft of the proposed Charter. It was further ascertained that it was not necessary for all the Regulations of the Association to be included in the Charter, but that there might be Ordinances or By-laws alterable by the Association, subject, however, as regards the more important of them (to be classed as Ordinances), to the approval of the Privy Council. Counsel also advised that such subsidiary Regulations should, as a matter of convenience, be scheduled to the Charter, in order that, if the petition were approved by the Privy Council, the Regulations might as a whole take effect at once.

It was accordingly decided to frame—

(*a*) A draft *Charter*, embodying the fundamental principles of the Constitution of the Association.

(*b*) Draft *Ordinances*, containing the more important Regulations for the government and administration of the Association.

(*c*) Draft *By-laws*, containing the remaining regulations.

Powers of Future Modification.

The *Charter* itself will only be capable of modification by the grant from the Crown of a supplemental Charter.

The provisions as to alterations of *Ordinances* and of *By-laws* are contained in the Charter, the Ordinances being capable of alteration by the Association subject to the approval of the Privy Council, the By-laws by the Association without control of the Privy Council.

Principles Observed.

The principles by which the Committee has been guided in the preparation of these drafts have been—

(i) Primarily, to obtain an extended definition of *the Objects* of the Association and greater liberty of action. The provisions to this end are contained in Clauses 2 and 3 of the draft Charter, which are to be compared with Clauses 3, 4, and 5 of the present Memorandum of Association.

(ii) To carry into effect the specific instructions of the Representative Meeting that all financial business should be transferred from the General Meeting to the Representative Meeting. This being provided for, it has been deemed unnecessary to make provision for the future holding of any General Business Meetings of the Association. Under the proposed new regulations, therefore, General Meetings would be held for scientific and social purposes only.

(iii) To give effect to the resolutions of the Annual Representative Meeting at Leicester with respect to the alteration of certain Articles of Association, and also the instructions to the Central Council to prepare By-laws on certain matters for the consideration of the next Representative Meeting.

(iv) To carry out such other modifications of the present regulations as have been suggested by Counsel as being consequential upon the foregoing alterations.

(v) To translate, in other respects, the present Regulations, without alteration of substance.

IV. LEGAL OPINIONS OBTAINED IN CERTAIN IMPORTANT MATTERS.

In the course of preparation of the drafts now submitted, the Organization Committee has had occasion to take the opinion of Counsel (Mr. Dill) on specific points in addition to those already enumerated. As regards the most important of these, it appears to the Committee that it will assist the Divisions to have before them the advice thus obtained.

1. *Definition of Objects.*

The construction of the Objects Clause of the draft Charter (Clause 2) has received the very careful and close attention of the Committee and of Counsel, in order that the Objects of the Association, and the means by which it is proposed to carry out those Objects, may be framed so as to include everything which the Association may possibly at any time desire to undertake, and not by implication to debar the Association from doing those things which are not specifically mentioned.

The general statement of the Objects is contained in Subclause (1) of Clause 2, which Subclause appears to the Committee to include, in general terms, everything which the British Medical Association is likely at any time to wish to undertake for the benefit of its members or of the profession. Counsel has definitely advised, however, that the Privy Council would probably not approve a Charter containing only a definition of objects in these general terms, but would insist upon some more specific indication of the work which the Association undertakes or may at any time contemplate undertaking. Further, Counsel advises that a more detailed definition is, in his view, on the whole desirable in the interests of the Association.

To meet the objections that it is impossible to foresee and provide in specific terms for all that the Association may find it expedient to do in order to carry out in all respects these general objects as defined in Subclause (1) and that a definition of specific methods might conceivably be deemed to limit the Association, by implication, to the matters so stated, Counsel has framed the first part of Clause 2, Subclause (2), and its final Paragraph, (x), in such terms as in his view would give the greatest possible latitude to the Association.

The matters stated in the Paragraphs (i) to (x) of Subclause (2) include all the matters which were placed before Mr. Fischer Williams and Mr. Beaufort Palmer when the proposed alteration of the Memorandum of Association was under consideration, these having been reported to the Annual Representative Meeting at Leicester.

2. *Winding Up.*

The following statement embodies the replies of Counsel to specific inquiries by the Committee as to the legal form necessary to effect the transition from the present incorporation of the Association under the Companies Acts to incorporation by Royal Charter.

(*a*) The grant of a Charter would not *ipso facto* terminate the present Company, which must be duly wound up in the manner prescribed by the Companies Acts.

(*b*) For this purpose a Special Resolution of the Company would be necessary, which must be passed by a three-fourths majority of a General Meeting and confirmed by a simple majority in a subsequent meeting.

(*c*) The Meeting to consider the Winding-up Resolution should not in Counsel's opinion be convened until a Representative Meeting has definitely approved the Application for a Charter, and the Petition has been presented and an intimation received that it will be granted.

(*d*) It would be a matter of arrangement so to fix the dates of the meetings convened to pass the winding-up resolutions that the second should practically coincide with the date of grant of the Charter.

(*e*) The winding-up, if decided upon, would follow the ordinary course of a voluntary winding up: a liquidator would be appointed, who might be an officer of the Company, and whose duties would be to collect the assets of the Company, discharge its liabilities, and transfer the balance of assets to the Chartered Association. It would not be necessary actually to realize the assets, except so far as might be required for the discharge of liabilities.

ESTIMATE OF PROBABLE COST OF OBTAINING A CHARTER.

In reporting as to the probable cost of obtaining a Charter, the Organization Committee would first point out that a considerable portion of the cost has necessarily been already incurred in the preparation as directed by the Representative Meeting of the drafts now submitted. It is, therefore, desirable to set out the estimated cost of obtaining a Charter in two parts, namely,

(*A*) The cost already incurred.

(*B*) The estimated cost of completing the matter.

A. The costs up to the present have been *approximately:*

(1) Legal expenses	Counsel's fees	£75
	Other charges	115
(2) Other expenses (Printing, Committee Meetings, etc.)		200
		£390

B. The cost of completing the application will depend upon whether it is opposed or not.

If it were seriously opposed, it is impossible to estimate with any approach to accuracy the cost of proceeding with the matter.

If the application is not opposed, it is estimated that the costs would be, approximately:

(1) Government stamps and fees	£130
*(2) Legal expenses of completing the requisite papers (including such further fees as would be payable to Counsel) ...	200
*(3) Other expenses (Printing, Committee Meetings, etc.)	200
(4) Cost of winding up the existing Association	100
	£630

It is evident that the costs under (2) and (3) must depend to a considerable extent upon the nature of the alterations made by the Representative Meeting in the Draft now submitted, and the consequent legal expenses incurred in giving effect to such alterations.

---

*These items have been estimated on the supposition that the cost of completing the preparation of the draft Charter and Petition would at most not exceed that of preparing the drafts now circulated.

DRAFT CHARTER, ORDINANCES, AND BY-LAWS.

(*As drafted by Counsel, Mr. T. R. C. Dill, January, and revised by the Organization Committee and by Counsel, to March,* 1906.)

CHARTER.

British Medical Association.

EDWARD VII. by the Grace of God of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith—TO ALL TO WHOM THESE PRESENTS SHALL COME, GREETING.

WHEREAS

[a]

have presented to Us their humble Petition setting forth (amongst other things), to the effect following:—

[b]

AND WHEREAS We are minded to comply with the said prayer and to grant a charter containing the provisions hereinafter set forth.

NOW KNOW YE that We having taken the premises into Our Royal consideration of Our special Grace certain knowledge and mere motion, do will, ordain, constitute, declare, appoint, and grant as follows, that is to say:—

1. For the purposes hereinafter set forth and all other purposes of this Our Charter the above-named Petitioners and all other persons who shall pursuant to this Our Charter and the Ordinances made thereunder be members of the Corporation hereby constituted are hereby created and henceforth for ever shall be one body politic and corporate by the name of the "British Medical Association" (hereinafter called "the Association"), and by the name aforesaid shall have perpetual succession and a common seal with full power and authority to alter, vary, break, renew the same at their discretion, and by the same name may sue and be sued, in every court of Us, Our heirs and successors, and We do hereby grant to the Association full licence, right, authority, power and capacity (notwithstanding the statutes of Mortmain), First to take and hold all such lands, tenements, hereditaments and property as are now

---

[a] Here insert the names and descriptions of a few representative members of the existing Association as Petitioners.

The number of them is immaterial, but it is not desirable to make the document unnecessarily bulky, and I suggest that the number should not exceed twelve.—T.R.C.D.

[b] Here will be inserted a statement of the substance of the Petition which is not yet drafted, but will contain a short history of the Association and the reasons for desiring a Charter.—T.R.C.D.

Subjects of Clauses.

Corresponding provisions of the present Regulations.

vested in or held by the existing Association (c) hereinbefore referred to, or any trustees or trustee for that Association, and, secondly, to take, acquire, purchase and hold (d) in perpetuity or otherwise any lands, tenements, hereditaments and property whatsoever, situate within Our United Kingdom of Great Britain and Ireland; And (subject to such consent if any as may be required by law) (e) to grant, demise, alien, mortgage, charge or otherwise dispose of all or any of the lands, tenements, hereditaments and property for the time being of the Association, and also to do all other matters incidental or appertaining to a body corporate.

Objects of the Association.

Memorandum of Association, Clause 3.

2.—(1) We do hereby declare the objects of the Association to be the promotion of the medical and allied sciences, the maintenance of the honour and interests of the medical profession and of the members thereof collectively and individually, and the co-operation of the members of the Association for their mutual assistance and support in all matters affecting them in their professional capacity, including the encouragement, promotion or provision of means for protecting Members and their families against the exigencies of age, sickness, death or misfortune.

Methods.

(2) Without prejudice to the generality of the foregoing objects and to the other powers conferred by these presents and so that the said objects and powers shall be in no wise restricted by the powers next hereinafter specified We do hereby expressly declare that for the attainment of the aforesaid objects the Association may adopt any or all of the following means, that is to say:—

(i) May hold meetings and conferences at any place in the United Kingdom or in any part of Our dominions for the discussion of the affairs, interests and duties of the medical profession and for promoting personal and friendly intercourse between Members of the Association and between members of the medical profession in general.

(ii) May compile, revise, publish and distribute or sell lists and registers of medical practitioners, and records of events, transactions and proceedings of interest to the Members of the medical profession.

(iii) May publish periodically and sell the *British Medical Journal* or any other journal of a character specially adapted to the needs of the Medical Profession.

(iv) May encourage research in the medical and allied sciences by grants from the funds of the Association, by the establishment of scholarships, prizes or rewards and in such other manner as the Association may determine upon.

(v) May originate, support, promote, and oppose alterations in the law of the United Kingdom or any British Colony or Dependency affecting the Public Health or the Medical Profession and may promote the candidature of any member of the Association for Parliament or for any British Legislative Assembly.

Memorandum of Association, Paragraphs (*a*) to (*d*) of Clause 3.

(vi) May take or defend and assist persons in taking or defending any legal proceedings civil or criminal (including proceedings before the General Medical Council) in which in the opinion of the Association the honour or interests of the Medical Profession or of any Member of the Association in his professional capacity or any question of professional principle is or are involved.

(c) The expression, existing Association, will be defined in the preamble or recitals to the Charter.—T.R.C.D.

(d) The Privy Council may require a limit to be imposed on the annual value of the land which may be held.—T.R.C.D.

(e) The words in brackets are inserted as a reminder that the consent of the Charity Commissioners may be required to the alienation of land by the Association.—T.R.C.D.

(vii) May provide facilities for sales or transfers of medical practices, for the arrangement of medical partnerships and for the engagement of qualified assistants and temporary substitutes for medical practitioners being Members of the Association.

(viii) May establish, endow, contribute to, organise and manage provident or benevolent funds for the benefit or assistance of Members of the Association or of the Medical Profession and their families or dependents.

(ix) May undertake and carry out the execution of any trusts which the Association may deem to be directly or indirectly conducive to the interests of the Medical Profession or any branch thereof.

(x) May take such other means (whether of the same nature as the means hereinbefore stated or not) as may seem to the Association incidental or conducive to the promotion or carrying out of the foregoing objects or any of them.

Memorandum of Association, Clause 3, Paragraph (*e*).

Association not to carry on trade or make profit for individual members.

3. The Association shall not carry on any trade or business (except so far as the same may be involved in the publication, conduct and sale of the Journal of the Association and of the other documents and records hereinbefore mentioned and in the provision of facilities for the matters mentioned in paragraph (vii) of the last preceding clause) nor engage in any transaction with a view to the pecuniary profit or gain of the individual Members thereof, provided that this shall not preclude the Association from applying its funds in any manner within the contemplation and intention of the last preceding clause of these Presents, or in the remuneration of Members of the Association for services actually rendered.

Memorandum, Clause 4.

Membership: First Members.

4. The first Members of the Association shall be the persons named in the Register of the Members of the existing Association which has been certified by (the Secretary of the existing Association) as complete and correct and bears even date with the Order in Council for the preparation of the Warrant for passing this Our Charter under the Great Seal of the United Kingdom.

Article II.

Election of Members.
Ordinance 4;
By-laws 4 to 9.

Ordinary Members of the Association shall hereafter be elected in such manner as may be from time to time prescribed by the Ordinances and By-laws of the Association.

Honorary Members of the Association.
By-law 8.

5.—(1) The Association shall have power to elect as Honorary Members such persons, and in such manner as the By-laws of the Association may provide, and to admit members so elected to such privileges other than that of voting as Members of the Association, as may from time to time be conferred on them by or under the By-laws.

Article X.

Extraordinary Members of Divisions or Branches.
By-law 9.

(2) Each Division or Branch hereinafter mentioned of the Association shall have power to admit to certain of the privileges of membership of such Division or Branch, other than that of voting, Members of the Association, who are not entitled to be Ordinary Members of such Division or Branch and each Division or Branch of the Association not in the United Kingdom shall have power to admit to certain of the privileges of membership of such Division or Branch, other than that of voting, Members of the Medical Profession who are not eligible for election as Ordinary Members of the Association. The By-laws of the Association may prescribe the designation under which persons

Article VI.

Subjects of Clauses.
Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

shall be admitted to such privileges, the nature of the privileges to be conferred upon them, and the conditions of admission thereto.

Local Bodies of Members.

6.—(1) For the better attainment of the objects of the Association the Members thereof shall be formed into separate local bodies styled Divisions and Branches.

Article IV.

Divisions.
Ordinances 11, 12.
Branches.

(2) A Division shall comprise such body of Members as the Association shall in the manner prescribed by the Ordinances of the Association declare to be a Division, and a Branch shall be such Division, or such group of Divisions, as the Association shall in like manner declare to be a Branch.

Area of Divisions.

(3) Each Division shall have a local area to be fixed from time to time by or in accordance with the provisions contained in the Ordinances.

Membership of Divisions and Branches.

(4) Every Member whose address as registered for the time being in the books of the Association is at a place situate within the area of any Division shall *ipso facto* be an Ordinary Member of that Division and of no other, and every Ordinary Member of a Division shall *ipso facto* be an Ordinary Member of the Branch which comprises that Division and of no other.

Regulations as to constitution and government of Divisions and Branches.
Ordinances 11 to 13; By-laws 17 to 23.

(5) In all other respects the Divisions and Branches shall be so constituted, managed, and governed, and shall have such powers, rights, and privileges and shall be under such obligations, as shall be prescribed by or under the Ordinances and By-laws for the time being, and the By-laws may provide for contributions, grants and subscriptions out of the general funds of the Association to Divisions or Branches, and may impose on the Members of any Division or Branch such obligations towards the Association, and the Division and Branch respectively, as may seem to the Association to be expedient, and may empower any Division or Branch to make (subject or not subject to the approval of the Association) any rules in relation to the affairs thereof and to vary and repeal any such rules.

Article V.

Representative Body.
Ordinances 14 to 17; By-laws 24 to 34.

7. The general control and direction of the policy and affairs of the Association shall be vested in a body of Representatives (hereinafter called the "Representative Body") annually elected by the Divisions in accordance with the provisions of the Ordinances and the By-laws. The Representative Body shall hold an annual meeting (hereinafter called the "Annual Representative Meeting") and may hold other meetings (hereinafter called "Special Representative Meetings").

Articles XXVI to XXXV; By-laws 18 to 21.

Central Council.
Ordinance 19; By-laws 35 to 47.

8. There shall be a Central Council (hereinafter called "the Council") which shall, save as otherwise provided by the Ordinances, carry into execution resolutions passed by the Representative Body, and administer the affairs of the Association in accordance with this Our Charter and the Ordinances and the By-laws and shall exercise such powers and do such acts and things as may be exercised or done by the Association and are not by the Provisions of this Our Charter or the Ordinances or By-laws directed to be exercised or done by the Representative Body.

Articles XXXVIII to XL; By-laws 22 to 35.

Ordinances.

9.—(1) The Ordinances of the Association may (subject to the provisions of this Our Charter)

Ordinances 4 to 8.

(*a*) Prescribe the qualifications for membership of the Association and the other terms of such membership and prescribe or limit the amount of the subscriptions to be paid by members.

Articles II, III, VI to X.

Ordinances 8 to 10.

(*b*) Provide for the resignation of membership and for the removal from or other modes of termination of membership of the Association.

Articles VIII, XLII to XLIV.

Subjects of Clauses.

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

Ordinances 11, 12.

(*c*) Provide for the formation of the Divisions and Branches.

Articles IV, V; By-laws 4 to 12.

Representative Body, Ordinances 14 to 17; Council, Ordinance 19.

(*d*) Provide for and prescribe the constitution and powers of the Representative Body and the Council and the mode of election of the members thereof respectively.

Meetings of the Association, Ordinance 18; of the Representative Body, Ordinance 14, By-laws 26, 27; of the Council, Ordinance 19, By-laws 44–47.

(*e*) Provide for the holding of meetings of the Association and of the Representative Body and of the Council.

Representative Meetings, Articles XXVI to XXXV, By-laws 18 to 21; *Council*, Articles XXXVIII to XL, By-laws 22 to 35.

Ordinances 21, 22.

(*f*) Provide for the appointment of Officers of the Association.

Articles XXXVI and XXXVII.

Ordinance 23.

(*g*) Provide for the payment of the personal expenses incurred by members in connection with their attendance at meetings of the Representative Body or of the Council or of any Committee of either of the said bodies or at any Conference authorised by the Representative Body or by the Council.

Article XLV.

Ordinance 24; By-law 28.

(*h*) Provide for the audit of the accounts of the Association.

Article XVIII(A).

Ordinances 17, 26; By-law 28.

(*i*) Empower the Representative Body (subject or not subject to the consent of the Council or other restrictions) to make and from time to time to add to, amend, alter or repeal By-laws for regulating (subject to this Our Charter and the Ordinances of the Association) the proceedings of the Representative Body and the Council and any committee thereof respectively and the conduct of the business and affairs of the Association and any other matters which require to be so regulated.

Article XLVII.

(*j*) Provide for the government of the Association in all respects not otherwise provided for by this Our Charter.

Ordinances; Making, alteration, and repeal.

(2) The first Ordinances of the Association shall be those set forth in the 1st Schedule hereto and the same are hereby declared to be valid and effectual to all intents and purposes whatsoever. The Ordinances (including the first Ordinances) may be added to, amended, altered or repealed and new Ordinances made from time to time by the Representative Body subject to such restrictions (if any) as may be prescribed by the Ordinances. Provided that no such addition, amendment, alteration, repeal or new Ordinance shall come into operation unless and until it shall have been allowed by Our Privy Council. Such allowance shall be conclusive evidence that the addition, amendment, alteration, repeal or new Ordinance has been in all respects duly made and is valid and effectual for all purposes.

First By-laws.

10. The first By-laws shall be those set forth in the 2nd Schedule hereto, and the same are hereby declared to be valid and effectual to all intents and purposes whatsoever until the same shall be amended, altered or repealed in pursuance of the powers conferred by the Ordinances.

Article XLVII.

Continuity of office.

11. The Representatives of Divisions of the existing Association, who shall be holding office as such at the date when this Our Charter comes into operation, shall be deemed to be the first Representatives of the Divisions of the Association, and shall continue to hold office as such until their successors are appointed in pursuance of this Our Charter and Members of the Council of the existing Association holding office at the date when this Our Charter comes into operation shall be

Continuity of Divisions and Branches.

deemed to be the Members of and to form the first Council of the Association, and shall continue to act as such until the new Council is elected in pursuance of this Our Charter and the several Officers and Committees of the existing Association shall continue to hold their respective offices and discharge their respective duties and receive such emoluments, if any, as pertain to the offices which they fill until it shall be otherwise determined in pursuance of this Our Charter, and the Divisions and Branches of the existing Association, with their Officers, Councils and Committees existing and holding office respectively at the date of the grant of this Charter shall be deemed to be Divisions and Branches, Officers, Councils and Committees constituted or appointed in pursuance of this Our Charter, and shall continue until otherwise determined in pursuance of this Our Charter.

Supplemental Charter.

12. It shall be lawful for Us, Our Heirs and Successors by supplemental Charter to add to, amend or repeal the provisions of this Our Charter or any of them provided that a resolution to accept and approve such supplemental Charter shall have been passed by a majority of not less than two-thirds of the members present and voting at a Representative Meeting specially summoned for the purpose. Any such resolution shall have effect subject to such approval or confirmation (if any) as may from time to time be required by the Ordinances with respect to the amendment of an Ordinance ([h]).

Surrender of Charter and winding up.

13. It shall be lawful for the Association by a resolution of the Representative Body passed at a representative meeting specially summoned for the purpose by such majority as mentioned in the last preceding clause hereof and subject to such approval or confirmation as therein mentioned to surrender this Our Charter and to wind up the affairs of the Association, but if on the winding up or dissolution of the Association there shall remain after the satisfaction of all its debts and liabilities any property whatsoever, the same shall not be paid to or distributed among the Members of the Association or any of them, but shall, subject to any special trusts affecting the same, be given and transferred to some other institution or institutions having objects similar to the objects of the Association to be determined by the Representative Body at or before the time of dissolution or in default thereof by a judge of the Chancery Division of Our High Court of Justice.

14. Lastly, We do hereby for Us, Our Heirs and Successors grant that these Our Letters Patent shall be in and by all things good, firm, valid, sufficient and effectual in law notwithstanding any omission, imperfection, defect, matter, cause, or thing whatsoever to the contrary thereof in these Our Letters Patent contained and shall be taken, construed and adjudged in the most favourable and beneficial sense and to the best advantage of and for the Association as well in Our Courts of Record as elsewhere notwithstanding any recital, mis-recital, uncertainty, or imperfection in these Our Letters Patent ([i]).

In Witness whereof We have caused these Our Letters to be made Patent.

Witness Ourselves at Our Palace of this
day of in the year of Our Reign.

By warrant under the King's Sign Manual.

---

[h] Provisions such as this and the next clause are usually inserted in Charters and facilitate amendments.—T.R.C.D.

Article I.

1.—(1) In these Ordinances (where not repugnant to the Context)

(*a*) "The Charter" means and includes the Royal Charter granted in the year 1906, and incorporating the British Medical Association and any amendment thereof, and any supplemental Charter for the time being held by that Association.

(*b*) "The Ordinances" means the Ordinances for the time being of the Association.

(*c*) "The By-laws" means the By-laws for the time being of the Association.

(*d*) "The Journal" means the *British Medical Journal* or other the professional journal for the time being published by the Association.

(2) Words occurring in these Ordinances and also occurring in the Charter shall bear the same respective meanings in these Ordinances as they bear in the Charter.

2. The Interpretation Act, 1889, shall apply for the purpose of the interpretation of these Ordinances as it applies for the interpretation of an Act of Parliament.

3. These Ordinances shall be construed so as not to conflict with the Charter.

SECTION II.

MEMBERSHIP.

Eligibility.

Charter 4 and 9 (*a*). By-laws 4 to 9.

4. Any Medical Practitioner registered in the United Kingdom under the Medical Acts, and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualification as shall, subject to the By-laws, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. Subject as aforesaid the mode and conditions of election to membership shall from time to time be determined by or in accordance with the By-laws. Article III.

Subscriptions.

Charter 9 (*a*); By-laws 11 to 14.

5. Every Member shall pay to the Association a subscription of such amount not exceeding sixty shillings per annum, as may for the time being be prescribed by the By-laws. The said subscription shall be considered due in advance on the first of January of each year, or in the case of Members elected during the year at the time of election. Article VII.

Charter 9 (*a*).

6. Each year's subscription shall entitle the Member to all privileges of membership of the Association, including that of receiving the *Journal* for the current year, and to the ordinary privileges of membership of that Division and of that Branch of which he is an ordinary Member. Article VII.

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

Re-Eligibility.

Charter 9 (*a*).

Article IX.

7. No person who shall have been a Member of the Association and ceased to be such shall be eligible for re-election until he shall have paid all arrears of subscription (if any) due from him to the Association at the date when his former membership ceased, and no person whose former membership shall have been terminated by reason of his conviction or expulsion as hereinafter provided shall be eligible for re-election by any Branch Council without the sanction previously obtained of the Central Council.

Duration of Membership.

Charter 9 (*a*).

Article III (second paragraph).

8. Every Member whether one of the first members or a subsequently elected Member shall remain a member until his membership is terminated in accordance with the provisions hereinafter contained.

Termination of Membership.

Charter 9 (*b*).

9. Membership of the Association may be terminated in any of the following ways, namely:—

By-law 14. — Article VIII.

(*a*) By resignation subject to such notice as may be provided for by the By-laws and subject to the provisions of the next succeeding Ordinance.

By-law 14. — Article VIII.

(*b*) *Ipso facto* by default in the payment of subscriptions to the Association for such period as may be stated in the By-laws.

Article XLII.

(*c*) *Ipso facto* upon sentence (after conviction in a Court of Justice of any crime) to imprisonment with hard labour without the option of a fine or to any greater punishment, or upon erasure from the Medical Register under Section 29 of the Medical Act of 1858, or upon forfeiture through misconduct of the medical qualification by virtue of which the Member shall have been eligible for membership.

Article XLIII.

(*d*) *Ipso facto* by expulsion (after the enquiry and in the manner prescribed in the next succeeding Ordinance) on the ground that the conduct of the Member is detrimental to the honour and interests of the Medical Profession or Association or calculated to bring the Profession into disrepute, or on the ground that the member has wilfully and persistently refused to comply with the regulations of the Association or the rules of any Division or Branch of which he may be a member.

Expulsion.

By-law 54 (8), (as regards "enquiry"); By-law 57 (as regards "notice").

Article XLIV (*a*).

10. (*a*) The Council shall have power on the representation of any Branch and after due enquiry, of which not less than fourteen days' notice specifying a time and place at which he may be heard in his defence shall have been served on the Member in the manner prescribed by the By-laws, finally to expel from membership of the Association any Member of such Branch whose conduct shall be held by the Council to be such as renders him liable to expulsion under paragraph (*d*) of the last preceding Ordinance.

Article XLIV (*b*).

(*b*) The Council of each Branch out of the United Kingdom having a membership of not less than thirty shall have power, on the representation of any two Members of such Branch and at a Special Meeting convened at not less than one month's notice, and after due enquiry of which not less than fourteen days' notice in writing specifying a time and place at which he may be heard in his defence shall have been given to the Member, to expel from membership of the Association any Member of such Branch whose conduct shall be held by the Council

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

of the Branch to be such as renders him liable to expulsion under paragraph (*d*) of the last preceding Ordinance.

(*c*) A majority of two-thirds of those present and voting at a meeting whether of the Council or of a Branch Council shall be required for the purpose of exercising the powers conferred by the last two preceding clauses. Article XLIV (*c*).

(*d*) When a member is expelled he shall notwithstanding that he has ceased to be a member be liable to pay all sums due from him to the Association, or any Division or Branch thereof, at the time of his expulsion. Article XLIV (*d*).

(*e*) No member in regard to whom a representation as aforesaid has been made or whose conduct is under investigation, or is the subject of enquiry by the Council, or by a Branch Council, or by any Council or Committee of a Division, or by any Committee authorised in that behalf by any such Council as aforesaid, shall be capable of effectively resigning his membership of the Association until the investigation or enquiry is completed and the decision thereunder is made known. An enquiry or investigation shall, for the purpose of this clause, be deemed to commence at the time when the matter of such investigation or enquiry is first brought officially under the notice of the body authorised by or in pursuance of this Ordinance to make such investigation or enquiry. Article XLIV (*e*).

SECTION III.

Charter, 6 (2).

DIVISIONS AND BRANCHES.

Formation.

11. It shall rest with the Council from time to time to determine, recognise, and declare by resolution published in the Journal, what bodies of Members shall be Divisions, and what Divisions and groups of Divisions shall be Branches of the Association, and what shall be the local area of each Division, and accordingly the Council shall have full power from time to time to amalgamate, subdivide and modify Divisions and Branches and the local areas thereof. Nevertheless, not less than one calendar month's notice in all cases shall be given (in the manner prescribed by the By-laws) to any existing Division or Branch in whose boundaries or area any change is proposed. By-law 4.

By-law 57 (as regards notice).

Boundaries.

12. In determining the boundaries or area of Divisions and Branches, the Council shall have regard to the expressed wishes of the existing local bodies concerned, and to the facilities of communication in each district by railway and otherwise, and the opportunities thus afforded to Members of local bodies for meeting to transact the business thereof, and to the expediency of making the boundaries of such bodies coincide with those of Parliamentary constituencies, counties, or other public administrative divisions of the country. By-law 5.

Autonomy.

13. (*a*) Subject to the Charter and the Ordinances and By-laws each Division and each Branch shall be free to govern itself in such manner as it shall think fit, and for that purpose to make from time to time such Rules as it may think fit, and to repeal or alter the same as and when it shall consider it expedient. By-law 11 (*a*).

(*b*) The Rules so made, and for the time being in force, shall be binding on the Members constituting the Division or Branch in reference to which they are made. Provided that such Rules shall be By-law 11 (*b*).

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

submitted for approval to the Council and shall not come into operation unless and until they are approved by the Council.

SECTION IV.

Representative Body.

Charter 7, 9 (*d*); By-laws 24 to 34.

Articles XXVI to XXXV; By-laws 18 to 21.

Composition.

14. The Representative Body shall be composed of the Representatives annually elected by the Divisions in the manner prescribed by the Ordinances and the By-laws and of the members of the Council in office for the time being. No Member of the Association who is not a Representative of a Division or group of Divisions, or a Member of the Council, shall be entitled to take part in any Representative Meeting. Article XXVI.

Voting Power.

15. Members of the Representative Body elected by the Divisions shall alone be entitled to vote at a Representative Meeting. By-law 20.

Election of Representatives.

16.—(1) Representatives of Divisions shall be elected by Constituencies formed as follows, each such Constituency being entitled to elect one Representative. Article XXVII.

(2) Any Division having not less than fifty members may form one Constituency, and except as hereinafter provided every Division having less than fifty members shall be grouped by the Council with another Division, or with other Divisions, to form a Constituency having not less than fifty members.

(3) Provided that the Council shall have power to give separate representation to Divisions having fewer than fifty members in those cases in which it appears to the Council that special difficulties exist as to the holding of joint meetings with neighbouring Divisions.

(4) In no case shall the total number of Constituencies formed throughout the Association exceed 300.

(5) Subject as aforesaid the Constituencies shall be formed and may be from time to time altered by the Council, and the Council shall publish lists of the Constituencies as and when they may think expedient.

(6) In the case of a Constituency formed within the United Kingdom, the Representative shall be elected by a General Meeting of the Members of the Constituency, held not more than three months, nor less than three weeks, before the Annual Representative Meeting, and in the case of a Constituency not formed within the United Kingdom, the Representative shall be elected either in manner aforesaid, or by voting papers sent to each Member of the Constituency, as the said Constituency may decide.

Resolutions.

Charter 9 (1) (*d*) (*i*). 17.—(1) Subject as hereinafter provided a Resolution of the Representative Body (not being inconsistent with any provision of the Charter, Ordinances or By-laws) which affects the funds of the Association, or relates to the Ordinances or By-laws or to the policy of the Association in matters affecting the honour or interests of the medical profession, and is carried by a majority of not less than two-thirds of the members present and voting thereon, or which relates to any other business within the powers of the Representative Body, and is carried by a simple majority, shall be deemed to be a decision of the Association. Article XXXV.

Corresponding provisions of the present Regulations.

Proviso as to Notice.

(2) Provided that no resolution to make any addition to or any amendment, alteration or repeal of any Ordinances or By-laws, or to make any new Ordinance or By-law, shall have any operation unless a proposal to make the same shall have been previously approved and submitted to the Representative Body either by the Council, or by a Division, and shall have been published in the Journal, not less than three months before the Annual Representative Meeting or one month before the Special Representative Meeting at which such resolution is passed.

Proviso as to Referendum.

(3) Provided also that in respect of every resolution of the Representative Body the following provisions shall have effect:—

Articles XXII and XXXV (second paragraph).

(*a*) Within twenty-eight days after the date on which the resolution was passed the Council shall hold a meeting for the purpose of considering the resolution. Such meeting may be convened by a notice given either before or after or during the progress of the Representative Meeting at which the resolution was passed.

Article XXII (1).

(*b*) The Council at their said meeting may either approve the resolution or determine on a Referendum and they shall determine on a Referendum if in their opinion the resolution does not truly represent the wishes of the Association.

Article XXII (2)

(*c*) If the Council at their said meeting determine on a Referendum then the Secretary of the Association shall as soon as may be after the said meeting send by post to the Secretary of each Division of the Association a requisition requiring him to convene a meeting of the members of his Division (hereinafter called "the Division Meeting") for the purpose of considering the resolution and shall with such requisition transmit such observations (if any) on the subject of the resolution as the Council may direct, and the Secretary of each Division shall immediately after the holding of the Division meeting (if any) certify in writing to the Council the number of the votes given at the Division meeting for and against the resolution.

Article XXII (4) and (5).

(*d*) If the aggregate number of votes given for the resolution at all the Division meetings shall exceed the aggregate number of votes given against the resolution at all the Division meetings or if no vote shall be given at any Division meeting against the resolution the same shall be deemed to have been approved on a Referendum, provided that for the purpose of this provision no votes shall be reckoned unless the same shall be included in such certificate as aforesaid and such certificate shall have been received by the Secretary of the Association within four months after the date of the said meeting of the Council.

Article XXII (5).

(*e*) If the said meeting of the Council shall not be held within the said period of twenty-eight days then the resolution shall come into operation immediately upon the expiration of that period. But save as aforesaid the resolution shall have no operation unless and until it shall have been approved either by the Council or on a Referendum as hereinbefore provided and if and when so approved the same shall come into

Article XXII (3).

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

operation as a valid and effectual decision of the Association.

(*f*) The fact of the resolution having been so approved shall be forthwith published in the Journal.

SECTION V.

Annual Scientific Meetings.

Charter 9 (1) (*e*).

18. The Council shall annually arrange Meetings which it shall be open to every Member of the Association to attend, for the purpose of receiving addresses or other communications relating to the Medical or allied sciences, and discussing such subjects pertaining thereto as the Council may think proper, and the Council may arrange to hold such Meetings in the United Kingdom or abroad. When held in the United Kingdom, such Meetings shall be convened at the same place as the Annual Representative Meeting and in connection, but so as not to conflict, therewith. For the more convenient consideration of the matters to be discussed, the Council may provide that they shall be considered in Sectional Meetings, and the Council shall appoint a President and other Officers of such Sections as well as readers of any addresses that may be given.

Article XVIII (B).

SECTION VI.

Council.

Charter 8, 9 (*d*).
By-laws 35 to 47.

19. The Council shall come into office at the commencement of the Annual Representative Meeting of each year, and shall be composed of the President of the Association, the President Elect, the Past President, the Chairman of Representative Meetings, the Chairman of Council and Treasurer *ex officio* and of Members duly elected by the following bodies, namely (*a*) by the Branches of the Association which shall be grouped for the purpose in such manner as the By-Laws may prescribe (*b*) by the Representative Body, which shall have power to elect annually not less than four, nor more than six members of the Council, and (*c*) by the Council itself, which shall have power to add to its numbers by the co-optation of not more than one member for every ten members elected by the Branches and further by the election if it think fit, at any of its Meetings of all or any one of the following, namely: One Medical Officer on the active or retired list of each of the following services:—The Royal Navy Medical Service, the Army Medical Service, and the Indian Medical Service, provided that in each case such Medical Officer shall not have retired from the active list more than three years previously.

By-law 22.

SECTION VII.

Committees.

By-laws 53, 54, 55.

20. Committees may be appointed in such manner and having such powers as may be prescribed by the By-laws, or as the Representative Body or the Council, subject to the provisions of the By-laws, may think proper. The President of the Association, the Chairman of Representative Meetings, the Chairman of Council, and the Treasurer shall be *ex officio* Members of all Committees of the Association.

Article XLI.

SECTION VIII.

Officers.

Articles XXXV and XXXVII.

Charter (9) (1) (*f*).

21. There shall be the following executive officers of the Association, namely, a President, a President Elect, a Past President a

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

By-laws 49, 50.

Chairman of Representative Meetings, a Chairman of Council, and a Treasurer. The Officers aforesaid for the time being, other than the Chairman of Council, shall hold office for such period, and shall have and enjoy such duties, powers and privileges as shall be determined from time to time by the By-laws. The Chairman of Council shall be elected by the Council from its own number, and shall hold office for such period and discharge such duties as shall be determined by the Council. During his period of office and for one year thereafter he shall be an *ex officio* member of the Council, and any Branch of which at the time of his election he was a Representative shall be entitled to elect another in his stead.

22. The Council may from time to time appoint and dismiss such salaried and other officers and servants as it may think fit.

SECTION IX.

TRAVELLING EXPENSES.

Charter 9 (1) (*g*).

Article XLV.

23. The first-class travelling expenses within the United Kingdom of Members of Council and Representatives of Divisions attending any Representative Meeting shall be defrayed out of the general funds of the Association. Attendance of Representatives of Divisions for this purpose shall be construed to mean attendance at each Session of the Representative Meeting, unless the Council shall be satisfied that good cause existed for absence from any particular Session or Sessions. The first class travelling expenses within the United Kingdom of all Members attending Meetings of Council or of Committees and of all Members authorised by the Representative Body or by the Council to attend and attending any Conference shall be defrayed in like manner. The Council shall (subject as hereinbefore provided) determine what shall be considered an attendance for the purpose of this clause.

SECTION X.

By-law 34.

FINANCIAL AND OTHER REPORTS AND AUDIT.

Charter 9 1) (*d*) (*h*).

24. The Council shall annually prepare a Balance Sheet and Financial Statement of the Association for the past year, an Estimate of the probable income and expenditure of the Association for the coming year, and a Report of the general state and proceedings of the Association for the past year to be presented to the Annual Representative Meeting. Such Balance Sheet and Statement shall be audited by a professional Accountant and a copy of the same as audited and also a copy of such Estimate and Report shall be sent to the Secretary of every Branch and Division, and published in the Journal not less than two months before the said Meeting.

25. In addition to the above-mentioned Report, the Council shall have power to present to any Representative Meeting such further report or reports as it may deem advisable, and the same shall be published in the Journal if time permits.

SECTION XI.

BY-LAWS.

Charter 9 (1) (*i*).

Article XLVII.

26. Save so far as determined by the Charter, or by the Ordinances, the constitution and mode of government of the Association, the rights and obligations of every Member and separate body of Members thereof, the duties, powers, and privileges of all Officers, and of all Councils, Committees and governing and

Corresponding Clauses of this Draft. — Corresponding provisions of the present Regulations.

administrative bodies, both of the Association and of every Division and Branch, shall be such as may from time to time be prescribed and determined by or in accordance with the By-laws, and the By-laws (including the first By-laws) may from time to time be added to, amended, altered, or repealed by the Representative Body, subject to the provisions hereinbefore contained with respect to a resolution of that Body for the purposes aforesaid.

THE SECOND SCHEDULE.

BY-LAWS OF THE BRITISH MEDICAL ASSOCIATION.

SECTION I.

Preliminary.

1.—(1) In these By-laws (where not repugnant to the context) the expression "The Ordinances" means and includes the ordinances of the British Medical Association contained in the First Schedule to the Royal Charter granted in the year 1906, and incorporating that Association and any amendment of those Ordinances.

(2) Words occurring in these By-laws and also occurring in the Ordinances shall bear the same respective meanings in these By-laws as they bear in the Ordinances.

2. The Interpretation Act, 1889, shall apply for the purpose of the interpretation of these By-laws, as it applies for the interpretation of an Act of Parliament.

3. These By-laws shall be construed so as not to conflict with the Charter or the Ordinances.

SECTION II.

Membership.

Charter, 4;

Application.

Ordinance 4. 4. Every candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Ordinances and By-laws, and the Rules of the Division and Branch to which he may at any time belong, and to pay his subscription for the current year. By-law 1.

Election by a Branch Council.

5. Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its rules prescribe) after the date of the said notice. A Branch may, by special Resolution, require that each candidate for election shall furnish a certificate from two Members of the Association, to whom he is personally known, stating that they consider him a suitable person for election. By-law 2. Ordinance 4.

Election by the Council of the Association.

6. Every candidate who does not reside within the area of any Branch shall forward his application to the General Secretary of the Associa- By-law 13.

tion, together with a statement signed by three Members of the Association that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

Election of Officers of Services.

7. Notwithstanding anything contained in the two last preceding By-laws, officers of the Navy, Army, and Indian Medical Service on the Active List, are eligible for election through the Council or a Branch without any such certificate or statement as therein mentioned.

Honorary Members.

Charter, 5 (1).

8. The election of Honorary Members shall be by the Representative Body, on the recommendation of the Council. Honorary Members shall have none of the liabilities of Members as regards subscriptions, and shall not be entitled to any vote, but shall have such privileges as may be conferred upon them by resolution of the Representative Body. Every Honorary Member shall cease to be such Member upon a resolution of the Council to that effect passed by a majority of not less than two-thirds of those present and voting, and confirmed by the Representative Body.

Article X.

Extraordinary Members—"Associate," "Complimentary."

Charter, 5 (2).

9. Extraordinary Members shall be either Associate or Complimentary Members. Any Division or Branch may elect any Ordinary Member of any other Division or Branch as an Associate Member and any Division or Branch not in the United Kingdom may elect as a Complimentary Member any qualified Medical Practitioner resident within the area thereof, but not eligible for ordinary membership of the Association. Divisions or Branches may by their local Rules confer on Extraordinary Members such privileges other than that of voting, and impose such conditions of election as they may think desirable, subject to the sanction of the Council.

Article VI.

Annual List of Members.

By-law 19 (3).

10. In the month of May in each year a List of Members of the Association shall be prepared and published stating the names and addresses of the Ordinary Members of each Division and Branch as shown by the Register (to be kept by the Secretary of the Association) of Members of the Association on April 30th of that year, and those named in the said List as Members of any Division or Branch and no others shall be deemed to be the Ordinary Members of such Division and Branch at the date of the publication of such list for all the purposes of the Ordinances and the By-laws. Such list is hereinafter referred to as the "Annual List."

By-law 6.

SECTION III.

SUBSCRIPTIONS.

Charter 9(1) (*a*); Ordinances 5, 6, 9(*b*).

By-law 31.

Amount.

11. Except in the case of Members elected on or after the first of July in any year, the subscription to the Association shall be twenty-five shillings or such greater amount not exceeding thirty shillings as the Council may determine in the manner herein provided. A Member admitted on or after the first of July in any year shall pay half the current subscription for that year.

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

Increase.

By-law 13.

12. The Council, in exercising the power conferred upon it by the last preceding By-law, shall insert a notice in the *Journal* not later than the first Saturday in November of any year, to increase the annual subscription to such amount, not exceeding thirty shillings, as it may think necessary or desirable, such increase of subscription to take effect on the first day of January following.

To whom Paid.

By-law 14.

13. Subscriptions shall be paid by all Members to the General Secretary at the registered office of the Association, or in the case of Members residing out of the United Kingdom, to such persons (if any) as the General Secretary may authorise to receive subscriptions on his behalf, of which authorisation notice shall be given to all Members concerned.

Ordinance 9(*b*).

Arrears of Subscription, Cessation of Membership.

Article VIII.

14. Any Member whose subscription shall not have been paid on or before the 31st December of the current year shall, without prejudice to his liability to the Association, be suspended from all privileges of membership, and at the end of the succeeding year, if the arrears be still unpaid, he shall, *ipso facto*, cease to be a Member. No Member shall (except in case of his death or expulsion, or of his ceasing to be a

Ordinance 9(*a*).

Member under the provisions of Ordinance 9(*c*) or under the previous provision of this By-law) cease to be a Member without having given previous notice, in writing, of his intention in that behalf on or before the first December in the current year to the Secretary of the Association, and having paid all arrears of subscription (if any) due from him.

Charter 9 (1) (*a*).
Ordinances 5 and 6.

Extra Subscription to Divisions and Branches.

By-law 15.

15. It shall be competent for any Division or Branch offering special privileges to its Members to require a special subscription from those Members who desire to avail themselves of such special privileges, and it shall likewise be competent for any Division or Branch to charge such special subscription as it may think proper to its Extraordinary Members; but no Ordinary Member of any Division or Branch shall be called upon to pay any further subscription than that paid to the Association as a condition of enjoying any ordinary privilege of membership of such Division or Branch.

Special Subscriptions to Branches not in the United Kingdom.

16. It shall also be competent for any Branch not in the United Kingdom by Rule to require each member of such Branch to pay (in addition to his Subscription to the Association and to any special subscription payable under the last preceding By-law) an annual subscription of such amount not exceeding thirty-five shillings as may be deemed by such Branch to be necessary for defraying expenses occasioned by the special circumstances of such Branch, and not to be capable of being defrayed out of any grant from the funds of the Association made in pursuance of the provisions hereinafter contained, but such a Rule shall not have effect unless and until (*a*) it shall have been approved by a majority of three-fourths of those present and voting at the meeting of the Branch at which the same is considered; and (*b*) it shall have been approved by the Council, and the approval of the Council shall not be given to such Rule if the Council shall before considering the said Rule have received a representation in writing, purporting to be signed by not less than one-eighth of the total number of the members of such Branch (as appearing in the Annual

List for the time being in force) praying that the said Rule shall not be approved.

SECTION IV.

Charter 6 (5).

Ordinances 11, 12, 13

DIVISIONS AND BRANCHES.

Local Management: Branches.

17. The management of the affairs of each Branch shall be vested in a Branch Council, of which the Members of the Council of the Association elected by the Branch shall be Members *ex officio*. In the case of a Branch comprising more than one Division, each Division shall be entitled to elect a Member or Members of the Branch Council and the number of Members to be elected by each Division shall be as nearly as possible proportional to the membership of such Division. In addition to the Members so elected, the Branch Council may have as *ex officio* Members thereof such Officers of the Branch as the Branch may think desirable. By-law 8.

Local Management: Divisions.

Charter 6 (5).

18. Any Executive Committee or Council appointed to manage the affairs of any Division shall include *ex officio* the Member who for the time being represents the Division on the Representative Body, and any Executive Committee or Council of any Division which is not in itself a Branch shall also include, as *ex officio* Members thereof, the Members of the Branch Council elected by such Division. By-law 7.

Grant to Branches: Ordinary. By-law 16.

Charter 6 (5).

19. (1) The Treasurer of the Association shall annually pay or allow out of the funds of the Association, to the Treasurer of each Branch the sum of four shillings for each Member of the said Branch who has paid to the Association the full current annual subscription for that year, and the sum of two shillings for each Member elected after the 1st July, who has paid to the Association half the current annual subscription.

(2) The grants made under this clause shall be applied to the expenses of the bodies to which they are made at the discretion of those bodies and within the limits of the objects of the Association as defined in the Charter. By-law 16.

By-law 10.

(3) For the purposes of this By-law, those named in the Annual List for the time being in force, as Members of any Branch, shall be deemed to be Members of the said Branch for the year in which such Annual List is published, and those elected by any Branch Council, whose membership dates from July 1st in any year and has been notified to the Council, shall be deemed to be Members of the said Branch for the ensuing half-year. By-law 16.

(4) Provided that it shall be competent for the Treasurer in any year to make grants on account to any Branch prior to the publication of the Annual List for that year.

Supplementary Grants.

Charter 6 (5).

20. In addition to the grants made in pursuance of the last preceding By-law, the Council, on the application of any Division or Branch, shall have power to make a supplementary grant of such amount as the Council may deem proper. Every application by a Division, not itself a Branch, shall be forwarded through the Branch Council, whose duty it shall be to transmit the same to the Central Council, with such comment (if any), as the Branch Council may deem expedient.

21. All applications for supplementary grants shall be referred by the Council to the Organisation Committee for report thereon, and, in

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

considering the same, the said Committee and Council shall have regard to the evidence of work done by or through the agency of such Division or Branch for the Association or the medical profession, and also to the amount which may have been voluntarily subscribed locally for any purpose for which such a grant may be desired.

Application of Grants.

Charter 6 (5).

22. Out of the moneys received by way of grant from the Association as aforesaid each Branch shall defray all its expenses, and shall also pay to each Division of the Branch such sum as the Branch Council may consider necessary to enable the Division to defray its expenses.

By-law 17.

Annual Reports.

23. Every Division shall furnish annually to the Branch Council during the month of January, and every Branch shall furnish to the Council of the Association not later than March 15th in every year, a report of its proceedings during the previous year, a statement of its numbers and a financial statement in such form as the Council may from time to time prescribe.

By-law 9.

SECTION V.

Charter 7; Ordinances 14 to 17.

Representative Body.

Election of Representatives.

24. (1) A meeting of members of a constituency to elect a Representative on the Representative Body shall be convened (or where the election is by voting papers, the voting papers shall be despatched) by the Secretary of that constituency, or in the case of a constituency composed of more Divisions than one, by the Secretary of one of those Divisions to be chosen by the Secretaries of those Divisions, and if they cannot agree, by the Council.

Article XXVII.

(2) The person so acting shall, not less than fourteen days before the Annual Representative Meeting, inform the General Secretary of the name and address of the Representative elected by the constituency, and the General Secretary shall issue to such Representative a ticket of admission to the Meeting.

Article XXVII.

Substitutes for Representatives.

25. In the event of a Representative of any constituency being unable or unwilling to attend a Representative Meeting, the said constituency shall have power to select a Representative to act at the said Meeting in his stead, and such selection may be made by the constituency in General Meeting or by such Officer or Member of the Division or Divisions composing the constituency as may have been authorised by the Rules of the Division or Divisions or by a Resolution of the constituency to make such selection.

Article XXX; By-law 18.

Charter 9 (1) (*e*).

Convening of Annual Representative Meetings.

26. The Annual Representative Meeting shall be convened in every year by the Council, and shall be held at such time and place as shall have been prescribed by the Association in the previous Annual Representative Meeting, and if no time or place shall have been so prescribed, the same shall be determined by the Council.

Article XXVIII.

Special Representative Meetings

27. (1) Representative Meetings, other than the Annual Representative Meeting, shall be styled Special Representative Meetings, and may be convened at any time by the Council of its own motion and shall be so convened on requisition of not less than three Constituencies.

Article XXIX.

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

(2) At least 14 days' notice of such Meeting shall be given in the Journal, and such notice shall indicate the object for which such meeting is convened. Article XXIX.

(3) No business shall be dealt with by a Special Representative Meeting other than that for which it is specifically convened. Article XXXII.

Charter 9(1)(*i*); Ordinance 17.

Business of Annual Representative Meeting. Article XXXI.

28. The business of the Annual Representative Meeting shall be to elect a Representative of a Division as the Chairman of Representative Meetings for the year; to elect a President of the Association and a Deputy-Chairman of Representative Meetings; to elect not less than four nor more than six Members of the Council, and such other Officers and such Members of Committees as by the Ordinances or By-laws for the time being may be required to be so elected; to consider the election of Honorary Members when recommended by the Council; to appoint a place at which the next Annual Representative Meeting shall be held; to consider the Annual Financial Statement and Balance Sheet presented by the Council; to appoint an Auditor (who shall be a professional Accountant) and fix his remuneration; to consider Reports of the Council, Reports of Committees instructed to report to such Meeting and Reports of Branches and motions relating to the adoption of such reports in whole or in part; to make new Ordinances or By-laws and alter and repeal existing Ordinances or By-laws and to consider any resolution relating to the honour and interests of the Medical Profession or of the Association which shall have been adopted by any Division or Branch, provided that any such Resolution proposing material alteration of the Constitution or policy of the Association shall have been submitted through the Journal for the consideration of all the Divisions not less than three months previously.

Charter 9(1)(*h*). — Article XVIII(A).

29. The first business of the Annual Representative Meeting shall be to elect the Chairman of Representative Meetings. The next business shall be to determine the order in which the various matters placed upon the Agenda of the said Meeting shall be taken. By-law 19.

Chairman. Article XXXIII.

30. At every Representative Meeting the Chairman of Representative Meetings, when present, and in his absence the Deputy Chairman of Representative Meetings, when present, shall preside. In the absence of both the said Officers the Meeting shall appoint a Chairman from its own number.

Voting.

Ordinance 15.

31.—(1) In any Representative Meeting Representatives of Divisions only shall be entitled to vote. By-law 20.

(2) Voting shall be, as a rule, by show of hands, unless before such vote is taken twenty Representatives present request that the vote shall be taken by card, in which case every Representative shall record as many votes as there are Members in the constituency which he represents according to the annual list then in force.

(3) In voting upon any matter upon which a constituency has passed a Resolution within the nine months immediately preceding such Meeting, the Representative of that constituency shall be under obligation to vote in accordance with such resolution.

(4) The Chairman shall in the case of an equality of votes have a second or casting vote.

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

Quorum

32. No business shall be transacted at any Representative Meeting unless there be present at least one-half of the number of Representatives appointed to attend such Meeting. By-law 21.

Adjournment. Article XXVIII.

33. Any Representative Meeting may be adjourned from day to day until the completion of its business.

Minutes. By-law 19.

34. The Minutes of every Representative Meeting shall, after confirmation, be transmitted by the Chairman thereof to the Council for presentation to its next meeting.

SECTION VI.

Council.

Charter 8, 9 (1) (e .
Ordinance 19.

Branch Representation.

35.—(1) Any Branch, or group of Branches, having an aggregate membership of not less than 200, may elect one Member of Council, and any Branch, or group of Branches having an aggregate membership of not less than 400, may elect two Members of Council and an additional Member for each complete 600 Members in excess of 400. By-law 23.

(2) Branches in the United Kingdom having less than 200 Members shall be grouped for this purpose with neighbouring Branches unless in the opinion of the Council the special conditions of any such Branch justify the grant of separate representation.

(3) The grouping of Branches not within the United Kingdom for the purpose of electing Members of Council, shall be determined by the Council, provided that the total number of Members of Council to be elected by the Branches outside the United Kingdom shall not bear a less proportion to the total number of Members of such Branches than the total number of Members of Council to be elected by the Branches in the United Kingdom bears to the total number of Members of the last mentioned Branches.

(4) For the purpose of this By-law the number of the Members of a Branch shall be determined by the Annual List for the time being in force.

Election.

36. The election of Members of Council by the Branches shall be by means of voting papers sent by post to each member of the Branch. The said voting papers shall contain the names of those candidates who have been nominated, either (*a*) by a Division, or (*b*) in writing, signed by such number of Members (not less than three) as the Branch may by its Rules prescribe, and sent to the Secretary of the Branch on or before an appointed day of which not less than fourteen days' notice has been given in the Journal. The said voting papers shall contain such other particulars (if any) and shall be sent to the Secretary of the Branch within such time as the Branch may by its Rules prescribe. By-law 24.

Term of Office of Members of Council elected by Branches.

37.—(1) Each Member of Council elected by a Branch or group of Branches in the United Kingdom shall hold office for one year, and at the end of that time shall be eligible for re-election, unless he have served as the representative on the Council of one and the same Branch or group for six years successively, in which case he shall for one year be incapable of being elected as such representative. By-law 25.

(2) Each Member of Council elected by a Branch or group not in By-law 26.

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

Charter 8, 9 (1) (*e*). Ordinance 19.

the United Kingdom, or elected by the Council to represent the Royal Naval Medical Service, the Army Medical Service, or the Indian Medical Service, shall hold office for such period, not exceeding three years, as the electing Branch or Body may determine, and at the expiration of such period shall be eligible for re-election, provided that no such Member shall be re-elected so as to make his period of continuous service as the Representative on the Council of one and the same Branch exceed eight years.

Term of Office of Members elected by the Representative Body.

38. Each Member of Council elected by the Representative Body shall hold office for one year, and at the end of that time shall be eligible for re-election, unless he have served as a Member of Council elected by the Representative Body for six years successively, in which case he shall for one year be incapable of being so elected.

Term of Office of Co-opted Members.

39. Each Member of Council co-opted by the Council shall vacate his office at the close of the last meeting of the Council for the year, but shall be eligible for re-appointment unless he shall have been appointed in each of the then last preceding five years, in which case he shall be incapable of being so co-opted for the next ensuing twelve months.

Qualification. By-law 27.

40. No person shall be eligible for election as a Member of Council by a Branch or group of Branches in the United Kingdom unless at the time of his election, he shall be a Member of such Branch or of a Branch comprised in such group. The eligibility for election as a Member of Council by a Branch or group not in the United Kingdom, shall be such as may be determined by the Rules of the said Branch or of the Branches forming the said group, and if no such Rule shall be adopted, the regulations as to eligibility shall be the same as for the Branches and groups in the United Kingdom.

Election Return. By-law 28.

41. The return of the election of each Member of Council elected by a Branch or group shall be communicated in writing to the Secretary of the Association by the President or Secretary of the Branch by which he is elected or of which he is a Member, not less than twenty-eight days prior to the Annual Representative Meeting of the Association.

Powers of incomplete Council. By-law 29.

42. In default of and until election of a Member or Members by any Branch or other body authorised to elect, or so far as such election shall not be complete, all the powers conferred on the Council shall belong to and be exercised by the *ex officio* Members thereof alone and such other Members (if any) of the Council as may have been duly elected by any Branch or Branches or other bodies authorised to elect.

Casual Vacancies. By-law 30.

43. Any casual vacancy occurring in the Council not less than four months before the Annual Representative Meeting may be filled up by any Branch, or body, the representation of which may have so become vacant, and the election to fill such vacancy shall be conducted in the same manner as the Annual Election, or, in respect of election by a Branch, in such other manner as may be prescribed by the Rules of the said Branch Any person so chosen shall retain his office

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

so long only as the Member in whose office such casual vacancy shall have occurred would have retained the same if such vacancy had not occurred. The provisions of this clause shall apply as well to the members forming the first Council of the Association in pursuance of Clause 11 of the Charter as to members subsequently taking office.

Charter 8, 9; Ordinance 19.

Proceedings.

44. The Council shall meet not less than four times a year, and shall be presided over by the Chairman of the Council, or in his absence by a Chairman to be appointed by the Meeting from its own number. By-law 32.

45. Meetings of the Council shall be held at such time and place, and upon such notice as the Council shall appoint. By-law 32.

46. No business shall be transacted at any Meeting of the Council unless at least 15 Members be present. By-law 32.

47. The Chairman of Council may, if he think fit, and shall, upon receiving a requisition signed by not less than fifteen Members of the Council, and specifying the business for which a Special Meeting is required, call together a Special Meeting thereof. No business shall be transacted at a Special Meeting other than that for which such Meeting is called. By-law 33.

SECTION VII.

JOURNAL.

48. The *Journal* shall be conducted by a paid Editor, who shall be responsible for all that appears therein except such matters as are inserted therein in accordance with the Ordinances or By-laws, or by the direction of the Council. The Editor shall be appointed by and shall be subject to the control of the Council. Article XI.

SECTION VIII.

OFFICERS.

Charter 9 (1) (*f*); Ordinance 21.

49. The President of the Association shall be elected annually at the Annual Representative Meeting and shall enter upon the duties of his office at the next Annual Representative Meeting, and until then shall bear the title of President-Elect. At the expiration of his year of office as President he shall be designated Past President, and shall hold office as such for one year. By-law 36.

Ordinance 21.

50. The Treasurer shall be elected at an Annual Representative Meeting and shall hold office for three years. He shall receive all moneys payable to the Association, and discharge all accounts which have been ordered by the Council to be paid. By-law 37.

51. The Council shall have power to nominate for election at the Annual Representative Meeting those members who by their services to the Association are in the opinion of the Council worthy of election as Vice-Presidents. Such election shall be for life unless any appointment shall be subsequently cancelled by a vote of the Association in Representative Meeting assembled on a motion brought forward by the Council. No special privilege shall attach to the office of Vice-President. By-law 38.

Ordinance 22.

52. All salaried officers shall be appointed and may be dismissed by the Council and shall hold office for such period and perform such duties and receive such remuneration as the Council may from time to time determine. By-law 42.

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

SECTION IX.

Committees.

53. Subject to the Regulations of the Association, the Representative Body and the Council shall respectively have power to appoint Committees, with such powers as may to them seem necessary or convenient, and to fix the quorum thereof, and lay down Rules for regulating the proceedings of such Committees. By-law 39.

Ordinance 20.

54. Nevertheless, there shall be Standing Committees as follows:— By-law 40.

(1) *Finance.*

A Finance Committee not exceeding sixteen in number (five to form a quorum) shall be appointed by the Council, which shall, *inter alia*, examine into the general working of the office, and certify the quarterly accounts prior to their being presented to the Council. By-law 40(1).

(2) *Journal.*

A Journal Committee not exceeding nine in number (three to form a quorum) shall be appointed by the Council, which shall, *inter alia*, examine into the general working of the Journal, and report to the Council thereon. By-law 40(1).

(3) *Premises and Library.*

A Premises and Library Committee not exceeding nine in number (three to form a quorum) shall be appointed by the Council, to which shall be referred all matters connected with the Library and its management, as well as the management of the House Property and other real property of the Association. By-law 40(2).

(4) *Public Health.*

A Public Health Committee not exceeding nine in number (three to form a quorum) shall be appointed by the Council, to which shall specially be referred all questions relating to Public Health and the Poor-Law Medical Service. By-law 40(3).

(5) *Colonial.*

A Colonial Committee consisting of eleven Members (three to form a quorum) shall be appointed, to which shall be referred all questions specially relating to the Branches not in the United Kingdom. Of such Committee five Members shall be appointed by the Representatives of these Branches on the Council, and two by the Council. By-law 40 (4).

(6) *Naval and Military.*

A Royal Naval and Military Committee not exceeding eleven in number (three to form a quorum) shall be appointed by the Council, to which shall be referred all matters relating to the Royal Navy Medical Service, the Army Medical Service, the Indian Medical Service, and the Medical Organisation of the Auxiliary Forces. Such Committee to include the Representative Members of these Services on the Council. By-law 40 (5).

(7) *Medico-Political.*

A Medico-Political Committee shall be appointed, consisting of sixteen Members (seven to form a quorum), which shall deal with all matters involving the public relations of the Profession not specially referred to other Committees, and shall have six Members appointed by the Council, and six by the Representative Body; such Committee to report to the Council and to the Representative Body and to act under the Council By-law 40 (6).

Corresponding Clauses of this Draft.

Corresponding provisions of the present Regulations.

(8) *Ethical.*

By-law 40 (7).

An Ethical Committee (otherwise designated the Central Ethical Committee) shall be appointed, consisting of fourteen Members (five to form a quorum), which shall advise the Council on proposed Rules of Divisions and Branches relating to professional conduct, shall investigate and report to the Council upon the cases of Members whose conduct is to be considered by the Council, shall adjudicate in cases of disputes on ethical questions referred to it by members of the Association and generally shall advise, and where so directed, act for the Council on all questions of professional conduct. Five members of such Committee shall be appointed by the Council and five by the Representative Body.

(9) *Organisation.*

By-law 40 (8).

An Organisation Committee shall be appointed by the Council, not exceeding ten in number (three to form a quorum), which subject to the directions of the Council shall deal with all questions of the Boundaries or area of Divisions and Branches, and the Rules thereof other than those relating to ethical matters, and advise the Council thereon, and shall exercise such powers as may be conferred upon it by the Council in advising and assisting Divisions or Branches in the strengthening of their organisation. This Committee shall have power to add to its number, for special purposes, a limited number of members specially qualified to assist in its work.

(10) *Scottish Committee.*

By-laws 40 (9).

A Scottish Committee, consisting of one Secretary from each Scottish Branch and the Members of the Council representing Scottish Branches. It shall have a Secretary, resident in Scotland, and shall meet at such place and time as the Committee may itself direct, and shall report to the Council on any matter specially concerning Scotland.

(11) *Irish Committee.*

By-law 40 (10).

An Irish Committee consisting of the Members of the Council representing Irish Branches, one Secretary from each Irish Branch, and one Member elected by each Branch; provided that, in the case of the Leinster and Ulster Branches, such elected Members shall be practitioners not resident either in Dublin or Belfast, and provided that, in the event of the Secretary of a Branch being also a Member of the Central Council such Branch shall have power to elect a further Member of the Committee.

In each of the foregoing sections of this By-law the number stated as the total number of the Members of the Committee shall be deemed to be inclusive of those who are Members *ex officio* in pursuance of the Ordinances.

Chairman.

By-law 41.

55. Each Standing Committee shall appoint from its own number a Member of Council as Chairman.

SECTION X.

SEAL.

56. The Council shall provide for the safe custody of the seal of the Association, and the seal shall not be used except in pursuance of a resolution of the Council and in the presence of at least one member of the Council and of the Secretary of the Association who shall sign every instrument to which the seal is affixed.

SECTION XI.

General.

Corresponding provisions of the present Regulations.

Notices.

Article XLVI.

57.—(1) A notice may be served by the Association upon any member either personally or by sending it through the post, in a prepaid letter, addressed to such member at his last known address or by publication of such notice in the *Journal* and sending a copy of the *Journal* containing such notice to such member, prepaid and addressed as above mentioned.

(2) A notice may be served on any Division or Branch, by serving the same as aforesaid on the Secretary of such Division or Branch, and if there be none, then on any two members of such Division or Branch.

(3) Any notice, if served by post, shall be deemed to have been served on the day following that on which the letter, or a copy of the *Journal* containing the same is posted, and in proving such service it shall be sufficient to prove that the letter, or a copy of the *Journal* containing the notice, was properly addressed and put into the Post Office.

Validity of Proceedings.

By-law 44.

58. The proceedings of the Representative Body or of the Council or of any Branch Council or Committee or other Body acting under the Charter or the Ordinances or the By-laws shall not be invalidated by any accidental omission to give any notice required by the By-laws or by any vacancy among their members or by any defect in the election or qualification of any of the members thereof.

☞ ***To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.***

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Birmingham Branch.—The annual meeting of the Birmingham Branch will be held at the Medical Institute on Thursday, June 14th, at 3.30 p.m., and nominations for offices should reach the Honorary Secretary not later than May 23rd.—T. Sydney Short, Honorary Secretary, 35, Newhall Street, Birmingham.

Birmingham Branch: Coventry Division.—A special meeting of this Division will be held at the Coventry and Warwickshire Hospital on Tuesday, April 3rd, at 8.30 p.m. Agenda: (1) Mr. W. E. Bennett will read a paper on the Tolerance of the Peritoneum; (2) the Committee will recommend the adoption of the following resolution: "That the Division having, on February 15th last, approved of a scheme of principles and rules which they consider appropriate for the proper management of a provident dispensary, hereby declare that no member of the profession in the area of the Division should associate himself with, or continue to be associated with, any provident dispensary which is managed on lines fundamentally different from these principles and rules;" (3) the Committee will recommend that the Bradford Rule (B) should be altered so that "fourteen days' notice" should read "seven days' notice." After the meeting, a meeting of the members of the Voluntary Book Section will be held. Members desiring to join during the ensuing twelve months will oblige by either attending that meeting or otherwise signifying their wish.—E. H. Snell, Honorary Secretary, Warwick Avenue, Coventry.

Border Counties Branch: North Cumberland Division.—A meeting of the North Cumberland Division of the Border Counties Branch will be held at Penrith on Friday, April 6th. The Honorary Secretary will be pleased to hear from members who wish to read papers, show cases or pathological specimens. —Norman Maclaren, Honorary Secretary, 23, Portland Square, Carlisle.

Border Counties Branch: Scottish Division.—A meeting of this Division will be held in Dumfries about the middle or end of April. Members who have business or communications to bring before the meeting are requested to give notice to the Secretary.—George R. Livingston, Honorary Secretary, Dumfries.

East Anglian Branch *(Preliminary Announcement).*—The spring meeting of the East Anglian Branch will be held at King's Lynn on Thursday, April 5th. Members wishing to show cases or specimens or read papers should communicate at once with Dr. Gardiner, Tuesday Market Place, King's Lynn. —B. H. Nicholson, General Secretary of Branch, East Lodge, Colchester.

Edinburgh Branch: South-Eastern Counties Division. —The spring meeting will be held at St. Boswells in the house of Dr. Cullen, Chairman, in the afternoon of Friday, April 6th, at 4 o'clock. Agenda: (1) Matters referred by Medico-Political Committee to be considered. (2) Papers by various members to be read and discussed. (3) Annual balance sheet to be audited.—W. Hall Calvert, M.D., Honorary Secretary, Melrose.

Metropolitan Counties Branch: Kensington Division. —An ordinary meeting will be held at the Town Hall, High Street, Kensington, W., on Tuesday, March 27th, at 8.30 p.m. Dr. Robert Hutchison will read a paper on Chronic Diarrhoea. Certain matters referred to the Divisions will also be discussed. —Charles Buttar, Honorary Secretary, 10, Kensington Gardens Square, W.

Metropolitan Counties Branch: Walthamstow and City Divisions.—A conjoint meeting of these Divisions will be held at the Walthamstow Hospital, Walthamstow, on Tuesday, March 27th, at 4 p.m. Dr. Mitchell Bruce will read a paper on the Natural History of Tuberculosis.—Herbert Alexander, Honorary Secretary, Walthamstow Division; E. W. Goodall, Honorary Secretary, City Division.

Northern Counties of Scotland Branch.—A clinical meeting of the Branch will be held at the Northern Infirmary, Inverness, on Saturday, March 24th. Particulars will be sent to members by circular later. Members desirous of exhibiting specimens, or reading notes of cases are requested to communicate at once with the Secretary.—J. Munro Moir, M.D., Honorary Secretary, Ardross Terrace, Inverness.

North Wales Branch : South Carnarvon and Merioneth Division.—A meeting of the Division will be held at the Queen's Hotel, Portmadoc, on Thursday, April 5th, at 2 p.m. Members having papers to read or cases to show will please communicate with me before the 28th inst.—Hy. Gladstone Jones, Honorary Secretary, Criccieth.

South-Eastern Branch: Guildford Division.—The next meeting of this Division will be held at the Royal Surrey County Hospital, Guildford, on Friday, March 30th, at 4.30 p.m., the Chairman of the Division, Dr. J. P. A. Gabb, in the chair. Agenda: (1) Minutes of last meeting. (2) Adjourned discussion *re* contract practice. (3) Other matters referred to Divisions. (4) Mr. C. A Ballance, F.R.C.S., Surgeon to St. Thomas's Hospital and to the National Hospital for the Paralysed and Epileptic, will give an address on The Surgery of Brain Abscess, illustrated by lantern slides. (5) Any other business. Tea will be provided during the meeting. Members desirous of showing cases or specimens are invited to communicate with the Honorary Secretary. All members of the South-Eastern Branch are entitled to attend and to introduce professional friends, and visitors are cordially invited.—E. J. Smyth, Honorary Secretary, Maythorne, Epsom Road, Guildford.

South-Eastern Branch : Isle of Thanet Division.—The next meeting of this Division will be held at the St. Mildred's Hotel, Westgate-on-Sea, on Friday, March 30th, at 4.30 p.m., Dr. C. J. Heaton in the chair. Agenda: Correspondence. Consideration of (1) Nurses Registration Report (see Supplement to the British Medical Journal, March 3rd, 1906); (2) Hospital Administration (see Supplement to the British Medical Journal, February 17th, 1906). Mr. W. H. Clayton-Greene, M.B., B.C., F.R.C.S. (St. Mary's and the French Hospitals), will read a paper entitled Anuria. Dr. Street will show an electric signalling apparatus for the use of invalids. If time permits Dr. Watts will introduce a discussion on the recommendations of the Medico-Political Committee on the subject of Contract Practice (see Supplement to the British Medical Journal, July 22nd, 1905, p. 29). Tea will be served at 4 p.m. All members of the South-Eastern Branch are invited to attend these meetings and to introduce professional friends, but will not be entitled to vote on Divisional questions. A dinner will be held after the meeting in a private room of the hotel at 6.45 p.m. Members intending to dine are requested to inform the Honorary Secretary before the commencement of the meeting. It is hoped that members will endeavour to be present.—Hugh M. Raven, Honorary Divisional Secretary, Broadstairs.

South-Eastern of Ireland Branch.—An ordinary meeting will be held at the County and City Infirmary, Waterford, on April 4th, at 2 p.m. Agenda: To receive and formulate evidence regarding Poor-law reform to be given before the forthcoming Royal Commission on the Poor Law, through a Committee consisting jointly of members of the Irish Committee, the Irish Medical Association, the Poor-law Association, and the Workhouse Association.—J. Quirke, Honorary Secretary, Piltown, co. Kilkenny.

South-Western Branch : Barnstaple Division.—A meeting will be held at Barnstaple on Wednesday, March 28th, at 3.30. Titles of papers and particulars of clinical cases must be sent to the Honorary Secretary not later than Saturday 24th inst., that they may appear on the agenda.—F. W. Kendle, Honorary Secretary and Treasurer.

West Somerset Branch.—The spring meeting of this Branch will be held at the Taunton and Somerset Hospital on Tuesday, March 27th, at 3.30 p.m., when the President, Mr. Gordon Henry, will take the chair. Mr. H. T. S. Aveline, Superintendent of the Bath and Somerset Asylum, Cotford, has kindly promised to read a short paper and open a discussion on the Care and Treatment of the Feeble-minded. The Hospitals Committee of the Association also asks for an expression of opinion from the Branch with regard to the following resolution: "That, in the opinion of this meeting, there should be no out-patient departments in hospitals, except for consultations and casualties, and that this opinion specially applies to hospitals whose staff are general practitioners." Will any member wishing to bring any other matter before this meeting kindly give me early notice? Tea will be provided after the meeting.—W. B. Winckworth, Honorary Secretary, Taunton.

Yorkshire Branch : Bradford Division.—A special meeting of the whole of the profession in the Divisional area will be held at the Great Northern Victoria Hotel, Bradford, on Wednesday, March 28th, at 8.30 p.m. The meeting is being called together by the Division in order to consider the best method of attempting to solve the difficulty of medical club practice. A copy of the recommendations of the Medico-Political Committee on contract practice has been sent to every medical practitioner in the district. As an introduction to the question, the following resolution will be moved by Mr. J. Wherry Willson, "That in the opinion of this meeting the present system of contract club practice is unsatisfactor and unnecessary in Bradford, and that a Committee b appointed to consider another scheme of carrying on the work. It is earnestly hoped that every practitioner in the district especially those who are interested in club practice, wil endeavour to be present as it is only by absolute unanimit that it will be possible to come to any decision on th subject.—James Metcalfe, Lynthorne Hey, Frizinghall Bradford, Andrew Little, 114, Manningham Lane, Bradford Honorary Secretaries.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,47 births and 4,909 deaths were registered during the week ending Satu day last, March 17th. The annual rate of mortality in these towns which had been 17.3, 17.4, and 16.7 per 1,000 in the three precedin weeks, further fell to 16.2 per 1,000 last week. The rates in the severa towns ranged from 5.9 in Burton-on-Trent, 6.5 in King's Norton, 7.0 i Aston Manor, 8.7 in Ipswich, 9.2 in Tottenham, 9.4 in Barrow-in-Fu ness, 9.6 in Hornsey, and 9.8 in Warrington to 20.6 in Bradford and i Sunderland, 20.7 in Wolverhampton, 20.8 in Bournemouth, in Nor wich, and in Middlesbrough, 21.2 in Liverpool, 21.7 in St. Helens, 22. in Hanley, and 23.2 in Wigan. In London the rate of mortality wa 16.5 per 1,000, while it averaged 16.0 per 1,000 in the seventy-five larg provincial towns. The death-rate from the principal infectiou diseases averaged 1.4 per 1,000 in the seventy-six towns; in Londo this death-rate was equal to 1.7 per 1,000, while among the seventy five large provincial towns the rates averaged upwards t 2.1 in West Ham and in Merthyr Tydfil, 2.5 in Handswort (Staffs.) and in Liverpool, 2.7 in Plymouth and in Bury, 2. in Newcastle-on-Tyne, 3.0 in West Bromwich, and 5.7 in Smethwick Measles caused a death-rate of 1.0 in Croydon, in West Ham, and i Manchester, 1.1 in Liverpool and in Swansea, 1.2 in York, 1.3 i Preston, 1.9 in Newcastle-on-Tyne, and 2.7 in Bury; scarlet fever o 1.3 in Birkenhead; diphtheria of 1.0 in Hull and Middlesbrough, 1. in St. Helens, and 1.4 in Coventry and in Merthyr Tydfil; whooping cough of 1.0 in Stockport, in Liverpool, and in Sunderland, 1.1 i Cardiff, 1.2 in Rhondda, 1.3 in Plymouth, 1.6 in Handsworth (Staffs. 1.7 in Rotherham, 3.0 in West Bromwich, and 4.0 in Smethwick and diarrhoea of 1.3 in Reading. The mortality from enteri fever showed no marked excess in any of the large towns One fatal case of small-pox was registered last week i Plymouth, but none in any other of the seventy-six larg towns. Seven small-pox cases remained under treatment i the Metropolitan Asylums Hospitals at the end of last week against 6 at the end of each of the two preceding weeks; one ne case was admitted during the week, against 3, 1, and 1 in the thre preceding weeks. The number of scarlet-fever patients in thes hospitals and in the London Fever Hospital, which had been 2,68 2,628, and 2,545 at the end of the three preceding weeks, had furthe declined to 2,485 at the end of last week; 252 new cases were admitte during the week, against 274, 273, and 268 in the three precedin weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, March 17th, 963 births an 661 deaths were registered in eight of the principal Scotch towns The annual rate of mortality in these towns, which had been 19.6 19.3, and 18.2 per 1,000 in the three preceding weeks, rose again t 19.3 per 1,000 last week, and was 3.1 per 1,000 above the mean rat during the same period in the seventy-six large English towns Among these Scotch towns the death-rates ranged from 13.9 i Leith and 15.1 in Perth to 21.6 in Paisley and 24.7 in Dundee. Th death-rate from the principal infectious diseases averaged 2.4 pe 1,000 in these towns, the highest rates being recorded in Dundee an Paisley. The 335 deaths registered in Glasgow included 18 whic were referred to measles, 5 to diphtheria, 5 to whooping-cough, 3 t "fever," and 12 to diarrhoea. Three fatal cases of measles and 2 o diarrhoea were recorded in Edinburgh. Eight deaths from measles 2 from scarlet fever, and 2 from diphtheria occurred in Dundee 3 from diarrhoea in Aberdeen; 8 from measles in Paisley; and from scarlet fever in Leith.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, March 17th 511 births and 41 deaths were registered in six of the principal Irish towns, as agains 518 births and 412 deaths in the preceding period. The annual death rate in these towns, which had been 23.3, 25.1, and 22.2 per 1,000 in th three preceding weeks, fell to 19.4 per 1 000 in the week under notice this figure being 3.2 per 1,000 higher than the mean annual rate in th seventy-six English towns for the corresponding period. The figure ranged from 15.0 in Limerick and 15.6 in Waterford to 23.1 in Dubli and 27.8 in Belfast. The zymotic death rate in the same six Iris towns averaged 1.1 per 1,000, or 0.1 per 1 000, higher than during th preceding period, the highest figure—2.8—being recorded in Belfast while no deaths under this heading were registered in Cork an Waterford. The deaths included 12 from whooping-cough (9 a Belfast), 5 from diphtheria, and 10 from enteric.

SPECIAL NOTICE TO MEMBERS.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

MATTERS REFERRED TO DIVISIONS.

REPRESENTATIVE MEETING AT LONDON.

TUESDAY, JULY 24TH, AND FOLLOWING DAYS.

NOTICES OF MOTION.

THE following notices of motion have been received for discussion by the Annual Representative Meeting of the Association to be held at London, July 24th, 1906, and following days.

ASSOCIATION REGULATIONS.

AMENDMENT OF BY-LAW.

Standing Committees: Election.

By the NORTH MANCHESTER DIVISION (Lancashire and Cheshire Branch):

> That the Annual Representative Meeting be empowered to elect half the members of each Standing Committee.

STANDING COMMITTEES:

Attendance.

By the NORTH MANCHESTER DIVISION (Lancashire and Cheshire Branch):

> That any member of a Standing Committee of the Association absenting himself from two successive meetings without satisfactory explanation shall be deemed to have resigned, and the Committee shall forthwith fill the vacancy.

ASSOCIATION ADMINISTRATION.

YEAR BOOK.

Date of Issue.

By the NORTH MANCHESTER DIVISION (Lancashire and Cheshire Branch):

> That the Year Book be issued not later than October 1st in each year.

CENTRAL OFFICIALS.

Regulation and Co-ordination of Duties.

By the NORTH MANCHESTER DIVISION (Lancashire and Cheshire Branch):

> That a Committee be appointed to inquire into the duties of the General and Medical Secretaries, with a view to their better regulation and coordination.

By Direction of the Chairman of Representative Meetings,
J. SMITH WHITAKER, *Medical Secretary.*
March 29th.

NOTICE OF CHANGES OF BOUNDARIES OF DIVISIONS AND BRANCHES.

THE following changes have been made in accordance with the regulations of the Association, and take effect from the date of publication of this notice:

1. That the boundary of the Gateshead Division be extended to include the area formerly included in the Chester-le-Street Division, which is henceforth merged in the Gateshead Division.

2. That the boundary of the Monmouthshire Division be extended to include Brynmawr and the portion of the Rhymney Valley, as far south as Maesycwmmer, formerly included in the North Glamorgan and Brecknock Division,

ASSOCIATION INTELLIGENCE.

PROCEEDINGS OF COUNCIL.

At a meeting of the Council held, by kind permission of the Metropolitan Asylums Board, London, in their Board Room, on Wednesday, March 14th.

Present:

Dr. H. W. Langley Browne, Chairman of Council, in the Chair.

Dr. William Collier, Past-President.

Sir Victor Horsley, F.R.S., Chairman of Representative Meetings.

Dr. H. Radcliffe Crocker, Treasurer.

Dr. John Ford Anderson, London.
Dr. Edgar G. Barnes, Eye.
Dr. T. R. Bradshaw, Liverpool.
Colonel David Bruce, C.B., F.R.S. (Cape of Good Hope Branch), London.
Dr. R. Cochrane Buist, Dundee.
Dr. W. A. Carline, Lincoln.
Mr. Andrew Clark, London
Mr. E. J. Domville, Exeter.
Mr. George Eastes, M.B., London.
Professor David W. Finlay, M.D., LL.D., Aberdeen.
Dr. E. L. Fox, Plymouth.
Dr. John H. Galton, Upper Norwood.
Dr. Bruce Goff, Bothwell.
Dr. David Goyder, Bradford.
Dr. T. Druslyn Griffiths, Swansea.
Dr. J. Groves, Carisbrooke.
Dr. James Hamilton, Glasgow.
Dr. T. Arthur Helme, Manchester.
Mr. R. H. Kinsey, Bedford.
Dr. C. W. Marriott, Reading.
Dr. C. H. Milburn, Hull.
Professor J. T. J. Morrison, M.B., Birmingham.
Dr. James Murray, Inverness.
Professor William Osler, M.D., F.R.S., Oxford.
Mr. Edmund Owen, London.
Mr. C. H. W. Parkinson, Wimborne Minster.
Dr. Frank M. Pope, Leicester.
Dr. Edwin Rayner, Stockport.
Mr. H. Jones Roberts, Penygroes.
Mr. H. Betham Robinson, M.S., London.
Dr. E. Markham Skerritt, Clifton, Bristol.
Professor W. R. Smith, M.D. (Malta and Mediterranean Branch), London.
Mr. C. R. Straton, Salisbury.
Mr. John Lynn Thomas, C.B., Cardiff.
Dr. W. J. Tyson, Folkestone.
Mr. T. Jenner Verrall, Brighton.
Dr. Norman Walker, Edinburgh.
Dr. Arthur T. Wear, Newcastle-on-Tyne.
Lieutenant-Colonel E. M. Wilson, C.B., Farnborough.

The minutes of the last meeting having been printed and circulated and no objection received, were taken as read and signed as correct.

Read letters of apology for non-attendance from the President, Dr. M. Beverley, Dr. J. Brassey Brierley, Dr. James Craig, Dr. G. W. Crowe, Dr. C. G. Gooding, Dr. J. H. Hunter, Dr. McKenzie Johnston, Dr. J. Maxwell Ross, Professor Saundby, Mr. W. D. Spanton, and Fleet Surgeon J. Lloyd Thomas, R.N.

Moved by the Chairman of Council, seconded by the Treasurer, and

Resolved: That the congratulations of the Council be forwarded to the Right Hon. Sir Walter Foster, M.P., a former President of Council, on the honour of being sworn a member of His Majesty's Privy Council.

The Chairman of Council reported that Dr. T. Arthur Helme had resigned his seat on the Puerperal Morbidity Committee.

Read communication from Mr. James Cantlie asking that a Section of Tropical Medicine may be arranged for this year in London.

Moved by Dr. Griffiths, seconded by Mr. Eastes, and

Resolved: That it be left to the Toronto Executive to make what arrangements it thinks desirable for the discussion of Tropical Medicine in the Sections.

Resolved: That, as a result of the opinion expressed by the President of the Therapeutic Section, no further action be taken for the organization of a section of Physical Therapeutics at the Toronto meeting.

Moved by Dr. Helme, seconded by Dr. Bradshaw, and

Resolved: That the constitution of the Royal Commission on the Poor Laws would command the confidence of the medical profession if the Government were to appoint upon the Commission representatives of those responsible for the administration of the Medical Service of the Poor Laws.

Resolved: That the minutes of the Journal and Finance Committee be received.

Moved by the Treasurer, seconded by Dr. Markham Skerritt, and

Resolved: That the General Secretary be empowered to engage the second, third, and fourth floors of certain premises contiguous to the Strand from July 1st next as temporary premises during the rebuilding.

Resolved: That the minutes of the Premises and Library Committee be received.

Resolved: That Mr. William Henman, F.R.I.B.A., Architect to the Birmingham General Hospital, and Belfast Infirmary, etc., be invited to act as Assessor in the competition for erection of new premises.

Resolved: That during the rebuilding, the books of the Library be carefully stored in Harvey's Buildings, and that a Reading Room be provided in the temporary offices, to be supplied with current periodicals and new books.

Resolved: That the minutes of the Public Health Committee be received.

Moved by Dr. Groves, seconded by Dr. Markham Skerritt:

That at present it is not desirable for the British Medical Association to request that such an inquiry regarding Hospital Isolation should be instituted as suggested by the resolution passed in the Section of State Medicine at Leicester.

Whereupon an amendment was moved by Dr. Helme, seconded by Dr. Bradshaw:

That it is desirable for the British Medical Association to make such inquiry as suggested by the Section of State Medicine at Leicester, but in the meantime there is not sufficient positive evidence to ask the Local Government Board to receive a deputation on the subject.

The amendment having been put from the Chair the same was declared to be lost.

The recommendation moved by Dr. Groves was then put and carried as a substantive motion.

Resolved: That the Council appoint Dr. Groves, Mr. Herbert Jones, and Dr. Manley as representatives of the Association at the Congress of the Royal Sanitary Institute to be held at Bristol in July.

Resolved: That the minutes of the Organization Committee be received.

Moved by Mr. Verrall, seconded by Mr. Andrew Clark, and

Resolved: That the Council recommend the following draft by-law as to supplementary grants to Divisions and Branches for the consideration of the Representative Meeting:

In addition to the grants made in pursuance of By-law 16, the Council, on the application of any Division or Branch, shall have power to make a supplementary grant of such amount as the Council may deem proper. Every application by a Division not itself a Branch shall be forwarded through the Branch Council, whose duty it shall be to transmit the same to the Central Council, with such comment, if any, as the Branch Council may deem expedient.

All applications for supplementary grants shall be referred by the Council to the Organisation Committee for report thereon, and, in considering the same, the said Committee and Council shall have regard to the evidence of work done by or through the agency of such Division or Branch for the Association or the medical profession, and also to the amount which may have been voluntarily subscribed locally for any purpose for which such a grant may be desired.

Moved by Mr. Verrall, seconded by Professor Morrison, and

Resolved: That the Chester-le-Street Division be merged in the Gateshead Division.

With regard to a recommendation relative to the validity of the election of a certain member, it was moved by the Treasurer, seconded by Mr. Kinsey, and

Resolved: That the question raised be referred to the Solicitor of the Association for opinion and report.

Resolved: That the following By-law, with respect to the tenure of office of Representative Meeting Members of Council, be recommended to the Representative Meeting for adoption:

Each Member of Council elected by the Representative Meeting shall hold office for one year, and at the end of that time shall be eligible for re-election, unless he has served as a Member of Council elected by the Representative Meeting for six years successively, in which case he shall for one year be incapable of being so elected.

Resolved: That the Rules of the following be approved: Cape of Good Hope Eastern Branch, Leinster Branch, East London Division, Grahamstown Division, and Wandsworth Division.

Resolved: That the Home Divisions be requested to send in their replies regarding the proposed Royal Charter early in May.

Resolved: That the minutes of the Medico-Political Committee be received.

Moved by Dr. BUIST, seconded by Sir VICTOR HORSLEY, and

Resolved: That the Council approve the following action:

That representations be made to the Privy Council as to the necessity of scheduling diachylon as a poison under the Pharmacy Acts.

Moved by Dr. BUIST, seconded by Sir VICTOR HORSLEY,

That representations be made to the Pharmacopoeia Committee of the General Medical Council as to the desirability of removing diachylon from the *Pharmacopoeia*.

The motion having been put from the Chair was declared to be lost, 10—15.

Moved by Dr. BUIST, seconded by Sir VICTOR HORSLEY, and

Resolved: That a communication be sent to non-medical periodicals embodying the following:

That the attention of the British Medical Association has been drawn to the dangers incurred through the use of diachylon in pills or otherwise, and the Council feels that the public should be made aware that it has resulted frequently in paralysis, blindness, insanity, and death.

Moved by Dr. BUIST, seconded by Mr. C. R. STRATON, and

Resolved: That action be taken by approaching the Lunacy Commissioners and the Lord Chancellor on the subjects of this report at an early date, and that co-operation of the Medico-Psychological Association be invited.

Moved by Dr. BUIST, seconded by Sir VICTOR HORSLEY, and

Resolved: That the following recommendation as to pauper lunatics be brought to the notice of the Royal Commission on the Feeble-minded:

That provision be made for the supervision under the Commissioners in Lunacy of all persons of unsound mind who are in receipt of parochial relief.

Resolved: That the Asylums Committee of the London County Council be informed of the concurrence of the British Medical Association as to the boarding out of pauper lunatics. That the whole report be referred to the Irish Committee for consideration in order that they may make recommendations with respect to such provisions as in their view should be extended to Ireland.

Moved by Dr. BUIST, seconded by Sir VICTOR HORSLEY, nd

esolved: That the Council approve the Report and Recommendations on the Amendment of the Inebriates Act.

esolved: That the Home Secretary be requested to receive a deputation from the Association on the subject of Amendment of the Inebriates Acts.

esolved: That the support of the Association be given to the Inebriates Acts Amendment (Scotland) Bill.

esolved: That copies of the Warning Notice as to the appointments be forwarded to Secretaries of Medical Schools and Colleges, and that they be asked to have them placed on their notice boards.

Moved by Dr. HELME, seconded by Sir VICTOR HORSLEY, d

esolved: That the following resolution be issued with the circulars on Medical Contract Practice:

That it be pointed out, for the information of the Divisions, that the Contract Practice Report does not include any recommendation to carry on contract practice; that in the view of the Committee the question as to the necessity of contract practice in any given district is a matter for local determination; and that the recommendations in the Contract Practice Report were simply intended as suggestions as to how contract practice could be conducted in the interests of the profession and the public in those districts where it was believed to be for the present unavoidable. (*Minute* 35.)

solved: That the Prime Minister be requested to receive a deputation on the subject of the reorganization of the Local Government Board.

solved: That representations be made to the President of the Board of Education as to the desirability of including in the Education Bill systematic provision for medical inspection of school children.

Resolved: That the attention of the Lord Chancellor be drawn to the representations made by the Association to the late Lord Chancellor respecting the action of the Coroner for South-west London, and that he be requested to receive a deputation.

Resolved: That the minutes of the Science Committee be received.

Resolved: That the report of the Editor and Dr. Cecil Shaw, relating to special research libraries, be received, approved, and adopted when opportunity offers after the rebuilding of the premises.

Moved by Dr. NORMAN WALKER, seconded by Sir VICTOR HORSLEY, and

Resolved: That the Science Committee be made a standing committee, and the question of drafting the necessary by-law be referred to the Organization Committee.

Resolved: That the constituent members of the Special Societies of the Congress of American Physicians and Surgeons be invited to participate in the work of the Sections at the Toronto meeting.

Resolved: That a copy of the findings of the Puerperal Morbidity Committee be forwarded to the officers of the Section of Obstetrics and Gynaecology for presentation to the Section.

Moved by Dr. MILBURN, seconded by Dr. WEAR,

That it be an instruction to the Science Committee to take steps towards founding a British Medical Association Scholarship in Tropical Medicine.

The motion having been put from the Chair was declared to be lost.

Resolved: That the minutes of the Ethical Committee be received.

Resolved: That the Council approve the adoption of the Model Rules of Ethical Procedure by the Liverpool (Southern) Division, and of the Bradford Rules by the North Suffolk Division.

Read resolution from the British Medical Benevolent Fund:

BRITISH MEDICAL BENEVOLENT FUND,
ST. BARTHOLOMEW'S HOSPITAL, SMITHFIELD, E.C.,
February 22nd, 1906.

DEAR SIR,—I am desired to inform you that at the recent Annual General Meeting of Subscribers to this Fund the following vote of thanks to the Officers of the British Medical Association was passed:

That this Meeting desires to welcome Dr. Langley Browne on joining the Committee and to tender its warmest thanks to the Officers of the British Medical Association for the very cordial assistance received from them, and especially to Dr. Dawson Williams for his kindness in reporting the business of the monthly meetings in the BRITISH MEDICAL JOURNAL, and to Mr. Guy Elliston for his most valuable help in the collection of subscriptions.

Yours faithfully,
W. E. SARGANT, Hon. Sec.

GUY ELLISTON, Esq.

Resolved: That the same be received and entered on the minutes.

Moved by Mr. ANDREW CLARK, seconded by the TREASURER, and

Resolved: That a Special Committee be appointed to represent the various interests concerned to inquire into the existing constitution of the Volunteer Medical Service with a view to ascertaining whether it can be rendered more serviceable as an Army Medical Reserve.

Moved by Mr. ANDREW CLARK, seconded by Mr. LYNN THOMAS, and

Resolved: That the Committee consist of:

3 Senior Medical Officers of Brigades ...	In each case 1 from London and 2 from the country.
3 Officers commanding Volunteer Medical Staff Corps	
3 Officers commanding Bearer Companies	
3 Junior Officers of Medical Staff Corps or Bearer Companies	
6 Volunteer Regimental Surgeons ...	2 from London and 4 from the country.

together with the Representative of the Army Medical Service on the Council.

Moved by Dr. Buist, seconded by Dr. Norman Walker, and

Resolved: That the nomination of the Committee be left in the hands of the Chairman of Council, Mr. Andrew Clark, and Colonel Wilson for report to the Council.

Proceedings of Committees.

MEDICO-POLITICAL COMMITTEE.

A meeting of the Medico-Political Committee was held at the office of the Association on February 21st, when there were present: Dr. R. C. Buist (in the chair), Mr. G. C. Franklin (President), Sir Victor Horsley, F.R.S. (Chairman of Representative Meetings), Dr. H. Radcliffe Crocker (Treasurer), Mr. H. W. Armit, Dr. T. Arthur Helme, Dr. J. H. Hunter, Mr. George Jackson, Dr. J. A. Macdonald, Dr. L. S. McManus, Dr. H. F. Oldham, Mr. C. H. Watts Parkinson, Dr. Cecil E. Shaw, Mr. C. R. Straton.

The Committee's Recommendations.

The Chairman reported that at the last meeting of the Council all the recommendations of the Committee had been adopted.

Lead Poisoning Subcommittee.

The minutes of the Lead Poisoning Subcommittee of January 17th were received, and the following recommendations adopted:

(*a*) That representations be made to the Privy Council as to the necessity of scheduling diachylon as a poison under the Pharmacy Acts.

(*b*) That the Central Council be recommended to adopt for communication to non-medical periodicals in the districts concerned the following statement:

> That the attention of the British Medical Association has been drawn to the dangers incurred through the use of diachylon in pills or otherwise, and the Council feels that the public should be made aware that it has resulted frequently in paralysis, blindness, insanity, and death.

Votes of thanks were passed to Dr. Arthur Hall and Dr. W. B. Ransom for the assistance they had given by preparing articles on the subject.[1]

Amendment of the Lunacy Laws.

The following report of the Lunacy Subcommittee on the amendment of the lunacy laws was approved, and the recommendations adopted as recommendations of the Committee to the Council:

REPORT OF THE MEDICO-POLITICAL COMMITTEE ON THE AMENDMENT OF THE LUNACY LAWS.

With Special Reference to the Care and Treatment of Cases of Unconfirmed Mental Disease.

The importance of being able to treat early and unconfirmed cases of mental disease without bringing the patient into personal contact with the ordinary Lunacy administration has long been recognized by the medical profession, and the difficulties placed in the way of such treatment in England and Wales by the present Lunacy Acts have occupied the attention of the British Medical Association for the last ten years.

In Scotland, on the other hand, the requisite legal sanction for the special treatment of unconfirmed cases has been afforded through a saving Clause inserted in the Section xiii of the Lunatics (Scotland) Act, 1866. That Section prohibits the reception of a lunatic into an unlicensed house and the saving clause is as follows:

> Provided that the Enactments of this Section shall not apply to any Case where the Person so received and kept has been sent to such House for the purpose of temporary Residence only not exceeding Six Months, and under the Certificate of a Medical Person, which Certificate shall be in the Form of Schedule G to the first-recited Act annexed.

Schedule (G).

> I, L. M., a Medical Person duly qualified in Terms of the Act (specify this Act), certify on Soul and Conscience, that C. D. (name and design the Patient) is afflicted (state the Nature of the Disease), but that the malady is not confirmed, and that I consider it expedient, with a view to his recovery, that he should be placed (specify the House in which the Patient is to be kept) for a temporary Residence of (specify a Time not exceeding Six Months).

In considering the advisability of the insertion of such a provision in the English law, the Legislature has therefore available almost fifty years' experience of the working of the system in Scotland, and the evidence as to the results of that experience, collected from time to time by the British Medical Association, has been uniformly favourable.

A Committee of the Association in the years 1897-8, with the valuable co-operation of the Medico-Psychological Association, collated evidence as to the Scottish experience, and laid it before the Lord Chancellor (Lord Halsbury) with a joint recommendation from the two Associations that the English law should be modified in the same way.

The introduction into the last session of Parliament of the Attorney-General's (Sir Robert Finlay) Lunacy Acts Amendment Bill and of the Bill of the London County Council, introduced in their behalf by Sir John B. Tuke, indicated the acceptance by public authorities of those principles for which the medical profession has for so long been striving. The Attorney-General's Bill[2] incorporated, with other detailed improvements of the present Lunacy Law, the method of the Scottish Act for the treatment of cases of unconfirmed mental disease. Sir John B. Tuke's Bill[3] was to enable the London County Council to provide for the early treatment of cases of unconfirmed mental disease in special "receiving houses," a provision which has, with the knowledge and approval of the Scottish Lunacy Commissioners, for several years been made by the Glasgow Parish Council.

Though, owing to the exigencies of public business, these Bills were not passed, their introduction showed that the time was opportune for the definite formulation of the views of the medical profession on this subject, and for an attempt to make these views effective in the preparation of future Bills to amend the Lunacy Acts.

A small Subcommittee was therefore appointed by the Medico-Political Committee in May, 1905, and a report on the subject was laid before the Representative Meeting. The Representative Meeting directed the Medico-Political Committee to continue the consideration of the subject through a Subcommittee containing a sufficient number of members experienced in the administration of the Lunacy Act, and the present Subcommittee was appointed accordingly.

Recognizing with the late Attorney-General that some adjustments of detail in the present Lunacy Laws were necessary, not only as to the treatment of unconfirmed cases, but also in other respects, the Committee has taken into consideration several propositions relative to these Acts that have been brought before it, and it now presents its conclusions in the following recommendations:

(A) The Treatment of Unconfirmed Cases of Mental Disease.

Under this head the Committee, while in the main approving the principles underlying the clauses on this subject in the Attorney-General's Bill of 1905, considers that, in order to bring them into harmony with the views of the medical profession, and with the needs of the public, modifications in certain particulars are urgently needed.

The Committee therefore recommends:

That the support of the Association should be given to Clause 3 of the late Attorney-General's Bill, in the following modified form:

"*Temporary Care of Cases of Unconfirmed Mental Diseases.*

3.—(1) If a medical practitioner certifies that a person is suffering from mental disease, but that the disease is not confirmed, and that it is expedient, with a view to his recovery, that he be placed under the care of a person whose name and address are stated in the certificate for a period therein stated, not exceeding *six months*, then during that period the provisions of

---

[1] British Medical Journal, 1905, p. 428.

[2] British Medical Journal, 1905, vol. i, p. 1009.

[3] Ibid., 1905, vol. i, p. 846.

Section three hundred and fifteen of the Lunacy Act, 1890, shall not apply.

(2) The certificate must not be signed by the person under whose care the patient is to be placed.

(3) Where a medical practitioner signs any such certificate he shall, within one clear day after signing it, send a copy of it to the Commissioners.

(4) The person who receives a patient under any such certificate shall, within one clear day after receiving the patient, give notice to the Commissioners of his reception, and of the name and address of a medical practitioner who undertakes the treatment of the patient who may be the person under whose care the patient is placed. If the patient dies, or the residence of the person receiving him is changed, within the period mentioned in the certificate, the person receiving the patient shall within two clear days give notice of the death or change of residence to the Commissioners.

(5) He shall also, within two clear days after the expiration of the period mentioned in the certificate, or if he ceases to have the care of the patient at an earlier date, then within two clear days after that earlier date, send a report to the Commissioners stating whether the patient recovered, and, if not, in what manner he was dealt with when the person making the report ceased to have the care of him under the certificate.

(6) If default is made in sending any notice or report required by this section, the person in default shall be guilty of a misdemeanour, and be liable to a penalty not exceeding *twenty pounds*.

(7) If before the expiration of the period mentioned in the said certificate it shall appear to the person in whose charge the patient is, if a medical practitioner or the ordinary medical attendant of the patient, that an extension of the said period as hereinafter provided is desirable in the interests of the patient, then such medical practitioner shall, not less than one week before the end of the period, send to the Commissioners in Lunacy a report on the mental and physical condition of the patient.

Subject to the transmission to the Commissioners of such report as aforesaid, another certificate may, before the expiration of the period mentioned in the original certificate, be given for a further period not exceeding three months, provided that no patient shall in respect of the same attack of illness be detained under this form of certificate for more than nine months in all, and provided that after the expiry of these certificates no further certificate under this section shall be given in respect of the same patient within six months from the date of the expiration."

The Committee further recommends:

That clauses should be added providing for the treatment of cases of unconfirmed mental disease in special institutions or special wards, or in houses or homes, and that as far as possible the patients be placed under the charge of medical practitioners who have special experience in the treatment of mental disease.

(*B*) *Other Amendments of the Lunacy Laws.*

Under this head the Committee recommends that in any Bill amending the Lunacy Acts, clauses dealing with the following matters should be included:

(1) Applying the principles of the Superannuation Act and the Workmen's Compensation Acts as regards injuries received in performance of duties to members of the staffs of asylums supported out of public funds.

(2) Removing the disqualification imposed by Sections 158 and 165 of the Lunacy Act (1890) on certain medical practitioners from time to time.

(3) Permitting the Lord Chancellor to appoint from time to time such additional persons qualified for appointment by being medical practitioners, and such additional persons qualified for appointment by being barristers, to be paid Commissioners in Lunacy, as may be necessary for the performance of the duties of the Commissioners under the Lunacy Acts, 1890 and 1891, instead of limiting the power to the appointment of one additional medical man, and one additional barrister, as provided by Clause 2 of the Attorney-General's Bill, 1905.

(4) Permitting the reception of voluntary boarders in public asylums.

(5) Deleting from the forms of medical certificate required by the Lunacy Acts the words "separately from any other medical practitioner."

(6) Removing the restrictions whereby the validity of a licence is limited to the locality for which it was originally granted.

(*C*) *Lunacy Act (1890) Section 202.*

That provision be made for the supervision under the Commissioners in Lunacy of all persons of unsound mind who are in receipt of parochial relief.

(*D*) *Lunacy (Scotland) Acts.*

(1) That the protection which the English law at present affords to medical practitioners who certify in cases of lunacy should be extended to Scotland, and that the Association should at the first opportunity take steps to obtain the inclusion in the Scottish Law of Section 330 of the Lunacy Act (1890).

(2) That the provisions of the Lunacy Act (1890), Sections 13–15, charging the constable with the duty of arresting an alleged lunatic not under proper care, should be introduced into the Scottish law, and the duties of the Procurator Fiscal (Lunacy Act (Scotland) 1862, Clause 15) should be defined to show that he only takes action when the Inspector of Poor neglects to do so.

(*E*) *Action to be Taken.*

The Committee recommends:

(1) That action be taken by approaching the Lunacy Commissioners and the Lord Chancellor on the subjects of this report at an early date and that the co-operation of the Medico-Psychological Association be invited.

(2) That the recommendation (C) as to pauper lunatics be brought to the notice of the Royal Commission on the Feeble-minded.

(3) That the Asylums Committee of the London County Council be informed of the concurrence of the Medico-Political Committee of the British Medical Association as to the boarding out of pauper lunatics.

(4) That the whole report be referred to the Irish Committee for consideration, in order that they may make recommendations with respect to such provisions as in their view should be extended to Ireland.

AMENDMENT OF THE INEBRIATES ACTS.

The report of the Lunacy Subcommittee on the amendment of the Inebriates Acts was received, and the following report and recommendations were adopted for submission to the Council:

Report on Amendment of the Law Relating to the Detention and Care of Inebriates and Persons Suffering from the Habitual Use of Drugs.

The Committee has considered various proposals which have been put forward with reference to this matter, and has deemed it most convenient to draw up:

(A) A formal statement of the reasons for which further legislation appears to be necessary, and

(B) Recommendations as to such legislation.

(A) CONSIDERATIONS AS TO THE NECESSITY FOR LEGISLATION.

1. From the considerations placed before the Committee, it appears to be clearly established that there are in all classes of society persons who are, by indulgence to excess in intoxicating liquor, or in the use of stimulant, sedative or narcotic drugs or substances:

(*a*) At times incapacitated from performing their duties to themselves, their families, or the State; and

(*b*) By the same cause, at times rendered dangerous or offensive to themselves, their families, or the public.

2. The number of such persons is sufficiently great, and their conduct, in consequence of excessive indulgence in alcohol, etc., as aforesaid, is sufficiently noxious, to render it desirable that there should be means of restraining them from such excessive indulgence;

3. It is found by long and frequent experience that no means, except compulsory deprivation of the alcohol, or drug, is efficient in restraining such persons from their excessive indulgence;

4. There is at present no legal power by which such persons can be subjected to compulsory deprivation of alcohol unless they themselves so desire, or unless they have been repeatedly convicted of offences, and no legal power by which the takers of drugs in excess can under any circumstances be subjected to compulsory deprivation of such drug;

5. In the opinion of the Committee, there is urgent need that legislation should be provided, by which such persons could be placed under suitable control and restrained from excessive indulgence in alcohol, or drugs, as the case may be, whether they are willing to be so controlled or no, and whether or no they have been convicted of an offence;

6. The Committee recognizes the gravity of the recommendation which, if carried into effect, will authorize the deprivation of some of the liberty of persons who may have committed no crime or offence recognized by the law; and would include in its recommendation safeguards against the improper application of the powers that they desire to be created. It is of opinion that efficient safeguards may be constituted in two ways—namely: First, by requiring the consent of a judicial authority before any person can be restrained for such cause as is herein indicated; and second, by giving power to such judicial authority to give costs against any applicant for a detention order, whose application ought not, in the opinion of the judicial authority, to have been made.

(B) RECOMMENDATIONS.

Persons to be placed under Restraint.

1. Subject to the safeguards stated in paragraph 6 of part (A) of this report, the Committee is of opinion that powers should be given to a judicial authority to place under restraint, in spite of his own objection thereto, any person who is so addicted to the habitual use of alcohol or opium, or any stimulant, sedative, or narcotic drug or substance as

(*a*) to render him at times dangerous to himself or others;

(*b*) to render him at times incapable of managing himself or his affairs.

Form of Restraint.

2. If, in the opinion of a judicial authority, any person comes within the description of the last paragraph, then the judicial authority should have power to order that such person be committed for any period not exceeding three years to the custody of (*a*) any person named in the order willing to act as guardian; or (*b*) the managers of any licensed Retreat or Inebriate Reformatory who are willing to receive him. When any person is admitted to a Retreat or Reformatory under these circumstances, all conditions shall apply as if he had been admitted to a Retreat or Reformatory under the Inebriates Acts, 1879–1900. Power should be given to the Secretary of State to transfer the inebriate from the control of any guardian in whose charge he may be placed under order of Court—

(1) If the person in whose charge he was so placed declines to continue his responsibility or becomes incapable of properly exercising it.

(2) If the inebriate cannot be restrained from the use of alcohol or other substance as aforesaid.

Such power of transfer should include power to transfer the inebriate from the charge of the guardian to a Licensed Retreat or Inebriate Reformatory, or from a Retreat to a Reformatory, or from one Retreat or Reformatory to another.

Power to deal with Estates.

3. Power should also be provided to deal with the estates of persons who are by indulgence to excess in alcohol or drugs at times incapable of administering their estates with ordinary prudence.

Procedure.

4. In the opinion of the Committee the following matters should be provided for in any measure that deals with the persons under consideration:

(A) The judicial authority should be set in motion by petition.

(B) The provision as to the person by whom the petition is to be presented should be analogous to that contained in Section 5, Subsection (1), of the Lunacy Act, 1890.

(C) The petition should be supported by affidavits or by documents having the force of documents made on oath.

(D) The judicial authority should have power:

(*a*) To visit, or cause to be brought before him, the person whose conduct is in question.

(*b*) To make such further inquiries and summon such witnesses, including the husband or wife of the person complained of, as he may think necessary.

(*c*) To adjourn the inquiry.

(*d*) To make an order for the immediate committal of the person as hereinbefore suggested.

(*e*) To make an order for the committal of the patient at any time within   months of the date of the order, contingent on the behaviour of the patient and at the discretion of the petitioner.

(*f*) To dismiss the petition without or with costs against the petitioner, according as, in the opinion of the judicial authority, the petitioner has, or has not, acted in good faith, and without malice.

(*g*) To make a maintenance order on the estate of the inebriate, or to require guarantee that maintenance expenses shall be met.

(E) Protection should be afforded to all persons who have in good faith, and with reasonable care, done anything purporting to be done under the legislation proposed.

It was further resolved:

That it be a recommendation to the Council that the Home Secretary be requested to receive a deputation from the Association on the subject.

That it be recommended that the support of the Association be given to the Inebriates Amendment Act (Scotland) Bill.

That Dr. Cunyngham Brown, Mr. J. Carswell, Dr. John Macpherson, and Dr. Wyler be thanked for the assistance they have rendered.

CONTRACT PRACTICE.

The minutes of the Contract Practice Subcommittee of January 3rd and February 14th were received, and, on the recommendation of the Subcommittee, the following resolutions were adopted:

A.—That it be recommended to the Council that copies of the Warning Notice as to appointments be forwarded to Secretaries of Medical Schools and Colleges, asking them to have them placed on their notice boards.

B.—That the attention of Division Committees be drawn to the opening of the Central Emergency Fund, and that it be suggested that they should appoint one or two members to organize the contributions from their areas, and that small periodic subscriptions be specially encouraged.

C.—That the Medical Secretary and the Solicitor be instructed to draw up a model set of rules for a Public Medical Service, based on the principles stated in the memorandum approved by the Subcommittee.

D.—That it be pointed out, for the information of the Divisions, that the Contract Practice Report does not include any recommendation to carry on contract practice; that in the view of the Committee the question as to the necessity of contract practice in any given district is a matter for local determination; and that the recommendations in the Contract Practice Report were simply intended as suggestions as to how contract practice could be conducted in the interests of the profession and the public in those districts where it was believed to be for the present unavoidable.

PARLIAMENTARY SUBCOMMITTEE.

The CHAIRMAN presented the recommendations of the Subcommittee, which had met that morning, and these were adopted as follows:

Compulsory Vaccination.

With respect to a communication from the Jenner Society inquiring whether the British Medical Association would consider any policy for adoption with a view of meeting any proposal which may be made in the present House of Commons for the abolition of compulsory vaccination, it was resolved:

That the Jenner Society be informed that the policy of the Association is unaltered; that in the event of any proposal being made for the abolition of compulsory vaccination the Association would use its influence as far as possible against abolition; and that any proposals with respect to vaccination which the Jenner Society may think it advisable to make, will receive the careful consideration of the Association.

It was further resolved:

> That members of the Public Health Committee of the House of Commons be requested to confer with representatives of the Association on the subject of action to be taken in the present session with respect to vaccination.

Poor-law Medical Officers.

With respect to a communication from the Chairman of Council as to the advisability of approaching the President of the Local Government Board with a view to obtaining a return showing the number for each Poor-law union, the area, population, number of medical officers, and whether extra fees were paid as required by the Poor Law Orders, it was resolved:

> That it is desirable that such a return be obtained through a motion in the House of Commons, and that the Medical Secretary be instructed to request some member to bring the matter forward.

Replies of Members of Parliament to Questions Submitted at the General Election.

The Medical Secretary was instructed to prepare for inclusion in the report on action taken during the election, and for publication in the Journal, a tabular statement showing the replies of each member of Parliament to the questions submitted by him on behalf of the Association; the list to be alphabetically arranged according to Divisions of the Association.

Medical Acts Amendment Bill.

With respect to a communication from the British Dental Association suggesting that the British Medical Association should appoint representatives on a joint committee of the two Associations, to watch the interests of the Medical Acts Amendment Bill if it obtained a favourable place in the ballot, it was resolved:

> That the Chairman of Representative Meetings, Mr. Armit, Dr. Macdonald, and Dr. McManus be appointed Representatives of the Association upon the suggested Subcommittee, and that it be proposed that the Medical Secretary should act as Secretary.

Election of Member of Parliamentary Subcommittee.

Dr. J. A. Macdonald was appointed a member of the Parliamentary Subcommittee.

Reorganization of the Local Government Board.

The Committee resolved that the Prime Minister be requested to receive a deputation on the subject of the reorganization of the Local Government Board.

Poor-Law Commission.

The Committee resolved that renewed representation should be made to the Prime Minister as to the desirability of appointing on the Poor-Law Commission additional members who have knowledge of the operation of the Poor Law in its medical aspects.

Medical Inspection of School Children.

The Committee decided that representations should be made to the President of the Board of Education as to the desirability of including in the Education Bill the systematic provision for the medical inspection of school children.

Indecent Advertisements Acts.

It was resolved that the Home Secretary should be approached with respect to the amendment of the Indecent Advertisements Act.

Coroner for South-West London.

The Committee decided to call the attention of the Lord Chancellor to the representations made by the Association to the late Lord Chancellor, and request him to receive a deputation on the subject.

The decision of the Local Government Board auditor in the matter of the objections of the Association to certain payments by the London County Council to the Coroner for South-West London was ordered to be received; and the Medical Secretary reported that upon receipt of this information he had, by direction, asked Mr. Cockerton to state the reasons for his decision, and also to furnish the Association with a copy of the special report of the case which he proposes to make to the County Council, and that Mr. Cockerton had replied promising to do this, but indicating that probably some time would elapse before his report could be ready.

Conference with Pathologists.

The report of the conference of pathologists convened in accordance with the minutes of the Representative Meeting and of the Medico-Political Committee was received, and the Committee concurred in the findings of the conference:

> (*a*) That the employment of expert pathologists to assist in the *post-mortem* examination in medico-legal cases of special difficulty is highly desirable, and indeed necessary.
>
> (*b*) That such an expert cannot replace the medical practitioner.
>
> (*c*) That the medical practitioner, through his attendance during life or presence at or about the time of death, is in possession of first-hand knowledge which should be available both in evidence at the inquest and also at the *post-mortem* examination.
>
> (*d*) That the employment of expert pathologists should be in addition to, and not in substitution for, the employment of the practitioner who has previous knowledge of the case.
>
> (*e*) That experts should be remunerated at expert rates, with a minimum fee of five guineas for *post-mortem* examination and evidence. Any separate investigation to be paid for at special rates.
>
> (*f*) That expert pathologists should decline to act in any case in which they have not an assurance that the principles of the clauses will be observed.

The Carmichael Trust.

The Committee considered an application from a member of the Association asking for assistance in taking proceedings in respect of alleged non-compliance by the Royal College of Surgeons of Ireland with the conditions of the Carmichael Trust in a recent award. The Committee expressed its regret that it could not recommend the Association to take the action proposed.

"Sight-testing" Bills.

The Committee appointed Sir Victor Horsley, Mr. Armit, and Dr. Cecil Shaw to serve with representatives of the Ophthalmological Society on a Joint Committee to take action in opposition to Bills for the registration of "sight-testing" opticians.

ORGANIZATION COMMITTEE.

A meeting of the Organization Committee was held at the office of the Association on February 20th, Mr. T. Jenner Verrall in the chair, the other members present being: Mr. H. A. Ballance, Mr. Andrew Clark, Dr. Alfred Cox, Professor J. T. J. Morrison, Dr. E. Rayner, and Mr. W. E. Hempson (Solicitor to the Association).

The Bombay Branch.

On the consideration of a letter suggesting that the management of the Bombay Branch of the Association should be taken over by the Bombay Medical and Physical Society, it was resolved:

> That the Medical Secretary be instructed to reply that it would be impracticable for a Branch of the Association to be managed by a committee constituted and appointed as proposed; that the Organization Committee will be glad to give every assistance to the local members of the Association in organizing the Bombay Branch, and it is suggested as the first step that a meeting of members of the Branch be called at the first opportunity to elect officers and a committee or council.

Suggested Reduced Subscription in Certain Cases.

The Committee resolved that it was impossible to entertain the suggestion that under certain conditions the subscription of a member should be reduced.

Colonial Branches Finance.

The Committee instructed the Medical Secretary to inform certain Colonial Branches which had suggested that they should receive larger grants from the parent Association that the whole question was under consideration by the Council and the Organization Committee, and that it was hoped that provision may be made in the proposed Charter for greater freedom for the Colonial branches as to finance.

Branch Maps.

In reply to a communication from a Division, suggesting that maps showing the boundaries of all Divisions and Branches should be inserted in the *Year Book*, the

Committee resolved that the Division be informed that, under instructions already given, maps are supplied from the Medical Secretary's office showing the boundaries of those Divisions and Branches which apply for such maps. Inquiries which had been made showed that it would be too expensive to prepare a map of the whole Association showing the boundaries of its local bodies for publication in the *Year Book*.

Supplementary Grants to Divisions and Branches.

The Chairman having reported that the Council had adopted the recommendations of the Committee of December 12th, except that concerning supplementary grants to Divisions and Branches, it was resolved:

> That the Council be recommended to reconsider the draft By-law as to Supplementary Grants to Divisions and Branches, submitted by the Committee; that the Chairman be requested for this purpose to move the suspension of the standing orders of the Council, and that a special report on the subject be prepared for the consideration of the Council setting forth the special character of the alteration suggested in the draft by-law in question.

The Chairman further reported and the Committee approved additional recommendations which he had made to the Council and which the Council had adopted respecting matters which became ripe for recommendation subsequent to the Committee meeting. These were: the formation of a Saskatchewan Branch, the grouping of Colonial Branches for representation on the Council, and arrangements for issuing the Charter to the Divisions.

Application for a Charter.

The draft Charter was considered, certain additional emendations agreed upon, and points reserved for further reference to counsel and to the Charter Subcommittee.

Alteration of Boundaries.

Certain alterations of boundaries were recommended for approval by the Council.

Grouping of Divisions and Branches for Representative Purposes.

The Committee considered the grouping for 1906-7 of Divisions for representation in Representative Meetings and of Branches in the United Kingdom for representation on the Council; the Divisions and Branches were directed to be informed that the Committee was dealing with the matter, and would be glad to receive any suggestions.

Alteration of Articles.

Attention having been drawn to the alteration of Articles approved by the Representative Meeting at Leicester, the Chairman of Representative Meetings was requested to bring the matter before the Council, in order that, if the Council should think proper, the requisite General Meetings might forthwith be convened.

Election of a Member.

The Medical Secretary presented a report on information obtained with regard to an alleged irregularity in the election of a member by a Branch in the area of which he was not permanently resident, and the Committee directed the facts of the case to be reported to the Council with an intimation that, in the opinion of the Committee, the question was one of the interpretation of the word "residing" in Article III. The Committee recommended that in future it should be specified that the permanent address alone be given in the form of application for membership.

Tenure of Office of Representative Meeting Members of Council.

The following by-law, drafted in accordance with the instruction of the Council, was recommended for presentation to the Representative Meeting:

> Each member of Council elected by the Representative Meeting shall hold office for one year, and at the end of that time shall be eligible for re-election, unless he has served as a member of Council elected by the Representative Meeting for six years successively, in which case he shall for one year be incapable of being so elected.

SCIENCE COMMITTEE.

A meeting of the Science Committee was held at the office of the Association, on February 22nd, Dr. Norman Walker in the chair; the other members present were Sir James Barr, Dr. R. C. Buist, Mr. Andrew Clark, Dr. Wm. Collier, Dr. F. M. Pope, Professor Wm. Osler, F.R.S., Mr. H. Betham Robinson, Dr. Cecil E. Shaw, and Dr. W. J. Tyson.

Special Research Library.

The Committee considered the following report from Dr. Cecil E. Shaw (Belfast) and the Editor, made in pursuance with the instructions of the Committee at the previous meeting:

The Science Committee, at its meeting on October 4th, 1905, had before it a report presented by the Science Co-ordination Committee to the Council on February 15th 1905. This report contained the following paragraphs:—

> "*C.* Special Research Library.
>
> "That it is desirable to form a Lending Library for Research by duplicating the leading special periodicals.
>
> "The Committee recommend to the Scientific Grants Committee that they should consider the question of supplying or aiding in the purchase of the necessary literature for individual scientific researches with a view to the formation of a special Library for research."

The Science Committee deferred the consideration of these clauses until it could have before it a memorandum on the subject. We beg now to submit the following memorandum, and have appended to it a list of foreign publications (including American) which are frequently consulted by members engaged in clinical and pathological research.

We have ascertained that a considerable proportion, as indicated in the list, are already filed in the Library, and it is probable that some of the others might be obtained by way of exchange for the British Medical Journal.

We believe that many of these sets are seldom consulted, as workers in London have the opportunity of using the library of the Royal College of Surgeons, which is well known to be fully provided with this class of literature.

We understand that research workers in provincial centres frequently find considerable difficulty in obtaining access to such publications.

We are therefore of opinion that the usefulness of the Library would be materially increased by forming a Section containing such periodicals, and permitting members to borrow them under suitable regulations.

To facilitate the working of such a scheme, we are of opinion that these regulations should be as simple as possible, and would suggest the following:

1. No book shall be issued except to a member whose address is registered with the General Secretary.
2. A member desiring to borrow a book or periodical shall make an application to the Librarian, in writing, which application shall be filed by the Librarian, who shall forward the book as soon as it is available.
3. A member requiring a book to be transmitted by post shall send with his application a fee of 4d. for postage.
4. Any book in the custody of a member shall be returned carriage paid within twenty-four hours of the receipt of a written application from the Librarian.
5. The Librarian shall, on the first day of July in every year, require the return of all books, and none shall be issued between that day and the first day of September next following.

The appended list of periodicals, which is not put forward as complete, is submitted merely as an indication of the class of publications in view, and we venture to suggest that the work of the Committee will be facilitated if members would forward proposals for its extension or modification to one of us, so that a complete list may be submitted to the Committee at its next meeting.

With regard to foreign books, as distinguished from periodical publications, we have not attempted to draw up any list, but we believe that many now in the Library might advantageously be placed in this Section with the approval of the Library Committee. Applications for books not on the list of the Lending Section, or not in the Library, should be submitted by the Librarian to the Library Committee.

We recommend that the collection of theses of the Universities of Paris and Lyons now filed in the Library should be placed in the Lending Section.

A list of the publications in the proposed Lending Section should be prepared and published in the SUPPLEMENT of the JOURNAL. It should also be supplied to medical schools and colleges, and, on application, to members. A list of additions should be published from time to time.

CECIL E. SHAW.
DAWSON WILLIAMS.

November 22nd, 1905.

The report was approved, and recommended to the Council for adoption when opportunity offers after the rebuilding of the premises.

SCIENTIFIC GRANTS.

In accordance with the resolution adopted at the previous meeting, and approved by the Council, the Committee co-opted the following four gentlemen to be members of the Science Committee for the purpose of advising as to the allocation of scientific grants: Professor E. H. Starling, M.D., F.R.S. (London); Professor G. H. F. Nuttall, M.D., F.R.S. (Cambridge); Professor Ralph Stockman, F.R.S.E. (Glasgow); Professor A. H. White (Dublin).

The Committee considered reports on grantees received from Professor Starling, F.R.S., on London and district, Sir James Barr on Liverpool, Dr. T. Arthur Helme on Manchester, Dr. Milburn on Hull, Dr. W. Collier on Oxford, Professor Sims Woodhead on Cambridge, the Chairman on Scotland, and Dr. James Craig on Ireland.

ANNUAL MEETING, TORONTO.

A communication was read from the Honorary Secretary of one of the Sections of the Annual Meeting inquiring whether papers might be read by proxy. The Committee resolved that the officers of Sections be informed that no paper must be received on the understanding that it is to be read by proxy.

Preliminary circulars issued by the officers of the Sections of Dermatology and Pathology and Bacteriology were considered and approved.

Having heard a report from Professor Osler, F.R.S., the Committee resolved to recommend the Council that the constituent members of the special societies of the congress of American physicians and surgeons be invited to participate in the work of the sections.

CO-ORDINATION OF SCIENTIFIC WORK.

The following resolution passed by the Liverpool Southern Division was considered:

> It was agreed that in this District the Local Medical Societies provided ample opportunities for Scientific Meetings and discussions, but it was also pointed out that much good work might be done in the way of collective investigation of scientific subjects, through the Divisional Organization, if suitable subjects and inquiries were sent down to the Divisions from the Central Authorities.

The Committee resolved to suggest to the Division that the question of fixing a standard of puerperal morbidity would be a suitable subject for consideration.

PUERPERAL MORBIDITY.

It was reported that the Special Committee on Puerperal Morbidity, consisting of Professor Herbert R. Spencer, London, Convener; Miss Garrett Anderson, M.D., London; Dr. R. C. Buist, Dundee; Professor John W. Byers, Belfast; Dr. T. Arthur Helme, Manchester; Professor E. Hastings Tweedy, Dublin; Dr. Thomas Wilson, Birmingham; Dr. Robert Boxall, London Obstetrical Society; Dr. J. W. Ballantyne, Edinburgh Obstetrical Society; Professor Robert Jardine, Glasgow Obstetrical Society; Dr. W. E. Fothergill, Manchester, North of England Obstetrical Society; Dr. Andrew J. Horne, Dublin, Royal Academy of Medicine in Ireland; with Miss Garrett Anderson, M.D., as Honorary Secretary, has held meetings and was now preparing its report. It was resolved to recommend the Council to forward a copy of the findings of the Committee to the officers of the Section of Obstetrics and Gynaecology.

INVESTIGATION OF HEREDITARY DISEASE.

The following resolution, the outcome of a paper read by Dr. Urquhart in the Section of Psychological Medicine last year, and published in the BRITISH MEDICAL JOURNAL on December 16th, 1905, together with a letter from Dr. Urquhart, showing the lines upon which he was anxious the inquiry should follow, was considered:

> That the Section of Psychological Medicine respectfully request the Council to appoint a Committee for the investigation of hereditary forms of disease, and to place at the disposal of the Committee such funds as will enable them to report on the whole subject.

It was resolved to defer the consideration of the matter to afford an opportunity for the Chairman to confer with Professor Karl Pearson, F.R.S., Dr. Macpherson, and Dr. Bashford.

JOURNAL AND FINANCE COMMITTEE.

A MEETING of the Journal and Finance Committee was held at the office of the Association on March 5th, when there were present: Dr. H. W. LANGLEY BROWNE (Chairman of Council) in the chair, Sir Victor Horsley, F.R.S. (Chairman of Representative Meetings), Dr. H. Radcliffe Crocker (Treasurer), Dr. W. A. Carline, Mr. Andrew Clark, Dr. J. H. Galton, Dr. J. Groves, Mr. R. H. Kinsey, Mr. C. H. W. Parkinson, Dr. Edwin Rayner, Dr. E. Markham Skerritt, Mr. J. Lynn Thomas, C.B., Mr. T. Jenner Verrall.

PREMISES.

The recommendations of the Premises and Library Committee, which will be found set out in the report of the proceedings of Council, were considered, and the recommendation as to expenditure on temporary premises was approved and recommended to the Council for adoption.

MIDDLEMORE PRIZE.

It was resolved that as the Middlemore Prize may be awarded during the current year the nomination of adjudicators be referred to the Science Committee, with a recommendation that the prize be only offered for original work in the department of ophthalmic medicine or surgery.

PROPRIETARY DRUGS.

The minutes of the Proprietary Drugs Committee of February 9th, were approved, and the recommendations contained therein directed to be carried into effect.

At the meeting of this Committee on February 9th all the members were present, namely, Mr. R. H. Kinsey, Chairman of the Ethical Committee, in the chair; Professor Wyndham Dunstan, F.R.S.; and Professor A. R. Cushny; the Editor and General Secretary also attended. The following rules were adopted:

The Committee considered the principles which should guide the admission into the editorial columns of the JOURNAL of notices of proprietary drugs and preparations, and, after full discussion, adopted the five following resolutions:

1. That firms requesting notices of proprietary preparations in the editorial columns of the JOURNAL be required to state in confidence, for the information of the expert committee, the proportion of all the ingredients, and that the firms be asked to indicate any parts of their statements they would not wish to be published.

2. That in the case of a chemical compound firms be required to furnish to the Committee full information regarding its composition and constitution, together with tests for identity purity, and strength.
3. No notice of an article shall be admitted about which the manufacturer, or his agents, make false or misleading statements.
4. No notice of an article shall be admitted about whose therapeutic value the manufacturer, or his agents, make unwarranted, exaggerated, or misleading statements.
5. If the article is patented, either process or product, the number and date of such patent or patents must be furnished. If patented in other countries, the name of each country in which a patent is held must be supplied, together with the name under which the article is there registered.

Questions connected with the labelling and advertising of such preparations were discussed, and their further consideration deferred until the next meeting of the Committee.

PUBLIC HEALTH COMMITTEE.

A MEETING of the Public Health Committee was held at the office of the Association on February 3rd. Dr. GROVES, and afterwards Mr. C. H. WATTS PARKINSON, occupied the chair. The other members present were: Mr. Herbert Jones, Dr. F. C. Martley, Dr. T. G. Nasmyth, and Dr. J. Maxwell Ross.

DISMISSAL OF A PUBLIC VACCINATOR.

Action which had been taken in the matter of the dismissal of a public vaccinator from his office was approved.

HOSPITAL ISOLATION.

The resolution adopted in the Section of State Medicine at the annual meeting of the Association at Leicester suggesting that an inquiry should be held with regard to isolation hospitals as a preventive measure in checking the spread of infectious diseases was considered, and the Committee decided to report to the Council that it was not desirable for the British Medical Association to recommend such an inquiry (see Proceedings of Council, p. 142).

CONGRESS OF THE ROYAL SANITARY INSTITUTE.

It was decided to recommend the Council to appoint Dr. Groves, Mr. Herbert Jones, and Dr. Manley as representatives of the Association at the Congress of the Royal Sanitary Institute to be held at Bristol next July.

PUBLIC HEALTH (SECURITY OF TENURE) BILL.

The CHAIRMAN reported as to the present position of the Security of Tenure of Medical Officers of Health Bill, and the following resolution was adopted:

> That in the opinion of the Committee the Public Health Bill should be pressed forward, in its present form, by the Association, in co-operation with the Sanitary Inspectors' Association, and with that object the present President of the Local Government Board should be requested to receive a deputation.

PUBLIC HEALTH MATTERS BEFORE PARLIAMENT.

The MEDICAL SECRETARY reported as to other matters affecting public health which might require attention during the ensuing session, and it was resolved:

> That in the opinion of the Committee the parliamentary work of the Association in matters affecting public health should be concentrated in the first instance on the Public Health Bill, and that efforts be made by members of the Committee in co-operation with the Medical Secretary to induce members of Parliament to ballot for the Bill.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

BATH AND BRISTOL BRANCH.

THE fourth ordinary meeting of the session was held at Bath on February 28th, Dr. J. MICHELL CLARKE, President, in the chair.

A discussion on Recent Advances in Respect to Diseases of the Joints was opened by Professor HOWARD MARSH, of Cambridge, and the following members took part in it: Dr. CAVE, Dr. PRESTON KING, Dr. STACK, Dr. WATERHOUSE, Dr. WATSON WILLIAMS, Dr. PARKER, and Dr. MICHELL CLARKE. Patients were shown by Dr. OGILVY, Dr. PRESTON KING and Mr. BENSON.

METROPOLITAN COUNTIES BRANCH:

HAMPSTEAD DIVISION.

A MEETING of this Division took place on Friday, March 9th, at 4.45 p.m., at the Hampstead Conservatoire, Swiss Cottage. Mr. F. R. HUMPHREYS in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Hampstead Hospital.—Dr. GLOVER then demanded that a letter should be read which had been received from Dr. Cook on the subject of the Hampstead Hospital Conference. The CHAIRMAN declined to permit the reading of one letter, as it would be impossible to read one without reading all, and there was no time to read all the correspondence. He explained to the meeting that no agreement had been reached between the Committee and the acting staff of the hospital on this matter.

Paper.—Mr. LOCKWOOD read a paper entitled the *Modern Diagnosis of Tumours*, which will be published. After the paper, Mr. ERNEST SHAW demonstrated the immediate method of preparing sections for microscopical examination during operations. In the discussion which followed, Mr. HUMPHREYS thought the paper unduly pessimistic, as to ordinary diagnostic methods. The method left very little to the skill of the surgeon, but the advantage of having a competent pathologist present at the operation was proved. Mr. ARMIT corroborated Mr. Lockwood's statements as to the rapidity of the method. He thought it should have a very great future. There were certain difficulties, however, in microscopical diagnosis. It was not always easy to distinguish between carcinoma and sarcoma, between malignant and inflammatory tissues, even with the aid of the microscope. He proposed a vote of thanks to Mr. Lockwood; this was seconded by Mr. NELSON HARDY, and carried with acclamation. Dr. FORD ANDERSON asked if this method might be of value in obscure medical cases. Might it not be possible to take samples—for example, from the liver with an acupuncture needle—and determine their nature at once with the microscope? Mr. LOCKWOOD, in reply, said he had found this method most useful in cases of tumour of the breast where naked-eye appearances are especially fallacious. By means of the microscopic examination the area of operation could be extended with confidence, even to the dreaded supraclavicular region. Such extensive operations were by no means easy, and the skill of the surgeon could scarcely be regarded as unimportant. In reply to Mr. Armit, he thought that from the operator's point of view, the distinction between sarcoma and carcinoma—for example, of testicle—was not important. In reply to Dr. Anderson, he recalled a case of obscure disease of the gall bladder suspected of being empyema associated with a lump on a rib. He had incised this lump and found pus and bare bone. This was at first thought to be inflammatory, but he noticed that the exposed bone was red, not white, and an immediate microscopical examination of a piece of the abscess wall proved it to be columnar-celled carcinoma and cleared up the diagnosis. In general he disliked "harpooning" tissues; he preferred incision. A hearty vote of thanks was passed to Mr. Lockwood and his assistant. The interest taken in the subject was shown by the fact that the number of members present (25) was a record for this Division.

Meetings.—The CHAIRMAN mentioned that the April meeting, which appeared on the programme for April 13th, would be held on April 6th, as the former date was Good Friday. A special meeting would be held at Finchley in April, if possible.

Contract Practice.—The CHAIRMAN announced that the Committee had formed a subcommittee for the purpose of ascertaining the facts about local contract practice in the Division, and hoped that members would give all the information in their power.

Subdivisions.—The CHAIRMAN then proposed, and Dr. OPPENHEIMER seconded:

> That in the opinion of this meeting it is desirable that in any distant part of the Division, if the members therein resident should express their desire for the same, (1) a

> local Subdivision should be formed with power to annually nominate its own officers; (2) the proceedings of the Subdivision to be under the general supervision of the Divisional Committee, to whose Secretary notices of all meetings should be sent; (3) no resolution passed by a Subdivision to be binding upon the Division; (4) no independent report of the proceedings of the Subdivision to be published in the SUPPLEMENT; [(5) the expenses of a Subdivision to be defrayed by special local subscription]; (6) that the local meetings should be open to any members of the Division.

—There was decided opposition to Clause (5) of the resolution. Dr. MACEVOY objected to the whole proposal, and thought it would be far better to form new Divisions. Eventually the proposal of Mr. Humphreys was agreed to, with the exception of Clause (5), which was omitted on an amendment by Mr. HARDY, seconded by Mr. MOXEY.

Divisional Finance.—The SECRETARY read the Committee's reply to the inquiry by the Organization Committee of the Association as to Divisional finance. The reply was approved.

Conference of Divisions.—Dr. YELD proposed, and Dr. OPPENHEIMER seconded:

> That in view of the fact that the fifteen Divisions of the Metropolitan Counties Branch have only five Representatives on the Central Council, two delegates be nominated by this Division to arrange with delegates from other Divisions a list of names to be presented to the Divisions for their approval.

This was agreed to, with the following comments: (1) That it is desirable that all the Divisions should be invited to join the Conference; (2) that it is desirable that Divisions should not bind their delegates to vote for any particular names; (3) that members of Divisions are not bound to vote in accordance with the views of the Conference. Dr. Yeld pointed out that it was most desirable that general practitioners should be well represented, and the Conference would help to put forward the names of general practitioners who might otherwise be unknown outside their own Divisions. The Division expressed no opinion as to the number of general practitioners to be nominated by the Conference. Mr. R. H. Wellington and Mr. W. H. Farmer were then elected delegates.

Hospital Abuse.—Mr. HUMPHREYS proposed:

> That with respect to the question of the abuse of hospitals this Division is of opinion that the time has arrived when the Divisions should unite upon a common course of action, and that with a view to this end each Division should be invited to nominate two delegates to meet those of other Divisions, to arrange with them a scheme of action to be submitted to the Divisions.

—This was seconded by Mr. CUNNINGTON.—Mr. NELSON HARDY proposed as an amendment:

> That this Division is of opinion that the time has arrived when the subject of hospital abuse might be usefully discussed at a special meeting of the Metropolitan Branch Council called for the purpose, and hereby requests the authorities of the Branch to call such a meeting.

—This was seconded by Mr. FARMER.—On being put to the vote it was lost.—Dr. FORD ANDERSON then proposed:

> That a Special Hospitals Committee be appointed by the Branch Council to consider the subject, and report thereon.

—This was seconded by Mr. ARMIT, and carried.—Dr. ANDERSON pointed out that Mr. Humphreys's resolution could be brought forward again if the Committee was not formed.

Rules of Central Midwives Board.—Further discussion on this subject was adjourned owing to lack of time.

KENSINGTON DIVISION.

A MEETING of this Division was held at the Kensington Town Hall on Tuesday, March 27th, at 4.45 p.m.

Direct Representatives on General Medical Council.—Dr. Langley Browne and Mr. George Jackson were nominated as candidates for direct representation on the General Medical Council.

Nominations for Branch Officers.—The following nominations were made as candidates for office in the Council of the Metropolitan Counties Branch:—*Vice-President:* Dr. Crawford Thomson. *Treasurer:* Mr. Betham Robinson. *Honorary Secretaries:* Dr. F. J. Smith and Mr. Ernest Clarke. *Representative on the Central Council:* Mr. George Eastes.

Rebuilding of Association Premises.—The proposed rebuilding of the premises of the Association in the Strand was discussed.

Branch and Division Finance.—After consideration of the present system of Branch and Division Finance it was decided to suggest to the Organization Committee that a definite grant, not exceeding half-a-crown per member, should be made to the Divisions; and that, if the Royal Charter is granted, Divisions might employ their funds in medical charities and social entertainments, amongst other objects.

Paper.—Dr. ROBERT HUTCHISON read a paper on chronic diarrhoea. Mr. BRINDLEY JAMES, Mr. T. R. ATKINSON, Mr. EICHHOLZ, Mr. SPENCER MEERWALD, Mr. LYNCH, Mr. GEORGE EASTES, Dr. MOORHEAD, and the CHAIRMAN discussed the paper. Dr. HUTCHISON replied.

Vote of Thanks.—On the proposal of Mr. E. G. BARNES, seconded by Mr. BRINDLEY JAMES, a hearty vote of thanks to Dr. Hutchison was carried by acclamation.

LANCASHIRE AND CHESHIRE BRANCH:

NORTH MANCHESTER DIVISION.

A MEETING of this Division was held on Thursday, March 22nd, Dr. BODDY in the chair.

Resolutions.—The following resolutions were unanimously adopted:

1. This Division nominates as candidates for election as Direct Representatives on the General Medical Council, Mr. G. H. Broadbent and Mr. George Jackson.

2. This Division utterly condemns the methods employed by the Universal Insurance Company, Limited, and trusts that no medical man will accept the appointments offered; and, further, invites the Central Ethical Committee to consider the matter, and if desirable issue a warning notice to members against being in any way connected with the company.

Notices of Motion for Representative Meeting.—The following notices of motion were adopted:

(*a*) That the *Year Book* be issued not later than October 1st in each year.

(*b*) That any member of a Standing Committee absenting himself from two successive meetings of that Committee without satisfactory explanation shall be deemed to have resigned, and the Committee shall forthwith fill the vacancy.

(*c*) That a Committee be appointed to inquire into the duties of the General and Medical Secretaries, with a view to their better regulation and co-ordination.

(*d*) That the Annual Representative Meeting be empowered to elect half the members of each Standing Committee.

Notifications to Medical Secretary.—It was resolved that the following recommendation be forwarded to the Central Council:

> That Divisional Secretaries be recommended, by means of a permanent notice in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL, to notify the Medical Secretary of all intended meetings of their Divisions, and that post-cards be supplied them for this purpose; so that any matter awaiting consideration may, if possible, be forwarded in time for such meetings.

OXFORD AND READING BRANCH:

OXFORD DIVISION.

A GENERAL meeting of this Division was held on March 23rd at the Redcliffe Infirmary, Oxford, at 3 p.m. In the absence of Dr. Bloxsome, Dr. INNES GRIFFIN took the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Deceased Members.—Dr. COLLIER proposed a vote of sympathy with the families of Dr. Tuckwell, Dr. H. P. Mallam, and Dr. Stark, three members of the Division lately deceased. The vote was carried unanimously.

Midwives Act.—The SECRETARY read Section VIII of the Midwives Act, and laid it on the table, general assent being expressed.

☞ ***To ensure the insertion of notices in this column they must be received at the Central Offices of the Association not later than the first post on Tuesday.***

Association Notices.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

Notice is given that the Library will be closed on Monday and Tuesday next, April 2nd and 3rd.

March 29th. Guy Elliston, *General Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

Birmingham Branch.—The annual meeting of the Birmingham Branch will be held at the Medical Institute on Thursday, June 14th, at 3.30 p.m., and nominations for offices should reach the Honorary Secretary not later than May 23rd.—T. Sydney Short, Honorary Secretary, 35, Newhall Street, Birmingham.

Birmingham Branch: Coventry Division.—A special meeting of this Division will be held at the Coventry and Warwickshire Hospital on Tuesday, April 3rd, at 8.30 p.m. Agenda: (1) Mr. W. E. Bennett will read a paper on the Tolerance of the Peritoneum; (2) the Committee will recommend the adoption of the following resolution: "That the Division having, on February 15th last, approved of a scheme of principles and rules which they consider appropriate for the proper management of a provident dispensary, hereby declare that no member of the profession in the area of the Division should associate himself with, or continue to be associated with, any provident dispensary which is managed on lines fundamentally different from these principles and rules;" (3) the Committee will recommend that the Bradford Rule (B) should be altered so that "fourteen days' notice" should read "seven days' notice." After the meeting, a meeting of the members of the Voluntary Book Section will be held. Members desiring to join during the ensuing twelve months will oblige by either attending that meeting or otherwise signifying their wish.—E. H. Snell, Honorary Secretary, Warwick Avenue, Coventry.

Border Counties Branch.—The next meeting of this Branch will be held in Keswick on Friday, May 4th. Any member who desires to make a communication to the meeting is requested to inform the Secretary at his earliest convenience. Fuller details of arrangements will be published later. —Francis R. Hill, Carlisle, Honorary Secretary.

Border Counties Branch: North Cumberland Division. A meeting of the North Cumberland Division of the Border Counties Branch will be held at Penrith on Friday, April 6th. The Honorary Secretary will be pleased to hear from members who wish to read papers, show cases or pathological specimens. —Norman Maclaren, Honorary Secretary, 23, Portland Square, Carlisle.

Border Counties Branch: Scottish Division.—A meeting of this Division will be held in Dumfries about the middle or end of April. Members who have business or communications to bring before the meeting are requested to give notice to the Secretary.—George R. Livingston, Honorary Secretary, Dumfries.

East Anglian Branch —The spring meeting of this Branch will be held at the Globe Hotel, King's Lynn, on Thursday, April 5th. Programme of proceedings: 12.30, meeting of Council at the Globe Hotel. 1 o'clock, Luncheon. Those who intend to be present should send an intimation to Dr. Gardiner, King's Lynn, on or before Monday, April 2nd. 2 o'clock, General meeting of members: (1) Minutes of last meeting; (2) Sir Alan Reeve Manby, M.D., M.V.O., will read Short Notes on Some Colonial Hospitals, 1901; (3) S. W. Curl, M.D., M.R.C.P., Physician to the Essex and Colchester Hospital, will read a paper on Some Cases of Bright's Disease in which the Actual Condition of the Kidneys is Obscure. 4 o'clock, Afternoon Tea, by kind invitation of the members of the West Suffolk Division. Dr. Plowright has kindly offered to take members for a walk round Lynn about 3.30. Surgical instruments will be shown by Messrs. Down Bros.—B. H. Nicholson, H. A. Ballance, J. Gutch, Honorary Secretaries.

Edinburgh Branch: South-Eastern Counties Division. —The spring meeting will be held at St. Boswells in the house of Dr. Cullen, Chairman, in the afternoon of Friday, April 6th, at 4 o'clock. Agenda: (1) Matters referred by Medico-Political Committee to be considered. (2) Papers by various members to be read and discussed. (3) Annual balance sheet to be audited.—W. Hall Calvert, M.D., Honorary Secretary, Melrose.

Edinburgh Branch: Southern Division.—An ordinary meeting of the Division will be held in Room No. 5, Oddfellows Hall, Forest Road, on Tuesday, April 3rd, at 8.15 p.m. Business: (1) Minutes. (2) Correspondence. (3) Report of Representative to Representative Meetings. (4) Consideration of Draft Charter and Ordinances and other matters referred to Divisions. (5) Any other competent business.—Michael Dewar, Honorary Secretary, Edinburgh.

Metropolitan Counties Branch: Marylebone Division. —A meeting of this Division will be held on April 3rd at 11, Chandos Street, W., at 5 p.m.—Comyns Berkeley, 53, Wimpole Street, Cavendish Square, W., Honorary Secretary.

Metropolitan Counties Branch: Wandsworth Division. —A conjoint meeting of the Chelsea, Westminster, Lambeth, Norwood, Croydon, Richmond, and Wandsworth Divisions will be held at the Battersea Town Hall, Clapham Junction, at 4 p.m. on Thursday, April 19th, to discuss the proposed Royal Charter. Special speakers will be invited. Any member of the Association is invited to attend.—E. Rowland Fothergill, Honorary Secretary.

North of England Branch.—A meeting of the North of England Branch will be held on Tuesday, April 24th, at Stockton-on-Tees. Members wishing to read papers or show cases are requested to inform Dr. Cox as soon as possible.— Alfred Cox, J. H. Hunter, Honorary Secretaries.

North Wales Branch: South Carnarvon and Merioneth Division.—A meeting of the Division will be held at the Queen's Hotel, Portmadoc, on Thursday, April 5th, at 2 p.m. Members having papers to read or cases to show will please communicate with me before the 28th inst.—Hy. Gladstone Jones, Honorary Secretary, Criccieth.

South-Eastern of Ireland Branch.—An ordinary meeting will be held at the County and City Infirmary, Waterford, on April 4th, at 2 p.m. Agenda: To receive and formulate evidence regarding Poor-law reform to be given before the forthcoming Royal Commission on the Poor Law, through a Committee consisting jointly of members of the Irish Committee, the Irish Medical Association, the Poor-law Association, and the Workhouse Association.—J. Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following appointments have been made at the Admiralty: WILLIAM GORDON STOTT, M.B., Fleet Surgeon, to the *Bedford*, on recommissioning, March 27th; OSWALD REES, M.D., Staff Surgeon, to the *Mercury*, March 22nd; LOUIS E. DARTNELL, Staff Surgeon, to the *Thames*, April 2nd; LANCELOT KILROY, Staff Surgeon, to the *Brilliant*, on recommissioning, April 3rd; JOHN K. ROBINSON, M.B., Staff Surgeon, to the *Niobe*, and JAMES W. W. STANTON, Staff Surgeon, to the *Suffolk*, both on recommissioning, April 10th; LAWRENCE C. HUNT, Surgeon, to the *Suffolk*, on recommissioning, April 10th.

Surgeon HILARY C. ARATHOON has been promoted to the rank of Staff Surgeon with seniority of May 16th, 1902. Surgeon Arathoon joined the service on May 16th, 1894.

Surgeon SAMUEL H. FACEY has been promoted to the rank of Staff Surgeon. with seniority of November 29th, 1905. Staff Surgeon Facey's appointment to the *Pembroke* has been cancelled, and he has been appointed to the *Wildfire*, in the place of Staff Surgeon Lancelot Kilroy, to date April 3rd. Staff Surgeon Facey entered the service in 1897.

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT-COLONEL JAMES MURRAY IRWIN, M.B., B.Ch., who has been for nearly three years Staff Officer to the Principal Medical Officer, Aldershot command, has been appointed Assistant Director.-General, Army Medical Service, vice Lieutenant-Colonel Babtie, V.C., C.M.G., M.B. Colonel Irwin joined the R.A.M.C. in 1882, becoming Surgeon-Major in 1894, and Lieutenant-Colonel in 1902. He served in the Egyptian expedition of 1898 (Egyptian medal, and medal), and in South Africa in 1900-1902, in the course of which he saw most of the important fighting, including the actions near Johannesburg, Pretoria, and Diamond Hill. He received for his services mention in dispatches, the Queen's medal with five clasps, and the King's medal with two clasps.

Lieutenant-Colonel T. W. O'HORA HAMILTON, C.M.G., M.B., B.Ch., has been appointed Staff Officer to the Principal Medical Officer at Aldershot, in the place of Lieutenant-Colonel Irwin. Lieutenant-Colonel Hamilton joined the service as Surgeon in February 3rd, 1883, became Surgeon-Major in 1895, and was promoted Lieutenant-Colonel in 1903. He served in the South African war, 1899-1902, and took part in the relief of Kimberley, the operations at Paardeberg, at Poplar Grove, Dreifontein, and Zand River. He was also in the actions near Johannesburg, Pretoria, and Diamond Hill, and those at Belfast and Colesberg. He was mentioned in dispatches, and has the Queen's medal with six clasps, and the King's medal with two clasps.

Lieutenant-Colonel Sir A. A. BROOKE-PECHELL, now at Portsmouth, has been appointed a Recruiting Medical Officer in the London district.

Major J. C. Morgan has succeeded Major A. R. Aldridge as Sanitary Officer, Eastern command, India.

The following officers have been appointed to the command of the various Indian station hospitals set forth: Lieutenant-Colonel T. B. WINTER, to Meerut, vice Lieutenant-Colonel A. S. Rose; Major J. S. EDYE, to Cawnpore, vice Lieutenant-Colonel R. E. R. Morse; and Captain A. MCMUNN to Jutogh, vice Major N. Tyacke, vacated.

ARMY MEDICAL RESERVE OF OFFICERS.

SURGEON-CAPTAIN JAMES A. CLARK, M.B., has been promoted to be Surgeon-Major, under date March 15th.

INDIAN MEDICAL SERVICE.

COLONEL A. F. DOBSON, M.B., Madras Establishment, has been appointed Principal Medical Officer, 9th (Secunderabad) Division.

Lieutenant-Colonel E. J. Fairland, retired pay, has relinquished the medical charge of troops, London.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,510 births and 4,808 deaths were registered during the week ending Saturday last, March 24th. The annual rate of mortality in these towns, which had been 17.4, 16.7, and 16.2 per 1,000 in the three preceding weeks, further fell last week to 15.8 per 1,000. The rates in the several towns ranged from 6.2 in Hastings, 8.4 in Willesden, 8.9 in Wallasey, 9.6 in Hornsey, 9.8 in Bury, and 9.9 in Walthamstow and in Reading, to 19.1 in Coventry, 19.6 in Hanley, 19.7 in Newport (Mon.), 20.5 in Swansea, 20.8 in Plymouth, 21.6 in Liverpool, and 25.0 in Swansea. In London the rate of mortality was 15.8 per 1,000, while it averaged 15.9 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases in these towns averaged 1.4 per 1,000; in London this rate was equal to 1.5 per 1,000 while among the seventy-five other large towns the rates ranged upwards to 2.5 in Handsworth (Staffs.), in Liverpool, in York, and in Rhondda, 2.9 in St. Helens and in Newcastle-on-Tyne, 3.0 in West Bromwich, and 3.1 in Croydon. Measles caused a death-rate of 1.1 in Bristol and in Liverpool, 1.2 in Hornsey and in Leeds, 1.4 in Croydon, 1.7 in Tottenham, 1.8 in Bury, and 2.3 in Newcastle-on-Tyne; diphtheria of 1.0 in Croydon, 1.1 in St. Helens, 1.4 in Merthyr Tydfil, and 1.9 in York; whooping-cough of 1.3 in Plymouth and in Gateshead, 1.6 in Smethwick and in Rhondda, 2.0 in Coventry and in Leicester, 2.5 in Handsworth (Staffs), and 3.0 in West Bromwich; "fever" of 1.0 in Burnley and 1.1 in St. Helens; and diarrhoea of 1.0 in Middlesbrough. The mortality from scarlet fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The number of small-pox patients in the Metropolitan Asylums Hospitals on Saturday last, the 24th instant, was 10, against 6, 6, and 7 on the three preceding Saturdays; 5 new cases were admitted during the week, against 1 in each of the three preceding weeks. The number of scarlet fever cases remaining under treatment in these hospitals and in the London Fever Hospital at the end of last week was 2,434, against 2,628, 2,545, and 2,485 at the end of the three preceding weeks; 234 new cases were admitted during the week, against 273, 268, and 252 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, March 24th, 990 births and 617 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 19.3, 18.2, and 19.3 per 1,000 in the three preceding weeks, declined again to 18.0 per 1,000 last week, but was 2.2 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 12.6 in Leith and 15.1 in Perth to 20.6 in Greenock and 22.8 in Dundee. The death-rate from the principal infectious diseases averaged 1.7 per 1,000 in these towns, the highest rates being recorded in Dundee and Greenock. The 293 deaths registered in Glasgow included 14 which were referred to measles, 9 to whooping-cough and 8 to diarrhoea. Three fatal cases of measles, 2 of whooping-cough, and 2 of diarrhoea were recorded in Edinburgh. Two deaths from measles, 3 from whooping-cough, and 3 from diarrhoea were registered in Dundee; 2 from diarrhoea in Aberdeen, and 2 from whooping-cough in Greenock.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, March 24th, 536 births and 420 deaths were registered in six of the principal Irish towns, as against 511 births and 417 deaths in the preceding period. The annual death-rate in these towns, which had been 25.1, 22.2, and 19.4 per 1,000 in the three preceding weeks, rose to 23.6 per 1,000 in the week under notice, this figure being 7.8 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 9.9 in Londonderry and 22.1 in Belfast to 27.3 in Limerick and 31.2 in Waterford. The zymotic death-rate in the same six Irish towns averaged 0.7 per 1,000, or 0.4 per 1,000 lower than during the preceding period, the highest figure—1.7—being recorded in Belfast, while no deaths under this heading were recorded in Limerick and Waterford. In all there were 8 deaths from whooping-cough (5 in Belfast) and 3 from diphtheria, all in Belfast.

Bayliss.—On March 27th, at 5, Gay Street, Bath, the wife of Richard Arthur Bayliss, M.R.C.S.Eng., L.R.C.P.Lond., a daughter.

Chambers.—On March 21st, at The Priory, Roehampton, the wife of James Chambers, M.D., of a son.

Hicks.—On March 18th, at Park House, East Finchley, the wife of Thomas W. Hicks, M.D.Lond., of a son.

MARRIAGE.

Clogg—King.—On March 24th, at Holy Innocents Church, South Norwood, by the Rev. H. Bickersteth Ottley, M.A., Herbert Sherwell Clogg, M.S., F.R.C.S., of Harley Street, second son of the Rev. William H. Clogg, of Clapton, and Emma Charlotte Mildred, eldest daughter of the late Frank King, Esq., M.I.C.E., of Barnes, and "Colwyn," Sydenham, and Mrs. King, of South Norwood.

DEATHS.

Bull.—On March 23rd, at Sparkhill, Birmingham, Elizabeth Grace, wife of Edwin G. Bull, M.B.Edin.

Leech.—At Prince's Buildings, Weston-super-Mare, on March 16th, Henry Richard Leech, M.D., late of Birmingham, aged 51.

Marriott.—On March 20th, at Swaffham, Norfolk, Robert Buchanan Marriott, M.R.C.S., L.S.A., L.M., aged 75 years.

DIARY FOR NEXT WEEK.

TUESDAY.

PATHOLOGICAL SOCIETY, 20, Hanover Square, W., 8.30 p.m.—Communications: (1) Alex. G. R. Foulerton—A Streptococcic Infection of the Pig simulating Tuberculosis. (2) S. R. Douglas—Some Experiments in Reference to to Immunity against Bacillus Pestis.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, **Pall Mall East, S.W., 5 p.m.**—First Oliver Sharpey **Lecture—Dr.** E. I. Spriggs: The Bearing of Metabolism Experiments upon the Treatment of Some Diseases.

WEDNESDAY.

OBSTETRICAL SOCIETY OF LONDON, 20, Hanover Square, W., 8 p.m.—Short communication: Dr. E. J. Maclean—Case of Ectopic Gestation in which the Fetus was removed 6½ months after Spurious Labour at term. Specimens: Dr. Amand Routh—Fibroma of the Ovary with Ascites. Dr. Boxall—Note on the After-history of a Case of Cystic Fibroid with Carcinoma of the Left Ovary and Right Fallopian Tube. Dr. Blacker—(1) A Fibromyoma of Uterus with Free Fluid in Peritoneum; (2) A Tubo-Abdominal Gestation Sac with Fetus. Mr. J. Bland Sutton—Cancer of the Body of the Uterus complicated with Fibroids. Demonstration: Dr. A. W. Addinsell—Chronic Infective Metritis.

THURSDAY.

NORTH-EAST LONDON CLINICAL SOCIETY, Tottenham Hospital, N., 4 p.m.—Clinical Cases.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, **Pall Mall East, S.W., 5 p.m.**—Second Oliver Sharpey Lecture—Dr. E. I. Spriggs: The Bearing of Metabolism Experiments upon the Treatment of Some Diseases.

FRIDAY.

LARYNGOLOGICAL SOCIETY OF LONDON, 20, Hanover Square, W., 5 p.m.—Exhibition of Cases, Drawings, and Specimens.

WEST LONDON MEDICO-CHIRURGICAL SOCIETY.—West London Hospital, Hammersmith, W., 8 p.m. Clinical meeting.

POST-GRADUATE COURSES AND LECTURES.

CENTRAL LONDON THROAT AND EAR HOSPITAL, Gray's Inn Road, W.C.—Wednesday, 5 p.m., Nose.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.—Thursday, 4 p.m.. Tuberculous Enlargement of the Bronchial Glands in Children.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, 22, Chenies Street, W.C.—The following clinical demonstrations have been arranged for next week at 4 p.m. each day: Monday, Skin; Tuesday, Medical; Wednesday, Surgical; Thursday, Surgical; Friday, Eye. **Lectures at 5.15 p.m. each day will be given as follows: Monday,** Rectal Examination in Urinary Disease; Tuesday, Pulmonary Tuberculosis in Children; Wednesday, Some Acute Infective Disorders of the Nervous System, Thursday, Internal Derangements of the Knee.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith **Road, W.—The following arrangements have been made for next week: Monday,** 12 noon, Practical Surgery; 4 p.m., Ophthalmology. Tuesday, 11.30 a.m., Bacteriology. Wednesday, 11 a.m., Examination of Throat, Nose, and Ear; 12 noon, Practical Surgery. Thursday, 3.15 p.m., Intestinal Anastomoses. Friday, 11 30 a.m., Bacteriology. Daily, at 2.15 p.m., Medical and Surgical Clinics.

CALENDAR OF THE ASSOCIATION.

Date.	Meetings to be Held.
	APRIL.
1 Sunday	
2 MONDAY	
3 TUESDAY	LONDON: Premises and Library Committee, 3.30 p.m. COVENTRY DIVISION, *Birmingham Branch*, Coventry and Warwickshire Hospital, 8.30 p.m. MARYLEBONE DIVISION, *Metropolitan Counties Branch*, 11, Chandos Street, 5 p.m. SOUTHERN DIVISION, *Edinburgh Branch*, Room No. 5, Oddfellows' Hall, Forrest Road, 8.15 p.m.
4 WEDNESDAY	LONDON: Journal and Finance Committee, 2.30 p.m. SOUTH-EASTERN OF IRELAND BRANCH, County and City Infirmary, Waterford, 2 p.m.

Proceedings of Committees.

ETHICAL COMMITTEE.

A MEETING of the Ethical Committee was held at the office of the Association on March 2nd, Mr. R. H. KINSEY (in the chair); the other members present were: Dr. J. Ford Anderson, Mr. H. A. Ballance, Dr. A. G. Bateman, Mr. G. H. Broadbent, Dr. Bruce Goff, Dr. R. L. Langdon Down, Mr. W. D. Spanton. Mr. W. E. Hempson, Solicitor to the Association, attended to advise the Committee.

TRADERS' COMMISSION TO MEDICAL MEN.

The Committee considered correspondence since the ast meeting of the Committee in a case which it had been previously decided should be reported in the JOURNAL when completed. In this case a medical practitioner practising abroad had received a letter rom a wholesale chemist in the United Kingdom pressing upon his notice certain special preparations and asking him to endeavour to sell them, and offering a commission on orders obtained through his introduc-ion. The medical practitioner in question placed the papers in the hands of the Editor of the BRITISH MEDICAL OURNAL, who placed them before the Ethical Committee. By direction of that Committee a letter was written to the hemist pointing out the impropriety of such an offer of ommission, and asking for an explanation.

The Committee now had before it a letter from the hemist explaining that his action was due to a mistake, xpressing great regret, and stating that he would not repeat the offence. The Committee accepted this xplanation and undertaking.

MEDICAL AID SOCIETIES.

The Committee approved of the reply which had been iven to an inquiry from the honorary secretary of a Division concerning the alleged connexion of a local medical practitioner with a medical aid society which canvassed, and the probability of the General Medical Council dealing with such a matter.

The reply given had been that the General Medical Council would only deal with such cases if definite evidence was placed before them of canvassing or advertising, and that if such evidence could be obtained the Association would assist in the preparation of a case for consideration by the General Medical Council.

PUBLICATION OF PHOTOGRAPHS AND BIOGRAPHIES.

The Committee approved of the action of the Chairman in replying to an inquiry from a Division to the effect that the propriety of members of the profession furnishing photographs and biographies for a county history was a matter depending in some degree upon special circumstances, and therefore for local consideration, but that in general such action was to be regarded adversely. The Division had since passed a resolution stating that no member of it should furnish the particulars.

COPYRIGHT OF THE "JOURNAL."

The GENERAL SECRETARY reported successful action taken to protect the copyright of the JOURNAL in a case in which a company had used an extract from it as an advertisement. The Committee expressed satisfaction at the result.

MISLEADING DESCRIPTION IN THE "MEDICAL DIRECTORY."

It was decided to address a remonstrance to a medical practitioner with respect to a misleading record of his former appointments which appeared in the *Medical Directory*.

COMMITTEE'S RECOMMENDATIONS.

The CHAIRMAN reported that the Council had at its last meeting adopted all the recommendations of the Committee. With respect to the resolution of the Council as to primary reference of ethical cases to Divisions or Branches for investigation, the following additional rule was adopted by the Committee for its own guidance:

> That in any cases referred to a Division or Branch for primary investigation, no decision should be arrived at by the

Central Ethical Committee until a report from the Division or Branch has been received.

Trade Advertisements.

The Committee expressed satisfaction at the result of the action taken in the matter of a company which had undertaken to discontinue printing the names of its medical officers on its wrappers.

Anonymous Complaints.

The Committee decided that it could not take into consideration complaints received anonymously.

Division Rules.

The Committee recommended the Council to approve the adoption of the model rules of ethical procedure submitted by the Liverpool (Southern) Division, and also the rules submitted by the North Suffolk Division.

The opinion of the Committee with respect to the rules submitted by the Wandsworth Division was directed to be communicated to the Division.

Investigation of an Ethical Case.

The Chairman reported, with reference to a request from a Division in Ireland, that an ethical case should be investigated by an impartial and independent person from a distance, and that he had asked the Irish Committee to appoint a suitable person in Ireland. The Chairman's action was approved.

Gratuitous Medical Advice.

The Committee considered complaints with respect to a scheme of gratuitous medical advice initiated by *Answers*, and the Editor was requested to deal with the matter in the Journal.[1]

Standing Order as to Hypothetical Cases.

It was resolved:

> That it be a standing order of the Committee that it give no opinion upon purely hypothetical cases. That the names of the practitioners concerned must in all cases be supplied, in order that a statement from them may be invited.

Medical Men and Public Appointments.

On consideration of an inquiry as to whether it was permissible for a medical practitioner to apply for a public appointment which had not been advertised as vacant, the Committee expressed the opinion that a medical practitioner is justified in applying for a public appointment which is actually vacant, whether the fact has been advertised or not.

Consultants.

The Chairman submitted a memorandum as to consultants which he prepared at the request of the Committee, and it was resolved to consider the matter further at the next meeting.

Members of Public Bodies giving Expert Advice.

A communication from the Public Health Committee was received, requesting the Ethical Committee to consider the propriety of the practice of medical members of public bodies giving expert advice in order to avoid the necessity for appointing expert officials, and the advisability of circulating an inquiry to the Divisions on the subject.

The following resolution was adopted:

> That, in the opinion of the Committee, the practice in question is undesirable, and that the Public Health Committee be informed that a recommendation to this effect will be included in the Annual Report of the Ethical Committee in order that it may receive the consideration of the Divisions.

School Certificates.

The Committee considered a communication from the Education Committee of a County Council with respect to alleged impropriety of a certificate of unfitness to attend school given by a medical practitioner; and a letter from the practitioner was read expressing regret for his action. The following resolutions were adopted:

> That in the opinion of the Committee the practitioner ought to make an apology to the Education Committee for his error.
>
> That the Education Committee be informed of this decision, and also that in the opinion of the Committee both the antecedent circumstances in this particular case, and the action of the Education Committee towards medical practitioners in the county, appear to require serious consideration, and that the papers have therefore been handed to the Committee of the Association which considers such matters.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* Journal.]

BIRMINGHAM BRANCH:

Coventry Division.

A meeting of this Division was held at the Coventry and Warwickshire Hospital on March 6th, Dr. Milner Moore in the chair.

Letters of Apology.—Apologies for non-attendance were received from Drs. Davidson, Pickup, and J. Orton.

Public Medical Services.—Dr. Moore moved the adoption of the recommendations contained in the Special Report on Public Medical Services of the Medico-Political Committee (Supplement, July 22nd, 1905).—This was seconded by Dr. Harman Brown.—The whole were agreed to unanimously with the following alterations:

> A. (4) In this clause "12 months" was substituted for "6 months."
>
> B. (2) As an addition to this clause, "That at least two-thirds of the Committee of Management should consist of active members of the staff of the Public Medical Service."

Paper.—Dr. Harman Brown read a paper on the Radical Cure of Hernia in Infants and Young Children, as illustrated by a successful series of cases. Six of these cases were exhibited.—The paper was discussed by Drs. Moore, Heal, and McGlashan, and Dr. Brown replied.

Minimum Midwifery Fee.—Dr. Brown moved:

> That the minimum fee for midwifery in the area of the Division be 1 guinea.

—This was seconded by Dr. McGlashan, but as the requisite notice for the resolution to be operative under the Bradford Rules had not been given, its consideration was deferred.

DORSET AND WEST HANTS BRANCH:

Bournemouth Division.

A meeting of this Division was held on Wednesday, March 28th, at Bournemouth, Dr. Snow in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Bournemouth Medical Society.—A communication from the Bournemouth Medical Society was read.

The Title of Doctor.—A resolution *re* the title of doctor, from the Gateshead Division, was negatived.

Hospital Out-patient Departments.—The question of hospital out-patient departments (Supplement, February 17th) was negatived.

Grants to Divisions.—The proposed amendment to the by-law relative to grants to Divisions (Altrincham Division) was negatived.

Expenses of Representatives.—The proposed amendment of the article relative to expenses of representatives (Northamptonshire Division) was negatived.

Registration of Nurses.—The questions submitted by the Medico-Political Committee as to nurses' registration (Supplement, March 3rd) were considered. Both questions were answered in the affirmative, after an interesting discussion.

Discussion.—A discussion on haematemesis was ably introduced by Dr. Littledale, Dr. Muspratt, and Mr. Vernon, and continued by Dr. Lys, Dr. Purkiss, Mr. Midelton, Dr. McCulloch, Dr. Belben, Dr. Barraclough, and Dr. Snow.

EAST ANGLIAN BRANCH:

East Norfolk Division.

The quarterly meeting of this Division was held at the Great Yarmouth Hospital on March 23rd, Dr. H. Wyllys in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

---

[1] British Medical Journal, March 10th, 1906, p. 583; March 17th, p. 639.

Grouping of Division.—The question of the grouping of this Division was considered, and it was decided that the present grouping with Lowestoft was satisfactory and should be adhered to. This was on the proposal of Mr. A. C. Mayo, seconded by Mr. W. Wyllys.

Case.—Mr. H. Wyllys read notes of a case of severe abdominal injury which had been treated in hospital. The man had fallen on to the spikes of some railings, one of which had torn open the abdominal walls, allowing a large portion of bowel to protrude; another spike had gone through the perineum in an oblique direction to Poupart's ligament, tearing a portion from its attachment together with a piece of the bone. The patient was then shown; he walked with a slight limp and looked well.

Lowestoft Medical Institute.—A resolution of the North Suffolk Division was read which declared that any medical man accepting the position of medical officer to the Lowestoft Medical Institute under existing conditions is acting in a manner detrimental to the interests and honour of the profession. This received the hearty support of the meeting, as did the opinion that consultants should not meet any one holding the appointment whilst the Lowestoft members are unable to do so.

Draft Charter.—The Draft Charter was laid before the meeting, and further consideration of the same was postponed until all the members should have had copies of it.

Women and Children's Clubs.—Drs. A. Mayo and H. Blake were invited to attend the Branch meeting at Lynn, and to bring forward the question of combating women and children's clubs.

Papers for Next Meeting.—Clinical cases or papers for the next meeting would be welcomed by the Secretary, J. Vickers.

GLASGOW AND WEST OF SCOTLAND BRANCH:
Dumbartonshire and Argyllshire Division.

A meeting of the Executive Committee of the Dumbartonshire and Argyllshire Division was held at Dr. Nicoll's house, 4, Woodside Place, Glasgow, on March 13th.

Letters.—The Honorary Secretary read letters of apology for absence from Drs. Sewell and Robertson, the latter requesting to be relieved of his duties owing to his advancing years. Dr. Nicoll, in Dr. Sewell's absence, took the chair.

Constitution of the Division.—The Honorary Secretary intimated that he had circularized the members of this Division on February 19th, asking them to vote on the following questions:

1. Should the Dumbartonshire and Argyllshire Division of the British Medical Association continue as at present constituted, and meet at a centre within the area of membership?
2. Should it remain as at present and meet in Glasgow?
3. Should this Division be merged in one of the Glasgow Divisions?
4. Should the whole matter be referred to the Executive Committee of the Branch?

The Honorary Secretary intimated that he received forty-four replies to the postcards sent to members. The majority of the members voted in favour of Resolution 2, which was declared carried.

Officers and Representatives.—It was agreed that Dr. Sewell remain in office; that the Honorary Secretary, J. Ewing Hunter, be appointed Representative to the Representative Meeting; that the Chairman, Dr. Sewell, and Honorary Secretary be appointed Representatives for the Branch meetings.

Surplus Funds.—It was agreed that any surplus funds should *not* be returned to the central funds, but should be kept in the Branch to meet any contingencies.

Proposed Association House in Edinburgh.—It was agreed that there should be no Association House, including library, in Edinburgh, for the obvious reason that there are not sufficient funds.

HALIFAX AND NOVA SCOTIA BRANCH.

The regular fortnightly meeting of this Branch was held at the City Council Chamber, Halifax, on February 14th, 1906.

Representative on Central Council.—On motion, it was resolved:

> That the election of a Representative of this Branch on the Central Council and Parliamentary Bills Committee be held at this meeting.

Lieutenant-Colonel G. Carleton Jones, A.M.S., the only nominee, was declared elected.

Communications.—Lieutenant-Colonel Jones read a paper on the household fly as a factor in the causation of disease, drawing much of his evidence from the records of the military sanitation arrangements in the Cuban, Boer, and Russo-Japanese wars. A discussion followed.—Dr. James Ross read a paper entitled Remarks on the Diagnosis and Treatment of Syphilis, which was also followed by discussion.

LANCASHIRE AND CHESHIRE BRANCH:
Liverpool and Birkenhead Divisions.

A joint meeting and dinner of these Divisions was held on the 22nd ult., when the members were invited to meet Mr. J. Smith Whitaker, the Medical Secretary of the Association, at the Adelphi Hotel. Covers were laid for some sixty members and friends, and the chair was taken at 8.15 p.m. by Sir James Barr, the President of the Branch, who, after ample justice had been done to the good fare provided, proposed the toast of "The British Medical Association." This was responded to by Mr. Smith Whitaker, who, in the course of his speech, gave an able and instructive address on medical organization. A cordial vote of thanks was afterwards passed to that gentleman on the proposition of the Chairman, seconded by Dr. Given, and a similar compliment to Sir James Barr for presiding terminated a very successful and enjoyable evening.

METROPOLITAN COUNTIES BRANCH:
Marylebone Division.

A meeting of this Division was held on March 21st at 11, Chandos Street, Dr. Radcliffe Crocker in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Direct Representatives on General Medical Council.—Mr. Andrew Clark was nominated as a candidate for the General Medical Council. It was resolved to support the nomination of Dr. Langley Browne and Mr. Rutherford Morison for the General Medical Council.

Annual Representative Meeting.—Sir Victor Horsley gave his report, as Representative of the Division, of the business done at the last Representative Meeting. A cordial vote of thanks was given to Sir Victor Horsley for the able manner in which he had represented the Division.

Entertainment Committee.—Mr. Armour was elected a Representative on the Entertainment Committee of the Metropolitan Counties Branch.

New Rules of Central Midwives Board.—It was resolved to take no action with regard to the new rules of the Central Midwives Board, as the Branch Council was already dealing with the matter.

Out-patients at Hospitals.—Resolutions i, ii, iii of the Hampstead Division on the question of out-patients at hospitals were agreed to. Resolution iv was rejected.

The Treatment of the Sick Poor.—The following resolution was unanimously passed, on the resolution referred to the Divisions from the Leicester Representative Meeting:

> That provided no interference with medical education is thereby caused, and in the neighbourhood concerned there exist sufficient facilities for the treating of the sick poor by means of public medical services or provident dispensaries, this Division approves of the resolution of the Representative Meeting.

Expenses of Representatives.—The resolution of the Nottingham Division on the payment of representatives' expenses was rejected.

By-law 17.—The resolution of the Altrincham Division to amend By-law 17 was approved.

Title of "Dr."—The resolution of the Gateshead Division on the title of "Dr." was rejected.

Declaration by Candidates.—The resolution of the Gateshead Division on the declaration by candidates was rejected.

New Premises of Association.—The resolution of the Wandsworth Division on consulting the Division before any sum over £200 was spent on the new premises of the Association was rejected.

St. Pancras and Islington Division.

The regular monthly meeting was held on March 23rd at the Royal Free Hospital, London, W.C. Dr. **Francis J. Buckell**, of Canonbury (Chairman), presided.

Sir William Collins.—The **Secretary** reported that in accordance with the wishes of the members, Sir William Job Collins, M.P., had been asked to join the Association, and he had written expressing his sympathy, but said he felt unable to accept the invitation.

General Medical Council.—Mr. Andrew Clark has accepted the nomination by the Division as a candidate for a seat on the General Medical Council.

Address.—Mrs. **Mary Scharlieb**, M.D., gave a lecture on The Significance of Uterine Haemorrhage both in Child-bearing Women and at the Menopause. A discussion followed, and Mrs. Scharlieb was heartily thanked, and she agreed to hand the lecture to the Secretary, to be forwarded to the Editor of the Journal with a request for its publication.

Medical Politics.—The members then discussed several points of medical politics, including the use of the title of "Dr."; the proposed outlay on Association buildings; the amount of expenses per head of members of Divisions, and the payment of the expenses of Representatives at annual meetings.

Stratford Division.

A meeting of this Division was held on Thursday, March 15th, at 9 p.m., at the Alexandra Hotel, Stratford, E., Dr. **Stocker** presiding.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Address.—Dr. **F. J. Smith** (London Hospital) gave a short address of a very interesting and practical character on colitis, and was awarded at the close a hearty vote of thanks, on the motion of the **Chairman**.

Election of Candidates for Central Council.—The meeting then proceeded to consider a communication from the Wandsworth Division regarding the selection of candidates for the Council of the Association, and, on the motion of Dr. **Percy Rose**, seconded by Dr. **Hay**, it was unanimously resolved:

> That this Division is prepared to take part in a committee of selection of candidates for the General Council of the Association, provided every Division in the Branch is represented on that Committee by a delegate, with voting powers according to their membership.

Candidates for General Medical Council.—Dr. F. J. Smith (Honorary Secretary, Metropolitan Branch) and Dr. L. S. McManus (Wandsworth Division) were nominated as candidates for the General Medical Council by the Stratford Division.

NORTH WALES BRANCH:

Denbigh and Flint Division.

A meeting of this Division was held at the Lion Hotel, Mold, on February 23rd.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

The Division and Parliamentary Candidates.—The **Secretary** presented a report on the memorandums and questions on parliamentary subjects affecting the medical profession, submitted for the consideration of parliamentary candidates.

Ethical Rules.—Division rules as to professional conduct, as well as those pertaining to contract practice and appointments, as drafted by the Medical Secretary and adopted by the Bradford Division, were discussed and referred to a Special Committee for consideration.

Next Meeting.—The annual meeting was fixed to be held at Wrexham in May.

Paper.—Mr. **James Taylor**, F.R.C.S., read a paper on the treatment of acute peritonitis. Discussing the pathology of the disease, he pointed out that neither mechanical nor chemical causes would alone suffice to set up the disease. A pathogenic organism was essential, and this, following Dudgeon and Sargent, to whose Erasmus Wilson Lectures he referred his audience, he showed to be usually the colon bacillus, which made its way into the peritoneal cavity and infected any previously-contained sterile fluid or foreign body. The streptococcus frequently found in conjunction with it he regarded as probably harmless and possibly as even benign in its influence. As for treatment, he showed by reference to the works of various authorities, that although the disease was so well known, there were curiously wide differences in the views taken as to the principles on which it should be treated. McCosh, of New York, for instance, described himself as operating only on 50 per cent. of all cases encountered, while Lennander, of Upsala, advised that in every case operation should be performed as soon as possible. Speaking for himself, he said the sum total of medical treatment was rest for the body, the intestines, and the mind. One form of rest was relief from pain. This could be obtained by opium, and the reasons commonly given for abstaining from its use seemed to him poor. Certainly it masked pain, but remembering what pain had existed before they could allow for that effect. If opium immobilized the intestines, it merely increased a condition which already existed, while it could not affect the amount of toxicity. Large doses need not be given; merely sufficiently to keep down the pain and secure rest for the nervous system. The time at which surgery should step in must vary with each patient. If the pulse-rate persistently increased from hour to hour or tympanitis increased, operation must be early. On the other hand, some delay was permissible if the expression became less anxious. In a case originating in the appendix, the question of locality might account for something; thus, if the patient were far off, immediate operation was indicated, but if near at hand, in a place where the patient could constantly be watched, one might be inclined to wait awhile. He had never, however, regretted early operation, and in some instances had regretted the opposite course. The urgency was greatest in first attacks of appendicitis, later ones being less frequently violent and fatal. As for the operation to be chosen in peritonitis, the author, after describing several incisions which had been advocated, described his own method, namely, that of following any localizing indications which might be discoverable, and opening the abdomen as near to the site as convenient, enlarging the primary incision if need be when exploration was complete. If a pus cavity were opened it should be emptied without disturbing surrounding adhesions, and the cause of suppuration removed if it were possible with the same limitations. If the peritonitis were general probably the best course, if the cause could not readily be found, was to wash out the cavity quickly, using a good quantity of saline fluid. If, however, the exudate were not markedly purulent, and the cause could be removed, washing out was not advisable, as, the cause being removed, the peritoneum could look after itself. When distended small intestine appeared in the wound his practice was to incise it, let out the gas and faeces, and sew up the opening; large intestine might often be treated in the same way, but sometimes it was well to stitch it to the skin wound, and make a temporary artificial anus. Drainage was essential in all purulent cases, and he greatly preferred using two or three india-rubber tubes. Gauze was useful when there was much oozing of blood, but he did not like it and preferred to avoid its use. In after treatment the main thing was rest in every form. The passage of a rectal tube was often useful to remove flatus, but he favoured no kind of enema; even saline rectal injections often did harm. Looking far ahead it seemed to him that though the surgical treatment of peritonitis was at present all-important, and would play a still more prominent part in the early future, yet, sooner or later, the treatment might once more be purely medical; for since acute peritonitis was always due to microbic invasion, and usually to the *B. coli*, a serum antitoxic to the latter might one day be found. This microbe disarmed, the peritoneum would be able to look after any perforations by itself.

PERTH BRANCH.

Meeting of Council.

A meeting of Council was held at 3.45 p.m. on Friday, February 23rd, Dr. **McEwan** in the chair.

New Member.—Dr. J. A. B. Sim, of Perth, was elected a member of the Association and Branch.

Clinical Meeting.

A clinical meeting was held at 4 p.m., Dr. **Norwell**, President, in the chair.

Apologies for Absence.—Apologies for absence were intimated from Dr. Buist (Dundee), Dr. Borrowman (Crieff), and Dr. Urquhart.

Confirmation of Minutes.—The minutes of last meeting were read, approved, and signed by the President.

The late Dr. Thom.—In the unavoidable absence of Dr. Urquhart, the Secretary read a communication from him in reference to the late Dr. Thom, of Crieff.—On the motion of the President, the Secretary was instructed to write and thank Dr. Urquhart for his interesting reference to the late Dr. Alexander Thom, and also to write Mrs. Thom, expressing the sympathy of the Branch in her bereavement.—The offer of Dr. Urquhart to have his reference printed and circulated to members of the Branch was agreed to.

Cases.—Dr. Paton showed several cases: (1) A boy recovering from acute nephritis; he had marked oedema and scanty urine loaded with albumen, which persisted for several weeks, and in the treatment advocated, amongst other drugs, the use of pulv. scammonii co., the administration of which drug seemed to cause the turning-point in his illness; (2) a case of interstitial nephritis; (3) a case of large white kidney, which was probably tuberculous in origin, because though albumen and blood had disappeared and urine plentiful, body weight was steadily decreasing; (4) a case of incipient phthisis with practically no physical signs to begin with, but persistent cough and later tubercle bacilli in sputum. Some discussion followed, Drs. Stirling and Beatty both advocating the use of purgatives in nephritis, such as pulv. scammonii co., and thinking purging was the means of eliminating the poison. Dr. Haig (Crieff) thought that the benefit from purging was due to rest given to the kidney by giving the kidney less work to do, etc.—Dr. Lyell showed a girl, aged 14, suffering from ichthyosis, which had existed since shortly after birth. In his remarks he said it was a deformity more than a disease. This was a very aggravated case and the distribution unusual. It is usually on the extensor surfaces, but a number of flexor surfaces were involved. All forms of treatment had been tried, large doses of cod-liver oil and thyroid extract, but the disease remained stationary.—Dr. Stirling showed a series of cases of osteomyelitis, specially referring to the differential diagnosis, and in the treatment the early recognition and free opening as the only chance of recovery. He also showed a few cases under treatment with tuberculin injections—namely, tuberculous glands improving and sinuses closing up. He also referred to its uses in skin and genito-urinary affections of tuberculous origin.—Dr. Taylor showed three cases of tuberculous peritonitis with marked improvement in two of the cases.

Demonstration.—A demonstration of the high-frequency apparatus then followed.

Tea.—Dr. Mackay kindly entertained the members to tea in his room.

SOUTH-EASTERN BRANCH:

Canterbury and Faversham Division.

An ordinary meeting of this Division was held at Sittingbourne on March 22nd.

Luncheon.—The Chairman of the Division, Dr. Gosse, kindly provided luncheon.

Clinical Meeting.

A clinical meeting was held at Dr. Gosse's surgery, 113, High Street, where Dr. T. Colcott Fox, Physician to Skin Department Western Hospital, gave a demonstration on some twenty or more skin cases shown by Drs. Gosse, Fisher, Whitehead Reid, Boodle, Grayling, Henchley, and surgeons Holmes, Gittings, and Dickenson, of the Royal Navy.

Medico-Political Meeting.

At the termination of the clinical meeting a medico-political meeting was held over the County Court Offices, 1a, Crescent Street, Dr. William Gosse presiding.

Confirmation of Minutes.—Minutes of previous meeting confirmed.

Next Meeting.—It was agreed that the next meeting should be held in Canterbury early in June, and that Dr. Whitehead Reid, President of the South-Eastern Branch, should be invited to preside.

Registration of Nurses.—The Nurses' Registration Report[1] was discussed. Dr. Whitehead Reid proposed and Dr. Evers seconded:

> That this Division approves in general of the method of registration for nurses proposed by the Select Committee of the House of Commons, but disapproves of a separate register of nurses whose training is of a lower standard than that laid down for registered nurses.

This was carried *nem. con.*—Dr. Evers proposed and Dr. Boodle seconded:

> That registration of nurses should include midwifery nurses who should have three years' training, of which one at least should be in a lying-in hospital.

This was carried unanimously.

Hospital Out-patient Departments.—Dr. Boodle proposed and Dr. Etheridge seconded, the resolution of Supplement of February 17th. This was carried unanimously.

Resolution of Ethical Committee.—A communication was read from the Central Ethical Committee in reference to a resolution passed by the Ethical Committee of this Division; the members present unanimously agreed with the finding of the Divisional Ethical Committee.

Police Emergency Fees.—The President of the South-Eastern Branch read some correspondence with reference to police emergency fees in Kent. It appeared that the police authorities would only hold themselves responsible for a medical man's fees when called in by the police to attend a prisoner. In other cases the medical practitioner had to look to the patient for his fee. This matter was brought forward by the Chairman (Dr. Wm. Gosse) at the Sheerness meeting in October last, and a resolution was passed calling on the Branch Council to take action in the matter for the purpose of procuring payment of medical practitioners called in by the police in all emergency cases.

Representative at Annual Representative Meeting.—It was decided to leave the matter of the grouping or not of this Division for the purpose of electing a Representative to attend the Representative Meeting to the central authorities.

Nomination of Members for the General Medical Council.—No action was taken thereon.

East Kent and Canterbury Medical Society.—Correspondence was read with reference to amalgamating the East Kent and Canterbury Medical Society with this Division of the British Medical Association.

Divisional Finance.—The questions asked by the Organization Committee with reference to Divisional finance were discussed.

Messages of Apology.—A letter and telegram of apology for absence were read from Drs. Alexander and Kessick Bowes respectively.

Communication from South-Eastern Branch.—It was resolved at this (Sittingbourne) meeting that the reply to the communication of the South-Eastern Branch be sent to the Medico-Political Committee of the Association "to render such support to the Divisions concerned as may be required" (vide Supplement, July 15th, 1905, p. 54).

Votes of Thanks.—Votes of thanks were passed to Dr. Gosse for presiding, allowing the use of his surgery for the clinical cases, and for hospitality in providing lunch and tea; and to Mr. Greensted for the use of offices for the medico-political meeting.

Croydon Division.

A meeting of this Division was held at the Greyhound Hotel, Croydon, March 15th. Mr. St. George Reid in the chair.

The late Dr. T. R. Adams.—In opening the meeting the Chairman referred to the great loss that the Division had sustained in the death of its late Chairman, Dr. T. R. Adams.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Next Meeting.—On the motion of Dr. Haslam, seconded by Mr. Horsley, it was resolved to hold the next meeting at the Croydon General Hospital with Dr. Redfern as Chairman.

Papers.—Dr. R. Hutchison read a paper upon the Treatment of Various Forms of Diarrhoea in Infancy and Childhood. Drs. Meredith Richards, Addey, Bell, Mark Jackson, and Reid took part in the subsequent discussion. Dr. W. S. A. Griffith read a paper upon Excessive Lochia and After-pains. Drs. Cressey, Braddon,

---

[1] Supplement, British Medical Journal, March 3rd, 1906.

Gripper, Addey, Turner, and Mark Jackson afterwards discusssd various points raised.

Dinner.—Fifteen members remained to dinner.

Eastbourne Division.

A meeting of this Division was held on Thursday, March 29th, at 8.30, in the Mayor's parlour, Town Hall, Eastbourne, Dr. Habgood in the chair.

Hospital Out-patient Departments.—The report of the Hospitals Committee was read and considered, and after considerable discussion the question on the scope of out-patient departments in hospitals was voted upon, with the result that the general principles involved were approved, though it was felt that the final form of the resolution would require modification and made less limited in application.

Registration of Nurses.—After discussion it was resolved:

> That this Division, while still feeling that the registration of nurses is unnecessary, considers that the method of registration proposed by the Select Committee of the House of Commons is the best under the circumstances.

The separate registration of midwifery nurses was approved by the members present.

Contract Practice.—The recommendations of the Medico-Political Committee on contract practice, as printed in the Supplement for August 5th, 1905, were approved.

Guildford Division.

A meeting of this Division was held at the Royal Surrey County Hospital, Guildford, on Friday, March 30th, at 4.30 p.m., Dr. A. Hope Walker, Vice-Chairman of the Division, in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Paper.—Mr. C. A. Ballance, F.R.C.S., gave an interesting address on the *Surgery of Brain Abscess*, which was much appreciated by those present. The paper was illustrated by an excellent series of lantern slides.

Contract Practice.—The adjourned discussion on this subject took place, and reports were received by Dr. Minchin (Godalming) and Dr. Sloman (Farnham) with regard to the feeling of practitioners in their respective neighbourhoods on the recommendations of the Medico-Political Committee (vide Supplement, July 22nd, 1905). In both cases a general approval of the principles of a public medical service was expressed, but it was not considered practicable, or in some respects desirable, to give effect to the recommendations at present. After some discussion by members the following resolution was then submitted to the meeting and carried unanimously:

> That this Division approves in general of resolutions 1, 3 (except section *b*), 4, 5, and 6, but does not consider it practicable at present to take any steps to carry them into effect in the area of the Division, as there appears to be no general dissatisfaction on the part of members with existing conditions of contract practice.

Non-approval of resolutions 2 and 7 and section (*b*) of 3 was expressed.

Hospital Out-patient Departments.—It was proposed by Dr. Hudson and seconded by Dr. Pearse that the proposal of the Hospitals Committee that out-patient departments should be limited to consultations and casualties, especially in the case of hospitals whose staff are general practitioners, be approved. This was carried.

Royal Charter.—The proposed application by the Association for a Royal Charter was approved.

Medical Practitioners and Midwives.—It was agreed to support as far as possible the action of the Metropolitan Counties Branch in regard to legislation for ensuring these payments by the London County Council, and the scale of fees proposed by the Council of the above Branch was considered suitable and adequate. It was hoped that similar action would be taken in other parts of the country.

Vote of Thanks.—A hearty vote of thanks was accorded by the meeting to Mr. Ballance for his paper.

Sevenoaks Division.

The spring meeting of this Division was held at the Royal Oak Hotel, Sevenoaks, on March 29th, Dr. Tew, M.O.H. Tonbridge, in the chair.

Parliamentary Committee.—Dr. Marriott (Sevenoaks), Chairman of the Parliamentary Committee, gave an account of the work of the Committee in connexion with the recent election, and it was resolved that the attention of the member for the Sevenoaks Division be called to the question of remuneration of medical men under the Midwives Act by the local authorities.

Papers.—Dr. E. W. White, of King's College Hospital, read an interesting and practical paper on the treatment of incipient and borderland cases of insanity in general practice, which gave rise to many questions. These were answered and discussed by the author.

General Accident Assurance Corporation.—Mr. H. M. Watts (Tonbridge) introduced the subject of the methods adopted by the General Accident Assurance Corporation, and the following resolutions were adopted:

> In the judgement of this meeting, the proposals of this Corporation for enlisting the services of medical men are unworthy of attention and derogatory to the profession, and it is to be hoped that there will be no acceptance of their terms in this Division; that this resolution be circulated to members of the British Medical Association in the Division and to non-members, and that it be sent with the Corporation's paper to the Medical Secretary of the British Medical Association.

Dinner.—The members subsequently dined together, and entertained the Chairman of the Urban District Council and two other guests.

ULSTER BRANCH.

A joint meeting of this Branch and of the Ulster Medical Society was held in the Medical Institute, Belfast, on Thursday evening, March 29th. Dr. Calwell, President of the Ulster Medical Society, occupied the chair, and Dr. Cecil Shaw, Honorary Secretary of the Branch, and Dr. Thomas Houston, Honorary Secretary of the Society, acted as joint secretaries.

Apologies for Non-Attendance.—Apologies were read from a large number, including Dr. Leonard Kidd, the President of the Branch, who was prevented at the last moment from attending and occupying the chair as had been arranged.

Tughan v. *Darnell.*—The business for which the meeting was summoned was: (1) To discuss what action, if any, should be taken with regard to the legal aspects of the decision in the recent action, Tughan *v.* Darnell; (2) to consider the advisability of raising a fund to assist Dr. Darnell in defraying the expenses of the case. Mr. Kirk read certain questions which he, Dr. McKisack, and Dr. Campbell had agreed to submit to counsel, seeking for information as to how the law as laid down by the learned judge would affect the practice of the profession. After considerable discussion it was arranged that these questions, supplemented by several others suggested at the meeting, should be submitted to counsel, the expenses to be defrayed by the two societies if their respective councils consented. The consideration of the second part of the business, concerning the raising of a fund, was deferred, and the meeting adjourned.

WEST SOMERSET BRANCH.

The spring meeting was held at the Taunton and Somerset Hospital on March 27th, Mr. Gordon Henry, President, in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and signed.

Paper.—Mr. H. T. S. Aveline, Superintendent of the Bath and Somerset Asylum, Cotford, read a very interesting paper on the care and treatment of the feeble-minded. Some discussion followed, which was joined in by the President, Dr. Macdonald, and Mr. Sydenham, after which Mr. Aveline was accorded a hearty vote of thanks for his interesting address.

Case.—Dr. H. T. Rutherfoord gave a brief outline of a case and showed a specimen of a uterus with large fibroid which he had removed from a patient on whom four years previously he had performed Caesarean section. On the motion of the President, Dr. Rutherfoord was cordially thanked for bringing this interesting specimen before the Branch.

Proposed Royal Charter.—Dr. Macdonald introduced the subject of the proposed application for a Royal Charter, which he explained lucidly and briefly to the meeting. It was decided in view of the importance of the subject to call a special meeting to consider the proposals.

Hospital Out-patient Departments.—The following resolution sent to the Branch from the Hospitals Committee was discussed, the subject being opened by the President:

> That in the opinion of this meeting there should be no out-patient departments in hospitals, except for consultations and casualties, and that this opinion specially applies to hospitals whose staff are general practitioners.

After a general discussion, it was proposed by Dr. H. T. Rutherfoord, seconded by Mr. C. Randolph, and carried *nem. con.*

> That this meeting do not approve of the resolution *re* out-patient departments on the agenda paper.

Tea.—The members adjourned to tea before dispersing.

YORKSHIRE BRANCH:

Bradford Division.

An ordinary general meeting of this Division was held at the Eye and Ear Hospital, Bradford, on Tuesday, March 13th, at 8.30 p.m. In the unavoidable absence of the Chairman and Vice-Chairman, Dr. Hime was voted to the chair.

Confirmation of Minutes.—Dr. Metcalfe, an Honorary Secretary, read the minutes of the last meeting, which were adopted.

Administration Orders.—A letter was read from Messrs. Lund and Plunkett, accountants, Bradford, asking for a donation to a fund to pay the expenses of an appeal to the High Court with a view to reversing the decision of his Honour Judge Bompas, K.C., in regard to administration orders. The Chairman and other members present considered the matter a very important one for general practitioners in the Division, but there appeared to be some doubt as to whether the Division could legally subscribe to a fund for the purpose mentioned. Eventually Dr. Rabagliati proposed and Dr. Little seconded:

> That 3 guineas be given to the fund from the moneys in the hands of the Treasurer received from the Bradford and West Riding Medico-Ethical Union on its dissolution.

This was carried unanimously.

Notices of Motion for Representative Meeting.—The notices of motion in the Supplement for March 3rd, p. 78, were then considered. Decisions were arrived at for the guidance of the Representative at the next Annual Representative Meeting.

Registration of Nurses.—The nurses' registration report was discussed at considerable length, most of the gentlemen present taking part in the discussion. It was generally felt that it was impossible to answer the two questions suggested by the Medico-Political Committee in a direct manner.—Dr. Arnold Evans proposed, and Mr. Peck seconded, a resolution to the effect that the Division did not approve of any part of the recommendations.—Dr. Craig proposed, and Dr. H. J. Campbell seconded, the following amendment:

> That this Division, while approving in general of the proposed method of registration for nurses as contained in the abstract of the House of Commons Report, cannot approve of the suggested method of examination, or of the indefinite periods of training, or of the principle of the proposal in Paragraph XI relating to the possibility of instituting a separate *Register of Nurses*, whose training would be of a lower standard than that laid down for registered nurses.

On being put to the vote, the amendment was declared carried. In connexion with the second question, Mr. Horrocks proposed and Dr. Rabagliati seconded:

> That the names of all nurses should be registered in one register, but that a distinction should be made as to the class to which the nurse belonged, such as surgical, mental, midwifery, etc.

This was carried unanimously. The meeting then terminated.

Association Notices.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

Notice is given that the Library will be closed from Thursday next, April 12th, to Tuesday, April 17th.

April 5th. Guy Elliston, *General Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

Border Counties Branch.—The next meeting of this Branch will be held in Keswick on Friday, May 4th. Any member who desires to make a communication to the meeting is requested to inform the Secretary at his earliest convenience. Fuller details of arrangements will be published later.—Francis R. Hill, Carlisle, Honorary Secretary.

Border Counties Branch: Scottish Division.—A meeting of this Division will be held in Dumfries about the middle or end of April. Members who have business or communications to bring before the meeting are requested to give notice to the Secretary.—George R. Livingston, Honorary Secretary, Dumfries.

Lancashire and Cheshire Branch: Liverpool (Northern) Division.—A meeting of the members of the above Division will be held at the Medical Institution, 114, Mount Pleasant, on Monday, April 9th, at 4 p.m. Agenda: To consider and, if approved of, confirm the recommendations of the Executive Committee with reference to: (1) An ethical question. (2) Rules of the Central Midwives Board. (3) Matters referred to Divisions: (*a*) Contract Practice (see Supplement, British Medical Journal, August 5th, 1905); (*b*) selection of Direct Representatives on General Medical Council (see Supplement, October 7th, 1905), (*c*) suggested formation by Divisions of sections for clinical and pathological work (see Supplement, November 11th. 1905); (*d*) inquiry (1905-6) as to the present system of Division and Branch Finance; (*e*) Hospital Out-patient Departments (see Supplement, February 17th, 1906). (4) Notices of Motion: By the Gateshead Division, by the Wandsworth Division (see Supplement, February 10th, 1906); by the Altrincham Division, by the Northamptonshire Division (see Supplement, February 24th, 1906).—A. W. German, Honorary Secretary.

Metropolitan Counties Branch: Hampstead Division.—The next meeting of the Division will be held this day, Friday, April 6th, at the Hampstead Conservatoire, Swiss Cottage, N.W., at 8.30 p.m., Mr. F. R. Humphreys in the chair. Agenda: (1) Minutes. (2) Correspondence. (3) Questions. (4) The Hampstead Hospital Question. (5) Consideration of the Report of the Hospitals Committee (see British Medical Journal Supplement for February 17th, 1906). (6) Resolutions for the Representative Meeting. (7) Contract Practice Report (an epitome of which will be found in the British Medical Journal Supplement for March 3rd, 1906).—R. A. Yeld, Hampstead, Honorary Secretary.

Metropolitan Counties Branch: St. Pancras and Islington Division.—The next meeting will be held on Friday, April 27th, at the St. Pancras Infirmary, in Pancras Road, London, N.W., at 4 p.m. Agenda: (1) To consider the clauses of the Draft Charter, which will be explained by Mr. J. Smith Whitaker. (2) Hospital out-patient reform. (3) The registration of nurses.—Wm. Wynn Westcott, Secretary.

Metropolitan Counties Branch: Tottenham and City Divisions.—A conjoint meeting will be held on Thursday, April 19th, at 8.30 p.m., at Brooke House, Upper Clapton (by the kind invitation of Dr. J. O. Adams). Dr. J. H. Sequeira will give a demonstration of skin diseases. Members are invited to bring their professional friends.—Fred. Tresilian, Honorary Secretary, Tottenham Division; E. W. Goodall, Honorary Secretary, City Division.

Metropolitan Counties and South-Eastern Branches.—A conjoint meeting of the Chelsea, Westminster, Lambeth, Norwood, Croydon, Richmond, and Wandsworth Divisions will be held at the Battersea Town Hall, Clapham Junction, at 3.45 p.m. on Thursday. April 19th, to discuss the proposed Royal Charter. Dr. T. Jenner Verrall, Chairman Organization Committee, will address the meeting, followed by the Medical Secretary. The Presidents of the two Branches, as well as others, will be attending. All members of the Association who care to attend will be welcomed.—E. R. Fothergill, J. R. Johnson, P. H. Parsons, H. J. Prangley, W. K. Sibley, W. H. B. Stoddart, and E. H. Willock, Honorary Secretaries.

North of England Branch.—A meeting of the North of England Branch will be held on Tuesday, April 24th, at Stockton-on-Tees. Members wishing to read papers or show cases are requested to inform Dr. Cox as soon as possible.—Alfred Cox, J. H. Hunter, Honorary Secretaries.

South-Eastern Branch: Norwood Division.—A clinical meeting will be held on Thursday, April 12th, at 4 p.m., at St. John's Hospital, Morden Hill, Lewisham, H. C. Burton, F.R.C.S., of Blackheath, in the chair. The staff have kindly promised to show cases. Members desirous of exhibiting cases are requested to communicate with the Honorary Secretary at once. St. John's Hospital is a few minutes from Lewisham Junction and the Catford and Greenwich trams pass the bottom of Morden Hill.—H. J. Prangley, Honorary Secretary.

GENERAL MEDICAL COUNCIL.

ELECTION OF DIRECT REPRESENTATIVES FOR ENGLAND AND WALES, NOVEMBER, 1906.

Candidates Nominated by Divisions for Selection by the Representative Meeting on behalf of the Association.

The following members of the Association have been nominated by the Divisions named to be candidates for election, and have accepted nomination in accordance with the terms of the scheme published in the Supplement of the British Medical Journal for October 7th, 1905:

Name.	*Address.*	*Nominating Division or Divisions.*
BROADBENT, George Harry, M.R.C.S. ... (Member of Central Ethical Committee, Member of Lancashire and Cheshire Branch Council, and Representative of North Manchester Division.)	8, Ardwick Green, Manchester	Manchester (North).
BROWNE, Henry Langley, M.D., F.R.C.S.Ed. **(Chairman of Council of the Association.)**	**Moor House, West Bromwich**	**Central Birmingham.** City (London). Kensington. Marylebone. Swansea.
BULLAR, John Follett, M.B., F.R.C.S. ... **(Member of Branch Council, Southern Branch.)**	**7, Carlton Crescent, Southampton**	**Winchester.**
CLARK, Andrew, F.R.C.S. ... ... **(Member and late Chairman of Central Council, and President of the Metropolitan Counties Branch.)**	**71, Harley Street, W.**	City (London). Marylebone. St. Pancras and Islington.
HELME, Thomas Arthur, M.D., M.R.C.P. ... (Honorary Secretary and Treasurer of Lancashire and Cheshire Branch, Member of Central Council and Medico-Political Committee.)	3, St. Peter's Square, and Mayfield, Victoria Park, Manchester	Manchester (Central). Manchester (West).
JACKSON, George, F.R.C.S. ... ... **(President of the South-Western Branch, and Member of the Medico-Political Committee.)**	**10, Portland Villas, Plymouth**	Exeter. **Gateshead.** Kensington. Manchester (North). Plymouth.
LATIMER, Henry Arthur, M.D. ... ... **(Chairman and Representative of Swansea Division, Member of Medico-Political Committee.)**	**4, Belvoir Place, Swansea**	**Swansea.**
McMANUS, Leonard Strong, M.D. ... ... (Representative of Wandsworth Division, Member of Medico-Political Committee.)	25, Spencer Park, Wandsworth Common, S.W.	Stratford. Wandsworth.
MORISON, James Rutherford, F.R.C.S. ... **(Member of Branch Council and Chairman of Northumberland Committee, North of England Branch.)**	**14, Saville Row, Newcastle-on-Tyne**	Blyth (Cleveland). **Consett.** Furness. **Gateshead.** Marylebone. **Newcastle-on-Tyne.** North Northumberland. South Shields. Stockton-on-Tees. Sunderland.
RENSHAW, Charles Jeremiah, M.D., F.F.P.S.Glas. (Representative on Lancashire and Cheshire Branch Council and ex-Chairman of Altrincham Division.)	Beech Hurst, Ashton-on-Mersey, Lancashire	Altrincham. Manchester (Central). Manchester (West).
RHODES, John Milson, M.D. ... ... **(Chairman of South Manchester Division, Lancashire and Cheshire Branch.)**	**Ivy Lodge, Didsbury, Manchester**	Manchester (Central). **Manchester (South).**
SMITH, Frederick John, F.R.C.P., M.D. ... (Honorary Secretary, Metropolitan Counties Branch.)	138, Harley Street, W.	Stratford.
STRATON, Charles Robert, F.R.C.S.Edin.... **(Member of Central Council, Medico-Political Committee and Colonial Committee.)**	**West Lodge, Wilton, Salisbury**	Wandsworth. **Winchester.**
GODSON, Alfred, M.B., M.C.Cantab.... ... (Chairman of the Stockport, Macclesfield, and East Cheshire Division.)	Cheadle House, Cheadle, Cheshire	Stockport, Macclesfield, and East Cheshire.

April 5th.

J. SMITH WHITAKER, *Medical Secretary.*

THE SEVENTY-FOURTH ANNUAL MEETING
OF THE
British Medical Association,
TORONTO, CANADA, AUGUST 21st to 25th, 1906.

President:
George Cooper Franklin, F.R.C.S.Eng., Surgeon, Leicester Infirmary, Leicester.

President-elect:
Richard Andrews Reeve, B.A., M.D., LL.D., Dean of the Faculty of Medicine, University of Toronto.

Chairman of Representative Meetings:
Sir Victor Horsley, F.R.C.S., F.R.S., Surgeon, University College Hospital; and Surgeon, National Hospital for Paralysed and Epileptic.

Chairman of Council:
Henry Wm. Langley Browne, M.D., Ch.B., F.R.C.S.E., Consulting Surgeon, West Bromwich District Hospital.

Treasurer:
Hy. Radcliffe Crocker, M.D., F.R.C.P., Physician Skin Department, University College Hospital, London.

PROGRAMME OF BUSINESS.

An Address in Medicine will be delivered by Sir James Barr, M.D., F.R.C.P., F.R.S.E.

An Address in Surgery will be delivered by Sir Victor Horsley, M.B., F.R.C.S., F.R.S.

An Address in Obstetrics will be delivered by Walter Spencer Anderson Griffith, M.D., F.R.C.P.

THE SECTIONS.

There will be 13 Sections as shown in the subjoined list; they will meet on Tuesday, Wednesday, Thursday and Friday, August 21st, 22nd, 23rd and 24th, from 9.30 a.m. to 12.30 p.m.

The President, Vice-Presidents, and Secretaries of each Section constitute a Committee of Reference for that Section.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the British Medical Journal *without special permission.*

No paper must exceed 15 minutes in reading, and no subsequent speech 10 minutes.

Anatomy.

President: Professor Arthur Robinson, M.D., Birmingham.

Vice-Presidents: Professor Alexander Primrose, M.B., C.M., Toronto; David Edward Mundell, B.A., M.D., C.M., Kingston; Donald Armour, F.R.C.S., London.

Honorary Secretaries: Charles Buckingham Shuttleworth, M.D., C.M., F.R.C.S., 45, Bloor Street E., Toronto; Gawn Shaw Cleland, M.B., M.D., C.M., 730, Queen Street E., Toronto; J. Herbert Sanders, M.D., 1a, Palace Gardens Mansions, W.

Dermatology.

President: Norman Walker, M.D., Edinburgh.

Vice-Presidents: Graham Chambers, M.B., Toronto; Harry B. Anderson, M.D., C.M., Toronto; Arthur John Hall, M.D., Sheffield; Ernest Solly, M.B., Harrogate.

Honorary Secretaries: David King Smith, M.B., 311, Jarvis Street, Toronto; Donald Macgillivray, M.B., 12, Carlton Street, Toronto; John Campbell Rankin, M.B., 38, University Road, Belfast.

Laryngology and Otology.

President: J. Dundas Grant, M.D., London.

Vice-Presidents: George R. McDonagh, M.B., L.R.C.P., Toronto; Herbert Stanley Birkett, M.D., C.M., Montreal; John Macintyre, M.B., Glasgow; Hugh Edward Jones, M.R.C.S., Liverpool.

Honorary Secretaries: David James Gibb Wishart, B.A., M.D., C.M., L.R.C.P., 47, Grosvenor Street, Toronto; Geoffrey Boyd, B.A., M.B., 167, Bloor Street, Toronto; Adam Brown Kelly, M.D., 26, Blythswood Square, Glasgow.

Medicine.

President: Sir Thomas Barlow, Bart., K.C.V.O., M.D., London.

Vice-Presidents: Professor Alexander McPhedran, M.B., Toronto; Professor James Stewart, M.D., C.M., Montreal; Alexander Napier, M.D., Glasgow; William Calwell, M.D., Belfast.

Honorary Secretaries: Robert Dawson Rudolph, M.D., M.R.C.P., 396, Bloor Street W., Toronto; John Taylor Fotheringham, B.A., M.B., M.D., C.M., 36, Carlton Street, Toronto; Robert Hutchison, M.D., 22, Queen Anne Street, London, W.

Obstetrics and Gynaecology.

President: A. H. Freeland Barbour, M.D., Edinburgh.

Vice-Presidents: Professor James Algernon Temple, M.D., C.M., Toronto; Professor Adam H. Wright, B.A., M.B., Toronto; Professor William Gardner, M.D., Montreal; T. Arthur Helme, M.D., Manchester.

Honorary Secretaries: Frederick Fenton, M.D., C.M., 75, Bloor Street E., Toronto; Kennedy Crawford McIlwraith, M.B., 54, Avenue Road, Toronto; Cuthbert Lockyer, M.D., 117a, Harley Street, London, W.

Ophthalmology.

President: Robert Marcus Gunn, F.R.C.S., London.

Vice-Presidents: George Herbert Burnham, M.D., F.R.C.S.E., Toronto; John W. Stirling, M.D., Montreal; Joseph Nelson, M.D., Belfast; Arnold Lawson, F.R.C.S., London.

Honorary Secretaries: James Metcalf MacCallum, B.A., M.D., C.M., Toronto; Duncan Neil McLennan, M.D., C.M., 126, Bloor Street W., Toronto; Frank Pearson Skeffington Cresswell, M.B., 24, Windsor Place, Cardiff.

Paediatrics.

President: **George Alexander Sutherland**, M.D., London.

Vice-Presidents: **Henry T. Machell**, M.D., L.R.C.P., Toronto; **Allan M. Baines**, M.B., Toronto; **Otto Jackson Kauffmann**, M.D., Birmingham; **H. Betham Robinson**, M.S., London.

Honorary Secretaries: **Edward Stanley Ryerson**, M.D., C.M., 261, College Street, Toronto; **Joseph S. A. Graham**, M.B., 102, College Street, Toronto; **Ralph Vincent**, M.D., 1, Harley Street, London, W.

Pathology and Bacteriology.

President: Professor **J. G. Adami**, M.D., F.R.S., Montreal.

Vice-Presidents: Professor **John J. Mackenzie**, B.A., M.B., Toronto; Professor **Walter Thomas Connell**, M.D., C.M., Kingston; **Ingersoll Olmsted**, M.D., Hamilton; Professor **Robert Fraser Calder Leith**, M.B., Birmingham.

Honorary Secretaries: **Gideon Silverthorn**, M.B., M.D., C.M., 266, College Street, Toronto; **Harold C. Parsons**, B.A., M.D., C.M., 72, Bloor Street W., Toronto; **Frank George Bushnell**, M.D., Sussex County Hospital, Brighton.

Physiology.

President: Professor **Wm. Dobinson Halliburton**, M.D., F.R.S., London.

Vice-Presidents: Professor **Archibald B. Macallum**, M.A., M.B., F.R.S., Toronto; Professor **Wesley Mills**, M.A., M.D., Montreal; Professor **Charles Scott Sherrington**, M.D., F.R.S., Liverpool.

Honorary Secretaries: **Herbert E. Roaf**, M.D., The Bio-Chemical Department, The University, Liverpool; **Gustav Mann**, M.D., 25, Beechcroft Road, Oxford.

Psychology.

President: **Wm. Julius Mickle**, M.D., London.

Vice-Presidents: **Nelson Henry Beemer**, M.D., Toronto; **Charles Kirk Clarke**, M.D., Toronto; **Reginald Langdon-Down**, M.B., London.

Honorary Secretaries: **Alfred Thomas Hobbs**, M.D., Guelph, Ontario; **Goldwin Howland**, B.A., M.B., 540, Spadina Avenue, Toronto; **John Turner**, M.B., Essex County Asylum, Brentwood.

State Medicine.

President: **Frederick Montizambert**, I.S.O., F.R.C.S.E., D.C.L., M.D., Ottawa.

Vice-Presidents: **E. P. Lachapelle**, M.D., Laval University, Montreal; **Charles Sheard**, M.D., Toronto; **Peter Henderson Bryce**, B.A., M.B., Ottawa; **Joseph Groves**, M.B., Isle of Wight.

Honorary Secretaries: **Joseph D. Page**, M.D., Quebec; **F. G. E. Pearson**, M.D., Brantford, Ontario; **Arthur A. Mussen**, M.D., Municipal Offices, Liverpool.

Surgery.

President: Sir **Hector Clare Cameron**, M.D., Professor of Clinical Surgery, Glasgow.

Vice-Presidents: **Fred. Le M. Grasett**, M.B., C.M., F.R.C.S.E., Toronto; **Francis J. Shepherd**, M.D., C.M., LL.D., F.R.C.S.E., Montreal; **Alfred B. Atherton**, B.A., M.D., LL.D., Frederickton, N.B.; **Tecumseth Kingsley Holmes**, M.D., Chatham, Ontario.

Honorary Secretaries: **Harry A. Beatty**, M.B., 207, Simcoe Street, Toronto; **Frederick William Marlow**, M.D., C.M., F.R.C.S., 699, Spadina Avenue, Toronto; **Sinclair White**, F.R.C.S., Ranmoor, Sheffield.

Therapeutics.

President: **Donald MacAlister**, M.D., Cambridge.

Vice-Presidents: **John Lorenzo Davison**, B.A., M.D., C.M., Toronto; **Alexander D. Blackader**, B.A., M.D., Montreal; Sir **Alan Reeve Manby**, M.V.O., M.D., East Rudham; Professor **J. Rose Bradford**, M.D., F.R.S., London.

Hon. Secretaries: **Velyien E. Henderson**, M.A., M.B., University of Toronto; **Charles Potter Lusk**, M.D., C.M., 99, Bloor Street W., Toronto.

HONORARY LOCAL SECRETARIES.

Frederic Newton Gisborne Starr, M.B., Medical Building, Toronto.

Professor **John Joseph Mackenzie**, B.A., M.B., Medical Building, Toronto.

David James Gibb Wishart, B.A., M.D., L.R.C.P., Medical Building, Toronto.

COMMITTEE PATHOLOGICAL MUSEUM.

Professor **John Joseph Mackenzie**, B.A., M.B., Toronto, *Chairman.*
Maude Abbott, B.A., M.D., Montreal, *Secretary.*
Professor **Gordon Bell**, M.D., Winnipeg.
Professor **W. T. Connell**, M.D., Kingston.
Andrew Robertson Gordon, M.B., Toronto.
J. A. McGregor, M.D., London, Ontario.

EXHIBITION COMMITTEE.

Chairman: Dr. **Arthur Jukes Johnson**, Toronto.

Secretaries: Dr. **T. D. Archibald**, Toronto; Dr. **W. A. Young**, Toronto.

HONORARY LOCAL TREASURER.

Professor **J. W. Ross**, Toronto.

TORONTO ARRANGEMENTS COMMITTEE.

Dr. **Geo. A. Bingham**, 68, Isabella Street, Toronto.
Dr. **C. J. C. O. Hastings**, 258, Wellesley Street, Toronto.
Dr. **A. A. Macdonald**, 341, Bloor Street West, Toronto.
Professor **J. J. Mackenzie**, Medical Laboratories, Toronto.
Dr. **Alex. McPhedran**, 151, Bloor Street West, Toronto.
Dr. **R. B. Nevitt**, 46, Bloor Street West, Toronto.
Dr. **R. A. Reeve**, *President-elect*, 48, Bloor Street E., Toronto.
Dr. **F. N. G. Starr**, 112, College Street, Toronto.
Dr. **J. Algernon Temple**, 333, Bloor Street W., Toronto.
Dr. **D. J. Gibb Wishart**, 47, Grosvenor Street, Toronto.

PROGRAMME OF PROCEEDINGS.

Tuesday, August 21st, 1906.

9.30—12.30 a.m.—Meetings of Sections.
2.30 p.m.—Address on Obstetrics, Dr. W. S. A. Griffith.
4.30 p.m.—Garden Parties.
8 p.m.—Address of Welcome; Introduction of Guests, Delegates, etc.; and President's Address.
9.30 p.m.—Reception by the Lieutenant-Governor in the Parliament Buildings.

Wednesday, August 22nd.

9.30—12.30 a.m.—Meetings of Sections.
2.30 p.m.—Address on Medicine, Sir James Barr, M.D.
4.30 p.m.—Garden Parties.
8.30 p.m.—Address on Surgery, Sir Victor Horsley, F.R.S.
9.30 p.m.—Reception.

Thursday, August 23rd.

9.30—12.30 a.m.—Sectional Meetings.
4.30 p.m.—Garden Parties.
7.30 p.m.—Annual Dinner.

Friday, August 24th.

9.30—12.30 a.m.—Sectional Meetings.
2.30 p.m.—General Meetings.
4.30 p.m.—Garden Parties.
Excursions.
8.30 p.m.—Soirée.

Saturday, August 25th.

Excursions to Niagara Power Company's plant, through the courtesy of Sir Henry M. Pellatt.
Excursion to Muskoka.
Excursion to Lambton, through the courtesy of the President, Mr. Austin.

First-Class Circular Tours.

Messrs. Stockwell and Co., Limited, 8-10, Beak Street, London, W., send us the following particulars of first-class tours throughout London to Toronto and back:

Via Quebec and Montreal.		£	s.	d.
Saturday, August 4th.—Steamship *Empress of Britain*, 14,500 tons, C.P.R., arriving Quebec 11th, and thence to Montreal, rail to Toronto, returning by Lake steamer through the Thousand Islands and Rapids to Montreal home by C.P.R. steamer	From	36	16	6
Or Montreal to Toronto by steamer, rail home from Toronto via New York and Cunard steamer	From	38	5	5
Wednesday, August 8th.—Steamship *Lake Erie*, 7,550 tons, C.P.R., arrive Montreal 19th, rail to Toronto, returning by Lake steamer through the Thousand Islands and Rapids to Montreal, home by C.P.R. steamer	From	33	0	6

Montreal to Toronto by steamer, rail home from Toronto via New York and Cunard steamer ... ... From 36 5 5

Thursday, August 9th.—Steamship *Ionian*, 8,265 tons, Allan Line, arrive Montreal 18th, rail to Toronto, returning by lake steamer through the Thousand Islands and Rapids to Montreal, home by Allan Line steamer ... ... From 33 0 6

Or Montreal to Toronto by steamer, rail home from Toronto via New York and Cunard steamer From 36 5 5

Via New York.

Wednesday, August 8th.—Steamship *Teutonic*, 10,000 tons, White Star, arriving New York 15th, rail to Toronto, returning via Lake steamer to Montreal, thence by Dominion Line to Liverpool ... ... From 41 11 5

Friday, August 10th.—Steamship *Cedric*, 20,000 tons, White Star, arriving at New York 17th, rail to Toronto, returning via Lake steamer through the Thousand Islands and Rapids to Montreal, thence by Dominion Line steamer to Liverpool ... ... From 43 9 5

Saturday, August 11th.—Steamship *Etruria*, 8,161 tons, Cunard Line, arrive at New York 18th, rail to Toronto, returning via Lake steamer through the Thousand Islands and Rapids to Montreal, thence per Allan or C.P.R. steamer to Liverpool ... ... From 38 14 5

Saturday, August 11th.—Steamship *New York*, 10,000 tons, American Line, arriving New York 18th, rail to Toronto, returning via Lake steamer through the Thousand Islands and Rapids to Montreal, thence by Dominion Line steamer to Liverpool ... ... From 39 16 5

Messrs. Stockwell also forward the following rates for cabins in the Empress boats of the Canadian Pacific Railway and the boats of other lines. The *Empress of Britain* sails on August 4th:

"Empress of Britain" and "Empress of Ireland."
Proposed Saloon Rates.

SECOND-CLASS CIRCULAR TOURS.

Messrs. Stockwell and Co. also ask us to state that they issue second-class circular tours from London to Toronto. Passengers travel by the Canadian route via Liverpool to Montreal, by railway to Toronto, returning by steamer through the Thousand Islands and the Lachine Rapids to Montreal, and thence to Liverpool and London; the fare is £18 6s. 6d. They state that the accommodation and dietary are good, and, judging from the bill of fare submitted, there can be no doubt that it is ample, including three meat meals a day. Dates of sailing, bills of fare, and plans of steamers can be obtained on application to Messrs. Stockwell.

HOTELS IN TORONTO.

OUR Toronto correspondent has forwarded the following list of hotels in Toronto and their charges:

Name of Hotel.	Location.	Rates per Day.
King Edward	33 to 41, King St. East..	$3 00 to $5 00
Queen's Hotel ...	78 to 92, Front St. West	3 00 to 5 00
Rossin House... ...	King and York Sts. ...	2 50 to 5 00
Walker House ...	Front and York Sts. ...	2 00 to 2 50
Palmer House ...	King and York Sts. ...	2 00 to 3 50

NOTE.—Accommodation for over 30,000 visitors can be found in the number of good boarding-houses all over the city, at $1 00 per day, or $4 00 and $6.00 per week.

ROYAL COMMISSION ON THE CARE AND CONTROL OF THE FEEBLE-MINDED AND EPILEPTIC.

The Royal Commission on the Care and Control of the Feeble-Minded met on March 9th to receive evidence from Ireland, the principal witnesses being Sir G. P. O'Farrell, M.D., Inspector of Lunatic Asylums; Mr. J. M. Colles, Registrar of Lunacy; Mr. E. Burke, a General Inspector of the Irish Local Government Board, and Dr. F. E. Rainsford, Medical Superintendent of the Stewart Institution for Imbeciles, Palmerstown.

Sir G. P. O'Farrell, after giving an account of the general provisions for the treatment of persons of unsound mind in Ireland, said that the procedure for admission to public asylums differed altogether from that in England, as the initiative did not rest with the local Poor-law authorities, except as regarded cases actually in union workhouses. The necessary action had to be taken by a relative or friend of the lunatic, and as this involved the payment of a fee to the certifying medical practitioner, it presented a serious bar in the majority of cases owing to the poverty of the parties concerned. In consequence, recourse was had to the quasi-criminal procedure of swearing informations, and taking the lunatic before two magistrates to obtain an order. His experience in Ireland convinced him that fine or imprisonment were quite unable to effect any reformation in the habits of the confirmed drunkard. Quite 50 per cent. of the crime committed in Ireland could be traced to alcoholic excess; this excess was the cause of much insanity, and the efforts to deal with this great national evil had hitherto been trivial. It was not unreasonable to expect that grants similar to those originally given in England to enable inebriate institutions to be started and fostered should be made to such institutions in Ireland. As to persons mentally deficient who were possessed of means, while they were minors they were under the care of the Court of Chancery. Many of these persons, though weak-minded, were not absolutely imbecile or insane, and having a considerable amount of wealth at their disposal, eventually became the easy prey of designing and parasitical adventurers; in the course of a few years they might thus squander money which would have been enough to afford them a competence for life, and contracting at the same time vicious and intemperate habits, become ultimately a burden on the public rates by gravitation into asylums or prisons. Protection in such cases could be afforded by a slight extension of the powers of the Lord Chancellor, who was already charged with the care and commitment to custody of the persons and estates of those found to be idiot, lunatic, or of unsound mind.

Mr. Colles suggested that if schools for training improvable children were provided by voluntary effort, feeble-minded and imbecile children found in unsuitable surroundings might be committed to them by a magistrate. The expense should be met partly by capitation grants from the Treasury and partly by local authorities, subject to the conditions that all such schools should be adequately supervised, and that the period of detention should be somewhat longer than in industrial schools.

Mr. Edmund Burke said that the want of institutions for the education of mentally-deficient or backward children was very apparent, not only in the case of feeble-minded pauper children, but in the case of children belonging to the poorer classes who now lived with their relatives. The boarding-out system could be seldom resorted to with advantage in such cases, and if separate schools could be provided for their reception it would be an enormous gain.

Dr. Frederick E. Rainsford said that in his institution the inmates, unless helpless idiots, could, as a rule, be easily taught something. The establishment of an industrial school or colony for the benefit of weak-minded persons, the greater part of the work being done by the inmates, was highly desirable.

At a meeting of the Royal Commission on the Care and Control of the Feeble-minded on March 16th further evidence was received from Ireland, the principal witnesses being Sir Christopher Nixon, ex-President of the Royal College of Physicians and Visiting Physician to the Central Criminal Lunatic Asylum at Dundrum; Dr. Conolly Norman, Resident Medical Superintendent of the Richmond Asylum; and Mr. E. M. Courtenay, Lunacy Inspector.

Sir Christopher Nixon said that in considering the factors which contribute to swell the number of feeble-minded and defective persons, post-natal conditions such as the influence of insanitary and depressing environment, insufficiency of food and parental care, and alcoholic excess, counted for much. On the other hand, there was constant evidence of a parallelism in conformation, in disposition, and in diathesis between a child and its parent. Hence it was most desirable that feeble-minded and defective women should be kept in institutions during the entire procreative period. This consideration applied with particular force in the case of a woman who, when out of a workhouse, lived the life of a prostitute. All pauper imbeciles should be removed from workhouses and kept in special institutions. As for ordinary defectives, the problem of dealing with them would be solved if certain religious bodies already engaged in allied work could be persuaded to take charge of a colony for the feeble-minded such as that at Ursberg in Bavaria. As for criminal lunatics, the accommodation at Dundrum should be increased so as to permit of a better segregation of different classes of lunacy, and of the separation of convicts who became insane during imprisonment, from persons detained "during pleasure" as having been irresponsible for the commission of a crime. The former persons, on termination of their sentence, should not be sent to an ordinary asylum or released, but kept under supervision in a special asylum. Prisoners who were merely feeble-minded and persons known to be habitual criminals should be treated in much the same way.

Dr. Conolly Norman said that in an asylum for imbeciles and idiots the adults should be separated from the young. No effort should be spared to kindle in the latter any spark of intelligence that might exist. In a few cases "higher grade imbeciles" might be made self-supporting. Many more could be taught to occupy their time in useful employments. The great majority at least could be improved in habits of cleanliness and self-care. Those incapable of any improvement should be permanently detained as they required more nursing and care than it could reasonably be expected they would get in a private household. Those who had been taught to earn or to assist in earning their own living, the harmless and tranquil, and those who had acquired habits of decency and order, should be provided for by an organized system of family care as in France, Germany, and elsewhere abroad.

Mr. E. M. Courtenay stated that the Acts relating to the care of the insane in Ireland in some cases contained provisions not in accordance with modern ideas on the subject. They did not sufficiently guarantee the proper admission of the insane to asylums, nor did they adequately safeguard the public against the suspicion that cases were unnecessarily detained in these institutions.

CENTRAL MIDWIVES BOARD.

A meeting of the Central Midwives Board was held on March 29th at 6, Suffolk Street, Pall Mall, with Dr. F. H. Champneys in the chair.

Information as to the Proceedings of the Board.

A letter from Dr. Meredith Young (M.O.H. Stockport) was read, forwarding a copy of a resolution passed at a meeting of the Incorporated Society of Medical Officers of Health on February 16th, asking for information as to the proceedings of the Board so far as they affect local supervising authorities. In the course of the discussion on this letter, Mr. Ward Cousins pointed out the advisability of supplying the Society concerned with the information desired, and this suggestion was adopted.

Proposed Cardiff Examination Centre.

A letter was read from Dr. E. Walford (M.O.H. Cardiff), forwarding a copy of a resolution passed by the local supervising authority at Cardiff, asking the Board to make Cardiff one of the provincial centres for the Board's examinations. Some of the candidates did not understand the English language, and it was urged that this difficulty would be obviated by having a provincial centre at Cardiff. The matter was referred to the Standing Committee, in spite of the opposition of Sir William Sinclair, Mr. Ward Cousins, and Mr. Parker Young.

Suggested Official Handbook for Midwives.

The report of the meeting of examiners held on March 20th, 1906, to consider the question of an official handbook for midwives was received. The following is quoted from the report:

> It was moved by Dr. Lyle, and seconded by Dr. Fothergill, "That the examiners recommend to the Board the publication of an official handbook for midwives." After discussion, during which suggestions were made that the object of the motion might be met by an amplification of the syllabus of instruction, the motion was put and lost, 7 voting in favour of it and 17 against.

Sir W. J. Sinclair said that he would give formal notice of a resolution bearing on this matter.

Duties of Inspectors of Midwives.

The Standing Committee recommended that local supervising authorities, having appointed inspectors of midwives, be requested to furnish the Board with copies of the rules that have been drawn up for the inspector's guidance, and that, where no rules have been compiled, the local supervising authority be asked whether such rules, if drawn up by the Central Midwives Board, would be acceptable. This was discussed, and it was decided that the consideration of this recommendation be postponed for six months.

Persistently Disobedient Midwives.

The Clerk of the London County Council having reported that two midwives were guilty of persistent disobedience to Rule E, 19 (b), and had announced their intention of not complying with the rule, the Board directed that the midwives in question should be called on to furnish an explanation of the facts alleged against them by the London County Council.

Certificates of Character.

At a meeting of the Board on January 30th, 1906, the name of Mary Ann George was removed from the Roll, and instructions were given that the papers in the case should be sent to the Public Prosecutor for his consideration of the facts concerning the signing of a certificate of good character by a clergyman. The Board had received a letter from the Director of Public Prosecutions, dated March 5th, 1906, in which he says that he has read and considered the papers forwarded to him. Although the conduct of the clergyman in question was, in his opinion, morally inexcusable, and the explanation altogether unsatisfactory, he did not think in view of that explanation that the clergyman would be convicted under Section 12 of 2 Ed. VII, cap. 17, of wilfully making or causing to be made a falsification in a matter relating to the Roll of midwives. The Director of Public Prosecutions submitted that, if any indictable offence under that Act should be brought to the notice of the Central Midwives Board, it would be within its power to institute a prosecution, and that these would not necessarily be cases calling for the intervention of the Director of Public Prosecutions under 42 and 43 Vict., cap. 22, and the regulations made under that Act.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following appointments have been made at the Admiralty: **Francis H. Clayton**, M.D., Staff Surgeon, to the *Egmont*, additional, for miscellaneous service, vice Shaw, March 28th; **Charles E. Matthew**, M.B., Fleet Surgeon, to the *Monmouth*, on recommissioning, April 10th; **William E. Marshall**, Staff Surgeon, to the *Pembroke*, additional, and **John McElwee**, M.D., Fleet Surgeon, to the *President*, additional, for three months' course of study at West London Hospital, both dated April 9th; **Richard Willan**, Surgeon, to the *Monmouth*, on recommissioning, April 10th; **Evan St. M. Nepean**, Fleet Surgeon, to the *Empress of India*, vice McElwee, April 1st; **George A. S. Bell**, Fleet Surgeon, and Staff-Surgeons **Frederick Fedarb** and **Flystan G. E. O'Leary** have been appointed to the *President* for hospital course, the former under date April 12th and the latter both under date April 9th; **Richard W. Stanistreet**, Staff Surgeon, to the *Doris*, vice F. Fedarb, and **Harold E. Fryer**, Staff Surgeon, to the *Tyne*, April 9th; **Patrick W. MacVean**, M.B., Surgeon, to the *Sapphire II*, vice O'Leary, April 9th; **Alfred T. Gailleton**, M.B., to the *President*, for hospital course, April 9th.

Fleet Surgeon E. W. **Luther** has been placed on the retired list (at his own request), with the rank of Deputy Inspector-General. He was Surgeon in March, 1874, Staff Surgeon in March, 1886, and became Fleet Surgeon in September, 1890.

ROYAL ARMY MEDICAL CORPS.

Colonel D. **Bruce**, M.B., C.B., has been ordered to Malta, on duty with the Mediterranean Fever Commission. Colonel Bruce is a member of the Army Medical Service Advisory Board, and is an expert in tropical diseases.

Major T. **McCulloch**, M.B., now at the War Office, Major J. G. **McNaught**, M.D., at Edinburgh, and Major J. C. **Weir**, M.B., London, are also to be appointed members of the foregoing Fever Commission. Major McCulloch saw service in China in 1900 (medal), and was mentioned in dispatches; while Major McNaught was in the South African War, 1901-2, and has the Queen's medal with five clasps.

Colonel M. W. **O'Keefe** has been appointed to the charge of the Royal Herbert Hospital, Woolwich. Colonel O'Keefe took part in the Egyptian Expedition, 1882 (medal with clasp, bronze star), and in the Tirah Campaign, 1897-8.

Colonel **Montgomery Blennerhassett**, C.M.G., retires on retired pay, April 4th. Colonel Blennerhassett's appointment as Lieutenant-Colonel was dated March 30th, 1892, and he became Colonel on April 1st, 1902, when he served as Administrative Medical Officer, India. He was in the Ashanti expedition of 1895-6, and was honourably mentioned (star).

INDIAN MEDICAL SERVICE.

Major R. **Heard**, M.B. (Bengal), is confirmed in appointment of Joint Medical Officer at Simla, from February 9th.

Captain W. M. Houston, M.B., Personal Assistant to Surgeon-General with the Government of Bombay, is appointed Inspector of Factories within the local limits of the City of Bombay.

In the Eastern Command Captain L. B. **Scott**, M.B., 8th Rajpoots, has been appointed to the medical charge of the regiment, vice Lieutenant-Colonel S. C. **Nandi**, retired; and Captain F. P. **Connor**, 13th Rajpoots, to the medical charge of that regiment.

The receipt of charge by Major J. **Jackson**, M.B., of Yeravda Central Prison on March 6th, 1906, is gazetted, as well as that by Captain J. M. **Woolley**, of Bhagalpore Central Gaol, on December 4th, 1905.

The following officers are admitted to the Indian Medical Service, from September 1st, 1905, and are assigned to the commands specified: C. H. **Reinhold**, A. F. **Hayden**, and B. E. M. **Newland** (Northern); L. A. H. **Lack** (Eastern); E. J. C. **McDonald**, R. W. **Mackenzie**, W. D. **Wright**, and J. F. **Boyd** (Northern); V. N. **Whitamore** (Eastern); J. **Catto** (Western); N. S. **Sodhi** (Eastern); W. J. **Powell** (Western); and W. C. **Gray** (Secunderabad Division).

ROYAL ARMY MEDICAL CORPS (VOLUNTEERS).

Alexander Callam is gazetted a Lieutenant in the North-East Lancashire Bearer Company, March 27th.

ARMY MEDICAL RESERVE OF OFFICERS.

Surgeon-Lieutenant-Colonel **Robert T. C. Robertson**, M.B., having resigned his commission in the Volunteers, ceases to belong to the Army Medical Reserve of Officers, April 4th.

Mr. W. J. F. **Middlemiss**, L.D.S.Edin., has been appointed a Dental Surgeon to the troops in Ireland, and Mr. E. H. **Wyand**, L.D.S.Eng., to the troops at Aldershot.

Vital Statistics.

In seventy-six of the largest English towns, including London, 8,933 births and 5,150 deaths were registered during the week ending Saturday last, March 31st. The annual rate of mortality in these towns, which had been 16.7, 16.2, and 15.8 per 1,000 in the three preceding weeks, rose again last week to 17.0 per 1,000. The rates in the several towns ranged from 8.3 in Grimsby, 9.0 in Hornsey, 9.4 in Willesden, 9.7 in Leyton, 10.1 in King's Norton, 10.6 in Handsworth (Staffs.), and 10.9 in Stockton-on-Tees, to 21.3 in Birmingham, in Bootle, and in Bury, 21.4 in Huddersfield, 22.1 in Liverpool, 22.2 in Blackburn, 22.8 in Hanley, 23.3 in Warrington, and 24.5 in Middlesbrough. In London the rate of mortality was 18.5 per 1,000, while it averaged 16.4 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.6 per 1,000 in the seventy-six towns; in London this death-rate was 1.8 per 1,000, while among the seventy-five large provincial towns the rates ranged upwards to 3.1 in Liverpool and in Preston, 3.3 in Handsworth (Staffs.), 3.6 in Wolverhampton, 3.9 in Blackburn, 4.0 in Smethwick, and 4.4 in Bury. Measles caused a death-rate of 1.4 in Manchester and in Halifax, 1.6 in Liverpool, 1.7 in Bristol and in Newcastle-on-Tyne, 2.0 in Great Yarmouth, 2.2 in Tottenham, 2.7 in Blackburn and in Preston, and 3.6 in Bury; diphtheria of 1.1 in St. Helen's; whooping-cough of 1.5 in Oldham, 1.6 in Wolverhampton, 1.8 in Southampton, 2.3 in Warrington, 2.5 in Aston Manor, 3.0 in West Bromwich, 3.3 in Handsworth (Staffs.), and 4.0 in Smethwick; and diarrhoea of 1.1 in Oldham. The mortality from scarlet fever and from enteric fever showed no marked excess in any of the large towns. No fatal case of small-pox was registered last week in any of the seventy-six towns. The number of small-pox cases under treatment in the Metropolitan Asylums Hospitals, which had been 6, 7, and 10 at the end of the three preceding weeks, had declined again to 8 at the end of last week; no new case was admitted during the week, the numbers having been 1, 1, and 5 in the three preceding weeks. The number of scarlet-fever patients in these hospitals and in the London Fever Hospital at the end of the week was 2,386, against 2,545, 2,485, and 2,434 at the end of the three preceding weeks; 223 new cases were admitted during the week, against 268, 252, and 234 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, March 31st, 974 births and 647 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 18.2, 19.3, and 18.0 per 1,000 in the three preceding weeks, rose again to 18.9 per 1,000 last week, and was 1.9 per 1,000 in excess of the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 15.8 in Leith and 16.5 in Edinburgh to 21.8 in Dundee and 25.7 in Paisley. The death-rate from the principal infectious diseases averaged 1.8 per 1,000 in these towns, the highest rates being recorded in Dundee and Greenock. The 306 deaths registered in Glasgow included 14 which were referred to measles, 2 to scarlet fever, 3 to diphtheria, 7 to whooping-cough, and 5 to diarrhoea. Seven fatal cases of measles, 2 of scarlet fever and 2 of diarrhoea were recorded in Edinburgh. Two deaths from measles, 2 from whooping-cough, 2 from diarrhoea, and 1 from typhus fever occurred in Dundee; 2 from measles in Paisley; and 2 from diarrhoea in Greenock.

HEALTH OF IRISH TOWNS.

During the week ending Saturday March 31st, 650 births and 482 deaths were registered in six of the principal Irish towns as against 536 births and 420 deaths in the preceding period. The annual death-rate in these towns, which had been 22.2, 19.4, and 23.6 per 1,000 in the three preceding weeks, rose to 26.6 per 1,000 in the week under notice, this figure being 9.6 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 23.4 in Waterford and 24.0 in Cork to 29.2 in Belfast and 31.4 in Limerick. The zymotic death-rate in the same six Irish towns averaged 1.7 per 1,000, or 1.0 per 1,000 higher than during the preceding period, the highest figure—3.9—being recorded in Belfast, while no deaths under this heading were recorded in Waterford. The Belfast deaths included 21 from whooping-cough.

Vacancies and Appointments.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenance of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journal is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medical Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a member of the Association by the Branch Council at any meeting thereof held not less than seven days (or such longer period as the Branch may by its Rules prescribe) after the date of the said Notice. A Branch may by special Resolution require that each candidate for election to the Association shall furnish a certificate from two Members of the Association to whom he is personally known. Officers of the Navy, Army, and Indian Medical Services on the Active List are eligible for election through the Council or a Branch without approving signatures as laid down in By-law 3.

By-law 3.—Every candidate whose place of residence is not included in the area of any Branch shall forward his Application to the General Secretary of the Association, together with a statement signed by three members of the Association, that from personal knowledge they consider him a suitable person for election. Notice of the proposed election shall be sent by the General Secretary to every Member of the Council, and the candidate, if not disqualified by any Regulation of the Association, may be elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of the said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingdom and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

CAPE OF GOOD HOPE (EASTERN PROVINCE) BRANCH:

GRAHAMSTOWN DIVISION.

AN ordinary meeting of this Division was held on Friday, March 16th, in the Committee Room of the Albany General Hospital, at 8 p.m., Dr. J. BRUCE-BAYS in the chair. The meeting had been postponed from March 9th owing to the visit of H.E. the Governor to Grahamstown on that date. A letter from Dr. C. E. Jones-Phillipson was read, apologizing for his absence and for his inability to send cases as he had hoped.

Specimens.—The following specimens were then shown:—Dr. DRURY: Local melanosis in the lower eyelid—section. Kindly lent by C. B. LOCKWOOD, F.R.C.S.: Microphotograph showing bilharzia ova in the vermiform appendix. Shown for Dr. C. S. HAWES, now at Davos Platz: Blood film to demonstrate the estimation of the "opsonic index"; *Microsporon audouini* stained by Gram's method; pedunculated soft fibroma removed after twenty-five years' duration, on account of severe haemorrhage. Dr. DRURY: Pus from knee-joint, with diplococci. Dr. GREATHEAD: Specimen of fatal strangulation of ascending colon by an attenuated strand of omentum; small daughter-cysts from a case of hydatid disease infiltrating the os innominatum and destroying the sacro-iliac synchondrosis. Dr. PURVIS exhibited a microscopical section of the above case of Dr. Greathead's, showing the cysts lying in lacunae of bone. Dr. PURVIS also showed a section of scirrhus of an axillary gland. Dr. WROUGHTON: Horseshoe-shaped kidney with trifurcated ureter. Dr. MULLINS: Tuberculous ulceration of the bladder, etc.

Paper.—Dr. BRUCE-BAYS described an attempt to treat a granulating bedsore by application of a glass plate, which failed.

Letters, etc.—Letters were read from Dr. Grant, of Fort Beaufort, Mr. Smith Whitaker, and a wire from Dr. Jones-Phillipson.

Vote of Thanks.—A vote of thanks to the chairman of the hospital for the use of the committee-room closed the proceedings.

HALIFAX AND NOVA SCOTIA BRANCH.

The regular fortnightly meeting was held on February 28th.

Motion re Election of Representative.—Dr. C. D. MURRAY, seconded by Dr. T. J. F. MURPHY, moved a resolution deprecating the proposed grouping of this Branch with others for the election of one Representative on the Council. This was carried.

Model Tenements.—The Rev. Dr. ARMITAGE addressed the Branch, setting forth a proposition for the building of a block of model tenements in Halifax, and asking the interest of the Branch.

Communications.—Dr. C. DICKIE MURRAY, United States Immigration Inspector at Halifax, read a paper entitled The Medical Examination of Immigrants.—Dr. A. C. HAWKINS, Canadian Immigration Inspector at Halifax, followed with a paper on The Diseases of Immigrants.—These papers were discussed together.

The regular fortnightly meeting was held on March 14th.

Compulsory Registration of Births.—A motion was passed favouring the compulsory registration of births in Halifax, and a Committee was appointed to lay the matter before the City Council.

Patent Medicines.—On motion, a Committee was appointed to deal with the patent medicine question with a view to securing any necessary legislation.

Paper and Demonstration.—Dr. G. L. SINCLAIR read a paper on the medical aspects of hypnotism, supplementing it in a most interesting manner by hypnotizing several of the gentlemen present.

A meeting of the Branch Council was held after adjournment.

SOUTH-EASTERN BRANCH:

ISLE OF THANET DIVISION.

THE sixteenth meeting of this Division was held at St. Mildred's Hotel, Westgate, on March 30th, Dr. C. HEATON in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read, confirmed, and signed.

The Division and Parliamentary Candidates.—The

Honorary Secretary reported that the candidates at the last general parliamentary election had been each personally interviewed by members of the Executive Committee of the Division, and had given answers in writing to the various medico-political questions brought forward by the Association, and that the answers were favourable to practically every question.

Medical Practitioners and Midwives.—A letter was read from Dr. Watts giving information that the guardians were prepared to pay fees on the Poor-law scale to private practitioners called in to assist midwives provided the practitioners informed the relieving officer forthwith, and provided the Board at the next meeting considered the cases to be those of destitution.

Registration of Nurses.—It was resolved that the discussion on the registration of nurses be adjourned.

Hospital Administration.—A discussion then took place on the report of the Hospital Committee on Hospital Administration. Dr. Thornton proposed, and Dr. Street seconded, a resolution that the report be not approved; this was rejected by a large majority. Dr. Watts proposed, and Dr. Raven seconded, a resolution that the report be approved, including the four recommendations and the special question at the end. This was carried.

Paper and Demonstration.—Mr. W. H. Clayton Greene, F.R.C.S., M.B., B.S., of St. Mary's and the French Hospitals, read a paper entitled Anuria. The paper was discussed, and Mr. Greene replied. Dr. Street showed and demonstrated an electric signalling apparatus for the use of invalids.

Annual Meeting of Division.—It was decided that the annual meeting should be held in Ramsgate in June.

Dinner.—A dinner was held after the meeting, at which eight members were present.

Reigate Division.

A meeting was held at the Cottage Hospital, Redhill, on April 5th, Dr. John Walter, J.P., in the chair.

Draft Charter.—The draft Charter of the Association was considered. It was proposed by the Chairman, and seconded by Dr. E. Bromet, M.A., etc., that the draft Charter be approved by this Division. This was carried unanimously.

SOUTH-WESTERN BRANCH:

Barnstaple Division.

A special meeting was held at the North Devon Infirmary, Barnstaple, on Wednesday, March 28th, at 3.30 p.m., Dr. Toye, Chairman, presiding.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Correspondence.—Letters of regret for non-attendance were read from Drs. Atkinson, Ware, and Chapman.—A communication received from the Medical Secretary *re* representation of the Division was placed before the meeting.

Paper.—Dr. Jonas read notes of a case of (toxic) fatty degeneration of liver.

Case.—Dr. Morris showed a case of cretinism improving under thyroid extract.

Microscopic Specimens.—Dr. Jonas showed microscopic specimens of: (1) Carcinoma of prostate; (2) fatty liver.

Contract Practice.—The resolutions respecting contract practice passed at the Annual Representative Meeting of the Association were discussed, with a view of discovering some means for carrying them into effect. It was resolved that for convenience of organization the Division should be split up into five subdivisions as under: (1) Lynton, Coombe Martin, Ilfracombe, and adjoining minor parishes; (2) Barnstaple, Ashford, Braunton, Pilton, Newport, and adjoining minor parishes; (3) Bideford, Westward Ho, Northam, Appledone, Torrington, Clovelly, Hartland, and adjoining minor parishes; (4) Bradworthy, Winkleigh, Dolton, High Bickington, Chumleigh, Marchard Witheridge, and adjoining minor parishes; (5) South Molton and North Molton. It was resolved that each subdivision be under the charge of a member of the Executive Committee, whose duties should be to convene a meeting of all the medical practitioners in each area at an early date, at which the suggestions of the Medico-Political Committee should be considered. It was resolved that all agreements so arrived at should be approved by the Executive Committee as a whole and finally ratified by a general meeting of the Division. Whether it would be possible to make such decisions binding under Rule G of the Ethical Committee was considered to be highly improbable, it being pointed out that if a member chose to put himself in opposition to his professional brethren he could still do so with comparative immunity by severing his connexion with the Association. On the proposition that contract practice should be thrown open and that private clubs should be abolished, Dr. Smyth moved as an amendment:

> That this Division expresses its approval of the resolution, but considers that it is not expedient to attempt to carry it into effect in this district at the present time.

This was seconded by Dr. Jonas. On the amendment being put to the meeting, it was carried by a majority of 2. It was agreed that steps be taken to obtain direct medical representation on the Managing Committees of all local organizations connected with contract practice.

Draft Charter.—It was resolved not to suggest any amendments to the draft of the proposed Royal charter.

Annual Meeting of Division.—It was decided to hold the forthcoming annual meeting at Ilfracombe on Wednesday, April 18th.

GRANTS FOR SCIENTIFIC RESEARCH.

The Council of the British Medical Association desires to remind members of the profession engaged in researches for the advancement of medicine and the allied sciences that it is prepared to receive applications for grants in aid of such research. Applications for sums to be granted, which must reach this office not later than May 31st, must include details of the precise character and objects of the research which is proposed, and must be made on forms to be had of the General Secretary, at the office of the Association, 429, Strand, London.

Every recipient is required to furnish to the Science Committee, on or before May 31st following upon the allotment of the grant, a report (or, if the object of the grant be not then attained, an interim report to be renewed at the same date in each subsequent year until a final report can be furnished) containing: (*a*) A brief statement for the Report of the Science Committee, showing the results arrived at, or the stage which the inquiry has reached; (*b*) a general statement of the expenditure incurred, accompanied, so far as is possible, with vouchers; (*c*) and references to any Transactions, Journals, or other publications in which the results of the research have been printed.

The work of the Grantees shall be subject to inspection.

Research Scholarships.

The Council of the British Medical Association is prepared to receive applications for three Research Scholarships, each of the value of £150 per annum, tenable for one year, and subject to renewal by the Council, provided the whole term of office has not exceeded three years.

The scholarships exist for the encouragement of research in Anatomy, Physiology, Pathology, Bacteriology, State Medicine, Clinical Medicine, and Clinical Surgery.

The Scholars' work shall be subject to inspection.

Applications for Scholarships must be made on forms to be had of the General Secretary, and returned on or before May 31st.

Ernest Hart Research Scholarship.

The Council of the British Medical Association is also prepared to receive applications for the Ernest Hart Memorial Scholarship of the value of £200 per annum, tenable for one year, but subject to renewal by the Council for another year. The Scholarship is for the study of some subject in the department of State Medicine.

N.B.—Applications for Scholarships and Grants should, as a rule, be accompanied by a recommendation from the head of the laboratory in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work, and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

Guy Elliston, *General Secretary.*

429, Strand,
April, 1906.

GENERAL MEDICAL COUNCIL.

ELECTION OF DIRECT REPRESENTATIVES FOR ENGLAND AND WALES, NOVEMBER, 1906.

Candidates Nominated by Divisions for Selection by the Representative Meeting on behalf of the Association.

THE following members of the Association have been nominated by the Divisions named to be candidates for election, and have accepted nomination in accordance with the terms of the scheme published in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL for October 7th, 1905. The list of Nominations by Divisions was closed on March 31st, as provided in the Scheme, and will not be republished except in the Agenda of the Representative Meeting.

Association Notices.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

Notice is given that the Library will be closed from Thursday next, April 12th, to Tuesday, April 17th.

April 5th. Guy Elliston, *General Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

Birmingham Branch.—The annual meeting of the Birmingham Branch will be held at the Medical Institute on Thursday, June 14th, at 3.30 p.m., and nominations for offices should reach the Honorary Secretary not later than May 23rd.—T. Sydney Short, Honorary Secretary, 85, Edmund Street, Birmingham.

Border Counties Branch.—The next meeting of this Branch will be held in Keswick on Friday, May 4th. Any member who desires to make a communication to the meeting is requested to inform the Secretary at his earliest convenience. Fuller details of arrangements will be published later. —Francis R. Hill, Carlisle, Honorary Secretary.

Border Counties Branch: Scottish Division.—A meeting of this Division will be held in Dumfries about the middle or end of April. Members who have business or communications to bring before the meeting are requested to give notice to the Secretary.—George R. Livingston, Honorary Secretary, Dumfries.

Lancashire and Cheshire Branch.—In accordance with By-law 24, notice is hereby given that nominations of Representatives of this Branch in the Council of the Association must be received by me, duly signed and in writing, on or before May 1st, 1906.—T. Arthur Helme, M.D., Honorary Secretary, 3, St. Peter's Square, Manchester.

Lancashire and Cheshire Branch: Altrincham Division.—A special meeting of this Division will be held on Thursday, April 19th, at Altrincham, at 6 p.m. (Committee at 5 p.m.).—T. W. H. Garstang, Edge Mount, Altrincham, Honorary Secretary.

Lancashire and Cheshire Branch: Leigh Division.—The monthly meeting of the Division will be held at 8.30 p.m. on Thursday, April 19th, at the Co-operative Rooms, Ellesmere Street. Agenda: (1) Minutes; (2) correspondence; (3) notices of motion for Representative Meeting; (4) suggestion for collective investigation by the members of the Division; (5) formation of library; (6) anyother business.—M. J. Halton, Honorary Secretary.

Metropolitan Counties Branch: St. Pancras and Islington Division.—The next meeting will be held on Friday, April 27th, at the St. Pancras Infirmary, in Pancras Road, London, N.W., at 4 p.m. Agenda: (1) To consider the clauses of the Draft Charter, which will be explained by Mr. J. Smith Whitaker. (2) Hospital out-patient reform. (3) The registration of nurses.—Wm. Wynn Westcott, Secretary.

Metropolitan Counties Branch: Tottenham and City Divisions.—A conjoint meeting will be held on Thursday, April 19th, at 8.30 p.m., at Brooke House, Upper Clapton (by the kind invitation of Dr. J. O. Adams). Dr. J. H. Sequeira will read a paper on the Various Forms of Ringworm and their Treatment. The paper will be illustrated by lantern slides. Members are invited to bring their professional friends.—Fred. Tresilian, Honorary Secretary, Tottenham Division; E. W. Goodall, Honorary Secretary, City Division.

Metropolitan Counties and South-Eastern Branches.—A conjoint meeting of the Chelsea, Westminster, Lambeth, Norwood, Croydon, Richmond, and Wandsworth Divisions will be held at the Battersea Town Hall, Clapham Junction, at 3.45 p.m. on Thursday, April 19th, to discuss the proposed Royal Charter. Dr. T. Jenner Verrall, Chairman Organization Committee, will address the meeting, followed by the Medical Secretary. The Presidents of the two Branches, as well as others, will be attending. All members of the Association who care to attend will be welcomed.—E. R. Fothergill, J. R. Johnson, P. H. Parsons, H. J. Prangley, W. K. Sibley, W. H. B. Stoddart, and E. H. Willock, Honorary Secretaries.

North of England Branch.—A meeting of the North of England Branch will be held on Wednesday, April 25th, at Stockton-on-Tees. Members wishing to read papers or show cases are requested to inform Dr. Cox as soon as possible.—Alfred Cox, J. H. Hunter, Honorary Secretaries.

North Wales Branch.—A meeting of this Branch will be held at Rhyl on Tuesday, April 24th, at 2 p.m. Members having papers to read, cases to communicate, or specimens are requested to send notice before the 14th April to the Honorary Secretary, H. Jones Roberts, Penygroes.

South-Eastern of Ireland Branch.—The annual meeting of this Branch will be held at the Victoria Hotel, Kilkenny, on May 2nd, at 12 noon. Agenda: (1) To receive annual report of Branch; (2) to elect officers; (3) motion by Honorary Secretary to have a code of ethical rules adopted by Branch; (4) any other business. Members are requested to notify their intention of reading papers.—J. Quirke, M.D., Piltown, Honorary Secretary.

South Midland Branch.—In accordance with the by-laws, nominations of a member of Central Council to represent this Branch must reach me on or before 12th May, 1906.—E. Harries Jones, Honorary Secretary, 45, Sheep Street, Northampton.

South Wales and Monmouthshire Branch: Cardiff Division.—An ordinary general meeting of this Division will be held at the Cardiff Infirmary on Thursday, April 26th, at 3.15 p.m. Agenda: (1) Minutes of last meeting. (2) Dr. T. Garrett Horder will move, "That in the opinion of this Division it is not desirable that any member should hold two official positions at the same time, either in a Branch or a Division, and that the Central Council be requested to draw up a regulation to that effect." (3) To consider the proposed Royal Charter of incorporation to the British Medical Association. (4) To consider the report of the Medico-Political Committee on the proposed registration of nurses. (5) Mr. F. P. S. Cresswell will show a patient who has marked ptosis, associated with a tumour in the malar region of a doubtful nature.—Ewen J. Maclean, R. Russell Thomas, Honorary Secretaries.

South-Western Branch: Barnstaple Division.—The annual meeting will be held at the Queen's Hotel, High Street, Ilfracombe, on Wednesday, April 18th, at 2.30 p.m. Papers.—Dr. Toye: (1) Haemorrhage from the Ear; (2) Should Fishing be permitted in the Public Reservoirs? Mr. W. F. Kendle: Notes on a Case of Pancreatic Abscess. Business: To read and confirm minutes; to consider the special report on public Medical Services, the adoption of which will be formally moved by the Honorary Secretary (N.B.—It will facilitate business if members will hand the Honorary Secretary copies of proposed amendments before the commencement of the meeting); to receive annual report; to elect Chairman for the ensuing year; to elect Vice-Chairman; to elect Executive Committee; to elect Honorary Secretary and Treasurer; to elect Representative for Representative Meeting; to elect Representative on Branch Council. Clinical: Dr. Toller will exhibit the electrical installation at the Hydro at the conclusion of the meeting. Gentlemen who wish to lunch at the Queen's Hotel before the meeting are requested to communicate direct with Dr. Kettlewell, Capstone Lodge, Ilfracombe, on or before Saturday, April 14th.—F. W. Kendle, Honorary Secretary.

Vital Statistics.

VITAL STATISTICS OF LONDON DURING THE FIRST QUARTER OF 1906.

[Specially Reported for the British Medical Journal.]

In the accompanying table will be found summarized the vital statistics of the metropolitan boroughs and of the City of London, based upon the Registrar-General's returns for the first, or winter, quarter of the year. The mortality figures in the table relate to the deaths of persons actually belonging to the various boroughs, and are the result of a complete system of distribution of the deaths in public institutions among the several boroughs in which the deceased persons had previously resided.

The 32,670 births registered in London during the three months under notice were equal to an annual rate of 27.8 per 1,000 of the population, estimated at 4,721,217 persons in the middle of the year; in the corresponding quarters of the three preceding years the rates had been 29.1, 28.7, and 28.5 per 1,000 respectively, the average rate for the first quarters of the ten years 1896-1905 being 30.2 per 1,000. The birth-rates last quarter ranged from 14.9 in Hampstead, 16.5 in the City of Westminster, 18.0 in the City of London, 19.0 in Stoke Newington, 19.6 in Kensington and 21.8 in Chelsea to 32.5 in St. Marylebone, 33.9 in Shoreditch, 34.0 in Poplar, 35.3 in Bethnal Green, 36.8 in Finsbury, and 37.4 in Stepney.

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Deaths occurring in Public Institutions during the First Quarter of 1906.

The 18,834 deaths of persons belonging to London registered during last quarter were equal to an annual rate of 16.0 per 1,000, against 16.8, 17.8, and 16.2 per 1,000 in the first quarters of the three preceding years; in the corresponding quarters of the ten preceding years the mean rate was 19.3 per 1,000. The death-rates last quarter in the various boroughs ranged from 11.0 in Hampstead, 12.7 in Paddington and in Stoke Newington, 13.0 in Wandsworth, 13.3 in Lewisham, and 13.5 in Fulham and in Kensington to 19.0 in Deptford, 19.1 in Southwark, 19.4 in Bermondsey, 20.1 in Bethnal Green, 20.2 in Finsbury, and 21.4 in Shoreditch.

During last quarter 1,671 deaths were referred to the principal infectious diseases; of these 680 resulted from measles, 129 from scarlet fever, 193 from diphtheria, 456 from whooping-cough, 44 from enteric fever, and 169 from diarrhoea, but not any from small-pox, from typhus, or from ill-defined pyrexia. These 1,671 deaths were equal to an annual rate of 1.42 per 1,000 against an average rate of 1.98 per 1,000 in the first quarter of the ten preceding years. The lowest death-rates last quarter from these infectious diseases were 0.12 in Hampstead, 0.49 in the City of Westminster, 0.56 in Hackney, 0.65 in Paddington and in Holborn, and 0.71 in Woolwich; the highest rates were 1.89 in Hammersmith, 1.95 in Greenwich, 2.03 in Camberwell, 2.12 in Stepney, 2.14 in Shoreditch, 2.29 in Finsbury, and 3.43 in Deptford. Measles showed the greatest proportional mortality in Hammersmith, Islington, Finsbury, Southwark, Camberwell, and Deptford; scarlet fever in St. Pancras, the City of London, Bethnal Green, Poplar, Southwark, and Deptford; diphtheria in Hammersmith, Chelsea, Finsbury, Stepney, Bermondsey, and Greenwich; whooping-cough in Shoreditch, Bethnal Green, Stepney, Poplar, Deptford, and Greenwich; "fever" in Paddington, Fulham, Finsbury, Stepney, Poplar, Deptford and Woolwich; and diarrhoea in Hammersmith, Chelsea, Shoreditch, Stepney, Poplar, Bermondsey, and Battersea.

During the three months under notice 1,783 deaths from phthisis were registered, equal to an annual rate of 1.52 per 1,000, the rates in the corresponding quarter of the three preceding years having been 1.66, 1.77, and 1.55 per 1,000 respectively. Among the various boroughs the lowest death-rates from phthisis were recorded last quarter in Kensington, Fulham, Hampstead, Wandsworth, Camberwell, and Lewisham; and the highest rates in Chelsea, Holborn, Finsbury, Shoreditch, Bethnal Green, and Southwark.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 115 per 1,000 last quarter, against 127, 133, and 114 per 1,000 in the corresponding quarters of the three preceding years; the mean rate in the first quarters of the ten years 1896-1905 was 131 per 1,000. The lowest rates of infant mortality last quarter were recorded in Paddington, St. Marylebone, Stoke Newington, Holborn, and Finsbury; and the highest rates in Hammersmith, St. Pancras, Shoreditch, Bethnal Green, Bermondsey, and Deptford.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,943 births and 5,157 deaths were registered during the week ending Saturday last, April 7th. The annual rate of mortality in these towns, which had been 16.2, 15.8, and 17.0 per 1,000 in the three preceding weeks, was again 17.0 per 1,000 last week. The rates in the several towns ranged from 8.4 in Willesden, 8.9 in Aston Manor, 9.3 in Leyton and in King's Norton, 9.6 in East Ham, and 9.9 in Burton-on-Trent, to 22.0 in Sunderland, 22.5 in Plymouth, 22.7 in Liverpool, 23.8 in Reading, 25.4 in Burnley, 27.1 in Warrington, and 28.1 in Middlesbrough. In London the death-rate was 16.8 per 1,000, while it averaged 17.1 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases in these towns averaged 1.5 per 1,000; in London this death-rate was equal to 1.6 per 1,000, while among the seventy-five other large towns the rates ranged upwards to 2.6 in Bristol and in Leyton, 3.0 in Walthamstow, in Burton-on-Trent, and in Liverpool, 3.2 in Smethwick, and 4.5 in Warrington. Measles caused a death-rate of 1.1 in Leeds, 1.3 in Bradford, 1.4 in Croydon, 1.6 in Liverpool and Blackburn, 1.7 in Newcastle-on-Tyne, 2.1 in Walthamstow, and 2.4 in Hornsey; diphtheria of 1.1 in Walsall; whooping-cough of 1.1 in Bristol, 1.5 in West Bromwich, 1.6 in Handsworth (Staffs.) and in Smethwick; 2.2 in Plymouth, and 2.3 in Warrington; and diarrhoea of 1.2 in Rochdale, and 1.6 in Smethwick. The mortality from scarlet fever and from enteric fever showed no marked excess in any of the large towns. No fatal case of small-pox was registered last week in any of the seventy-six towns. The number of small-pox patients under treatment in the Metropolitan Asylums Hospitals, which had been 7, 10, and 8 at the end of the three preceding weeks, was again 8 at the end of last week; no new cases were admitted during the week, against 1.5 and none in the three preceding weeks. The number of scarlet fever patients in these hospitals and in the London Fever Hospital at the end of the week was 2,322, against 2,485, 2,434, and 2,386 at the end of the three preceding weeks; 292 new cases were admitted during the week, against 252, 234, and 223 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, April 7th, 1,033 births and 665 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 19.3, 18.0, and 18.9 per 1,000 in the three preceding weeks, rose again to 19.4 per 1,000 last week, and was 2.4 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the rates ranged from 17.9 in Glasgow and 18.0 in Aberdeen to 22.2 in Paisley and 2.34 in Dundee. The death-rate from the principal infectious diseases in these towns averaged 1.5 per 1,000, the highest rates being recorded in Paisley and Perth. The 287 deaths registered in Glasgow included 8 which were referred to measles, 8 to whooping-cough, and 5 to diarrhoea. Four fatal cases of measles and 2 of diarrhoea were recorded in Edinburgh. Three deaths from measles and 2 from diarrhoea occurred in Dundee; 5 from measles and 2 from diarrhoea in Paisley; and 2 from diarrhoea in Perth.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, April 7th, 534 births and 389 deaths were registered in six of the principal Irish towns, as against 650 births and 482 deaths in the preceding period. The annual death-rate in these towns, which had been 19.4, 23.6, and 26.6 per 1,000 in the three preceding weeks, fell to 21.2 per 1,000 in the week under notice, this figure being 4.2 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 13.7 in Cork and 17.4 in Londonderry to 24.6 in Belfast and 31.4 in Limerick. The zymotic death-rate in the same six Irish towns averaged 1.0 per 1,000, or 0.7 per 1,000 lower than during the preceding period, the highest—3.2—figure being recorded in Belfast, while no deaths under this heading were recorded in Cork, Limerick, or Waterford.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following appointments have been made at the Admiralty: Herbert H. Gill, M.B., Staff Surgeon, to the *President*, additional, for three months' study at Dreadnought Hospital, Greenwich; John H. Pead, M.B., Staff Surgeon, to the *President*, additional, for three months' study at St. Bartholomew's Hospital, both dated April 9th; Walter H. Sequiera, Staff Surgeon, to *Charybdis*, vice Pead, April 5th; Alan G. Eastment, Surgeon, to the *Thetis*, vice Gill, April 9th, and Maurice T. Male, M.B., Surgeon, to the *Russell*, vice Thomson.

ROYAL ARMY MEDICAL CORPS.

Exchange.

The charge for inserting notices respecting Exchanges in the Army Medical Department is 3s. 6d., which should be forwarded in stamps or post office order with the notice, not later than Wednesday morning, in order to ensure insertion in the current issue.

Officer, R.A.M.C., to go to India early 1907, desires exchange with a Lieutenant-Colonel or a Major due for promotion within the next ten months. Apply: Nodor, c.o. Sir C. McGrigor, 25, Charles Street, S.W.

Major John H. Rivers and Captain Hamilton G. F. Stallard have received authority to accept and wear the decoration of the Imperial Ottoman Order of Osmanieh (Fourth Class) conferred upon them by the Khedive of Egypt, authorized by the Sultan of Turkey, April 3rd. Major Rivers has been employed with the Egyptian army since January 17th, 1899, and Captain Stallard since January 7th, 1899.

Lieutenant-Colonel C. W. S. Magrath, M.D., having written a specially good essay during 1905-6, the fact has been recorded in the confidential report of the Chief of the General Staff.

Lieutenant-Colonel George J. Coates, M.D., from half-pay, is gazetted Lieutenant-Colonel, with precedence next below L. W. Swabey, March 13th.

Captain P. S. O'Reilly has been posted to the Cambridge Hospital at Aldershot, for duty, on completion of a course at the Dépôt.

Lieutenants J. A. Anderson and H. C. Sherren, now at the Queen Alexandra Hospital, Millbank, have been appointed to the Southern Command.

Lieutenant-Colonel W. A. Morris has been appointed to command the Station Hospital, Murree, vice Lieutenant-Colonel C. C. Reilly, vacated.

Quartermaster and Honorary-Lieutenant John Matthews has been granted the honorary rank of Captain, under date March 25th.

INDIAN MEDICAL SERVICE.

The retirement from the service of the undermentioned officers has been notified: Lieutenant-Colonel Frederick W. Wright, D.S.O. (Bengal Establishment). December 7th, 1905; Lieutenant-Colonel Eugene Cretin, M.B. (Bengal Establishment), December 31st, 1905; and Lieutenant-Colonel Gerard M. E. McKee (Madras Establishment), March 14th. Lieutenant-Colonel Wright was appointed Surgeon on April 1st, 1873, and became Surgeon-Lieutenant-Colonel on April 1st, 1893. He took part in the Afghan war of 1878-80, and was present at the actions of Jugdulluk and Charasiah. He was in the march from Kabul to Kandahar and at the battle on September 1st, as well as in the operations against the Maris (medal with clasp and bronze star). Lieutenant-Colonel Wright also saw service in the Burmese Expedition (1886-8), being mentioned in dispatches and receiving the D.S.O. (medal with clasp); in the expedition to China in 1900 (medal) and the North-West Frontier of India (Waziristan) 1901-2 (medal with clasp). Lieutenant-Colonel E. Cretin's commission as Surgeon was dated March 30th, 1878, and that of Surgeon-Lieutenant-Colonel, March 30th, 1898. His war services comprise the Afghan war, 1880, where he took part in the action of Kam Dakka, the Lughman Valley expedition, and the affair of Hissarlik (medal); the Burmese expedition, 1885-7 (medal with clasp); the expedition to Dongola, 1896 (medal); and operations on the North-West Frontier of India, at Tochi, 1897-8 (medal with clasp). Lieutenant-Colonel McKee entered the service as Surgeon on October 2nd, 1880, and became Lieutenant-Colonel on October 2nd, 1900. He took part in the Burmese expedition, 1885-7, receiving the medal with clasp, and in the expedition to China, 1900 medal).

ARMY MEDICAL RESERVE OF OFFICERS.

Surgeon-Lieutenant Francis E. Fremantle, M.B., Herts Imperial Yeomanry, is appointed Surgeon-Captain, to date April 7th.

ROYAL ARMY MEDICAL CORPS (VOLUNTEERS).

Captain J. Macdonald, M.B., is promoted to be Major in the Seaforth and Cameron Bearer Company, March 31st.

Alfred E. Royce is appointed Quartermaster with the honorary rank of Lieutenant in the Manchester Companies of the Northern Command, March 31st.

ROYAL GARRISON ARTILLERY (VOLUNTEERS).

James H. H. Pirie to be Surgeon-Lieutenant of the 1st Edinburgh (City), dated March 31st.

ROYAL ENGINEERS (VOLUNTEERS).

Surgeon-Captain A. H. Croucher, M.D., resigns his commission in the 1st Sussex, March 31st.

VOLUNTEER RIFLES.

Surgeon-Captain J. A. Clark, M.B., Queen's R.V. Brigade Lothian Regiment (Royal Scots) to be Surgeon-Major, March 31st.

Supernumerary Surgeon-Lieutenant F. N. Grinling (commanding Tyne Volunteer Infantry Brigade Bearer Company) to be Surgeon-Captain, 2nd V.B. Northumberland Fusiliers, remaining supernumerary, March 31st.

Surgeon-Captain C. S. de Segundo, M.B., 20th Middlesex (Artists), is granted the honorary rank of Surgeon-Major, March 12th.

Civil Practitioner William Lockwood has been appointed Surgeon and Agent at Worthing and Lancing, vice Parish, to date April 2nd, and Civil Practitioner Walter T. James has been appointed Surgeon and Agent at New Quay, Cardigan, vice Evans, April 5th.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenan of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journ is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medic Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if n disqualified by any Regulation of the Association, may be elect a member of the Association by the Branch Council at any meeti thereof held not less than seven days (or such longer period the Branch may by its Rules prescribe) after the date of the sa Notice. A Branch may by special Resolution require that ea candidate for election to the Association shall furnish a certifica from two Members of the Association to whom he is persona known. Officers of the Navy, Army, and Indian Medical Servi on the Active List are eligible for election through the Coun or a Branch without approving signatures as laid down By-law 3.

By-law 3.—Every candidate whose place of residence is not included the area of any Branch shall forward his Application to General Secretary of the Association, together with a statem signed by three members of the Association, that from perso knowledge they consider him a suitable person for electi Notice of the proposed election shall be sent by the Gene Secretary to every Member of the Council, and the candidate not disqualified by any Regulation of the Association, may elected a Member of the Association by the Council at any meeting thereof held not less than one month after the date of said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingd and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

Every member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he belongs. BY ORDER.

MATTERS REFERRED TO DIVISIONS.

REPRESENTATIVE MEETING AT LONDON.

TUESDAY, JULY 24TH, AND FOLLOWING DAYS.

NOTICES OF MOTION.

HE following notices of motion have been received
r discussion by the Annual Representative Meeting
f the Association to be held at London, July 24th,
906, and following days.

[*Notices previously received were published in the* SUPPLE-
ENT *of February 10th, page 45; February 24th, page 62;
arch 3rd, page 78; and March 31st, page 141.*]

ASSOCIATION REGULATIONS.

PROPOSED NEW BY-LAWS OR AMENDMENT OF BY-LAWS.

y the COUNCIL OF THE ASSOCIATION:

.—By-laws drafted by the Council pursuant to Instructions of the Representative Meeting at Leicester.

1. Representation of the Representative Meeting on the Council.

That the Representative Meeting shall have power to elect annually not more than six members of the Central Council.

2. Supplementary Grants to Divisions and Branches.

That in addition to the grants made in pursuance of By-law 16, the Council, on the application of any Division or Branch, shall have power to make a supplementary grant of such amount as the Council may deem proper. Every application by a Division, not itself a Branch, shall be forwarded through the Branch Council, whose duty it shall be to transmit the same to the Central Council, with such comment, if any, as the Branch Council may deem expedient.

All applications for supplementary grants shall be referred by the Council to the Organization Committee for report thereon, and, in considering the same, the said Committee and Council shall have regard to the evidence of work done by or through the agency of such Division or Branch for the Association or the medical profession, and also to the amount which may have been voluntarily subscribed locally for any purpose for which such a grant may be desired.

B. New By-laws Proposed by the Council.

1. Tenure of Office of Members of Council Elected by the Representative Meeting.

That each member of Council elected by the Representative Meeting shall hold office for one year, and at the end of that time shall be eligible for re-election, unless he has served as a member of Council elected by the Representative Meeting for six years successively, in which case he shall for one year be incapable of being so elected.

2. Standing Committees.

Additional Section of By-law 40.

Science Committee.

That a Science Committee, consisting of fourteen members, shall be appointed by the Council, who shall advise, and where so directed act for, the Council in all matters not specially referred to other Committees which concern the work of the Association for the promotion of the Medical and allied Sciences, including the conditions of award of Scholarships, Grants, or Medals given by the Association, or under trusts undertaken by the Association, the adjustment of the Sections at the Annual Meeting, the arrangement of Committees for special scientific work, and the encouragement and assistance of the scientific work of the Branches and Divisions. The Committee shall have power to co-opt, for the consideration of the award of Scholarships, Grants, and Medals, members, not exceeding four in number, specially qualified to assist in its work.

AMENDMENTS PROPOSED BY DIVISIONS AND BRANCHES.

Amendment of By-law 23.

Representatives on Central Council.

By the Hampstead Division (Metropolitan Counties Branch):

That a Branch have an additional member on the Central Council for each complete 300 members in excess of 400.

Amendment of Articles and By-laws.

Constitution of Central Council of the Association.

By the Hampstead Division (Metropolitan Counties Branch):

That at least one Registered Dental Surgeon should be added to the Central Council of the Association, either by election or by co-option.

Amendment of By-law 40.

Standing Committees.

By the Dundee Branch:

That the By-law be amended in accordance with the following propositions:

A.—STANDING COMMITTEES.

1. That there be a Finance Committee.
2. That there be a Journal Committee.
3. That there be a Hospitals Committee.
4. That there be an Arrangements (Annual Meeting) Committee.
5. That the Premises and Library Committee be removed from the List.

B.—MEMBERSHIP OF COMMITTEES.

6. That the Chairman of Representative Meetings and the Treasurer be *ex officio* members of all Committees.

1. Finance Committee.

7. That the Chairman of the Organization Committee for the time being be *ex officio* a member of the Finance Committee.
8. That the Chairman of the Journal Committee for the time being be *ex officio* a member of the Finance Committee.
9. That the Chairman of the Science Committee for the time being be *ex officio* a member of the Finance Committee.
10. That the Chairman of the Medico-Political Committee for the time being be *ex officio* a member of the Finance Committee.
11. That in addition to the *ex officio* members, the Finance Committee have eight ordinary members appointed by the Council from its own number.

2. Journal Committee.

12. That the Journal Committee have nine ordinary members appointed by the Council, of whom five at least shall be from its own number.

3. Hospitals Committee.

13. That the Hospitals Committee have twelve ordinary members appointed by the Council, of whom six at least shall be from its own number.

4. Arrangements Committee.

14. That the Arrangements Committee have as ordinary members six members appointed by the Council from its own number, and six members appointed by the Local Executive Committee for the annual meeting.

C.—FUNCTIONS OF COMMITTEES.

1. Finance Committee.

15. That it be the duty of the Finance Committee to certify the accounts prior to their presentation to the Council.
16. That it be the duty of the Finance Committee to advise the Council on the administration of any funds held in trust by the Association and of the Superannuation Fund, and, when necessary, the appointment of administrators for any such funds.
17. That it be the duty of the Finance Committee to report to the Council on the financial bearings of any proposals involving special expenditure.
18. That it be the duty of the Finance Committee to supervise and report to the Council on the general working and organization of the central office.
19. That it be the duty of the Finance Committee to consider and report to the Council upon the management of the property of the Association.

2. Journal Committee.

20. That it shall be the duty of the Journal Committee to consider and report to the Council upon any matters connected with the Journal or other publications of the Association.

3. Hospitals Committee.

21. That it shall be the duty of the Hospitals Committee to consider and report to the Council upon all questions concerning hospitals and other medical charities.

4. Arrangements Committee.

22. That it shall be the duty of the Arrangements Committee (*a*) to advise the Council on the arrangements for the Annual Meeting, including the definition of Sections and Subsections; (*b*) to submit to the Council a list of nominations for the officers of Sections and readers of the addresses.

5. Redrafting of By-law 40.

23. That it be an instruction to the Chairman, the Secretaries, and the Solicitor to adjust By-law 40 in accordance with these and any non-conflicting resolutions adopted at the Annual Representative Meeting, and until this be done these resolutions shall take the place of any corresponding parts of the present By-law 40.

Amendment of Article.

Expenses of Representatives.

By the Wandsworth Division (Metropolitan Counties Branch):

(Amendment to motion by the Northampton Division; vide "Supplement," February 24th.)

That the word "all" in the first line and the word "etc." in the third line be omitted, and that at the end the words "to the extent of not more than 15s. a day" be added,

AMENDMENT OF BY-LAWS 16 AND 17.

Capitation Grants.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch).

1. That in view of the greater activity and organization now apparent in various Divisions of the Association, the time has come for reconsideration of By-laws 16 and 17 whereby fixed capitation grants are made to the Branches and through them to the Divisions.
2. That it be an instruction to the Central Council to consider the following among other subjects, and report to the Divisions by March 31st, 1907, what changes in the By-laws they suggest.

(*a*) That it is not desirable that there be gradually accumulating funds lying idle in the hands of various Branches, which, as such (at all events for the present), seem to have no need of them.

(*b*) In view of the expenses of local Scientific Medical Societies it is not unreasonable to suppose that a Division should require grants up to even 7s. 6d. a head per annum, which might be given in instalments in accordance with work done, and made direct from the Central Office.

(*c*) That there should also be made direct to Branches, for Branch expenses, from the Central Office capitation grants up to 2s. 6d. per annum in accordance with work done, which could be increased by grants from Divisions for special purposes made by special Division resolutions.

(*d*) That a basis for the necessary first instalment in each year to a Branch or Division could be arrived at by consideration of the average of expenses incurred during the past three years.

ASSOCIATION ADMINISTRATION.

MEDICAL SECRETARIES.

District Organizing Secretaries.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

That in order to accelerate the consideration of, and dealing with, matters of local interest that do not affect the principles or policy of the Association, and so relieve the routine work of the Central Office, it is desirable that there be gradually introduced the principle of District Organizing Medical Secretaries. That it be an instruction to the Central Council to consider the matter, and to report with a scheme to the Divisions by March 31st, 1907.

Capitation Grant to Divisions and Branches.

Local Control.

By the BOURNEMOUTH DIVISION (Dorset and West Hants Branch):

That the Capitation Grant to Branches should be absolutely at the disposal of the Branches and Divisions, and to be allocated to the Divisions as agreed on.

MEDICO-POLITICAL.

Coroners' Law: Medical Witnesses.

By the HAMPSTEAD DIVISION (Metropolitan Counties Branch):

That the medical witness at a coroner's inquest should be the medical man last in attendance upon the deceased, or the first to see the dead body, as has been the practice until recently pursued.

ayment of Medical Men called in in Complicated Midwives' Cases.

y the HAMPSTEAD DIVISION (Metropolitan Counties ranch):

That the recommendations of the Medico-Political Committee relative to the payment of Medical Men called in to attend the patients of midwives be endorsed, and the Council of the Association urged to take immediate steps to ensure the introduction of clauses dealing with this matter into any suitable Bill at the earliest possible moment.

Vaccination.

Compulsory Revaccination.

By the HAMPSTEAD DIVISION (Metropolitan Counties Branch):

That revaccination prior to the statutory age for leaving elementary schools be made compulsory.

Supply of Government Lymph to all Practitioners.

That Government lymph should be supplied to all practitioners who desire it.

Office of Public Vaccinator.

That the office of Public Vaccinator should either be abolished, or made a whole-time appointment.

Contract Practice: Medical Organization.

By the HAMPSTEAD DIVISION (Metropolitan Counties Branch):

That for the purpose of deciding upon the local conditions under which contract practice should be carried on, an organized body, such as a Division of the British Medical Association, in conjunction with all the local profession, should be formed in each affected district.

Nurses' Registration: Representation of Medical Profession on Central Board.

By the WANDSWORTH DIVISION (Metropolitan Counties Branch):

1. That in the opinion of this Representative Meeting the number of seats allotted to the medical profession on the Council in the Bill for Nurses' Registration now before the House of Commons is inadequate.
2. That it be an instruction to the Central Council to take the necessary steps in order to have the one seat allotted under the auspices of this Association increased to seven.

Relation of the Medical Profession to the State. Income and Property Tax.

By the EXETER DIVISION (South-Western Branch):

That the question of the incidence of the Income Tax upon the medical profession be referred to the Divisions for consideration, together with the Memorandum on the subject submitted by the Exeter Division.

MEMORANDUM BY THE EXETER DIVISION ON REPLACEMENT OF INCOME TAX BY PROPERTY TAX.

Income tax, as now levied, puts a premium on idleness generally, and specially penalizes intellectual work, because it makes no practical distinction between income from earnings and income from property. It especially constitutes a most unfair burden on the professional classes.

Income tax thus forms a standing grievance, and a direct incentive to the introduction of steep graduation as a supposed means of remedying its injustice. But steep graduation will not right what is radically wrong in the tax, whilst it will introduce a very dangerous principle. The income tax is wrong because the theory on which it rests is wrong. The State is theoretically supposed to protect income, and income tax is the charge made for this protection. But does the State protect income? Take two illustrations:

1. A man without property earns £1,000 a year by his profession. He breaks down. (The State makes no attempt to replace his income.)
2. A family lives on an income of £1,000 a year wholly earned by a man who has no surplus to insure his life. He dies. (The State treats his survivors as paupers.)

In each of these cases a heavy payment is made to the State annually for protection of income. Where does the protection come in? It does not come in at all. The State in fact does not protect income.

The State protects two things—person and property. Person repays this protection by work and by indirect taxation; property should repay it by a proportional property tax. But income should not be taxed for protection which it does not get. In other words, income tax should be abolished and property-tax should be put in its place. No other arrangement will be equitable. Such a tax will not press on the artisan and labouring classes, will not constitute an unjust burden on the professional classes, penalizing intellectual work, but will be borne by those on whom it ought to fall—the owners of property over a certain minimum amount. By a reasonable system of exemption and abatements, its incidence can be adjusted so as not to fetter industry or to press unduly on those who may fairly claim abatement or remission. It will no more stop saving than the present income tax stops earning. It will no more drive capital out of the country than the income tax does. It will remove the excuse now existing for such confiscatory taxation as a steeply-graduated income tax.

Now that the principles of taxation are likely to be considered, this change from income tax to property tax ought to be taken into account.

ETHICAL.

Position of Consultants: Proposed Separate Class.

By the HAMPSTEAD DIVISION (Metropolitan Counties Branch):

> That a class to be styled "Consultants" shall be recognized as possessing special knowledge and experience of at least one department of practice and shall undertake not to treat patients, habitually, either at their own consulting rooms or at the houses of patients or elsewhere, except in cooperation throughout the treatment of any case, either personally or by correspondence, with practitioners usually in charge of such patients.
>
> Rider: This does not refer, under present circumstances, to patients seen at the charitable institutions to whose staff consultants are attached.

HOSPITALS.

Constitution and Management of Hospitals.

Representation of Local Profession on Committee.

By the HAMPSTEAD DIVISION (Metropolitan Counties Branch):

> That the constitution and management of hospitals whose staff are general practitioners are specially a matter of concern to the local profession, who should be adequately represented on the Committee of Management.

Hospital Administration.

By the HAMPSTEAD DIVISION (Metropolitan Counties Branch):

> That the following be substituted for the corresponding paragraphs in the propositions already approved by the Representative Meeting as to Hospital Administration. (Published by the Hospitals Committee in the SUPPLEMENT for February 17th, 1906.)
>
> (*a*) For Paragraph 10 substitute the following:
>
> *Limitation of Cases.*
>
> (10) That the number of new cases to be seen professionally on any one day by an honorary medical officer shall be limited to 20 (until the out-patient departments become consultative).
>
> (*b*) For Paragraph 12 substitute the following:
>
> *Retirement of Staff.*
>
> (12) That it is desirable that in all hospitals there shall be an age and service limit for the retirement of the members of the medical and surgical staff.

AMENDMENT OF STANDING ORDERS OF REPRESENTATIVE MEETINGS.

By the DUNDEE BRANCH:

> That there be added:—
>
> (*a*) The Annual Representative Meeting shall at its first meeting appoint a Committee of five members, who shall report upon the financial aspects of any proposal involving special expenditure which has not already been reported on by the Finance Committee.
>
> (*b*) The Meeting shall not consider any proposal involving special expenditure until it has been reported upon by the Finance Committee, or by the Committee appointed as above.

By Direction of the Chairman of Representative Meetings.

J. SMITH WHITAKER, *Medical Secretary.*

April 19th.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

BERMUDA BRANCH.

A MEETING of this Branch was held at the City Hall, Hamilton, on March 22nd, Dr. C. H. BUTTERFIELD, President, in the chair.

Outbreak of Diphtheria.—Dr. HARVEY (M.O.H.) stated some facts and outlined the recent outbreak of diphtheria in the colony. A lengthy discussion ensued on the treatment of diphtheria and the dosage of antitoxin.

Contribution to Cottage Hospital.—On a motion of Dr. TROTT, seconded by Dr. TUCKER, £10 of the amount on hand was put at the disposal of the staff of the cottage hospital to improve the apparatus for administering anaesthetics.

BIRMINGHAM BRANCH:

WEST BROMWICH DIVISION.

A MEETING of this Division was held in the Board Room of the District Hospital on Wednesday, April 11th, at 4 p.m., Dr. W. H. STEPHEN, Chairman, presiding.

Letters of Apology.—Apologies were announced from Mr. S. T. D. Weston, Dr. T. Underhill, and Dr. A. Underhill.

Confirmation of Minutes.—The minutes of the last meeting were read, confirmed, and signed by the Chairman.

Proposed Royal Charter.—The proposed Royal Charter was explained by Dr. H. W. LANGLEY BROWNE and Dr. H. MANLEY, and it was unanimously resolved:

> That the Royal Charter be applied for.

Registration of Nurses.—On the report on the registration of nurses being considered it was resolved:

> 1. That this Division approves in general of the method of registration for nurses proposed by the Select Committee of the House of Commons.
> 2. That this Division does not approve of the separate registration of midwifery nurses.
> 3. That in the constitution of the Central Nursing Board the medical profession should have adequate direct representation.

Hospital Out-patient Departments.—On the report *re* hospital out-patient departments, it was resolved:

> That in the opinion of this Division the question is impracticable.

Direct Representative on General Medical Council.—It was also resolved that this Division nominate Dr. H. W. Langley Browne as one of the Direct Representatives on the General Medical Council.

Proposed Annual Dinner.—It was proposed by Dr. W. H. STEPHEN, seconded by Mr. T. SANSOME, and resolved:

> That the members of this Division should have an annual dinner,

arrangements for the same being left in the hands of Dr. H. Manley, Dr. A. Croll, and Mr. T. Sansome, jun.

DUNDEE BRANCH.

THE Dundee Branch held an ordinary meeting in the Students' Union, Dundee, on Friday, April 13th, J. MACKIE WHYTE, M.D., President, in the chair.

Motions for the Representative Meeting.—Resolutions (reported separately) relating to the Committees of the Association were adopted.

Bradford Rules.—These were discussed, and the Secretaries were instructed to put them on the agenda of the annual meeting.

Hospital Out-patient Departments.—Resolved:

> That locally it would be quite unsuitable to confine the out-patient department to casualties and consultations, and that no universal rule should be laid down.

Registration of Nurses.—Resolved:

> That registration of nurses on the lines of the Select Committee's report is desirable.

Resolved:

> That midwifery nurses should also be registered.

Royal Charter.—Resolved:

> That the application be approved, subject to amendments of by-law by the Representative Meeting.

Representative on Central Council.—The meeting resolved to nominate Dr. R. C. Buist as a candidate for the representation of the conjoint Branches.

EAST ANGLIAN BRANCH.

A MEETING of the Branch was held at the Globe Hotel, King's Lynn, on Thursday, April 5th, President, Dr. **Barton** (Norwich).

Council Meeting.—The Council meeting was held at 12.30.

Representative on Central Council.—A letter was read from Dr. Beverley tendering the resignation of his seat on the Central Council of the Association.

President-elect.—It was unanimously resolved that Dr. Brogden, of Ipswich, be invited to undertake the Presidency of the Branch in 1907. A letter has been received from Dr. Brogden accepting the honour.

The general meeting was held after luncheon.

Vote of Thanks to Dr. Beverley.—The following resolution was proposed by Dr. **Mayo**, seconded by Sir **Alan Reeve Manby**, M.V.O., and carried unanimously:

> That a hearty vote of thanks be accorded to Dr. Beverley for his excellent services as Representative of the East Anglian Branch on the Central Council of the Association. The Branch regrets his resignation, and it is the sincere wish of all the members that Dr. Beverley will show the same interest in the future as he has done in the past in all that concerns the welfare of the Branch.

Communications.—Sir **Alan Reeve Manby** read short otes on some colonial hospitals, 1901. Dr. S. W. **Curl** ead a paper on some cases of Bright's disease in which he actual condition of the kidneys is obscure.

Contract Practice.—Dr. **Gardiner** (King's Lynn), in the bsence of Dr. **Blake** (Great Yarmouth), read a paper by im on contract practice.

Visit to King's Lynn.—Dr. Plowright kindly took the embers for a most interesting walk round King's Lynn.

Tea.—Afternoon tea was kindly provided by the embers of the West Norfolk Division.

Annual Meeting.—The annual meeting will take place at outhend-on-Sea on June 26th.

EDINBURGH BRANCH:

South-Eastern Counties Division.

HE spring meeting was held in the house of Dr. **Cullen** Chairman), on the afternoon of Friday, April 6th, at o'clock.

Confirmation of Minutes.—The minutes of the previous eeting were read, approved, and duly signed by the hairman.

Matters Referred to Divisions.—The medico-political atters referred to the Division were then discussed: (*a*) he decisions in regard to contract practice arrived at on a revious occasion were adhered to; (*b*) the registration of urses was not considered advisable, Dr. **Calvert** issenting; (*c*) in regard to coroners' law, Dr. **Blair** oved:

> That the medical man in attendance ought to give evidence in all cases of sudden or suspicious death.

r. **Cullen** seconded, and the motion was agreed to;) the Charter was considered and approved on the otion of Dr. **Hamilton**, seconded by Dr. **Young**. he accounts for the year 1905 were audited and found orrect.

Midwives Act.—Dr. **Calvert** made a few remarks in dvising the extension of the Midwives Act to Scotland. e dwelt on the intolerable position in which medical ractitioners were placed by the spread of the idea that ll troubles which arose *post partum* were due to mal-raxis on their part. This was largely the result of the aching of Dr. Horrocks and others. In most cases and poorer-class midwifery a certificated nurse could do all at was necessary. The medical man would become a killed official called in when emergencies arose or when terference was necessary to bring about delivery. The members present seemed to agree with the premisses but refused to grant Dr. Calvert's conclusions. It was therefore decided that the extension of the Midwives Act to Scotland was not advisable.

British Medical Benevolent Fund.—The **Secretary** brought the British Medical Benevolent Fund under the notice of members, some of whom subscribed.

Vote of Thanks.—The members united in thanking Dr. Cullen for his kind hospitality which they had much enjoyed.

METROPOLITAN COUNTIES BRANCH:

Hampstead Division.

A MEETING of the Division was held on Friday, April 6th, at 8.30 p.m., at the Hampstead Conservatoire, Swiss Cottage, N.W., Mr. F. R. **Humphreys** in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were taken as read.

Correspondence.—Letters of regret for inability to be present were received from Miss Mary Rocke and Drs. Dick, Turner, Wellington, and C. Wilson.—The **Honorary Secretary** noted with great regret the death of Dr. Lemin, a new member of the Division.

Hampstead Hospital.—A prolonged discussion took place on this subject. The **Chairman** reported that since their last meeting he had written to the medical papers stating that in view of the meeting of the local profession which it was proposed to call in the course of a few weeks, to consider the whole matter of the administration and future of the Hampstead General Hospital, medical practitioners in the neighbourhood were invited to keep an open mind upon the subject. He had also written to the authorities of the King Edward's Hospital Fund, asking if any conditions were attached to their proposed grant of £5,000 to the hospital, and had received a reply in the negative. The Hampstead Division of the British Medical Association objected both to the out-patient department of the hospital and to the restricted nature of its medical staff.

Mr. **Armit** gave a short history of the agitation relative to the hospital in the Division, and the failure of their Committee to obtain a conference with the medical staff of the hospital. Their Committee had fully considered the subject, and had drawn up its report in the form of the following resolutions, which he now moved should be received:

1. That an out-patient department in Hampstead is unnecessary.
2. That the casualty department be kept distinct from any other department, and that casualty patients, if not suitable for admission, be seen once, and thereon be referred to private practitioners, provident dispensaries, or Poor-law authorities.
3. That there be greater facilities for general practitioners of the neighbourhood to attend in-patients.
4. That the more or less permanent appointment of the medical staff of the Hampstead Hospital is undesirable, and that there should be a *service* limit, as well as an age limit, to such appointments.
5. That the outside medical profession should be *adequately* represented on the Board.

The reception of this report was seconded by Mr. **Cunnington**, and passed *nem. con.* On its adoption being moved, Dr. L. G. **Glover** moved as an amendment:

> That the Hampstead Division of the British Medical Association, having heard a description of the means adopted at the Hampstead General Hospital (1) to prevent abuse of the charity by undeserving applicants for relief; (2) to facilitate the use of the institution by outside practitioners, cordially approves of the same, and in commending the institution to the favourable notice of the medical profession, trusts that the Council of the hospital will use every endeavour to prevent the alteration of the present constitution with regard to the status of those appointed on the staff; and it further resolves that the report of the Committee of the Division having been received, no further action be taken thereon.

Dr. Glover complained of the action of the Committee, and said he thought the hospital staff had been badly treated. Dr. Yeld had now explained the omission of his letter to the Hospital Secretary from the published letters, but he thought the explanation should have come earlier. The hospital staff had to reckon with laymen, lawyers, and others, to some of whom it appeared a dreadful thing that their Chairman should have written to the King Edward's Hospital Fund about the proposed grant. He was himself favourable to the adoption of a service limit, and he hoped also to see an almoner appointed to check abuse. The Committee's action had raised difficulties for the medical staff with the hospital authorities, and he thought the best way to bring matters to a successful termination was by the adoption of his amendment.

Mr. KINGSFORD seconded the amendment, with which he agreed much more than with the Committee's report.

Mr. CUNNINGTON said that at a former meeting it had been agreed to postpone the consideration of the subject until they had a conference with the medical staff, which unfortunately came to nothing. He had nothing to say against the management of the hospital, but felt he did not know enough about it to accept Dr. Glover's account. He had only heard one side of the question—the hospital side.

Dr. OPPENHEIMER thought it was undesirable at present to express any opinion on that matter.

Dr. COOKE said they had had similar difficulties at Willesden. He thought it would be quite impossible to be continually changing the hospital staff, and quite impracticable to have all the practitioners in Hampstead on it.

Mr. ARMIT said abuses occurred wherever there was an out-patient department. No hospital worked by general practitioners should have an out-patient department. If he were a general practitioner, which he was glad to say he was not, he would object to have his patients sent in to hospital to be treated by another general practitioner.

Dr. PEAKE thought there should be a consulting staff, and that the out-patient department would be excellent if used as a consultative department.

The CHAIRMAN thought the action of the hospital authorities in circulating at the present time a number of questions to local practitioners an exceedingly improper one. At the present moment there was a large amount of abuse of the Hampstead Hospital. He had been assured of this by several medical men. A great part of the out-patients came from a distance, and did not belong to Hampstead at all. It was for the hospital authorities to show that there was no abuse. The Hospital Sunday and Saturday Funds gave grants in proportion to the relief given, and the hospital authorities should show that such grants were properly applied. Patients at the provident dispensary who got behind in their payments went to the hospital and were treated gratuitously. Apart from the question of abuse, was there any need in Hampstead for an out-patient department at all? Why should they provide one for the benefit of Kentish Town? He asked if the practitioners present were satisfied with the arrangements as to the hospital staff.

Dr. MACFADDEN regretted that the Chairman had not mentioned more definitely the cases of abuse. As one of the hospital staff he had on several occasions referred cases both to private practitioners and to provident dispensaries, but he found that it sometimes happened that those sent to the dispensaries only paid one month's subscriptions, and then dropped off.

Dr. PIDCOCK thought it showed the demoralization produced by the out-patient department, that when patients got the opportunity of contributing to a provident dispensary they did not continue to do so. He mentioned several cases of abuse in detail. It seemed impossible to prevent abuse unless the patients were followed to their own homes. People put on their shabbiest clothes, and made a regular practice of going to the London hospitals.

Dr. TAYLOR asked if it would not be well to have the question deferred until all the profession in Hampstead had had an opportunity of expressing their opinion in public meeting?

Dr. MACNAUGHTON-JONES thought there was much in both the resolution and the amendment with which they could agree. It seemed to him that the hospital staff had been hardly dealt with. Dr. Glover's suggestion of having an almoner appointed was an excellent one, and should be accepted.

Mr. JESSOP said the amendment required great consideration. He asked if the Hampstead Hospital was benefiting the greatest possible number of medical men. He thought not. It was only giving four men the benefit of the practice there. At all hospitals having out-patient departments there was great abuse, and it would be well if those departments could all be done away with.

Mr. STOCKER thought that to ask members to vote *en bloc* for an amendment containing so many points was rather a large order. He agreed with Dr. Glover that a regular hospital staff was necessary, but he differed from him about the out-patient department not being abused. It was abused everywhere, and the abuse could only be stopped by getting the relieving officer to visit applicants at their own homes.

The CHAIRMAN then put the amendment to the meeting and declared it lost, 15 voting for and 27 against it.

It was agreed that the Committee's report should be voted on clause by clause.

Clause 1 was carried by 31 to 7.

Clause 2 was carried by 32 to 2.

Clause 3 was carried by 23 to 12.

On Clause 4, Dr. GLOVER moved the omission of all the words from "that" to "and," leaving it to read: "That there should be a service limit as well as an age limit to appointments to the medical staff."

This was carried with 1 dissentient.

Clause 5 was carried by 24 to 7.

Dr. OPPENHEIMER moved and Mr. ARMIT seconded:

> That the Committee of the Division be empowered to invite the local medical profession to a conference on the Hampstead Hospital question.

This was carried by 10 to 5. It was also agreed that the Committee should be empowered, in conjunction with any other medical bodies desiring it, to place before public bodies interested the views of the Division on the management of the Hampstead Hospital.

Resolutions for the Representative Meeting.—It was agreed that the resolutions which had been printed and circulated among members, and further revised by the Committee, should be submitted, as printed and revised, to the Medical Secretary as the resolutions of the Division.

A further resolution by Mr. H. W. ARMIT with reference to the EPITOME of the JOURNAL was suggested and carried, but subsequently withdrawn.

Contract Practice.—Owing to the late hour, the consideration of this subject was postponed.

MARYLEBONE DIVISION.

A GENERAL meeting of this Division was held at 11, Chandos Street, W., on April 3rd, at 5 p.m., Dr. RADCLIFFE CROCKER in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were signed as correct.

Candidates for Central Council.—Dr. F. J. Smith and Dr. Comyns Berkeley were appointed to attend a meeting of representatives of Divisions of the Metropolitan Branch to discuss the choice of candidates for the Council of the Association.

Ethical Rules.—The draft model rules regulating the procedure of a Division on ethical matters were unanimously adopted as the ethical rules of the Division.

Appointments.—The rules as to appointments, as adopted by the Bradford Division, were also adopted.

Proposed Alteration in Article XXVII.—The alteration in Article XXVII, as recommended by the Wandsworth Division, was rejected.

Proposed Change of Title.—The alteration in the title of the officers of a Division, as recommended by the Wandsworth Division, was rejected.

Fees for Ambulance Work.—It was decided that the minimum fee for lectures on ambulance work should be £1 1s. per lecture and for an examination £2 2s.

Resolutions Referred to Division.—No opinion was expressed on the resolutions referred to the Division by the Representative Meeting, namely, on:

(*a*) The Scientific Work of the Divisions and Branches.
(*b*) Sectional Work at the Annual Meeting.
(*c*) Special Research Library.
(*d*) Relation of the Association to other Scientific Societies.

Draft Charter.—The following resolution was carried:

> Provided that it be understood that it is not thereby giving adherence to any particular undertaking, this Division is in favour of the Draft Charter as printed.

STRATFORD DIVISION.

THE annual dinner of this Division was held in the Great Eastern Hotel, Liverpool Street, E.C., on Thursday

March 29th, Dr. Stocker, Chairman of the Division, presiding. Over 50 members and friends sat down to dinner, and the proceedings were characterized by great good fellowship and enthusiasm. After the loyal toasts had been proposed by the Chairman and duly honoured, Mr. J. Smith Whitaker proposed "The Health of the Stratford Division," which was responded to by the Chairman. Mr. Andrew Clark, Chairman of the Branch, responded to the toast of "The British Medical Association," proposed by Dr. Percy Rose; while Dr. Sanders, in a humorous speech, proposed the health of "The Guests," which was responded to by Dr. F. J. Smith. Dr. Grogono proposed "The Chairman," to which Dr. Stocker replied. A musical party rendered selections during the evening, which was altogether a most happy and successful one. Several applications for membership have resulted.

SOUTH-EASTERN BRANCH:

Brighton Division.

An ordinary meeting of this Division was held at the Dispensary on March 28th, Mr. T. Jenner Verrall in the chair.

Confirmation of Minutes.—The minutes of the previous meetings were read and confirmed.

Annual Meeting of Branch.—Dr. Marsh proposed, and Dr. Curwen seconded, a resolution to the effect that the annual meeting of the Branch next year be held at Brighton, and that Mr. T. Jenner Verrall be the President-elect. This was put to the meeting, and carried unanimously.

SOUTH-EASTERN OF IRELAND BRANCH.

A meeting of this Branch was held at the Adelphi Hotel, Waterford, on April 4th, at 2 p.m. A telegram having been received from Dr. Wynne, President, that, owing to an obstruction on the railway line, he could not arrive before 2.30 p.m., Dr. R. B. Carey was voted to the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Letters.—A letter from Dr. Laffan was read, expressing disappointment at support received in his effort to check hospital abuse in the case of those who are able to pay, he writer having forgot to appear.

Irish Committee.—The Chairman, taking up the first tem on the agenda list, gave a full and lucid exposition of the inception, constitution, and objects of the newly-naugurated Irish Committee. He told how recently, in conjunction with the other several Irish Poor-law Committees and the Irish Medical Association, it assisted in orming what is known as the Conjoint Committee, which s to be divided into four subcommittees—namely, Medical Relief, Health, etc.—for the purpose, each within its own cope, of collecting material for the Medico-Political and Public Health Committees of the British Medical Association, to be submitted by them as evidence before the orthcoming Royal Commission on the Poor Law. In the ourse of his remarks he drew special attention to the ircular recently issued by the Honorary Secretary of the Medical Relief Committee, Dr. Moorhead, to all Poor-law medical officers throughout Ireland, urging on them the ital necessity of keeping a minute account of all particulars in connexion with their work as such in course of he current year, and pending the sitting of the Royal Commission aforesaid.

Draft Charter.—The President (Dr. Wynne) then took he chair, and a discussion followed on the draft of the roposed Royal Charter. In the course of this it was pointed ut by Dr. D. Walshe that one of the chief advantages rising out of the transmutation over that of the Companies Act, under which at present the Association was ncorporated, would be that the Central Council would njoy greater facility in the way of disbursing larger sums f money for scientific research, etc., without direct appeal o special legislation. It was proposed by Dr. Carey and econded by Dr. Mackesy:

> That the Branch approves of the application for the proposed Royal Charter on the lines drafted in the Supplement of the British Medical Journal of March 24th, 1906.

Paper.—A paper by Dr. William Morris next claimed he attention of the meeting. It was on a case of intesnal obstruction under the care of Dr. Mary Strangman, caused partly by gall stones and partly by volvulus, and requiring operation for its relief. The calculi were numerous, one of which, as large as a medium-sized chestnut, excited considerable speculation as to its mode of entry into the intestine, and many theories were advanced in explanation thereof. No cicatrices or adhesions were observed either in the duodenum, colon, choledochus, or bowel, and the patient made a good recovery.

Vote of Condolence.—A vote of condolence, proposed by Dr. D. Walshe, and seconded by Dr. Morris, in sympathy with Dr. T. Laffan, late President of the Branch, on the occasion of the death of his brother, Dr. Patrick Laffan, of Tara, and which was received in silence, and followed by a highly eulogistic family tribute by Dr. O'Brien, brought the meeting to a close.

Waterford Division.—Subsequently a meeting of the Waterford Division of the Branch was held, when Dr. Wynne resigned the Honorary Secretaryship, and Dr. M. J. Morrissey (Waterford) was elected to the post.

Luncheon.—The members then lunched together at the Adelphi.

GRANTS FOR SCIENTIFIC RESEARCH.

The Council of the British Medical Association desires to remind members of the profession engaged in researches for the advancement of medicine and the allied sciences that it is prepared to receive applications for grants in aid of such research. Applications for sums to be granted, which must reach this office not later than May 31st, must include details of the precise character and objects of the research which is proposed, and must be made on forms to be had of the General Secretary, at the office of the Association, 429, Strand, London.

Every recipient is required to furnish to the Science Committee, on or before May 31st following upon the allotment of the grant, a report (or, if the object of the grant be not then attained, an interim report to be renewed at the same date in each subsequent year until a final report can be furnished) containing: (*a*) A brief statement for the Report of the Science Committee, showing the results arrived at, or the stage which the inquiry has reached; (*b*) a general statement of the expenditure incurred, accompanied, so far as is possible, with vouchers; (*c*) and references to any Transactions, Journals, or other publications in which the results of the research have been printed.

The work of the Grantees shall be subject to inspection.

Research Scholarships.

The Council of the British Medical Association is prepared to receive applications for three Research Scholarships, each of the value of £150 per annum, tenable for one year, and subject to renewal by the Council, provided the whole term of office has not exceeded three years.

The scholarships exist for the encouragement of research in Anatomy, Physiology, Pathology, Bacteriology, State Medicine, Clinical Medicine, and Clinical Surgery.

The Scholars' work shall be subject to inspection.

Applications for Scholarships must be made on forms to be had of the General Secretary, and returned on or before May 31st.

Ernest Hart Research Scholarship.

The Council of the British Medical Association is also prepared to receive applications for the Ernest Hart Memorial Scholarship of the value of £200 per annum, tenable for one year, but subject to renewal by the Council for another year. The Scholarship is for the study of some subject in the department of State Medicine.

N.B.—Applications for Scholarships and Grants should, as a rule, be accompanied by a recommendation from the head of the laboratory in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work, and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

Guy Elliston, *General Secretary.*

429, Strand,
April, 1906.

☞ *To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.*

Association Notices.

1906 ANNUAL GENERAL MEETING.

The Annual General Meeting of the British Medical Association will be held in the Caxton Hall, Caxton Street, Victoria Street, London, S.W., on Tuesday, July 24th at 10 o'clock in the forenoon.

ANNUAL REPRESENTATIVE MEETING.

The Annual Representative Meeting will take place in the Caxton Hall, Caxton Street, Victoria Street, London, S.W., on Tuesday, July 24th, immediately after the Annual General Meeting, which will be held at 10 o'clock in the forenoon; on Wednesday, July 25th, at 10 a.m.; on Thursday, July 26th, at 10 a.m. if required; also on Friday, July 27th, at 10 a.m. if required.

BY ORDER OF THE COUNCIL,
GUY ELLISTON, *General Secretary.*

April 18th, 1906.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH.—The annual meeting of the Birmingham Branch will be held at the Medical Institute on Thursday, June 14th, at 3.30 p.m., and nominations for offices should reach the Honorary Secretary not later than May 23rd.—T. SYDNEY SHORT, Honorary Secretary, 85, Edmund Street, Birmingham.

BORDER COUNTIES BRANCH.—The next meeting of this Branch will be held in Keswick on Friday, May 4th. Any member who desires to make a communication to the meeting is requested to inform the Secretary at his earliest convenience. Fuller details of arrangements will be published later. —FRANCIS R. HILL, Carlisle, Honorary Secretary.

BORDER COUNTIES BRANCH: SCOTTISH DIVISION.—The annual general meeting of the above Division will be held at the Dumfries and Galloway Royal Infirmary, upon Tuesday, May 8th, when Dr. Gulland, of Edinburgh, will give an address on Blood Examination in General Practice. The April meeting will not now be held.—GEORGE R. LIVINGSTON, Dumfries, Honorary Secretary.

LANCASHIRE AND CHESHIRE BRANCH.—In accordance with By-law 24, notice is hereby given that nominations of Representatives of this Branch in the Council of the Association must be received by me, duly signed and in writing, on or before May 1st. — T. ARTHUR HELME, M.D., Honorary Secretary, 3, St. Peter's Square, Manchester.

METROPOLITAN COUNTIES BRANCH: HAMPSTEAD DIVISION. —An extra meeting will be held on Friday, April 27th, at 5 p.m., at Finchley.—R. A. YELD, Hampstead, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS AND ISLINGTON DIVISION.—The next meeting will be held on Friday, April 27th, at the St. Pancras Infirmary, in Pancras Road, London, N.W., at 4 p.m. Agenda: (1) To consider the clauses of the Draft Charter, which will be explained by Mr. J. Smith Whitaker. (2) Hospital out-patient reform. (3) The registration of nurses.—WM. WYNN WESTCOTT, Secretary.

MIDLAND BRANCH.—Nominations of candidates for the Council of the Association for the ensuing year must be sent before May 14th to ASTLEY V. CLARKE, 37, London Road, Leicester, Honorary Secretary.

MIDLAND BRANCH: BOSTON AND SPALDING DIVISION.—A meeting of this Division will be held on Thursday, April 26th, at 3.45 p.m., at the Red Lion Hotel, Strait Bargate. Agenda: (1) Discussion on Motors for Medical Men, introduced by Drs. Mason and Miller. (2) Special subjects referred to the Division for discussion.—A. E. WILSON, Boston, Honorary Secretary.

NORTH OF ENGLAND BRANCH.—A meeting of the North of England Branch will be held on Wednesday, April 25th, at Stockton-on-Tees. Members wishing to read papers or show cases are requested to inform Dr. Cox as soon as possible.—ALFRED COX, J. H. HUNTER, Honorary Secretaries.

NORTH WALES BRANCH.—A meeting of this Branch will be held at Rhyl on Tuesday, April 24th, at 2 p.m. Members having papers to read, cases to communicate, or specimens are requested to send notice before the 14th April to the Honorary Secretary, H. JONES ROBERTS, Penygroes.

SOUTH-EASTERN OF IRELAND BRANCH.—The annual meeting of this Branch will be held at the Victoria Hotel, Kilkenny, on May 2nd, at 12 noon. Agenda: (1) To receive annual report of Branch; (2) to elect officers; (3) motion by Honorary Secretary to have a code of ethical rules adopted by Branch; (4) any other business. Members are requested to notify their intention of reading papers.—J. QUIRKE, M.D., Piltown, Honorary Secretary.

SOUTH MIDLAND BRANCH.—In accordance with the by-laws, nominations of a member of Central Council to represent this Branch must reach me on or before 12th May.—E. HARRIES JONES, Honorary Secretary, 45, Sheep Street, Northampton.

SOUTH WALES AND MONMOUTHSHIRE BRANCH: CARDIFF DIVISION.—An ordinary general meeting of this Division will be held at the Cardiff Infirmary on Thursday, April 26th, at 3.15 p.m. Agenda: (1) Minutes of last meeting. (2) Dr. T. Garrett Horder will move: "That in the opinion of this Division it is not desirable that any member should hold two official positions at the same time, either in a Branch or a Division, and that the Central Council be requested to draw up a regulation to that effect." (3) To consider the proposed Royal Charter of incorporation to the British Medical Association. (4) To consider the report of the Medico-Political Committee on the proposed registration of nurses. (5) Mr. F. P. S. Cresswell will show a patient who has marked ptosis, associated with a tumour in the malar region of a doubtful nature.—EWEN J. MACLEAN, R. RUSSELL THOMAS, Honorary Secretaries.

STAFFORDSHIRE BRANCH.—The third general meeting of the session will be held at the Victoria Hotel, Wolverhampton, on Thursday, May 10th. The President, Dr. G. S. Hatton, will take the chair at 3.30 p.m. Business: (1) Minutes of the last general meeting. (2) Correspondence. (3) Exhibition of Living Cases. (4) Paper, B. Cridland: Some Remarks on the Treatment of Squint. (5) Paper, E. Deanesly: A Survey of Surgical Work in a Provincial General Hospital. (6) Exhibition of Pathological Specimens, etc. A dinner will be arranged for 6.30 p.m. (charge 5s.), should a sufficient number of names be sent in.—G. PETGRAVE JOHNSON, Stoke-on-Trent, Honorary General Secretary.

NORTH WALES BRANCH.—A meeting of this Branch will be held at the Westminster Hotel, Rhyl, on Tuesday, April 24th, at 2 p.m. Agenda: (1) To read the minutes of the last meeting. (2) To read correspondence. (3) To receive the report of the Branch Council. (4) To read the financial statement for 1905. (5) To receive the report of the Jones Morris Memorial Fund. (6) Dr. H. Grey Edwards will bring to the notice of the meeting the position taken up by the medical profession at Bangor in regard to the vacancy in the medical officership of the Bangor Workhouse, and will move a resolution. The following papers will be read: Richard Jones, M.D., D.P.H., Blaenau Festiniog: The Prevalence of Cancer in North Wales. G. P. Newbolt, F.R.C.S., Liverpool: Some Remarks on Four Consecutive and Successful Operations for Perforated Gastric Ulcer. G. A. Crace-Calvert, M.B., Ruthin: Observations on the Opsonic Index of Tuberculous Patients undergoing Sanatorium Treatment. J. Hill Abram, M.D., M.R.C.P., Liverpool: Some Cases of Intrathoracic Tumour. J. Howell Evans, M.Ch., F.R.C.S., London: (1) Injuries to the Head of the Fetus at Birth which result in Intracranial or Extracranial Haemorrhages, illustrated by numerous lantern slides; (2) Rebellious Uterine Haemorrhages, illustrated by pathological specimens. J. E. Gemmell, M.B., Liverpool: Tubal Abortion. J. Lloyd Roberts, M.D., M.R.C.P., Liverpool: Colitis Sinistra. Luncheon at 1 p.m. prompt; tickets, 2s. 6d. each. The Branch Council will meet at 1.45 p.m.—H. JONES ROBERTS, Penygroes, Honorary Secretary.

ULSTER BRANCH.—The spring meeting of this Branch will be held in Derry on Saturday, May 5th. Members having any communications to make to the meeting will please send me particulars not later than April 24th.—CECIL SHAW, M.D., Belfast, Honorary Secretary.

ATTENDANCES OF COUNCIL, COMMITTEES, AND SUBCOMMITTEES FOR 1905-6.

ATTENDANCES OF COUNCIL, 1905-6 (9 MEETINGS).

VACCINATION BILL.

HIS Bill was introduced into the House of Commons on arch 28th, 1906, by Mr. Arthur Black, and is supported Mr. Channing, Mr. Levy, Sir Charles McLaren, r. Ramsay Macdonald, Mr. Nicholls, Mr. George White, d Sir William Collins.

A BILL TO

nend the Law in respect to the Procedure of Officers and Justices of the Peace administering the several Vaccination Acts,

it enacted by the King's Most Excellent Majesty, by d with the advice and consent of the Lords Spiritual d Temporal, and Commons, in this present Parliament sembled, and by the authority of the same, as follows:

1. *Short Title.*—This Act may be cited as the Vaccinan Acts Amendment Act, 1906.

2. *Restrictions on Initiation of Proceedings under Vaccinan Acts by Officers of Local Authorities.*—After the passing this Act an officer of a Board of Guardians or other al authority, wholly or partly paid for his services out the proceeds of any rate, shall not institute proceedings be concerned in legal proceedings against any person non-compliance with the provisions of any Vaccination t, unless authorized to do so by a resolution passed by Board of Guardians or other local authority employing n, nor until a copy of each resolution in writing, signed the chairman presiding at the meeting of the Board of ardians or other local authority at which such resolu- was passed, has been handed to him; and such officer ll exhibit to the justices adjudicating upon a summons en out by him such copy of resolution when demanded them or by the defendant or other person appearing on behalf.

. *Certificates of Exemption.*—An application for a certifi- of exemption under the Vaccination Act, 1898, may made by the father or the mother or either of the rdians of a child liable to vaccination under any Act, the justices to whom the application is made shall catechize the applicant, but may, if not satisfied that applicant has a conscientious objection to vaccina-, administer, or cause to be administered, the usual ; and if the applicant declares on oath that he or she eves that vaccination would be prejudicial to the th of the child in question, a certificate of exemption l be granted, at a cost not exceeding one shilling, out further question or remark.

CENTRAL MIDWIVES BOARD.

A MEETING of the Central Midwives Board was held on April 10th, at 6, Suffolk Street, Pall Mall, with Dr. F. H. CHAMPNEYS in the chair.

Medical Men called in by Midwives.

The Board spent some time in considering the revision of its rules under the Act preparatory to sending them in to the Privy Council for approval. The following letter from the Privy Council was read:

Privy Council Office,
April 5th, 1906.

Sir,

Referring to the payment of legally qualified medical practitioners when called in by midwives in difficult cases I am directed by the Lord President of the Council to transmit to you to be laid before the Central Midwives Board the accompanying copy of a letter from the Local Government Board on the subject, and to state that it appears to his Lordship that the payment in the case of persons who are fit subjects for medical relief is a matter of arrangement and presents no special difficulty, but that there are a considerable number of cases where the persons who are willing to pay for a midwife refuse to incur further expense and the position of the midwife under Rule E. 17 becomes one of grave perplexity.

His Lordship is of opinion that Rule E. 17, being inconsistent with Rule 6, the difficulty might be solved by an amendment of Rule E. 17 by substituting for the word "decline" in the third line the words "explain that she is not qualified."

Further, his Lordship considers that a midwife should be required to intimate when she undertakes a case, that a necessity to send for a medical practitioner may arise at any moment.

I am, Sir,
Your obedient servant,
A. W. FITZROY.

To the Secretary,
Central Midwives Board,
6, Suffolk Street,
Pall Mall, S.W.

The letter from the Local Government Board referred to in the above communication was then read:

Local Government Board,
Whitehall, S.W.,
April 2nd, 1906.

Sir,

I am directed by the Local Government Board to state that they have had under consideration the question of the payment of medical practitioners called in by midwives under Rule E. 17 of the rules of the Central Midwives Board in difficult cases.

It appears to the Board that at present there is no legal provision under which the payment of the medical man called in by a midwife can be guaranteed. In the cases of poor persons entitled to receive medical relief at the hands of the Guardians, provision for the attendance, if necessary, of the district medical officer might be made beforehand by application to the relieving officer for an order. The Board are of opinion that in any such case, even if an order had not been previously obtained, and although some medical man other than the district medical officer were called in, it would be competent to the Guardians if they thought proper to pay for the medical assistance under the provisions of Section 2 of the Poor-law Amendment Act, 1848.

The Board are unable to concur in the suggestion that the notice of necessity for medical help issued by a midwife should have the same legal effect as an order by a relieving officer to the district medical officer. The Board consider that there are grave objections to conferring upon midwives powers to grant relief either absolutely or on loan.

Further, with regard to Section 133 of the Public Health Act, 1875, although it seems to them that the provisions of that section might possibly be available if a town council or other local authority for the execution of that Act are willing to pay for the medical assistance required, the Board are of opinion that it is not desirable as a general rule that payments to medical men in such cases should be made under this section. Apart from the question of the intention of the Legislature in framing this enactment, it seems to the Board that any payment made by a public authority to a medical man called in by a midwife would in fact be in the nature of relief to the poor, and that from every point of view it is better that such relief at the expense of the rates should only be administered by the authority empowered by law to do so, namely, the Guardians of the poor.

I am, Sir,
Your obedient servant,
NOEL T. KERSHAW,
Assistant Secretary.

The Central Midwives Board decided that the following revised rule should be submitted to the Privy Council for approval:

In all cases of abortion, of illness of the patient or child; or of any abnormality occurring during pregnancy, labour, or lying-in, a midwife must explain that the case is one in which she must advise that a registered medical practitioner be sent for, and must hand to the husband, or the nearest relative or friend present, the form of sending for medical help, properly filled up and signed by her, in order that this may be immediately forwarded to the medical practitioner. If for any reason the services of a registered medical practitioner be not available, the midwife must, if the case be one of emergency, remain with the patient and do her best for her until the registered medical practitioner arrives, or until the emergency is over. After having complied with the rule as to the summoning of medical assistance, the midwife will not incur any legal liability by remaining on duty and doing her best for her patient.

Illiterate Midwives.

The agenda paper contained a notice of a motion to be moved by Sir William Sinclair and seconded by Mr. Ward Cousins that a new rule in the following terms be inserted in the rules:

> No one shall be permitted to begin the course of instruction, either theoretical or practical, until she has produced evidence satisfactory to the Central Midwives Board that she has received sufficient elementary education to enable her to read a textbook and take notes of cases. But this rule shall not apply to pupils who have received training in general nursing for at least one year.

In the unavoidable absence of Sir William Sinclair and Mr. Ward Cousins, Mr. H. G. **FORDHAM** observed that he was in sympathy with the principle but not with the way in which the rule was worded, and he moved that the instructor who certifies a candidate as having attended a course of instruction should do so in the following terms:

> I certify that .... (to whom this certificate refers) has attended to my satisfaction a course of instruction in the subjects enmerated in Rule D 4, extending over a period of not less than three months, and consisting of not less than fifteen lectures, and has shown that she possesses sufficient elementary education to enable her to read and to take notes of cases.

This was seconded by Dr. W. R. **DAKIN**, and on being put to the vote was carried by the casting vote of the Chairman, to be submitted to the Privy Council for approval.

Vital Statistics.

THE ANNUAL REPORT OF THE REGISTRAR-GENERAL FOR ENGLAND AND WALES.

THE sixty-seventh annual report of the Registrar-General relating to the vital statistics of England and Wales for the year 1904 has just been issued. The more general statistical facts have already been dealt with in the quarterly returns relating to that year; but, besides much other additional information, the report now published contains a detailed analysis of the causes of death, which is necessary for a proper appreciation of the significance of the figures in the tabular portion of the report.

MARRIAGE-RATE.

The number of persons married during 1904 was 515,712, being equal to 15.2 per 1,000 of the estimated population, or 0.6 per 1,000 below the rate in the ten preceding years. Calculated on the unmarried and widowed population at age 15 years and upwards, the marriage-rate in 1904 was 46.5 per 1,000, or 1.3 per 1,000 less than the corresponding rate in 1903.

BIRTH-RATE.

The births registered in England and Wales during the year under notice numbered 945,389, and were equal to an annual rate of 27.9 per 1,000, which was 1.3 per 1,000 below the average rate for the ten years 1894-1903, and was the lowest rate hitherto recorded. Among the registration counties the birth-rates ranged from 21.5 in Sussex, 22.2 in Cornwall, 22.9 in Dorsetshire, 23.0 in Bedfordshire and in Herefordshire, and 23.2 in Devonshire, to 31.9 in Northumberland, 32.6 in Staffordshire, 34.9 in Durham and in Glamorganshire, and 35.5 in Monmouthshire. There were in England and Wales as a whole, 1,037 male births to 1,000 female births, the average proportion in the ten preceding years being 1,036 to 1,000. With reference to the decline of the birth-rate, it is shown in the report that, in equal numbers of females at ages between 15 and 45 years, the births in 1904, compared with those in the years 1870-2, showed a decrease of more than 27 per cent.; seven-tenths of this decrease was due to a lower rate of fertility in married women, and one-tenth to a decline in the proportion of illegitimate births.

DEATH-RATE.

The deaths registered in England and Wales during 1904 numbered 549,784, being 16.2 per 1,000 of the population at all ages; this rate is 1.0 per 1,000 below the averag in the ten years 1894-1903, and is only 0.1 per 1,000 abov the rate for the year 1903, which is the lowest on record. After correction for differences in the sex and age constitution of the several counties, the lowest rates of mortalit were recorded in Oxfordshire, Huntingdonshire, Wiltshire, Dorsetshire, Rutlandshire, and Westmorland; an the highest rates in Warwickshire, Lancashire, Durham Northumberland, Glamorganshire, and Denbighshire.

The death-rates at various age-periods were generall below the corresponding rates in the preceding decennium Infantile mortality, measured by the proportion of death among children under one year of age to registered birth was equal to 145 per 1,000, or 5 per 1,000 less than th decennial average. In a selected group of urban countie the corrected death-rate was 17.9 per 1,000, against 13.5 pe 1,000 in a group of rural counties, both the urban and th rural mortality being lower than the respective average for the preceding five years.

CAUSES OF DEATH.

The definite causes of death, excluding all forms o violence, specified in the present report, are groupe provisionally under two headings, namely, "Genera Diseases" and "Diseases of Particular Organs." Th mortality from two of the principal epidemic diseases whooping-cough and diarrhoea, was above the average, bu the deaths from small-pox, measles, scarlet fever, diphtheria, and enteric fever showed a decline, the death-rat from the last mentioned disease being the lowest on recor The mortality from influenza was equal to 168 per millio persons living, against an average of 302 in the fifteen yea 1890-1904. The deaths from phthisis were at the rate of 1,45 per million among males and 1,029 among females, thes rates being about 3 per cent. lower than the respectiv averages for the preceding five years; in the rural counti the quinquennial average was slightly exceeded in 190 while in the urban counties the decline of phthisis mo tality was rather greater than in England and Wales as whole. To cancer or malignant disease, 29,682 deaths we attributed during the year under notice, being 2,461 i excess of the annual average number in the preceding te years after correction for increase of population; amo males the death-rate from this disease in 1904 was 740 p million and among females 1,006 per million, both thes rates being respectively the highest on record. Alcoholis was definitely stated as the cause of death of 1,396 men a 962 women; among both sexes the recorded mortality fro alcoholism, as well as from cirrhosis of the liver, has bee declining since 1900, and it would appear, therefore, th there has been no increase recently in the loss of life intemperance.

INADEQUATE CERTIFICATION.

The deaths of 51,449 persons in 1904 were attributed ill-defined or not specified causes. Many other deat would have remained in this group but for the inquiri addressed to medical practitioners respecting deaths certified as due to dropsy, tumour, haemorrhage, and certa other indefinite conditions. In the course of a year repli to 3,896 inquiries of this kind were received and in ma cases enabled a more definite cause of death to be assigne For example, 466 deaths from malignant disease, 391 fr tuberculous diseases, 129 from appendicitis, and 118 fr puerperal septic diseases were transferred to definite headings as a result of the additional information so obtained

HEALTH OF ENGLISH TOWNS.

IN seventy-six of the largest English towns, including London, 8. births and 5,200 deaths were registered during the week end Saturday last, April 14th. The annual rate of mortality in th towns, which had been 17.0 per 1,000 in each of the two preced weeks, rose to 17.1 per 1,000 last week. The rates in the several tow ranged from 8.0 in Willesden, 8.8 in East Ham, 9.2 in Tottenh 9.7 in Portsmouth, 10.0 in Devonport, 10.1 in Aston Manor, and 10. Handsworth (Staffs.), to 21.1 in Oldham, 21.4 in Manchester, 21.5 Birmingham, 21.9 in Middlesbrough, 22.1 in West Bromwich, 22.6 Smethwick, 23.1 in Tynemouth, and 25.6 in Liverpool. In London rate of mortality was 17.4 per 1,000, while it averaged 17.0 per 1,00 the seventy-five other large towns. The death-rate from the princi infectious diseases averaged 1.7 per 1,000 in the seventy-six towns: London the death-rate was equal to 1.6 per 1,000; while among seventy-five large provincial towns the rates ranged upwards 2.7 in Bristol and in Preston, 2.9 in Tynemouth, 3.0 West Bromwich, 3.3 in Manchester, 3.4 in Rotherham, in Leyton, 4.0 in Great Yarmouth, and 4.8 in Liverp Measles caused a death-rate of 1.3 in Leyton, in Bristol, in Prest and in Bradford, 1.8 in Bury, 2.0 in Manchester, 2.6 in Liverpool, 3.0 in Great Yarmouth; scarlet fever of 2.6 in Rotherham: whoop cough of 1.1 in Leicester, 1.2 in Hornsey, 1.3 in Birmingham Birkenhead, 1.4 in Cardiff, 1.5 in Bournemouth, 1.8 in Leyton, 2 Smethwick, and 3.0 in West Bromwich; and diarrhoea of 1. Walsall, 1.2 in York, 1.6 in Middlesbrough, and 1.9 in Tynemouth. mortality from diphtheria and from enteric fever showed no mar excess in any of the large towns. No fatal case of small-pox was registered last week in any of the seventy-six towns. The number of small-pox patients under treatment in the Metropolitan Asylums Hospitals, which had been 8 on each of the two preceding Saturdays, had declined to 7 on Saturday last, the 14th inst.; no new case was admitted during the three weeks ending on that date. The number of carlet fever cases in these hospitals and in the London Fever Hospital was 2,301 at the end of last week, against 2,434, 2,386, and 2,322 at he end of the three preceding weeks; 270 new cases were admitted uring the week, against 234, 223, and 292 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

DURING the week ending Saturday last, April 14th, 920 births and 655 eaths were registered in eight of the principal Scotch towns. The nnual rate of mortality in these towns, which had been 18.0, 18.9, and 9.4 per 1,000 in the three preceding weeks, declined again to 19.1 per 000 last week, but was 2.0 per 1,000 above the mean rate during the ame period in the seventy-six large English towns. Among these cotch towns the death-rates ranged from 11.6 in Aberdeen and 14.4 in aisley to 20.9 in Glasgow and 24.3 in Greenock. The death-rate from he principal infectious diseases averaged 1.6 per 1,000 in these owns, the highest rates being recorded in Glasgow, Dundee, and eith. The 335 deaths registered in Glasgow included 12 which were eferred to measles, 5 to diphtheria, 6 to whooping-cough, and 7 to iarrhoea. Six fatal cases of measles, 2 of diphtheria, and 2 of hooping-cough were recorded in Edinburgh; 3 of measles and 2 of iarrhoea in Dundee; and 2 of measles and 3 of whooping-cough in eith.

Vacancies and Appointments.

VACANCIES.

his list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

ARBADOS GENERAL HOSPITAL.—Junior Resident Surgeon. Salary, £200 per annum, with quarters.

IRKENHEAD BOROUGH HOSPITAL.—Junior Resident House-Surgeon. Salary, £80 per annum.

RMINGHAM UNIVERSITY.—Assistant Lecturer on Pathology and Bacteriology. Stipend, £250 per annum.

DMIN: CORNWALL COUNTY ASYLUM.—Third Assistant Medical Officer. Salary, £135, rising to £155 per annum.

RITISH LYING-IN HOSPITAL, Endell Street, W.C.—Physician to Out-patients.

XTON: DEVONSHIRE HOSPITAL.—Assistant House-Surgeon. Salary, £70 per annum.

IARING CROSS HOSPITAL, W.C.—Assistant Physician.

JDLEY: GUEST HOSPITAL.—Assistant House-Surgeon. Salary, £40 per annum.

ST SUSSEX COUNTY ASYLUM, Hellingly.—Second Assistant Medical Officer, male. Salary, £200 per annum.

SEX AND COLCHESTER HOSPITAL.—House-Surgeon. Salary, £100 per annum.

ELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—Surgeon to Out-patients.

MEL HEMPSTEAD: WEST HERTS INFIRMARY.—House-Surgeon Assistant-Secretary. Salary (combined), £110 per annum.

SPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.—House-Surgeon. Salary, £20 for six months, and £2 10s. washing allowance.

LL ROYAL INFIRMARY.—Honorary Assistant Ophthalmic Surgeon for Out-patient Department.

LME DISPENSARY, Dale Street, Manchester. Honorary Surgeon.

ICESTER INFIRMARY.—Assistant Surgeon.

CARD: WALLASEY DISPENSARY AND VICTORIA CENTRAL HOSPITAL.—House-Surgeon. Salary, £100 per annum.

MEMBERSHIP OF THE BRITISH MEDICAL ASSOCIATION.

The British Medical Association exists for the promotion of medical and the allied sciences, and the maintenan of the honour and the interests of the medical profession.

The Annual Subscription to the British Medical Association is £1 5s. 0d., and the British Medical Journ is supplied weekly, post free, to every member of the British Medical Association wherever he may reside.

Forms of application for membership can be obtained from the General Secretary, 429, Strand, London, W.C.

The principal rules governing the election of a medical practitioner to be a member of the British Medic Association are as follow:

Article III.—Any Medical Practitioner registered in the United Kingdom under the Medical Acts and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualifications as shall, subject to the Regulations, be prescribed by the Rules of the said Branch, shall be eligible as a Member of the Association. The mode and conditions of election to Membership shall from time to time be determined by or in accordance with the By-laws. Every Member, whether one of the existing Members or a subsequently-elected Member, shall remain a Member until he ceases to be a Member in accordance with the provisions hereof.

By-law 1.—Every Candidate for Membership of the Association shall apply for election in writing, addressed to the Association, and stating his agreement, if elected, to abide by the Regulations and By-laws of the Association, and the Rules of such Division and Branch to which he may at any time belong, and to pay his subscription for the current year.

By-law 2.—Every candidate who resides within the area of a Branch shall forward his application to the Secretary of such Branch. Notice of the proposed election shall be sent by the Branch Secretary to the General Secretary of the Association, and to every Member of the Branch Council, and the candidate, if disqualified by any Regulation of the Association, may be elect a member of the Association by the Branch Council at any meeti thereof held not less than seven days (or such longer period the Branch may by its Rules prescribe) after the date of the sa Notice. A Branch may by special Resolution require that ea candidate for election to the Association shall furnish a certific from two Members of the Association to whom he is persona known. Officers of the Navy, Army, and Indian Medical Servi on the Active List are eligible for election through the Coun or a Branch without approving signatures as laid down By-law 3.

By-law 3.—Every candidate whose place of residence is not included the area of any Branch shall forward his Application to General Secretary of the Association, together with a statem signed by three members of the Association, that from perso knowledge they consider him a suitable person for electi Notice of the proposed election shall be sent by the Gene Secretary to every Member of the Council, and the candidate not disqualified by any Regulation of the Association, may elected a Member of the Association by the Council at any me ing thereof held not less than one month after the date of said notice.

The annual subscription to the British Medical Journal for non-members is £1 8s. 0d. for the United Kingd and £1 12s. 6d. for abroad.

Printed and published by the British Medical Association at their Office, No. 429, Strand in the Parish of St. Martin-in-the-Fields, in the County of Middlesex

ATTERS REFERRED TO DIVISIONS.

NUAL REPORT OF COUNCIL

TO BE PRESENTED TO THE

nnual Representative Meeting,

TO BE HELD IN

ton Hall, Caxton Street, Westminster, S.W.

ON

Y 24th, 1906, and following days (as may be necessary).

REPORT OF COUNCIL, 1905-6.

UR Council in submitting its report for the year
-6 congratulates the Association on its decision to
the seventy-fourth annual meeting in Greater
in.

agine with what pride your founder, Sir Charles
ings, would look back to that memorable gathering
orcester on July 19th, 1832, when, on his initiative,
gentlemen met and launched the British Medical
iation on its eventful career. Contrast the position
332 and 1906! To-day, through its numerous
ches, the activity of your great Association has extended to practically every corner of the British Empire, and no member need feel he is too far removed to appeal for assistance when the honour of the medical profession is assailed. The membership of fifty enrolled at Worcester has swollen to close on 20,000, while a reserve has been built up of over one hundred thousand pounds.

The annual meeting at Montreal in 1897 was the first in the history of the Association to be held elsewhere than in the United Kingdom. So great a success attended this departure that your Council felt no hesitation in recommending the acceptance of the cordial invitation proffered from Toronto, so happily designated the Queen City of Canada, an important centre of learning, whose University holds the proud position of Premier University of the Dominion of Canada.

Judging by the large numbers who have intimated their intention of being present from the Old Country, the great interest aroused throughout the Dominion, and owing to the unselfish efforts of the Local Executive, the seventy-fourth annual meeting is assured of being one of the most memorable gatherings in the annals of the Association.

Your Council would urge every member to make a special effort to be present, as the expense and time involved will be found to compare not unfavourably with those incidental to a month's trip in Europe.

CHAIRMAN OF COUNCIL.

2. In succession to Mr. Andrew Clark, who completed his three years' service as Chairman of Council at Leicester, your Council elected Dr. H. W. Langley Browne, one of the representatives returned by the Birmingham Branch.

GOLD MEDAL OF MERIT.

3. Your Council awarded to Mr. Andrew Clark the Gold Medal of Merit of the Association in recognition of the special services rendered by him to your Association as

Treasurer, as Chairman of Council, and in many other offices, the presentation being made at Leicester.

Deaths of Members of Council.

4. Since your Council last reported it has lost by death two old and valued colleagues in Mr. W. Jones Morris and Colonel Cresswell, C.B. Mr. Jones Morris had been a member of the Council without a break since 1885, and, by his regular attendance and unselfish labours on your Council and in the North Wales Branch, did much to advance the interests of your Association.

Colonel Cresswell also throughout his career was an active worker on behalf of your Association, and was as far back as 1872 a member of the old Committee of Council.

The Council has also to deplore the deaths of Dr. Robert Somerville, a former colleague and representative of the Border Counties Branch for a period of ten years; and Sir John Burdon-Sanderson, F.R.S., who rendered valued help to the Association, more especially in connexion with the Scientific Grants Committee.

Deaths of Members of the Association.

5. Your Council regrets to have to record the deaths since April, 1905, of the following members of the Association: Dr. Thomas Rutherford Adams, Chairman of the Croydon Division; Dr. John Appleyard, Dr. Albert Henry Baines, Dr. Thomas John Barnardo, the well-known philanthropist; Mr. Edward Henry Beaman, Captain George Crofts Beamish, I.M.S., Dr. Reginald Bigg, Mr. Peter Percival Bradford, Dr. J. E. Brogden, Dr. Joseph Orpe Brookhouse, who was President of the Section of Pharmacology and Therapeutics at the Nottingham meeting in 1892; Sir John Burdon-Sanderson, Bart., M.D., F.R.S., Dr. Keith Campbell, Colonel James Charles Gordon Carmichael, M.D., Dr. Thomas Albert Carter, Mr. John Augustus Tatham Cartwright, Dr. Thomas Edmonston Charles, Mr. Joseph Collier, who held the office of Vice-President in the Section of Diseases of Children when the Association held its annual meeting in Manchester in 1903; Dr. Robert Patrick Connell; Mr. Jonathan Nelson Cregeen, Vice-President of the Lancashire and Cheshire Branch; Colonel Pearson Robert Cresswell, C.B., Dr. W. Clement Daniel, Dr. Joseph Everett Dutton, who lost his life in the Congo territory while actively engaged in the investigation of trypanosomiasis and tick fever; Dr. John Eaton, Sir Joseph Ewart, M.D., a former President of the Bengal Branch, and Vice-President of the Section of Medicine when the Association met at Brighton in 1886, also President of the Section of Public Medicine at the Carlisle meeting in 1896; Dr. Ernest Field, Surgeon Alexander William Flood, R.N., Dr. Henry Isaac Fotherby, Dr. John Francis Scott Fowler, for several years Honorary Secretary of the British Guiana Branch; Dr. William Frazer, The Hon. Otho Galgey, Dr. Richard Garnham, Dr. William Graham, Major Alexander Gibb Grant, I.M.S.(ret.), Mr. Angus John Grant, Dr. Joseph Greasley, Dr. Michael Hindmarsh Greener, Dr. Arthur David Griffiths, Dr. Herbert Tyrrell Griffiths, Dr. Jonathan Atkinson Harrison, Mr. Christopher Heath, a Past-President of the Royal College of Surgeons; Dr. John Highet, Mr. Charles Hooper, Chairman of the Aylesbury Division of the South Midland Branch; Dr. James Jamieson, Dr. Samuel Johnston, Mr. Philip William Jones, Mr. Thomas Charles Langdon, one of the founders of the Southern Branch, and a member of the Parliamentary Bills Committee; Mr. George Longbotham, Dr. Edward John Longton, Dr. George Lowson, Dr. W. C. Lucey, Dr. James Lynass, Mr. William MacGeagh, Dr. Jessie MacGregor, Dr. D. McMordie, Lieutenant-Colonel Eugene Valentine MacSwiney, M.D.; Mr. Henry Parr Mallam, Mr. William Turner, Dr. Hooper Masters, Dr. Farquhar Matheson, Mr. Alexander Matthew, Staff-Surgeon Alworth E. Merewether, R.N.; Mr. Thomas Moreton, Mr. W. Jones Morris, Mr. William Moxon, formerly President of the South Midland Branch; Lieutenant-Colonel Peter Mulvany, R.A.M.C.; Dr. James Murphy, a member of the Central Council at the time of his death, and formerly a member of the Parliamentary Bills Committee; Lieutenant-Colonel Kaikhoshro Sorabji Nariman, Colonel Bartholomew O'Brien, M.D., I.M.S., Dr. William Ogle, Dr. William O'Neill, Dr. John Edward Panton, Dr. Francis Henry Parsons, Dr. William Arthur Payne, Dr. Harry Campbell Pope, the first Chairman of the Kensington Division; Dr. Henry S Purdon, Dr. John Robert Kealy, a past President an founder of the Southern Branch, and Vice-President of th Ethical Section at the Portsmouth meeting in 1899; Mr John Abernethy Kingdon, Dr. James Rankin, Captai James Valentine Roche, R.A.M.C.; Dr. William Sheldon Mr. Cyrus Walter Smith, Dr. George Daniel Smith Lieutenant-Colonel Maurice Henry Smith, late I.M.S. Dr. Robert Somerville, Surgeon-Captain William Car Sprague, M.D., late I.M.S., at one time President of th Cambridge and Huntingdonshire Branch; Major Harol Arthur Stalkartt, M.B., R.A.M.C.; Dr. J. F. Stewart, Mr George Stamp Taylor, Mr. Charles Robert Clark Tichborne, Dr. Llewellyn Treharne, Inspector-Genera Alexander Turnbull, M.D., R.N., at one time a member o the Parliamentary Bills Committee; Major Wilfre Constant Vickers, M.B.; Captain James Waddell, R.A.M.C. Dr. James G. Walker, Mr. James Wallwork, Dr. Edwar Henry Warner, Mr. George Weller, Dr. William Augustu West, Lieutenant-Colonel Charles White, R.A.M.C.; Mr Samuel Whitlow, Dr. David Wield, Honorary Secretary o the Queensland Branch; Dr. Thomas Duddington Wilson Chairman of the South Edinburgh Division; Dr. W Wingate-Saul, and Colonel William Owen Wolseley R.A.M.C.

Royal Honours.

6. Your Council has had the pleasure of congratulatin the Right Honourable Sir Walter Foster, M.P., who wa Chairman of Council from 1884-6, on being sworn member of His Majesty's Most Honourable Privy Council also Sir James Barr, Sir Thomas Chavasse, and Sir Arthu Chance on receiving the honour of knighthood.

Dr. Robert Farquharson.

7. Dr. Farquharson, who for reasons of health did no seek re-election this year, had been a member of Parliament since 1880, and at all times rendered valuabl services to the Association as Chairman of the ol Parliamentary Bills Committee, and by his work in th House in watching matters affecting the public health Your Council takes this opportunity of placing on recor its appreciation of the work done by Dr. Farquharson o behalf of the Association both in and out of Parliament.

Medical Benevolent Institutions.

8. During the year 1905 the General Secretary receive from members nearly £800 on behalf of the Britis Medical Benevolent Fund, the Royal Medical Benevolent College, Epsom, and the Irish Medical Benevolen Fund.

Your Council would again urge on all members th claims of these institutions, believing that it is onl necessary for the Association to appreciate how muc distress is alleviated through these funds for member to extend at once more general support.

If every member would subscribe a minimum of 5s per annum the scope and usefulness of these institution might be considerably extended, and a step made toward the attainment of the ideal that no deserving case nee appeal in vain.

The Metropolitan Asylums Board.

9. The Council desires to place on record its hig appreciation of the kindness of the Chairman an members of the Metropolitan Asylums Board during th past twelve months in placing their Board Room at th disposal of the Council for its meetings.

Clerical Staff Superannuation Fund.

10. The scheme to provide superannuation allowances t members of your clerical staff on the attainment of 65 year of age, approved by the Representative Meeting at Leiceste came into operation on January 1st of the current yea All the members of the staff eligible to join the Fund hav availed themselves of the advantages offered.

The Journal.

11. In the history of the British Medical Journa during the past year the chief event has been the improvement in the type and general form, introduced in th first number of 1906.

The type and form of the Journal had remained practically unaltered since 1867. During that period of nearl forty years great advances were made in the periodic press generally, and your Council felt that the Journa

at a disadvantage owing to the failure to improve
general appearance in accordance with the times.
r Council, therefore, having considered memorandums
ented by the Editor and General Secretary, resolved to
e material alterations. The column has been lengthened
clearer and larger type has been introduced. A coloured
oper has been placed upon each issue, and opportunity
been taken to recognize the great services rendered by Sir
rles Hastings, founder of the Association, by introducing
the front page a medallion portrait, reproduced from
engraving by S. W. Reynolds after the oil painting by
. Faulkner presented to Sir Charles Hastings by the
ciation in 1839. These changes entailed a large
unt of work and anxiety upon the officers concerned,
your Council takes this opportunity of congratulating
n on the result of their labours.

pursuance of the policy of publishing from time
ime special numbers dealing fully with some par-
ar subject of interest to the medical profession at
, the greater part of the issue of the JOURNAL
d June 3rd, 1905, was devoted to a series of articles
he medical profession abroad, in its educational,
l, and economic aspects. The increased interest
n in the social and economic position of the
ssion in this country seemed to render opportune
ttempt to bring together information with regard to
position held by the profession in other European
tries, and the legislative and other regulations under
h medical practice is carried on abroad. With the
eration of contributors having special acquaintance
the conditions of medical practice in the chief
pean countries and British Colonies, it was found
ble to collect a mass of information of no little
est to all medical men which it is believed will
und useful also in the discussion of the legislative
sals which the Association intends to put forward.
e proceedings of the annual meeting at Leicester
fully reported immediately after the conclusion
e meeting, and the task of reporting the proceedings
e Sections was concluded in November.
e increase in the amount of official or semi-official
r rendered necessary by the increase in the work of
epresentative Meeting, Committees, and Branches of
ssociation induced your Council to sanction as from
eginning of 1905 the issue of a SUPPLEMENT weekly.
necessity for this change is shown by the fact that
number of pages in the SUPPLEMENT showed an
ase as compared with 1904 of 82 per cent. (from 500
to 912), and as compared with 1903 of 197 per cent.
ost of the production of the SUPPLEMENT is a serious
but a considerable expenditure under this head is
able if the members are to be kept fully informed of
olitical and economic activities of the Association.

FINANCIAL STATEMENT.

Owing to heavy expenditure consequent upon the
sed activity throughout the Association, your
il cannot submit so favourable a financial statement
the year 1904.
total revenue reached £50,100 and the expenditure
0, leaving, in comparison with former years, a
w margin on the right side. The candle has been
at both ends: the receipts have diminished by close
1,000, while the expenditure has increased by
), with the result that the credit balance of £5,000
year's working, which of recent years has been the
rd, shrinks to barely £900 for the year 1905. It is
ary to go back as far as the year 1878 to find a balance
ome over expenditure falling below four figures.
analysing the various heads of expenditure, it is
ying to note that the Editorial Department,
ct A, has entailed no increase of expenditure.
Abstract B, the cost of printing the JOURNAL
an increase of £135, and to this must be added,
mparison, approximately £250, a proportion of the
f the fifty-third journal printed in 1904, as against
the period under review. This increase is not
urable when it is appreciated that during 1905 there
published a supplement each week aggregating
ges while in 1904 there were only twenty-four
ments in all, with a total of 500 pages. All this
tailed considerable increase in composition, paper,
ning, and handling generally. Further, in 1905 the average issue per week increased, and reached the grand total of close on 1,200,000 copies for the year. It is satisfactory to record that these JOURNALS, sent off to all parts of the world, reached members with strict regularity, it being the rarest thing for a subscriber to have to complain of non-delivery of any issue.

In Abstract C, the General Association Expenses, there is a marked increase of expenditure amounting to £1,100. The principal items which go to make up this amount are £200 for repairs and upkeep of your premises, due to the necessity of painting the outside fabric; £140 legal expenses, as a result of the Troutbeck inquiry, the proposed alterations to the Memorandum of Association, the Contract Practice inquiry, and other matters on which legal assistance was necessary; £120 for miscellaneous printing, consequent upon the considerable increase of printing for the work of the Association; £480 increase in the cost of producing and circulating the *Year Book*, consequent on the increased circulation and the addition of an alphabetical list of members, entailing a jump from 172 pages in 1904 to 408 pages in 1905; £80 in the office postage, due to the large increase of correspondence in the General Secretary's department and in that of the Medical Secretary, which is also reflected in the increase of £35 for stationery. The increase of £60 in Sundries is on account of the award of two gold medals of merit.

In Abstract D the salaries show an increase of £440; £190 of this is for the Assistant Medical Secretary, appointed at the close of 1904; £50 for the Medical Secretary; £150 for the Medical Secretary's staff; and £50 for the clerical staff in the General Secretary's office.

In Abstract E there is an increase of £700 in the collective expenses of the Representative Meeting, Council, and Committees generally. The railway fares of the representatives for the Leicester Meeting, however, were about £70 less—due, perhaps, to meeting at a convenient centre in the Midlands. There is an increase, roughly, of £100 for Council fares, owing to there having been an extra meeting in 1905. Of committees, two dropped out, whereby £20 was saved; but nine additional committees were appointed, entailing a new expenditure of £140. Of the committees also at work in 1904, the Committee of Chairmen cost £50 more; the Ethical, £40; the Hospitals, £70; the Journal and Finance, £85 (this Committee now meets a week before the Council, instead of on the same day, which entails separate railway fares). The Medico-Political Committee cost £200 more; the Organization, £45; the Premises and Library, £100 (owing to the frequent meetings in connexion with the proposed rebuilding scheme); while the Public Health cost £20 more, and the Scottish £13.

The Medical Defence Committee made its report to the 1905 meeting, and has not met since, and in consequence a saving of £70 is effected as compared with 1904, while about £50 was saved over the Royal Naval and Military Committee. In 1904 it held seven meetings, while last year it met only once.

Turning to Abstract F, the Library, except for £20 more spent on books, has cost the Association about the same as in previous years. Your Council is of opinion that it is only necessary to write off £100 for depreciation, as your Library now stands in your balance-sheet at the low figure of £2,200.

It will be observed in the revenue or profit and loss account your Council has written off £250 from plant and type which is valued for the close of the year at £1,250. It is not considered prudent to write this down lower, as in the event of a loss by fire the claim could only be put forward at its value in the balance-sheet.

Your Council has given serious attention to the investments of the Association, and on the grounds of sound finance has written all holdings down to the market prices prevalent on December 31st last. This has involved the sum of £780, but it is not unreasonable to anticipate, with the revival of trade all round and the increase of business looked for generally, but more especially by banks, that Bank of England stock, of which you are holders to the extent of £14,500, will enjoy a return to popular favour, with consequent appreciation of price, whereby the shrinkage provided in your balance-sheet will ultimately prove merely a prudent bookkeeping adjustment.

The item of £300 to the Office Staff Superannuation Fund would appear a new charge. This is not the case, as

Balance Sheet 31st December, 1905.

We certify, in accordance with the provisions of the Companies Act, 1900, that all our requirements as Auditors have been mplied with. Having examined the above Balance Sheet, dated 31st December, 1905, with the books and vouchers of the ssociation, and having inspected the Deeds of the properties, 429, Strand, 2, 3, 4 and 5, Agar Street, and 2 and 3, arvey's Buildings deposited with your Bankers, and having verified the investments held on account of the Association and of the ove Trust Funds, we report that the Balance Sheet is in our opinion properly drawn up so as to exhibit a true and correct ew of the state of the Association's affairs as shown by the books of the Association. PRICE, WATERHOUSE & CO.

3, Frederick's Place, Old Jewry, E.C., March 24th, 1906.

a similar sum was voted in 1904, but deducted from the capital account; consequently the item did not appear under the Profit and Loss. Your auditors, however, consider that such an item should be shown under that head, as it is a charge that may appear for some years until the Fund has become self-supporting on a sound financial basis.

The amount written off against losses on subscriptions by deaths and arrears is practically the same as for the previous year, and results in a nett loss of but a fraction over 1 per cent. of the total membership.

REVENUE.

Your Council is pleased to report that the revenue from subscriptions continues steadily progressive—a healthy and most satisfactory sign in an Association formed for mutual co-operation in the maintenance of the honour of the medical profession. The sum received is £25,000, or approximately half the total revenue.

ADVERTISEMENTS.

The year 1905 has earned for itself the unenviable reputation of being one of the worst years on record for securing advertisements. The oldest and most influential papers have not escaped this cycle of bad trade, as is evidenced by the publication of the reports of those papers owned by joint stock companies. The *Illustrated London News* had to admit a shrinkage of £10,000 from this source, in spite of an expanding circulation, and it is hardly to be expected that the BRITISH MEDICAL JOURNAL would be immune from similar influences. The contraction in receipts, as compared with 1904 amounts to £1,000, or about 5 per cent. In this connexion, however, it is satisfactory to be able to show that while there has been a shrinkage the total stated, £1,000, is more apparent than real. In 1904 you had fifty-three issues of the JOURNAL to earn £21,465, while in 1905 you had only fifty-two to earn £20,440. This alone would account for about £450. Further the special issue, generally published in December, was deferred until the first issue in the current year; but for this you would certainly have earned fully a further £250. The *Year Book* also suffered to some extent. It is generally recognized that it is difficult to keep a new publication at the level of a first number in the way of receipts from advertisements, but your Council is convinced that the *Year Book* will grow in favour with advertisers owing to the advantage of having an advertisement in a publication to which constant reference is made throughout the year.

When the foregoing facts are taken into consideration the Association must feel some sense of satisfaction that receipts from advertisements are not lower. At any rate, your Council is glad to report that in spite of the serious depression such care has been exercised in the accepting of business, that the large sum of £20,440 has been earned at the expense of bad debts amounting to only thirty shillings. Revenue from advertisements must always be an uncertain quantity and recognized as susceptible to trade fluctuations. A close study of the pages of the JOURNAL, however, will reveal an extraordinary diversity of interests advertised, which tends to minimize the risks of an irregular income from this source.

The sales of the JOURNAL have slightly diminished, but here again the 53 and 52 issues for the last two years would explain the difference. The interests on investments and rents show a small expansion. This item ought to have been more had all your house property been let during the year. It is difficult, however, to find suitable tenants unless a reasonably long lease can be offered: this has not been possible with the contingency of the whole of the houses in the Strand and Agar Street being needed for the erection of premises more in accordance with the increased requirements of the Association.

In conclusion, your Council reports that after providing for the additional expenditure resulting from the growing activity throughout the Association, by carrying the surplus of £862 for the year to capital account, you had on December 31st a balance of £102,259 of assets over liabilities.

ESTIMATE OF INCOME AND EXPENDITURE FOR 1906.

13. Your Council submits the following estimate of the probable receipts and expenditure for the year ending December 31st, 1906, and for comparison the amounts actually expended and received during the year 1905:

Expenditure.

CHAIRMEN OF COMMITTEES.

14. Your Council would call special attention to the heavy work which has fallen on the Chairmen of the various Committees during the past twelve months, and would emphasize the heavy obligations your Association owes to these gentlemen. For some of the chairmen of central committees the amount of time and trouble involved to keep abreast of the steadily-increasing work entails no inconsiderable personal sacrifice. To give some idea of the remarkable increase in Committee work consequent upon the change of the constitution in 1902, it is interesting to note the striking expansion in the annual volume of minutes of Council, Committees, and Subcommittees. The volume for 1905 contains 1,136 pages, being an increase of 318 pages over 1904. The following are the figures of the last five years—namely, two years prior to the new constitution and the subsequent years:

1900	1901	1902	1903	1904	1905
386 pages	430 pages	470 pages	593 pages	818 pages	1,136 pages

COMMITTEES.

CHLOROFORM COMMITTEE.

15. This Committee has carried out the following work since its last report:

The work undertaken has been a continuation of that pursued during preceding years.

(*a*) Continuing the experiments performed by perfusing chloroform in various solutions through the tissues of the heart-muscle, skeletal muscle, and visceral muscle, the Committee has attempted to institute a comparison between these varieties of muscle, and has studied the effects of various concentrations of chloroform upon them respectively. It was found possible to establish a quantitative estimate of the susceptibility which these tissues present. The heart muscle is most susceptible, and voluntary muscle although evincing similar susceptibility to chloroform was far less profoundly affected, the dose of chloroform which produced marked depression and ultimate extinction of the heart beat when perfusing the heart caused no obvious depression in voluntary muscle. As in the case of the heart muscle, when chloroform was perfused in blood very much larger doses were tolerated by voluntary muscle than when the chloroform was presented in a medium of saline solution or other artificial circulating medium. Dealing with the effect of chloroform upon the blood vessels of the limb it was found that percentages of chloroform of the strength of 0.1 and 0.2 in equal parts of blood and saline caused a constriction of the vessels, which, however, was of brief duration. Higher percentages produced a dilatation consequent upon this initial constriction, and this persisted for a considerable time. When chloroform-free fluid was then perfused the outflow was at first lessened, and, coincidentally with this, the contraction of the voluntary muscles was found to be increased, and the converse. It thus appears that the difference of grade of susceptibility to chloroform of neuromuscular mechanisms in the body is very great. Further confirmatory experiments undertaken with the muscular wall of the intestine revealed that that structure behaved towards chloroform similarly to other muscular structures, the effects differing in degree but not in kind.

The Committee further made a considerable number of observations upon the inspired and expired air of persons taking chloroform, with a view of ascertaining whether the anaesthetic is retained and what is the proportion of chloroform exhaled to that inhaled.

This part of the Committee's research, although reported upon in an appendix to its report to the Association, has not been advanced sufficiently far for any definite pronouncement to be made upon it. It is under investigation on different lines by different workers among the Committee, and their findings will be submitted to the Council in the next report of the Committee.

It may be pointed out that the work which has so far been done has demonstrated that the neuromuscular mechanisms of the body react regularly to dosage of chloroform, that that dosage is a question of conveyance and retention of the anaesthetic in certain tissues, and that the amount of chloroform inspired bears a relation to that in the expired air, and this is believed to be definite and conditioned by circumstances within the control of the administrator of the anaesthetic.

Therapeutic Committee.

16. During the past year the Committee has investigated (1) the bactericidal action of a number of silver compounds—silver nitrate, silver fluoride, ammoniacal silver chloride, silver potassium cyanide, actol, itrol, argentol, ichthargan, argyrol, albargin, nargol, largin, novargan, protargol, argentamine, and argonin; (2) the influence of preservatives in antitoxic serums; and (3) the chemical composition of a new Argentine drug, which was found to contain a bitter principle, a volatile oil and sugar, but no alkaloid or glucoside.

A circular requesting clinical information regarding the value of the various silver compounds was sent to nearly 300 members of the profession, but owing to the small number of replies hitherto received the Committee is not yet in a position to report on this subject.

The Pharmacopoeial Subcommittee has had under consideration the drugs and preparations which might with advantage be deleted from the *British Pharmacopoeia*. Considerable progress has been made and the subcommittee is continuing its labours.

Premises.

17. Last year your Council reported that it was carefully considering the whole question of providing proper and sufficient accommodation for all departments of the work of your Association; and with this idea the Premises and Library Committee has spent much time and trouble in arriving at a thoroughly comprehensive scheme.

With the existing buildings, the Association is not in the most favourable position for securing the best return on the capital invested. For a considerable time the accommodation necessary for efficiently carrying on the work of the Association has been inadequate, and, except for the General Office, the rooms available are small, badly arranged, and ill-ventilated.

Having regard to the commanding position of your premises, and the great value of freehold frontages on the Strand, your Council felt that it might be advantageous to sell this property and acquire a site elsewhere equally suitable for the business of your Association. Accordingly your Council applied to some of the leading land agents and others in London for suitable sites, and stipulated that no property could be entertained other than freehold. As evidence of the difficulty of securing freehold property in the centre of London, it is remarkable that, in spite of a very extensive search, nothing at all suitable was forthcoming.

Certain properties were available on a ninety-nine years' lease; but, on consulting Mr. J. Brougham Glasier, senior partner in the well-known firm of Messrs. Glasier and Sons, Valuers and Land Agents, your Council was advised that the purchase of such a site as an investment would not compare favourably with a plan to demolish and rebuild suitable offices on your present freehold site.

In face of this opinion, from so eminent an expert, your Council felt it had no alternative whereby the Association could be placed in a more favourable financial position so far as your property is concerned, and therefore decided to rebuild on a comprehensive scheme. In order to secure suitable plans for the rebuilding, your Council invited six architects to compete and submit proposals for the best means of dealing with the site, and in the adjudication on the plans submitted has had the assistance of an experienced architect as assessor.

On considering the question of rebuilding, it is estimated that to construct suitable offices and take full advantage of the site a capital outlay of from £35,000 to £40,000 will be involved. Although this would appear a large sum, your Council feels that by such an outlay your Association for many years to come will be provided with modern, suitable, and convenient premises for the housing of all departments of its work. Further, what is of no less importance, as a result of the rebuilding a net increase of rent from the ground floors of £2,400 per annum is anticipated, being a return of 6 per cent. on a capital outlay of £40,000.

The carrying out of the rebuilding will necessitate considerable disturbance and the finding of temporary offices elsewhere, but your Council will use every endeavour to minimize any inconvenience to members, and to push on the work with the utmost expedition. It is hoped that by July, 1907, your Association will be able to resume possession of 429, Strand.

Colonial Committee.

18. This Committee has devoted much time to the consideration of ordinances governing medical practice in the Colonies, more especially Ceylon and the West Indies, where the Medical Acts have recently been under revision. The Committee continues to urge the importance of establishing Medical Registration in all His Majesty's Colonies and Dependencies. The Colonial Secretary has pointed out that he is unable to lay down any hard-and-fast regulations in this direction, as he must to a considerable extent be influenced by the views of local Legislatures, more especially in the smaller and less organized Colonies where there are difficulties of varying population and language.

A Special Subcommittee has been at work for the past two years with the view of establishing the principle of reciprocity of medical practice throughout the Empire, more especially in Australasia, and urging the expediency of registering only those medical qualifications which are registrable in the United Kingdom. Marked encouragement has been received through the Colonial Secretary from the Governors of the States in the Commonwealth; New South Wales, Western Australia, South Australia, and Tasmania, have formally expressed approval of the principle. Everything points to the efforts of the Association in this direction being successfully accomplished.

It is hoped that Australasia will follow the Ordinances of Ceylon and of the Medical Council of Cape Colony, whereby equal rights and advantages are given only to holders of British registrable Degrees, or to holders of Degrees from such Foreign Countries as admit those holding British registered Degrees to practise within their dominions.

Other interests of members resident in Greater Britain beyond the Seas have also from time to time received the careful consideration of the Committee.

Medico-Political Committee.

19. The Medico-Political Committee has held six meetings since the Annual Representative Meeting at Leicester.

The minutes of the Committee which have been placed before your Council have contained the record of the consideration of many important questions, upon which the Medico-Political Committee will in the ordinary course report fully to the Representative Meeting. The present report is confined to an account of those matters which have been the subject of special resolutions of your Council.

In accordance with the instruction of the Annual Representative Meeting at Leicester, the resolutions of that meeting on the subject of contract practice and the reports presented by the Medico-Political Committee in relation to that subject have been circulated, not only through the Supplement to all members of the Association, but also to all practitioners in the United Kingdom who are not members.

The attention of the Medico-Political Committee having been drawn by a Division of the Association to the fact that the Recommendations as to contract practice were being misunderstood as containing a recommendation by the Association that contract practice should be undertaken, the Committee decided to inform the Divisions that this was not the intention of the report, and your Council deemed it advisable that a communication to that effect should be included in the information sent to practitioners who are not members of the Association.

Your Council also approved the inclusion in the circular forwarding these recommendations of a report of the decisions of the Representative Meeting on other matters affecting the profession, and a paragraph drawing attention to the work which the Association is doing for the general good of the profession, and asking practitioners who are not members to join the Association. In response to this circular over 300 applications for membership of the Association have been received.

The attention of the Medico-Political Committee having been directed to the dangers to the community resulting from the increasing use in certain districts of diachylon for certain purposes, a special Subcommittee was appointed to investigate the matter, and as a result of their deliberations your Council, on the recommendation of the Medico-Political Committee, has taken the following action.

> (*a*) Representations have been made to the Privy Council that it is advisable that diachylon should be included as a poison in the first part of the schedule to the Pharmacy Act.
>
> It has also been recommended that the opportunity should be taken of the present consideration by Parliament of the Poisons and Pharmacy Bill, which provides, among other matters, for the revision of the schedule to the Pharmacy Act, to include diachylon in the revised schedule contained in that Bill.
>
> (*b*) A communication has been addressed to newspapers which circulate in the districts chiefly affected, asking them to publish a public warning from the Association against this use of diachylon.
>
> (*c*) The support of the Coroners' Society and of the Divisions of the Association is being sought with regard to this matter.

Pursuant to an instruction of the Annual Representative Meeting the Medico-Political Committee has appointed, with the approval of your Council, a special Lunacy Subcommittee, including experts specially qualified to advise on the subjects of the amendment of the Lunacy Laws, and also the amendment of the Inebriates Acts.

The principal subject considered as regards the amendment of the Lunacy Laws was that of the treatment of unconfirmed mental disease. In reference to this your Council has approved the recommendation that the general principles of the Scottish law on this subject in force since 1857 should be applied to England. Under this it would be possible for a case of unconfirmed mental disease to be placed under care and treatment for a period not exceeding six or nine months without being certified under the Lunacy Acts.

It has been decided to approach the Lord Chancellor on the subject, and the co-operation of the Medico-Psychological Association has been sought for this purpose. The full report of the Subcommittee on this matter will be placed before the Representative Meeting.

The Medico-Political Committee will also report fully on the proposals for amendment of the Inebriates Acts which were prepared by the Subcommittee.

The main principle underlying these proposals is that cases of inebriety, or of morphinism and similar drug habits, should be treated by a system of compulsory control analogous to that of the Lunacy Act, and that previous conviction under the criminal law should not be a condition necessary to make such control possible.

Your Council on the recommendation of the Committee proposes to make representations to the Home Secretary upon this subject, and has decided that the support of the Association shall be given to a Bill amending the Inebriates Acts as applying to Scotland based upon the principles above stated which is being promoted by the Glasgow Corporation.

Your Council has decided that members of the new Government should in due course be approached on several other important questions affecting the profession which from time to time have received the consideration of the Association.

In addition to the contemplated deputation to the Lord Chancellor on the subject of the amendment of the Lunacy Laws, it is proposed also to make representations to him with respect to the administration of the Coroners Law by the Coroner for South-West London.

It is proposed also to take advantage of the change in the Government to press forward the proposals as to the reorganization of the Local Government Board which were submitted by a deputation to Mr. Walter Long when President of that Board.

The Prime Minister will be asked to receive a deputation on this subject.

The Medico-Political Committee has carried out, so far as was practicable, the instruction of the Annual Representative Meeting with respect to bringing under the notice of candidates for Parliament questions affecting the medical profession, and circulating the replies to members of the profession in the several constituencies throughout the country.

Your Council, on the recommendation of the Medico-Political Committee, also gave instructions for the circulation to medical practitioners of information as to the past action with respect to medical questions of those candidates who were members of the last Parliament.

These instructions entailed considerable additional work on the Medical Secretary's department.

The Medico-Political Committee has reported to your Council that it is preparing a special report on this matter.

Central Ethical Committee.

20. The Central Ethical Committee has held five meetings and has been called upon to decide, or to advise upon, a greater number of questions of professional conduct than in any previous year, both questions of a general character and as affecting individual members of the profession.

The Committee will in due course present its annual report to the Representative Meeting, and your Council reports only upon those matters which have been the subject of special resolutions of the Council.

Upon the advice of the Central Ethical Committee your Council has approved the adoption by several Divisions and Branches of rules as to procedure in ethical cases, and of rules for the regulation of the professional conduct of the members of those bodies. The rules as to professional conduct in respect of appointments which were placed before the Annual Representative Meeting at Leicester by the Central Ethical Committee in its annual report, have been found suitable for the requirements of several Divisions and have been adopted by them with the approval of your Council. An important modification of the rule as to the adoption of such resolutions has been introduced by the Portsmouth Division, namely, that if a certain proportion of the members of the Division are not present at the meeting at which any resolution affecting the terms upon which appointments should be held is carried, the resolution shall be referred to a vote of the members of the Division taken through the post.

The Central Ethical Committee has been called upon to advise the Council on several questions affecting the insertion of advertisements in the British Medical Journal, and advertisements have been refused which in the opinion of the Central Ethical Committee contained unduly commendatory references to individuals, or undue claims as regards methods of treatment. In particular, advertisements relating to Homes for the treatment of inebriety have been refused which appeared to contain claims to the possession of special methods of treatment not generally made known.

The warning notice as to appointments which is published in the advertisement columns of the British Medical Journal, under the supervision of the Central Ethical Committee, has been found increasingly useful to the Association and the profession. The Central Ethical Committee has been unable to advise your Council to relax, as requested in some cases, the rule originally approved with respect to the insertion of these notices—namely, that the Medical Secretary must only insert a notice in this column upon the application, or with the concurrence, of the Honorary Secretary of the Division or Branch of the Association concerned, and that the name given as that of the person to whom applications for information should be addressed must in all cases be that of the Honorary Secretary who makes or authorizes the application. Inasmuch as this notice is inserted upon the responsibility of the Council of the British Medical Association, your Council concurs in the opinion of the Central Ethical Committee that the Council should be able to rely in every case upon a local officer of the Association for advice as to the propriety of the insertion of the notice. With a view to extending the usefulness of the notice to the members of the medical profession who may not see the British Medical Journal, your Council has directed that the medical schools throughout the country be requested to place this notice weekly upon their notice boards.

The question having arisen for consideration as to the advisability of the Central Ethical Committee dealing with cases which have not been previously referred for investigation by Divisions of the Association, your Council has approved a standing resolution whereby cases in which any question of fact appears to be in dispute will always be referred for primary investigation to the respective Division.

The effect of this resolution will be that issues of fact will only be tried by the Central Ethical Committee upon appeals from decisions of Divisions or Branches, or in cases where Branches propose the expulsion of members.

To facilitate the satisfactory investigation of such cases your Council has authorized the payment of the travelling expenses of those who may attend at the request of the Central Ethical Committee to give evidence.

ORGANIZATION COMMITTEE.

21. The most important matter engaging the attention of the Organization Committee during the year, apart from its ordinary routine work, has been that of the proposed application for a Royal Charter. Your Council received from the Annual Representative Meeting the following instructions:

Minute 50.

> "That the Representative Meeting issue the necessary authority for application on behalf of the Association to be made to the Privy Council praying His Majesty to grant a Royal Charter of Incorporation to the Association."

Minute 54.

> "That the Central Council be instructed to submit the draft of the application for a Royal Charter to the Divisions as soon as possible, with an estimate of the probable cost and with an explanatory memorandum."

Minute 239.

> "That it be an instruction to the Council, in drafting the new regulations in connexion with the application for a Charter, to provide for the transference of all financial business from the General to the Representative Meeting of the Association."

Minute 240.

> "That it be an instruction to the Council, in drafting new regulations in connexion with the application for a Charter, to provide for the constitution of a Finance Committee separate from the Committee which deals with the Journal."

In accordance with the standing order of the Council that the Organization Committee should deal with all matters affecting the regulations of the Association and standing orders, the foregoing resolutions of the Representative Meeting were referred to that Committee. After most careful consideration by the Committee, in conjunction with the Officers and the Solicitor of the Association, and with Counsel (Mr. T. R. Colquhoun Dill, who was specially engaged for this matter), a draft Charter, ordinances, and by-laws have been prepared, as well as an explanatory memorandum and estimate of cost, as directed by the Representative Meeting, and have been issued for the consideration of the Divisions.

The work of preparation of these documents was carried out in the office of the Medical Secretary, as Secretary of the Organization Committee, and has occupied much of the time of the staff of that department during the winter.

The following instructions of the Representative Meeting to your Council were also referred to the Organization Committee in order that draft by-laws might be prepared as directed:

Representation of Representative Meeting on Council, and Grants to Branches and Divisions.

Minute 185.

> "That the Representative Meeting be given power to elect not less than four nor more than six members of the Central Council."

Minutes 194-5.

> "That in the opinion of the Representative Meeting, it is desirable that the Council, having made due provision for the expenditure necessary to carry out other objects of the Association, should have power to make from time to time grants from the central funds to such Branches or Divisions, and of such amounts as the Council may think proper, having regard to the evidences of work done, and to the amount of local subscription for any purpose for which a supplementary grant may be given, the Council to be advised by the Organization Committee as to the distribution of the amount available; and that the Council be instructed at the first opportunity to bring before the Representative Meeting such alterations of the by-laws as may be necessary to give effect to this resolution."

Minute 197. (Rider added.)

> "That the applications for money by Divisions be in the first place made to the Branch Councils and forwarded by them with remarks thereon for the consideration of the Council."

Draft by-laws have accordingly been prepared by the Committee, and these having been approved by your Council as appearing to fulfil the intention of the Representative Meeting at Leicester, are now submitted for the consideration of the Annual Representative Meeting in London.

Upon consideration of the draft by-law as to the election of members of Council by the Annual Representative Meeting, the Organization Committee reported to your Council that it appeared desirable that some limit of time should be assigned to the continuous service of members of Council so elected, such as is assigned by the by-laws to the period of service of members of Council elected by the Branches and those co-opted by the Council. This recommendation having been approved by your Council, a draft by-law has accordingly been prepared and is submitted for the consideration of the Annual Representative Meeting.

Your Council further referred to the Organization Committee the following resolution of the Representative Meeting:

Minute 192.

> "That, with a view to furthering the organization of the medical profession, the Council be asked to consider the advisability of providing a scheme for the affiliation of local medical societies with the British Medical Association."

And your Council reports its concurrence in the following recommendation of the Committee:

> "That in the opinion of the Committee the only form of affiliation compatible with the constitution of the Association is that the local Society should be merged in the Association, and that, having regard to the variety of local conditions, no general scheme for this purpose can be formulated, and that the Council be recommended so to report to the Representative Meeting."

The Organization Committee has also had under consideration instructions of the Annual Representative Meeting at Leicester to that Committee as follows:

On consideration of the motion—

Minute 143.

Moved: "That in By-law 23, for '600' be read '300.'"

Minute 144.

Resolved: "That the resolution of the Wandsworth Division be remitted to the Organization Committee for consideration of the principle that it is undesirable to increase the membership of the executive body of the Association."

With reference to the resolution of the Representative Meeting contained in Minute 144 the Committee reports that it is inexpedient to increase the size of the Council, and that, having regard to the addition of members to be elected by the Representative Meeting, it is inadvisable that the number of Branch representatives should be increased.

The Annual Representative Meeting at Leicester postponed (Minute 136) consideration of a proposed resolution (Minute 134) as follows:

> "Except for the purpose of winding up, the Association shall not have power to call for the return to its general funds of any surplus accruing from the grants to Branches under By-law 16 until the Organization Committee should have reported to the Central Council upon Branch and Division expenditure."

The Organization Committee has made careful inquiry from the Branches and Divisions throughout the country as to their views upon this subject, and the replies have been collated. It is hoped that a complete report on the subject will be available for the Annual Representative Meeting.

The Organization Committee, in pursuance of its ordinary duties, has considered and reported to your Council upon Rules submitted by 4 Branches and 3 Divisions, and these have all been approved except in cases in which it appeared to the Organization Committee that the proposed Rules conflicted with the letter or spirit of the Articles and By-laws of the Association.

Adjustments of boundaries have been effected by your Council upon the recommendation of the Committee, or by the Committee itself under the standing authority conferred upon it by the Council to deal with cases in which there was entire local agreement.

In each case the modification of existing boundaries was considered at the request of the members of the Association directly concerned, and was carried through with the concurrence of the Divisions and Branches affected.

Your Council has approved the formation of two new Branches outside the United Kingdom, namely, the Egyptian Branch and the Saskatchewan Branch.

Your Council has carefully considered the most convenient grouping of Divisions and Branches for representation in the Representative Meeting and in the Central Council respectively. Attention having been drawn last year to the inconvenience resulting to some Colonial Branches from the fact that their grouping was only decided by your Council at the same time as that of the Home Branches, the matter was taken into consideration as affecting the Colonial Branches at the January meeting of the Council, and the decisions of your Council communicated to the Colonial Branches. Representations have again been made by certain Home Branches as to the inconvenience resulting from grouping with other Branches for representation on the Council, particularly in cases in which Branches having over 200 members have to be grouped in order to provide for the representation of neighbouring Branches having fewer than 200 members. Your Council, having regard to the terms of By-law 23, has been unable to depart from the principles originally laid down in this matter.

Your Council has received periodically from the Organization Committee reports of visits paid by the Medical Secretary to various Divisions and Branches, including both visits made by instruction of that Committee with the object of increasing the membership and strengthening the organization of the Association, and those made by direction of other Committees for the purpose of giving assistance in local difficulties affecting the interests of the profession, or in the investigation of ethical cases.

Repeated testimony has been received from the Branches and Divisions to which such visits have been paid as to the value of the work thus done in furtherance of the interests of the medical profession, in inducing medical practitioners who are not already members of the Association to join, and in awakening or increasing the interest of members in the work of the Association.

Public Health Committee.

22. The Public Health Committee has met four times since the last annual meeting, and has considered important questions affecting the public health service of the country generally, and also questions of defence of individual officers in cases of disputes as to terms of appointment.

The Public Health (Security of Tenure of Officers) Bill was the subject of a special instruction from the Annual Representative Meeting to your Council (Minute 41), and every effort has been made to prepare the way for the favourable consideration of the Bill by Parliament. As the result of representations made through the Chairman of the Public Health Committee, the late President of the Local Government Board (Mr. Gerald Balfour) received a deputation from the British Medical Association, the Incorporated Society of Medical Officers of Health, and the Sanitary Inspectors' Association on the subject of this Bill. Mr. Balfour expressed the sympathy of the Local Government Board with the general objects of the Bill, but indicated certain difficulties which might prevent the Board from approving it in its present form.

The Public Health Committee has carefully considered these difficulties, and to what extent it might be possible for the Association to modify the Bill in order to meet the views of the Board. It has been decided to seek the first favourable opportunity of bringing the matter before the present President of the Local Government Board.

On the recommendation of the Public Health and Medico-Political Committees, your Council has appointed a special Committee to collect evidence to be submitted on behalf of the British Medical Association to the Royal Commission on the Poor Law. Questions drawn up by the Committee are now being circulated to those who are believed to be in a position to give information of value, and the replies will be carefully collated and evidence thereon submitted to the Royal Commission.

The attention of the Public Health Committee has been drawn to the practice of some medical practitioners who are members of public bodies giving expert advice in order to enable such bodies to avoid the necessity of appointing expert officers. The Ethical Committee has been requested to consider the matter, and it will be the subject of a recommendation to the Annual Representative Meeting from that Committee.

Hospitals Committee.

23. The Hospitals Committee has met three times since the last annual meeting of the Association, in addition to holding two Conferences with non-medical representatives of the governing bodies of hospitals, appointed at the Conference held in March, 1905.

The conclusions of the Committee on various points considered subsequently to the Conference of 1905, namely, cottage hospitals, pay wards, and the relation of hospitals to provident dispensaries, public medical services, and the Poor Law, were reviewed by the Committee, and submitted with the findings of the Conference of March for the consideration of the Joint Committee. Having been amended in various respects to meet the views of the non-medical members of the Joint Committee, these were forwarded to your Council with a recommendation that they should be issued for the consideration of the governing bodies of all hospitals in the United Kingdom, together with a Memorandum explaining the circumstances in which they were so presented.

The Hospitals Committee has also considered the following resolution of the Annual Representative Meeting at Leicester:

> That it is inadvisable that this meeting should pass a resolution on the general principle of hospital outpatient departments before that principle has been submitted to the Divisions, and this meeting hereby decides that the question be remitted through the Hospitals Committee to the Divisions.

This resolution has been placed before the Divisions, together with all the resolutions of the Hospitals Committee, in order that the Divisions might be placed in a position to consider the question of out-patient departments in its relation to the various other questions affecting the government of hospitals which had come before the Committee.

Apportionment of a Member's Annual Subscription.

24. Your Council submits a Schedule as follows, showing how a member's subscription of 25s. per annum is apportioned for defraying the expenses of the Association during the past year:

General Association expenses, Representative Meeting, Council, Committees, Library, salaries, and wages ...	£15,549	13.67
Capitation to Branches	3,459	4.0
Type and plant depreciation	250	0.2
Written off investments...	781	0.8
Clerical staff superannuation...	300	0.25
Written off subscriptions	742	0.63
Carried to capital account	912	0.85
Net cost of printing Journal, postage, editorial, etc., after deducting receipts for advertisements, sales, etc.	5,230	4.6
	27,223	
Receipts from advertisements, sales of Journal, etc.	22,930	
	£50,153	25.0

Clerical Staff.

25. Your Council is aware that the success and activity of the Association is to no small extent dependent on the loyal and enthusiastic co-operation of the clerical staff at head quarters; and it takes this opportunity of placing on record its sincere appreciation of the valuable assistance rendered to your Association by the Editor, the General Secretary and Manager, the Medical Secretary, and the whole of the staff throughout the past twelve months.

Auditors.

26. Your auditors, Messrs. Price, Waterhouse and Co., have again examined and audited your books during the year 1905, and under Article XXIII (*a*) and in accordance with the Companies Act, 1900, they are eligible and seek re-election.

H. W. LANGLEY BROWNE,
Chairman of Council.

NOTICES OF MOTION.

The following notices of motion have been received for discussion by the Annual Representative Meeting of the Association to be held at London, July 24th, 1906, and following days.

[*Notices previously received were published in the* Supplement *of February 10th, page 45; February 24th, page 62; March 3rd, page 78; March 31st, page 141; and April 21st, page 181.*]

ADMINISTRATION OF THE ASSOCIATION LIBRARY.

Circulating Medical Library.

By the Gateshead Division (North of England Branch):
That the Council of the Association be requested to take into consideration the feasibility of adding to the other attractions of the Association a Circulating Medical Library, and report to the Divisions in time for a decision to be taken at the next Representative Meeting.

By Direction of the Chairman of Representative Meetings.

J. Smith Whitaker, *Medical Secretary.*

April 26th.

1906 ANNUAL GENERAL MEETING.

The Annual General Meeting of the British Medical Association will be held in the Caxton Hall, Caxton Street, Victoria Street, London, S.W., on Tuesday, July 24th at 10 o'clock in the forenoon.

BY ORDER OF THE COUNCIL,

GUY ELLISTON, *General Secretary.*

April 18th, 1906.

ASSOCIATION INTELLIGENCE.

PROCEEDINGS OF COUNCIL.

At a meeting of the Council held, by kind permission of the Metropolitan Asylums Board, London, in their Board Room, on Wednesday, April 18th, 1906, at 2 o'clock in the afternoon.

Present:

Dr. H. W. Langley Browne, Chairman of Council, in the Chair.
G. C. Franklin, F.R.C.S., Leicester, President.
Sir Victor Horsley, F.R.S., Chairman of Representative Meetings.

Dr. John Ford Anderson, London.
Dr. T. R. Bradshaw, Liverpool.
Dr. R. Cochrane Buist, Dundee.
Dr. W. A. Carline, Lincoln.
Mr. Andrew Clark, London.
Dr. James Craig, Dublin.
Mr. E. J. Domville, Exeter.
Mr. George Eastes, M.B., London.
Professor David W. Finlay, M.D., LL.D., Aberdeen.
Dr. H. A. Francis (Brisbane and Queensland Branch), London.
Dr. John H. Galton, Upper Norwood.
Dr. Joseph J. Giusani, Cork
Dr. Bruce Goff, Bothwell.
Dr. David Goyder, Bradford.
Dr. J. Groves, Carisbrooke.
Dr. James Hamilton, Glasgow.
Dr. T. Arthur Helme, Manchester.
Mr. R. H. Kinsey, Bedford.
Dr. C. G. Drummond Morier (South Australian Branch), London.
Professor J. T. J. Morrison, M.B., Birmingham.
Professor William Osler, M.D., F.R.S., Oxford.
Mr. C. H. W. Parkinson, Wimborne Minster.
Dr. Frank M. Pope, Leicester.
Dr. Edwin Rayner, Stockport.
Mr. H. Jones Roberts, Penygroes.
Mr. H. Betham Robinson, M.S., London.
Mr. George Rowell, F.R C.S., London.
Dr. Cecil E. Shaw, Belfast.
Dr. E. Markham Skerritt, Clifton, Bristol.
Professor W. R. Smith, M.D. (Malta and Mediterranean Branch), London.
Mr. C. R. Straton, Salisbury.
Dr. G. E. Twynam (Sydney and New South Wales Branch), London.
Mr. T. Jenner Verrall, Brighton.
Dr. Norman Walker, Edinburgh.
Dr. Arthur T. Wear, Newcastle-on-Tyne.
Lieutenant-Colonel E. M. Wilson, C.B., Farnborough.

The minutes of the last meeting (March 14th, 1906) having been printed and circulated and no objections received were taken as read and signed as correct.

Read letters of apology for non-attendance from the Treasurer, Dr. E. G. Barnes, Dr. J. Brassey Brierley, Colonel D. Bruce, C.B., F.R.S., Dr. D. Burgess, Dr. G. W. Crowe, Dr. T. D. Griffiths, Dr. R. McKenzie Johnston, Dr. James Murray, Mr. Edmund Owen, Dr. J. Maxwell Ross, Professor Saundby, Mr. W. D. Spanton, Mr. J. Lynn Thomas, C.B., and Dr. W. J. Tyson.

The Chairman of Council reported the resignation of Dr. M. Beverley as a representative of the East Anglian Branch on the Central Council.

Moved by the Chairman of Council, seconded by Dr. Markham Skerritt, and

Resolved: That this Council learns with regret that Dr. Beverley, who has so ably represented the East Anglian Branch for a number of years on the Central Council, resigns his seat, and desires to place on record its high appreciation of his services, more especially as Chairman of the Hospitals Committee.

Moved by Mr. Andrew Clark, seconded by Colonel Wilson, and

Resolved: That the Volunteer Medical Service Committee consist of: The President and Chairman of Council, *ex officio*, Colonel G. T. Beatson, C.B., V.D., Surgeon-Colonel W. H. Bull, V.D., Surgeon-Colonel Andrew Clark, V.D., Surgeon-Colonel G. S. Elliston, V.D., Surgeon-Captain W. N. Evans, Surgeon-Colonel P. B. Giles, V.D., Captain J. McK. Harrison, Lieutenant-Colonel Valentine Matthews, V.D, Surgeon-Major J. Munro Moir, Captain E. C. Montgomery Smith, Major C. P. Oliver, Surgeon-Captain W. Pemberton Peake, Captain H. Robinson, Captain Wm. Sheen, Lieutenant-Colonel R. R. Sleman, V.D., Surgeon-Captain J. B. Stevens, Surgeon-Colonel W. R. Smith, V.D., Surgeon-Lieutenant-Colonel Atwood Thorne, Surgeon-Lieutenant-Colonel A. T. Wear, V.D., and Lieutenant-Colonel E. M. Wilson, C.B., C.M.G.

Read acknowledgements from the Prime Minister, and Lord George Hamilton (Chairman of the Royal Commission on the Poor Laws and Relief of Distress) in reference to the minute, pointing out that the constitution of the Royal Commission on the Poor Laws would command the confidence of the medical profession if the Government were to appoint upon the Commission representatives of those responsible for the administration of the Medical Service of the Poor Laws, which were ordered to be entered on the minutes.

Read acknowledgement of the congratulatory resolution passed by the Council upon Sir Walter Foster having been sworn a member of His Majesty's Most Honourable Privy Council, which was ordered to be entered on the minutes.

30, Grosvenor Road, Westminster, S.W.,
March 31st, 1906.

Dear Mr. Elliston,—I am much gratified by the resolution passed by the Council of the Association at their last meeting congratulating me on being sworn a member of His Majesty's Most Honourable Privy Council. There are many burdens and drawbacks in public life, but in my experience they are amply compensated for by the kindly remembrance of old friends and associates like the members of your Council. It is on this account that I am most grateful for their kind resolution.—Yours truly,

WALTER FOSTER.

Guy Elliston, Esq.,
Secretary, British Medical Association.

The following resolutions from the Council of the Lancashire and Cheshire Branch were then considered:

1. This Council views with alarm the serious decrease in the surplus funds of the Association during the past year, and urges upon the Central Council the absolute necessity of curtailing the expenses in the several departments, notably that of the Medical Secretary.

2. That this Council instructs the Representatives of the Branch to bring the matter before the Council of the Association.

3. That the action of our members on the Council of the Association be approved, and that they be thanked for their services in opposing unnecessary expense in the organizing department of the Association; and, further, that this Branch Council hopes they will continue in such action.

4. That, in the opinion of this Council, it is desirable that the Medical Secretary should devote his attention to organizing and advisory, and not to clerical, work.

5. That this Council is of opinion that the proposal of *Answers* to appoint medical practitioners to give free medical advice in return for a supposed introduction to medical practice in their immediate neighbourhood is derogatory to the dignity of the profession, and against the interests of both the public and the profession.

6. That this Council is of opinion that the holding of such an appointment by a member of the British Medical Association is inconsistent with membership of the Association.

7. That this Council is prepared to lay before the General Medical Council the case of any medical man taking up such an appointment within the boundaries of this Branch.

8. That this Council regrets the delay in the report upon the complaint of a member of the Branch, and requests the Representatives of the Branch upon the Central Council to use every possible means to expedite the consideration of the case by the Council, and further request Dr. G. H. Broadbent to use his best efforts with the Ethical Committee for the same end.

Resolved: That Resolutions 1 to 4 be received and entered on the minutes, and that it be pointed out to the Council of the Lancashire and Cheshire Branch that the expenditure in the several departments, and notably that of the Medical Secretary, is largely consequent upon the due fulfilment of instructions of the Representative Meeting. That resolutions Nos. 5 to 8 be received and entered on the minutes.

Read communication conveying invitation for the Annual Meeting to be held in Exeter:

1, Matlock Terrace, Torquay,
March 7th, 1906.

Dear Sir,—The question of inviting the Association to hold its Annual Meeting of 1907 at some place within the Branch area has been under consideration by the Branch for some time past. I am now instructed to inform you that it is the unanimous wish of the Branch to issue a cordial invitation to the Association to hold its Annual Meeting of 1907 at Exeter.

A deputation from the Branch has been appointed to wait upon the Central Council and tender the invitation, and are ready to attend at your Council on the 14th inst. if it should be convenient for your Council to receive them.

I have the honour, Dear Sir, to remain,
Guy Elliston, Esq., Your faithful Servant,
General Secretary, G. YOUNG EALES, Hon. Sec.
British Medical Association.

Resolved: That the letter be received and entered on the minutes.

Resolved: That the South-Western Branch and the Bradford Division be respectively informed that the new Council for 1906-7 will be glad to receive deputations conveying invitations for the holding of the 1907 Annual Meeting on Wednesday morning, 26th July, at an hour to be subsequently arranged.

Resolved: That the 29 candidates whose names appear on the circular convening the meeting be and they are hereby elected members of the British Medical Association.

Resolved: That the minutes of the Journal and Finance Committee be received.

Dr. MARKHAM SKERRITT, in the absence of the Treasurer, presented the Financial Statement for the year ending December 31st, 1905.

Resolved: That the Financial Statement for the year ending December 31st, 1905, as certified by the auditors be received and approved and circulated, together with the estimate of receipts and expenditure for the year ending December 31st, 1906, to the Secretaries of Branches and Divisions and published in the JOURNAL in accordance with By-law 34. (see page 200.)

Moved by Dr. MARKHAM SKERRITT, seconded by the CHAIRMAN OF COUNCIL, and

Resolved: That the Council approve the Rules of the scheme for the Superannuation of the Clerical Staff, and that they be the rules governing the fund.

Resolved: That the salary of the Medical Secretary be increased by £50 per annum.

Resolved: That the Southern Branch be informed that it is by the consent of the Council that the advertisements referred to are advertised in the JOURNAL.

Resolved: That the accounts for the quarter ending 31st March last, amounting to £11,491 12s. 8d., be received and approved, and it be recommended that the Treasurer be empowered to pay those remaining unpaid, amounting to £3,963 5s. 10d.

Resolved: That the railway fares of witnesses called by the Irish Committee for an ethical inquiry be paid in the same way as witnesses summoned by the Central Ethical Committee.

Resolved: That the minutes of the Premises and Library Committee be received.

Resolved: That the Council award the first Prize to the competitor's plans No. 5, bearing the *nom de plume* "Light and Air," and the second Prize to the competitor's plans No. 3, bearing the *nom de plume* "Lux."

The CHAIRMAN of COUNCIL then opened the sealed envelopes and declared the author of "Light and Air" to be Mr. H. Percy Adams, F.R.I.B.A., 28, Woburn Place, W.C., and the author of "Lux" to be Mr. Edmund Woodthorpe, F.R.I.B.A., 32, Gresham Street, E.C.

Resolved: That the regulations for the guidance of the Librarian in regard to duplicates be approved and adopted, and stand as the regulations of the Association for the guidance of the Librarian.

Resolved: That the accounts for the quarter be received and that the Treasurer be empowered to pay them, amounting to £46 7s. 11d.

Resolved: That the General Secretary be instructed to inform the Honorary Secretaries of the Cheltenham Medical Library and the Portsmouth Medical Library that the Council regrets it cannot accede to their requests, as in giving duplicate books it is the rule of the Association to give priority to the Branches and Divisions of the Association.

Resolved: That the minutes of the Medico-Political Committee be received.

Moved by Dr. BUIST, seconded by Mr. PARKINSON, and

Resolved: That the support of the Association be given to the Prevention of Corruption Bill.

Moved by Mr. Kinsey, seconded by Dr. Craig, and

solved: That the action of the Chairman of the Medico-Political Committee in communicating with the Government regarding the composition of the Royal Commission on Vivisection be approved.

solved: That the minutes of the Irish Committee be received.

solved: That the minutes of the Ethical Committee be received.

solved: That the Council approve the adoption of the Model Rules of Ethical Procedure, and of the Bradford Rules by the Marylebone Division, and of the Bradford Rules by the Stockport, Macclesfield, and East Cheshire Division.

solved: That the minutes of the Organization Committee be received.

olved: That the Council do not approve the proposed new Rule of the Yorkshire Branch with reference to the election of representatives of the Branch on the Central Council.

olved: That having regard to the expression of opinion of those attending the Conference of Honorary Secretaries at Leicester as to the utility of such Conferences, the Council sanction that a Conference of Secretaries be held at the time of the forthcoming Annual Representative Meeting in London.

he Committee reported that in accordance with instruc- s already received they were preparing a comprehensive rt on Division and Branch expenditure, based on the ies to inquiries circulated by the Committee, and on annual reports of Divisions and Branches; that it was rable such a report should be available for the consider- of the Divisions before the Annual Representative ting.

lved: That the Council authorize the Committee to circulate the report when complete without waiting to place the same before the Council.

lved: That with respect to the Annual General Meeting this year all the business described under Section A of Article XVIII be transacted at the General Meeting in London.

lved: That the Council authorize the Organization Committee to regroup the North Wales, Shropshire, and Staffordshire Branches, and also the Dorset and West Hants, West Somerset, and Bath and Bristol Branches, if found desirable, upon consideration of he membership as shown by the Annual List of Members, and of intimations received as to the wishes f these Branches respectively.

lved: That the other Branches in the United Kingdom be provisionally granted independent epresentation, or be grouped, as the case may be, or the year 1906-7, in the same manner as for the ear 1905-6.

ved: That the West Bromwich Division, if not ttaining fifty members before April 30th, be grouped ith the Dudley and Bromsgrove Divisions.

ved: That the Enniskillen, Monaghan, and Omagh ivisions be grouped with the Divisions of Connaught form one constituency as was the case last year.

ved: That the Council do provisionally group the ther Divisions in the United Kingdom for repre- ntative purposes for the year 1906-7 in the same anner as in the year 1905-6.

ved: That the Council authorize the Organization ommittee, as in previous years, finally to determine e grouping of Divisions and Branches as soon as ssible after the information contained in the Annual ist of Members is available.

ed: That the Council accept the return of the presentative elected by the Halifax and Nova Scotia ranch.

ed: That arrangements be made for the forthcoming nual Representative Meeting to consider the draft arter, Ordinances, and By-laws, the replies of visions in the United Kingdom and the report of e Council thereon; that the Divisions in the United ngdom be informed that the matter will be so nsidered, and that the Divisions not in the United ngdom be informed that the Representative Meeting ll not be asked to come to any final decision upon matter until the replies of the Divisions outside United Kingdom have been received, five months being allowed for this purpose from the date of the issue of this notice.

Resolved: That Divisional Secretaries be requested to notify the Medical Secretary of all intended meetings of their Divisions, and that postcards be supplied them for that purpose, so that any matter awaiting consideration may, if possible, be forwarded in time for such meetings.

Resolved: That the minutes of the Public Health Committee be received.

Resolved: That in view of information received showing that Clause 2 (1) of the Public Health Bill has been interpreted in a sense not intended by the Association, the Council authorize such redrafting of the Clause as shall make clear that the only object is to secure that appointments of Sanitary Officers shall not lapse without the sanction of the Local Government Board.

Resolved: That the Report of Council be received and approved and submitted to the Secretaries of each Branch and Division, and published in the Journal in accordance with By-law 34. (See page 197.)

Moved by the Chairman of Council, seconded by Dr. Carline, and

Resolved: That Mr. W. E. Hempson be reappointed Solicitor to the Association for the ensuing twelve months.

Resolved: That the reports of Branches be received, approved, and published in the Journal. (See page 217.)

Moved by the Chairman of Council, and

Resolved: That the Annual General Meeting be summoned for 10 a.m. on Tuesday, July 24th, to be immediately followed by the Representative Meeting. Further, that the Representatives meet *de die in diem* at 10 a.m. until the completion of business.

Resolved: That the Report on Puerperal Morbidity be received and published in the Journal.

The Council rose at 6.30 p.m.

Proceedings of Committees.

MEDICO-POLITICAL COMMITTEE.

A meeting of the Medico-Political Committee was held at the office of the Association on March 28th, when there were present: Dr. R. C. Buist, in the chair; Sir Victor Horsley, F.R.S. (Chairman of Representative Meetings), Dr. H. Radcliffe Crocker (Treasurer), Mr. H. W. Armit, Dr. T. Arthur Helme, Mr. George Jackson, Dr. H. A. Latimer, Dr. J. A. Macdonald, Dr. L. S. McManus, Dr. H. F. Oldham, Dr. Cecil E. Shaw, Mr. C. R. Straton. Mr. W. E. Hempson, solicitor to the Association, also attended to advise the Committee upon certain matters.

Substitution of Property Tax for Income Tax.

The Committee considered a communication from the Exeter Division forwarding a copy of the memorandum on the substitution of property tax for income tax, and recommended the Division to refer the matter to the Representative Meeting.

Professional Responsibility.

Dr. Cecil Shaw drew attention to the case of Tughan *v.* Darnell, the third trial of which had taken place in Belfast in the previous week,[1] when the judge, in summing up, gave utterance to dicta with respect to the legal responsibilities of medical practitioners which, if accepted, would render those responsibilities much more onerous than they had hitherto been. A motion was made that the Committee recommend the Council to give the assistance of the Association in taking the case before higher courts, but upon careful consideration it was decided not to adopt this course.

Reports on Recommendations of Committee.

The Chairman reported the action of the Council with respect to the recommendations of the Committee at its last meeting. Also that the Council, on consideration of the minute of the Committee directing that the honorary secretaries of Divisions should be informed that the recommendations of the Committee as to contract practice were not intended to convey any recommendation in favour of such practice, ordered that a statement to this effect should also be included in the copies of the recommendations on contract practice which by direction of the Representative Meeting were being forwarded to all practitioners.

---

[1] British Medical Journal, April 7th, 1906, p. 833.

Medical Acts Amendment Bill.

The Committee received the report of Counsel instructed to revise the Medical Acts Amendment Bill in accordance with the instructions of the Representative Meeting and to prepare a schedule of repeals preparatory to the introduction of the Bill into Parliament. Upon consideration of Counsel's report, it was decided to instruct him to carry out the more complete redrafting of the Bill which he had suggested as desirable, and that the Committee should report accordingly to the Annual Representative Meeting.

Vivisection.

The Chairman reported that on receiving information as to certain Bills affecting the position of vivisection which had been introduced into the House of Commons and were down for second reading at an early date, and also as to the statement by the Home Secretary that he was prepared to appoint a Royal Commission to inquire into the subject of vivisection, he had, as a matter of urgency, directed that a letter be written to the Home Secretary, and also a letter to all members of Parliament, urging that in view of the proposed appointment of a Royal Commission the *status quo* as regards vivisection should not be disturbed in the meantime, and that, therefore, the two Bills in question should not be allowed to go forward. Special requests had been addressed to the medical members of Parliament to take action in the matter.

The Committee approved the action taken by the Chairman, and appointed a Subcommittee to draft a statement on the matter for the information of members of Parliament.

Poisons and Pharmacy Bill.

It was resolved, on the recommendation of the Parliamentary Subcommittee, that the Privy Council be recommended to include diachylon in the first part of the schedule of the Poisons and Pharmacy Bill (No. 25).

Notice of Accidents Bill.

The Committee placed on record its satisfaction with the incorporation in the Notice of Accidents Bill of those provisions which were urged upon the Home Office in June, 1905, by a joint deputation from the British Medical Association and from the Association of Certifying Factory Surgeons.

Prevention of Corruption Bill.

The Committee recommended the Council to accord the support of the Association to the Prevention of Corruption Bill, promoted with the object of preventing the payment of secret commissions.

Workmen's Compensation Bill.

Authority was given to the Chairman to take action, in accordance with the previously-declared views of the Association, with respect to the position of medical referees under the Workmen's Compensation Bill, which had been introduced into Parliament, but not printed, at the time of the meeting.

Contract Practice Subcommittee.

The Committee received from the Contract Practice Subcommittee a report on the present position of the existing dispute at Ebbw Vale—namely, that the appointment of Arbitrators, Mr. T. Richards, M.P., and the Medical Secretary of the Association, had been agreed to by both sides, but the terms of reference had not yet been settled. The Subcommittee approved the following terms, which had been approved by the Division and by the Contract Practice Committee of the South Wales Branch:

(*a*) That the reference should leave the widest possible powers to the arbitrators as to the conditions they should lay down in their award for the future terms of engagement of the medical staff attending the Ebbw Vale workmen, including whether there should be a workmen's committee of management, whether the poundage should be paid direct, and what the poundage should be.

(*b*) That the award should be in force for three years.

(*c*) That the two arbitrators themselves be requested, a a preliminary to the arbitration, to draw up the detaile terms of reference.

(*d*) That the Association insist that the terms of r ference must be submitted to meetings of the workme and agreed to by them.

A difficulty had in the meantime arisen as to th dismissal of a member of the staff and the appointmen of a successor while the negotiations as to arbitratio were in progress.

A report was also received as to the position at Maccles field, where the Medical Secretary had been requested t assist the local practitioners in clearing up certain diff culties. The Subcommittee reported that they still ha under consideration a model agreement between a contra practice organization and its medical officers, and a set model rules for the public medical services.

Amendment of the Lunacy Law.

The Chairman reported that on communicating to th Medico-Psychological Association, as directed, the desi of the British Medical Association for co-operation i approaching the Lord Chancellor with respect to th amendment of the lunacy laws, certain differences ha arisen which were to be the subject of a conference, ar the Committee gave directions as to the action to b taken.

ETHICAL COMMITTEE.

A meeting of the Ethical Committee was held at th office of the Association on April 6th, when there we present: Mr. R. H. Kinsey (in the Chair), Mr. G. Franklin (President of the Association), Dr. J. Fo Anderson, Dr. A. G. Bateman, Mr. G. H. Broadber Dr. G. W. Crowe, Dr. Bruce Goff, Dr. R. L. Langdon Dow Mr. W. D. Spanton. Among the matters considered we the following:

A Question of a Temporary Appointment.

The Chairman reported that a Division had aske advice as to the propriety of pronouncing unprofession the conduct of a medical practitioner in undertaking discharge temporarily the duties of an appointment whi was being offered for a permanency on terms which t Division had pronounced unsatisfactory. The Committ approved the advice which had been given—namely, th the Division should not condemn the action describ until they had communicated their opinion as to t undesirability of such temporary discharge of the duti of the appointment, and afforded the practition concerned an opportunity of conforming with their view

Powers of Calling Witnesses.

An application was also reported from the Irish Co mittee for information as to their power of summoni witnesses to attend before them in an ethical case, whi had been referred to that Committee, and their power paying expenses. The Chairman reported that the que tion of expenses had been referred to the Journal a Finance Committee.

The Committee resolved to consider at its next meeti the powers of various bodies of the Association to c witnesses in ethical cases.

Powers of Divisions to consider Ethical Cases.

It was also reported that a Division had been informe in answer to an inquiry, that it was competent fo Division of the Association to consider any question professional conduct, including resolutions of a lo medical society, but that it was advisable not to circul to members of the Division a notice such as had been su mitted relating to the conduct of a non-member.

Rules of Divisions and Branches.

The Committee considered Rules submitted by vario Divisions and Branches, and made recommendations the Council in reference thereto.

Action under Standing Orders as to Trade Advertisements.

The Committee received and approved the Medi Secretary's report of action taken under standing instr tions of the Committee with respect to trade advert ments and newspaper notices containing the names medical practitioners.

Medical Advice with “Answers.”

A report was received from the Editor stating that as esired by the Committee, an article had been published in ie British Medical Journal[1] with reference to the heme for the provision of medical attendance recently istituted by *Answers*, and that the appearance of this ticle had immediately been followed by a communica- on from the Editor of *Answers*[2] stating that in deference the opinion of the profession as indicated in the article had decided to abandon the scheme.

The Medical Secretary reported other information ceived indicating that the scheme had in fact been given).

The Committee expressed its satisfaction at the result the action taken through the Journal in the matter.

Results of Action Taken.

The Committee also received reports of the results of tion taken by instruction of the Committee in special ses, including the following:

Advertising by a Notice Board.

In the case of the exhibition by a medical practitioner notice boards, to which exception had been taken, and ich had been referred to the Division for consideration, was reported that the notice boards had now been noved.

False Description in “Medical Directory.”

The attention of a medical practitioner having been wn, by direction of the Committee, to the impropriety iis conduct in inserting in the *Medical Directory* that he l held a hospital appointment, which in fact he had held, it was reported that he had now expressed his ret for this false statement, and had undertaken not to eat it.

Assistant Opposing Former Principal.

he Committee received the report by a Division of the ılts of its investigation of a case, previously before the amittee, in which an Assistant had set up in oppo- m to a former Principal, and concerning which the amittee, seeing that no bond had been signed, had ed whether there was evidence of any under- ding, verbal or documentary, which should have binding between honourable men. With its rt on the facts the Division submitted also its lusions from those facts, and the Committee ex- sed its concurrence in the opinion of the Division, the Assistant in question had acted unprofessionally, ng taken an improper advantage of his fiduciary tion to obtain the patients of his former Principal. Committee further expressed the opinion that the cipal had been guilty of extreme negligence in not ining a proper undertaking when engaging the stant.

“Touting” Letter to Former Patient.

a case in which a medical practitioner had written a r to a patient under the care of another practitioner n he had previously attended, suggesting that he ld again be called in, the Committee found that his uct was most reprehensible, but that the apology h he had tendered should be accepted.

Question as to a Public Appointment.

e Committee considered the case of a practitioner, erly a member of the Association, who had applied to ivision of which he was then a member for support spect of the appointment as medical officer of health, he lost through a dispute with the sanitary rity, and which had been subsequently accepted by er member of the Division. Before the appointment ne vacant the Division had expressed its inability to action in the matter. Communications were also dered relative to the case from the Division con- d as to its action, and from the Council of the Branch ng attention to the delay in consideration of the case e Central Ethical Committee.

Committee resolved that having fully considered pers laid before it, it regretted that there was any in the matter, but considered that the delay was idable. The Committee further expressed the n that it was not called upon to take any action, regard to the fact that the matter had repeatedly been brought before the Executive Committee of the Division, and its decision on both occasions confirmed by the Division, the decision being that no action be taken.

Assurance Companies Offering Improper Inducements to Prospective Referees.

The Committee received a report from a Division with respect to the action of certain sickness and accident assurance companies which held out, as an inducement to medical practitioners to become referees, increase of practice which would accrue from the introduction given to patients of other practitioners. The Division condemned such methods, and suggested that the Central Ethical Committee should issue a warning to members against being connected in any way with the companies complained of.

The Committee concurred in the expression of opinion by the Division, and resolved that this opinion be communicated to Honorary Secretaries of Divisions in order that members might be warned against acting for such companies.

Report on Consultants.

The draft report on consultants, prepared by direction of the last Annual Representative Meeting, was further considered, and final consideration postponed to a special meeting.

PUBLIC HEALTH COMMITTEE.

A meeting of the Public Health Committee was held at the office of the Association on April 10th, Mr. C. H. Watts Parkinson in the chair, the other members present being Dr. J. Groves, Mr. Herbert Jones, Dr. Herbert Manley, Dr. F. C. Martley, Dr. T. G. Nasmyth, Dr. J. Maxwell Ross.

Suggested Inquiry as to Isolation Hospital.

A letter from the West Riding County Council was considered, inquiring as to a resolution which the County Council had been informed the British Medical Association had adopted at Leicester raising the question of the utility of hospital isolation. The Medical Secretary was instructed to inform the West Riding County Council that the resolution in question was not a resolution of the Association, but of the Section of State Medicine, and that the Council having in the ordinary course considered this recommendation of the Section of State Medicine, had decided not for the present to take any action.

Action of the Council respecting Recommendations of the Committee.

The Chairman reported that the Council had appointed Dr. Groves, Mr. Herbert Jones, and Dr. Manley to represent the Association at the Congress of the Royal Sanitary Institute at Bristol in July.

Public Health (Security of Tenure) Bill.

The Medical Secretary reported that Sir Francis Sharpe Powell had undertaken, at the instance of the Association and of the Public Health Committee of the House of Commons, to introduce the Public Health (Security of Tenure) Bill into the House of Commons. The Committee considered certain objections which had been raised in the General Medical Council to Clause 2, Subclause 1, of the Bill as at present framed, and decided to report to the Council that these objections and other information received indicated that the clause was open to an interpretation not intended by the Association, and that it would be redrafted in order to make the intention clear.

Bills before Parliament.

The Committee considered certain other public health Bills now before Parliament, and decided that no action by the Association was necessary.

Pending Disputes.

The Medical Secretary's report on action taken with respect to disputes affecting appointments under public authorities, including those at Aberystwyth and Bangor, was received and approved.

ORGANIZATION COMMITTEE.

A meeting of the Organization Committee was held at the office of the Association on April 10th, when there were present: Mr. T. Jenner Verrall in the chair; Mr. H. A. Ballance, Mr. Andrew Clark, Dr. A. Cox,

---

[1] British Medical Journal, March 10th, 1906, p. 583.

[2] British Medical Journal, March 17th, 1906, p. 639.

Professor J. T. J. Morrison, Dr. E. Rayner, Professor A. H. White.

Medical Secretary's Visits to Divisions and Branches.

The Medical Secretary reported that, in accordance with the instructions given by the Committee in December as the result of an application from the Council of the Yorkshire Branch, he had visited the following places in Yorkshire with a view to developing the organization of the Association and of the profession there—Huddersfield, Sheffield, Wakefield, Barnsley, Leeds, and Halifax. The reports received from the honorary secretaries of the Divisions and local medical societies in these centres indicated that there was a prospect of a considerable increase of membership and an awakening of activity in the Divisions, and in one case the probable formation of a Division in a district in which the Association had hitherto had very few members.

Visits to the Westminster Division and to a joint meeting of the Liverpool and Birkenhead Divisions were also reported, and the report was approved.

Issue of Recommendations as to Contract Practice.

The Committee also received a report of action taken by the Medico-Political Committee, who, in carrying out the instructions of the Annual Representative Meeting at Leicester to circulate to practitioners who were not members of the Association information as to the decisions of that meeting, had taken advantage of the opportunity to draw the attention of non-members to the work which the Association was doing for the profession, and to urge them to join the Association. The result of this action appeared to be a prospective increase of membership of over 300 at the date of the report, being about 200 more than the result from the ordinary routine circulars issued to non-members. The Committee expressed its concurrence in the action of the Medico-Political Committee.

Branch Rules.

The Committee considered and reported to the Council upon certain proposed alterations in the rules of the Yorkshire Branch.

Alteration of Boundaries.

The consideration of applications from the West Bromwich Division for a change of its boundaries, and from some medical practitioners in New Brunswick, Canada, for the formation of a new Branch of the Association was deferred pending receipt of further information.

Conference of Honorary Secretaries at Leicester.

The Committee received the report of the Conference of Honorary Secretaries of Branches and Divisions held at Leicester at the time of the last Annual Meeting, and recommended the Council to approve the holding of a similar Conference at the time of the next Annual Representative Meeting in London in July next.

Annual Reports of Divisions and Branches.

The Committee resumed the consideration of its instructions from the Council to report upon the annual reports of Divisions and Branches, and also to report on the present system of Division and Branch finance. The annual reports of Divisions and Branches for the year 1905 were considered, together with the replies received from those bodies to inquiries issued by the Committee in November last. A Subcommittee, consisting of the Chairman, Mr. Ballance, and Professor Morrison, was appointed to draft for the consideration of the Committee a report upon the whole subject, to be considered at the June meeting of the Committee. In view of the facts that the Council would not, after its meeting on April 18th, meet again until the beginning of July, and that it was desirable that a report on the subject should be available for consideration by the Divisions before the Representative Meeting, the Council was recommended to authorize the Committee to issue its report to the Divisions as soon as completed.

District Organizing Secretaries.

The consideration of a proposal to appoint district organizing secretaries, which had been referred by the Council to the Committee, was deferred pending the completion of the report on the finances of Divisions and Branches.

Grouping of Divisions and Branches.

The Committee considered the grouping of Divisions and Branches for the years 1906-7, and made provisional recommendations to the Council in reference thereto, recommending also that the Council as in previous years should authorize the Committee to determine the grouping finally after the annual list of members was made up on April 30th.

An application was considered from the Nova Scotia Branch to the effect that, the Representative of the Branch on the Council having been elected before the intimation of grouping by the Council in January had been received, the Branch requested the Council to accept the return of the Representative so elected; the Committee recommended the Council to accede to the application.

Science Committee.

In accordance with an instruction received from the Council the Committee drafted a new section of By-law 40 constituting a Standing Science Committee of the Association, and recommended the Council to adopt the same for submission to the Annual Representative Meeting.

The Charter.

The Committee received the Draft Charter, Ordinances and By-laws as finally revised by Counsel and sent to the Divisions. The Committee recommended the Council to arrange that the Annual Representative Meeting should consider the drafts in July, together with the replies of the Divisions in the United Kingdom and the report of the Council thereon; that the Divisions in the United Kingdom should be informed that the matter would be s considered, and that the Divisions not in the United Kingdom should be informed that the Representativ Meeting would not be asked to pronounce any fina decision upon the matter until sufficient opportunity ha been afforded for the reception of the replies of th Divisions and Branches outside the United Kingdom.

South African Medical Association.

Communications were considered from a Branch and Division in South Africa drawing attention to th suggested formation of a South African Medical Association, and asking for information as to certain points in th working of the British Medical Association and th possibility of carrying out in connexion with the Britis Medical Association all the work which it was propose that the South African Medical Association should unde take. A reply was ordered to be sent giving the informa tion desired.

Resolution of North Manchester Division.

Upon the consideration of a suggestion from the Nort Manchester Division the Council was recommended t approve the issue of a notice to honorary secretari requesting them to notify the Medical Secretary of a intended meetings of Divisions, postcards being supplie for the purpose, in order that matters awaiting consider tion might, wherever possible, be forwarded in time f such meetings.

IRISH COMMITTEE.

A meeting of the Irish Committee was held in t Shelbourne Hotel, Dublin, on March 31st, when the were present: Professor **Byers** (Belfast) in the chair, I R. B. Carey (Borris, co. Carlow), Dr. James Cra (Dublin), Dr. J. G. Cooke (Londonderry), Dr. J. S. Darli (Lurgan), Dr. Joseph Giusani (Cork), Dr. J. M. Ken (Granard), Dr. P. G. Lee (Cork), Dr. D. J. O'Connor (Cor Dr. J. Quirke (Piltown, co. Kilkenny), Dr. Cecil Sha (Belfast), Dr. Denis Walshe (Graigue, co. Kilkenny), a Professor White (Dublin).

Poor-law Commission.

The Secretary reported that the following gentlem had been nominated as Representatives of the Iri Medical Association on the Joint Poor-law Committe Dr. Thomas Donnelly (Dublin), Dr. F. W. Kidd (Dubli Dr. MacSweeney (Killarney), and Dr. Strahan (Dublin).

It was also reported that the Poor-law Associati nominated, instead of Dr. R. Marley Blake (who w unable to act), Dr. S. Agnew, of Lurgan.

The Secretary read correspondence with the Irish Workhouse Association relative to representation on the Joint Poor-law Committee and forwarding the following names of their representatives on the Joint Committee which were approved: Lord Mounteagle (London), Mr. Walter Kavanagh (Borris, co. Carlow), Mr. N. J. Synnott (Naas), and Miss Buchanan, P.L.G. (Dublin).

It was unanimously resolved:

> That in the opinion of the Irish Committee it is advisable that the Council should assist the work of the Irish Committee in connexion with the Poor-law inquiry by making a grant of £50 towards clerical assistance to the Secretary, postage, stationery, and local printing.

Connaught.

The Secretary reported that the South Connaught Division had held a meeting which was attended by four members, and that Dr. Mills stated that he saw no prospect of being able to hold, in the near future, a general meeting of the members of the Association in the province.

It was resolved:

> That we instruct our Honorary Secretary to circularize extensively the members of the British Medical Association in Connaught, informing them that the Irish Committee are willing to send a deputation, on a date to be fixed, to meet them, with a view to form a Connaught Branch of the British Medical Association so that they could have representation on the Irish Committee.

Power of Co-option.

It was resolved with one dissentient:

> That the Committee should, at the next Representative Meeting, seek for power to co-opt each year not more than three members from districts not already represented on the Committee.

Notice of motion accordingly to go forward to the next Representative Meeting.

Next Meeting.

It was reolved to hold the next meeting of the Committee in Belfast, on Saturday, June 16th.

PREMISES AND LIBRARY COMMITTEE.

A meeting of the Premises and Library Committee was held at the office of the Association on Tuesday, April 3rd, 1906, when there were present: Mr. Andrew Clark (Chairman) in the chair, Sir Victor Horsley, F.R.S. (Chairman of Representative Meetings), Dr. H. W. Langley Browne (Chairman of Council), Dr. H. Radcliffe Crocker (Treasurer), Dr. Edgar Barnes, Dr. J. Brassey Brierley, Dr. J. H. Galton, Dr. Bruce Goff, Dr. E. Markham Skerritt. Mr. Wm. Henman, Architect, attended as Assessor during the consideration of the competitive plans.

Premises.

The Committee considered the plans for the rebuilding of the Association's house in the Strand, and received the opinion of Mr. William Henman, F.R.I.B.A., architectural assessor. The Committee resolved to recommend the Council to award the first prize to the plans bearing the *nom de plume* "Light and Air," and the second prize to those bearing the *nom de plume* "Lux," in accordance with the recommendation of the assessor. Copies of these two sets of plans were directed to be forwarded to the Council, together with a copy of the report which the assessor undertook to make.

Regulations as to Duplicate Volumes.

The following regulations, drawn up in accordance with instructions of the Committee, were adopted and recommended to stand as the regulations of the Association for the guidance of the Librarian:

> 1. All volumes presented from the Central Library of the Association to Branch or Division Libraries remain the property of the Association.
> 2. In the event of a Branch or Division deciding to abandon its Library, all volumes presented from the Central Library must be returned.
> 3. All applicants for duplicate volumes must undertake to return to the central office the Duplicate List within 14 days after receipt.

Applications for Duplicate Volumes.

Applications from two provincial medical societies asking for duplicate volumes were considered. The Committee regretted it could not accede to the request, as in giving duplicate books it was the rule of the Association to give priority to Branches and Divisions of the Association.

Librarian's Report.

The Librarian reported that there had been over 1,720 attendances during the first three months of the year, being 171 more than in the corresponding period of last year. He also reported that 193 *Thèses de Paris* for the present session had been received, and stated the list of books presented or purchased for the Library.

The quarterly accounts for the Library were received and recommended for payment.

Library Hours.

Resolutions from the City Division suggesting that the library should remain open till 11 p.m., except on Saturdays, when it should be closed at 1 p.m., and the provision at head quarters for better social intercourse of members, especially for country members visiting London, were considered. The General Secretary was instructed to inform the City Division that the Committee regretted that it did not see its way at present to comply with the request.

JOURNAL AND FINANCE COMMITTEE.

A meeting of the Journal and Finance Committee was held at the office of the Association on April 4th, when there were present: Dr. H. W. Langley Browne (Chairman of Council) in the chair, Sir Victor Horsley (Chairman of Representative Meetings), Dr. H. Radcliffe Crocker (Treasurer), Dr. Edgar G. Barnes, Dr. W. A. Carline, Mr. Andrew Clark, Dr. J. H. Galton, Dr. J. Groves, Mr. R. H. Kinsey, Mr. C. H. W. Parkinson, Dr. Edwin Rayner, Dr. E. Markham Skerritt, Mr. J. Lynn Thomas, C.B.

Letters of apology for non-attendance were read from the President and Mr. Verrall.

The recommendations at which the Committee arrived are embodied in the report of the proceedings of Council.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* Journal.]

LANCASHIRE AND CHESHIRE BRANCH:
Chester Division.

A meeting of this Division was held on April 3rd, Mr. Grainger in the chair.

Apology for Absence.—The Honorary Secretary stated that Mr. Taylor had expressed regret that he was unable to be present.

Confirmation of Minutes.—The minutes of the last meeting were read and approved.

Matters Referred to Divisions.—The recommendations and report upon Contract Practice, the Public Medical Service, and Provident Dispensaries were considered and discussed, and it was proposed by Dr. Mann, and seconded by Dr. Parry, that they be approved of, if not in every detail, at least in principle.—This was carried unanimously.

Co-ordination of Scientific Work.—The question of the co-ordination of the scientific work of the Association was then considered. The Chairman stated, and it was generally admitted, that the Chester Medical Society to a great extent supplied this want, but it was proposed by Dr. King, and seconded by Dr. Duff:

> That it is desirable that at some of the Division meetings scientific work should be included.

—This being put to the meeting was negatived.

Candidates for General Medical Council.—The question of the selection of Association candidates for the General Medical Council was then considered, and referred to a future meeting.

Rules of Central Midwives Board.—The rules of the Central Midwives Board were then considered and approved of.

Registration of Nurses.—The registration of nurses was supported.

Tea.—Tea was kindly provided by the Chairman previous to the meeting.

METROPOLITAN COUNTIES BRANCH.

Financial Relations of Branch to Divisions.—The following is the text of the report of the Committee appointed to consider methods of regulating the financial relations of the Branch to the Divisions. The Committee suggests that the Council should pass the following resolutions to be added to the present rules of the Branch on financial matters:

1. That the Branch Council shall each year, at its first meeting after the annual elections to the Council, appoint a Finance Committee.
2. That the Finance Committee shall consist of three ordinary members of the Council, together with the President, President-elect, Treasurer, and one of the Branch Secretaries, as *ex-officio* members.
3. That the Finance Committee shall, at its first meeting, elect one of the ordinary members to be its Chairman.
4. That the Finance Committee shall, at the close of each financial year:
   (*a*) Audit the Branch accounts and report upon them.
   (*b*) Report upon the accounts of the Divisions.
   For these purposes the Treasurer of the Branch and the Treasurers of the Divisions shall each submit to the Finance Committee an account of the moneys under their separate control, and of the sums which have been expended under their authority.
5. That all money desired by a Division over and above the sums (viz.: £10 and a second £10) at present allowed by the financial rules of the Branch, shall be applied for through the Financial Committee, which shall report the matter to the Branch Council, which alone shall have power to grant or refuse such additional sums.
6. That in making any application for money under Rule 5, the Division making the application shall submit a full account up to date of the divisional funds, and a detailed statement of the purpose or purposes for which such money is to be used.

(Signed)
ANDREW CLARK, Chairman.

Nomination for Offices.—Dr. Fred. J. Smith (138, Harley Street, W.), Honorary Secretary, has issued a circular reminding members that it is a privilege of the Divisions to nominate members for election to serve the offices respectively of President, Vice-Presidents (4), Treasurer, and Secretaries (2) of the Branch. Such nominations must be made to him before May 28th. Nominations of members for election by the Branch to the Central Council of the Association may also be made by Divisions. Dr. Smith is authorized to state that his colleague, Mr. Ernest Clarke, does not wish to be re-elected Secretary. Dr. Smith has already received nominations for the officers of the Branch made by the Kensington and Wandsworth Divisions.

CITY AND TOTTENHAM DIVISIONS.

A CONJOINT meeting was held on Thursday evening, April 19th, at Brooke House, Upper Clapton, by the kind invitation of Dr. J. O. Adams. The Chairman of the Division, Dr. J. W. HUNT, presided.

Branch and Division Finance.—The following resolution was passed and ordered to be forwarded to the Organization Committee in response to their inquiry:

> That the financial arrangements of Division and Branch be left as they are, but that the grant made by the Branch to each of its Divisions be limited to 3s. per member, provided that the Branch is not to be prevented from making a grant to any Division or Divisions for special objects.

Representation of Branch on Central Council.—It was resolved that if the Divisions unite in holding a conference on this subject the City Division send two delegates. Mr. Frederick Wallace and Dr. E. W. Goodall were appointed delegates.

Paper.—Dr. J. H. SEQUEIRA read a paper on the various forms of ringworm and their treatment. The paper was illustrated by lantern slides and preparations.

Vote of Thanks.—A vote of thanks to Dr. Sequeira was carried by acclamation.

OXFORD AND READING BRANCH:

READING AND MAIDENHEAD DIVISION.

A MEETING of this Division was held in the library of the Royal Berks Hospital, on April 23rd, at 3.30 p.m., Dr. MARRIOTT in the chair.

Proposed Royal Charter.—The proposal for an application for a Royal Charter was agreed to. Regarding the "methods" of the proposed Charter, it was proposed by Dr. MARRIOTT and seconded by Dr. FREEMAN:

> That Section vi be struck out of the proposed methods.

This was carried unanimously.

Branch Surplus Funds.—It was proposed by Dr. HOLDEN and seconded by Dr. FARNDON:

> That each Branch should dispose of its surplus funds for charitable or other purposes as its members may from time to time propose.

Anaesthetists and Unregistered Dentists.—Incidentally it was mentioned that a member of the Division was in the frequent habit of giving anaesthetics for an unregistered dentist. The offending member was to be warned in a friendly manner by the Chairman of the risks he was incurring.

Apologies for Absence.—Letters were read from Mr. Walters and Mr. H. G. Armstrong regretting their absence from the meeting, and Mr. Walters strongly expressed approval of the application for a Royal Charter.

ULSTER BRANCH:

DERRY DIVISION.

A MEETING of this Division was held on March 21st, in the Guildhall, Derry, Dr. HUNTER (Chairman) presiding.

Proposed Bacteriological Laboratory.—It was proposed by Dr. MCCURDY, seconded by Dr. JAS. CRAIG, and unanimously passed:

> That a deputation, consisting of Drs. Hunter, Craig, McCurdy, and Cooke, should approach the Corporation to ask them to fit up a small laboratory where the medical officer of health could examine swabs, blood, etc., from cases of suspected infectious disease (bacteriologically).

Out-patient Departments in Hospitals.—It was unanimously passed:

> That, in the opinion of this meeting, there should be no out-patient departments in hospitals except for consultations and casualties, and that this applies especially to hospitals whose staff are general practitioners. This does not apply to special departments—for example, for eye, ear, and throat work.

Routine Business.—Some routine business was also transacted.

YORKSHIRE BRANCH:

BRADFORD DIVISION.

A SPECIAL meeting of the medical profession in the Bradford district, called together by the Division, was held at the Great Northern Victoria Hotel, Bradford, on Wednesday, March 28th, at 8.30 p.m. Dr. MITCHELL, Chairman of the Division, presided.

Contract Medical Practice.—The meeting was convened for the consideration of the recommendations of the Medico-Political Committee on Contract Practice, and as an introduction to the discussion Mr. J. WHERRY WILLSON moved the following resolution:

> That in the opinion of this meeting the present system of contract club practice is unsatisfactory and unnecessary in Bradford, and that a Committee be appointed to consider another scheme of carrying on the work.

Mr. Willson, in an eloquent and lucid speech, said: In approaching the question there are three preliminary points to be especially noted. First, that the question is not one of sentiment, or of charity. We are not dealing with the poor, but with well-to-do members of wealthy and powerful organizations—organizations which have a capital of forty-seven millions. Secondly, that if medical men will analyse the work they do for clubs, they will find that they are being paid at the rate of from 6d. to 1s. a visit. Thirdly, that the root of the evil is the contract. It is of no use adding one shilling or so to the annual amount received from each club member, as the more he pays, the more he will expect. A fourth point also, that any proposals now made will be regarded by the clubs as final, and will not easily be amended afterwards. The club system was introduced to provide cheap medical attendance for the poor, but these have been replaced by the "well-to-do," who now demand as a right, services formerly volunteered to their poorer brethren almost as a charity. The system is unfair both to the patient and to the medical man because of the compulsory nature of the attendance on both sides. The system is also unfair to the medical man, because he has no means of knowing how much work he will have to do for a fee which is fixed beforehand. In one respect these societies are not "friendly" at all, in that their members have to pay for their privileges, and only those who can do so are admitted, while medical men protect their funds from the claims of the physically unfit, whom they also frequently attend as charity patients. There are three reasons why medical men accept club appointments: (1) for charity, misplaced; (2) for advertisement—futile and unworthy; (3) because if one doctor refuses or resigns a club there are plenty of others who are ready to take it up. The club doctor is regarded as the slave of his patients, and may be called upon to account for his conduct to a club committee. Medical men have their own futures to consider, while as the result largely of underpaid medical work these societies are accumulating millions, medical men in their declining years, and their dependents, have to trust for support in only too many cases to benevolent associations, kept up by subscriptions from the profession. The suggested remedy: that each club patient should be allowed to choose his own doctor, and that such doctor's fees at so much a visit should be paid by the club to which the patient belongs, or to the Friendly Society to which that club is affiliated. The Friendly Societies are perfectly able, and in some instances have shown themselves ready, to carry out the scheme.—Dr. Mercer seconded the resolution, which was supported by Drs. Goyder, Horrocks, Carroll, Bateson, Gray, Munro, J. J. Bell, and Metcalfe. Drs. Craig, Bonner, McGee, Manknell, and Parkinson thought the aim a desirable one, but did not consider it possible to abolish club practice as at present carried on. Mr. Willson replied. The resolution, on being put to the meeting, was adopted *nem. con.*

Appointment of Committee on Contract Practice.—Mr. Willson then proposed and Dr. Goyder seconded:

> That the following Committee should be appointed to formulate a scheme for carrying on the work in the future: Drs. and Messrs. Manknell, Willson, Munro, Wade, Bonner, Eames, Craig, Handcock, Mercer, Goyder, Gray, and Carroll.

This was carried unanimously.—Dr. Metcalfe proposed and Dr. Goyder seconded, that Mr. Willson should act as Convener and Secretary for the Committee. Carried *nem. con.* The meeting then terminated.

☞ *To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.*

Association Notices.

LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

Members are reminded that the Library and Writing Rooms of the Association are fitted up for the accommodation of the members in commodious apartments, at the office of the Association, 429, Strand. The rooms are open from 10 a.m. to 5 p.m., except on Saturdays, when they close at 2 p.m. Members can have their letters addressed to them at the office.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Bath and Bristol Branch: Trowbridge Division.—Notice is hereby given that the annual meeting of this Division will be held at the Town Hall, Trowbridge, on Wednesday, May 23rd, at 2.45 p.m. Business: To elect officers; consider communications from the Association *re* Charter, Contract Practice, etc., and any other business.—John Tubb-Thomas, The Halve, Trowbridge, Wilts, Honorary Secretary.

Birmingham Branch.—The annual meeting of the Birmingham Branch will be held at the Medical Institute on Thursday, June 14th, at 3.30 p.m., and nominations for offices should reach the Honorary Secretary not later than May 23rd.—T. Sydney Short, Honorary Secretary, 85, Edmund Street, Birmingham.

Birmingham Branch: Central Division.—A special and general meeting will be held at the Medical Institute, on Wednesday, May 9th, at 4 p.m. Business: (1) To consider the proposed Royal Charter. Professor Morrison, a member of the Organization Committee, will explain the question, and propose a resolution. (2) On behalf of the Executive Committee, the Chairman, Mr. W. F. Haslan, will propose the adoption of certain ethical rules. Copies of these rules will be sent to each member.—E. D. Kirby, Honorary Secretary.

Border Counties Branch.—The next meeting of this Branch will be held in Keswick on Friday, May 4th. Any member who desires to make a communication to the meeting is requested to inform the Secretary at his earliest convenience. Fuller details of arrangements will be published later.—Francis R. Hill, Carlisle, Honorary Secretary.

Border Counties Branch: Scottish Division.—The annual general meeting of the above Division will be held at the Dumfries and Galloway Royal Infirmary, upon Tuesday, May 8th, when Dr. Gulland, of Edinburgh, will give an address on Blood Examination in General Practice. The April meeting will not now be held.—George R. Livingston, Dumfries, Honorary Secretary.

Dundee, Perth, and Stirling Branches.—The nomination of candidates for the office of Elective Member of Council for the ensuing year must be made in writing on or before May 14th to Dr. J. E. Moorhouse, 6, Melville Terrace, Stirling.—A. P. Low, Honorary Secretary, Dundee Branch; W. A. Taylor, Honorary Secretary, Perth Branch; J. E. Moorhouse, Honorary Secretary, Stirling Branch.

East Anglian Branch.—Notice is hereby given that nominations of two members for the office of Representative on the Central Council of the Association, each signed by not less than three members, must reach me not later than May 21st.—B. H. Nicholson, M.B., East Lodge, Colchester, General Secretary of Branch.

Lancashire and Cheshire Branch.—In accordance with By-law 24, notice is hereby given that nominations of Representatives of this Branch in the Council of the Association must be received by me, duly signed and in writing, on or before May 1st.—T. Arthur Helme, M.D., Honorary Secretary, 3, St. Peter's Square, Manchester.

Metropolitan Counties Branch: City Division.—A general meeting will be held on Thursday, May 3rd, at 9 p.m., at Woodchester, 208, Upper Clapton Road, N.E. Agenda: (1) To consider the nomination of candidates for the various offices in the Branch. (2) To consider report (if any) of delegates to conference *re* Representation of Branch on Central Council. (3) To consider the Draft Charter.

The annual meeting of the Division, which is to take place on Thursday, May 24th, at 4 p.m., will be held at the Great Eastern Hotel, Liverpool Street, E.C.—E. W. Goodall, Eastern Hospital, Homerton, N.E., Honorary Secretary.

Metropolitan Counties Branch: Hampstead Division.—An extra meeting will be held on Friday, April 27th, at 5 p.m., at Finchley.—R. A. Yeld, Hampstead, Honorary Secretary.

Metropolitan Counties Branch: Hampstead Division.—A conference on the management of the Hampstead General Hospital will be held at the Hampstead Conservatoire on May 5th, at 4.30 p.m., under the auspices of the Hampstead Division of the British Medical Association. Agenda: (*a*) To consider and adopt the resolutions passed by the Hampstead Division, British Medical Association, on April 6th, which read: I. That an out-patient department in Hampstead is unnecessary. II. That the casualty department be kept distinct from any other department, and that casualty patients, if not suitable for admission, be seen once and thereon be referred to private practitioners, provident dispensaries, or Poor-law authorities. III. That there be greater facilities for general practitioners of the neighbourhood to attend in-patients. IV. That there should be a service limit as well as an age limit to appointments to the medical staff. V. That the outside medical profession should be adequately represented on the Board. (*b*) To consider the recent circular letter and questions issued by the council of the hospital to the medical profession in Hampstead, in which, on the suggestion of the Executive Committee of King Edward's Hospital Fund, the question of the appointment of consultants to the acting staff of the hospital is raised. (*c*) To decide upon the steps to be taken to carry into effect the objects of this conference.—Reginald A. Yeld, M.D., Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: LAMBETH DIVISION.—The next meeting will be held at the Camberwell Infirmary, Brunswick Square, on Thursday, May 3rd, at 4 p.m. Agenda: (1) Minutes. (2) A paper by Dr. Frank C. Lewis on Artificial Immunity with especial reference to Opsonic Indices. (3) Demonstration of microscopic specimens. (4) Dr. Keats will show members round the Infirmary.—W. H. B. STODDART, Honorary Secretary.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS AND ISLINGTON DIVISION.—The next meeting will be held on Friday, April 27th, at the St. Pancras Infirmary, in Pancras Road, London, N.W., at 4 p.m. Agenda: (1) To consider the clauses of the Draft Charter, which will be explained by Mr. J. Smith Whitaker. (2) Hospital out-patient reform. (3) The registration of nurses.—WM. WYNN WESTCOTT, Secretary.

METROPOLITAN COUNTIES BRANCH: WESTMINSTER DIVISION.—A meeting of this Division will be held at 20, Hanover Square, on Thursday, May 3rd, at 8.30 p.m. Mr. J. Bland-Sutton will be in the chair. Agenda: (1) Minutes; (2) Correspondence; (3) Questions; (4) Communication from the Wandsworth Division *re* proposed nomination of candidates for election to the Central Council; (5) Consideration of Dr. Ford Anderson's paper on Hospital Abuse, and the propositions connected therewith, *vide* SUPPLEMENT, June 3rd, 1905; (6) Consideration of the proposed Royal Charter; (7) any other business.—W. KNOWSLEY SIBLEY, M.D., Honorary Secretary.

MIDLAND BRANCH.—Nominations of candidates for the Council of the Association for the ensuing year must be sent before May 14th to ASTLEY V. CLARKE, 37, London Road, Leicester, Honorary Secretary.

SOUTH-EASTERN BRANCH.—The annual meeting of this Branch will be held at Norwood on Wednesday, June 27th, Dr. Hetley, President-elect, in the chair. The following will be the agenda: (1) To elect the officers of the Branch. (This will be done by voting papers sent to each member of the Branch. Nominations by three members for the offices of President-elect, Vice-Presidents, and Secretary may be sent to the Honorary Secretary on or before May 21st.) (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. N.B.—Three members to represent the Branch on the Central Council will also be elected by voting papers. Nominations for these posts, each of three members in writing, should be sent to the Secretary of the Branch on or before May 21st.—H. M. STEWART, Dyffryn, 123, Thurlow Park Road, Dulwich, Honorary Secretary.

SOUTH-EASTERN BRANCH: NORWOOD DIVISION.—A meeting of this Division will take place at the Queen's Hotel, Upper Norwood, on Thursday, May 10th, at 4 p.m., Henry Hetley, M.D., of Upper Norwood, in the chair. Agenda: (1) Minutes of last meeting. (2) To decide when and where the next meeting shall be held, and to nominate a member to take the chair thereat. (3) Draft of proposed Royal Charter (vide SUPPLEMENT to the BRITISH MEDICAL JOURNAL, March 24th, 1906).—H. J. PRANGLEY, Anerley, S.E., Honorary Secretary.

SOUTH-EASTERN BRANCH: REIGATE DIVISION.—A meeting will be held at the Cottage Hospital, Redhill, on Thursday, May 17th, at 3.30 p.m., to elect a Representative of the Division and to consider other Association business. Mr. James Berry, B.S., M.B.Lond., F.R.C.S.Eng., Surgeon to the Royal Free Hospital, will open a discussion on Urinary Surgery. Members wishing to show specimens or patients are requested to communicate at once with the Honorary Secretary, W. A. BERRIDGE, 158, Station Road, Redhill.

SOUTH-EASTERN OF IRELAND BRANCH.—The annual meeting of this Branch will be held at the Victoria Hotel, Kilkenny, on May 2nd, at 12 noon. Agenda: (1) To receive annual report of Branch; (2) to elect officers; (3) motion by Honorary Secretary to have a code of ethical rules adopted by Branch; (4) any other business. Members are requested to notify their intention of reading papers.—J. QUIRKE, M.D., Piltown, Honorary Secretary.

SOUTH MIDLAND BRANCH.—In accordance with the by-laws, nominations of a member of Central Council to represent this Branch must reach me on or before May 12th.—E. HARRIES JONES, Honorary Secretary, 45, Sheep Street, Northampton.

STAFFORDSHIRE BRANCH.—The third general meeting of the session will be held at the Victoria Hotel, Wolverhampton, on Thursday, May 10th. The President, Dr. G. S. Hatton, will take the chair at 3.30 p.m. Business: (1) Minutes of the last general meeting. (2) Correspondence. (3) Exhibition of Living Cases. (4) Paper, B. Cridland: Some Remarks on the Treatment of Squint. (5) Paper, E. Deanesly: A Survey of Surgical Work in a Provincial General Hospital. (6) Exhibition of Pathological Specimens, etc. A dinner will be arranged for 6.30 p.m. (charge 5s.), should a sufficient number of names be sent in.—G. PETGRAVE JOHNSON, Stoke-on-Trent, Honorary General Secretary.

ULSTER BRANCH.—The spring meeting of this Branch will be held in Derry on Saturday, May 5th. Members having any communications to make to the meeting will please send me particulars not later than April 24th.—CECIL SHAW, M.D., Belfast, Honorary Secretary.

WEST SOMERSET BRANCH.—In accordance with the resolution passed at the spring meeting last month, a special meeting will be held at the Taunton and Somerset Hospital on Tuesday, May 8th, when the President, Mr. Gordon Henry, will take the chair at 3.45 p.m., to discuss the proposed application for a Royal Charter for the British Medical Association, and other business if necessary. Details of the proposed Charter will be found in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of March 24th.—W. B. WINCKWORTH, Taunton, Honorary Secretary.

GRANTS FOR SCIENTIFIC RESEARCH.

THE Council of the British Medical Association desires to remind members of the profession engaged in researches for the advancement of medicine and the allied sciences that it is prepared to receive applications for grants in aid of such research. Applications for sums to be granted, which must reach this office not later than May 31st, must include details of the precise character and objects of the research which is proposed, and must be made on forms to be had of the General Secretary, at the office of the Association, 429, Strand, London.

Every recipient is required to furnish to the Science Committee, on or before May 31st following upon the allotment of the grant, a report (or, if the object of the grant be not then attained, an interim report to be renewed at the same date in each subsequent year until a final report can be furnished) containing: (*a*) A brief statement for the Report of the Science Committee, showing the results arrived at, or the stage which the inquiry has reached; (*b*) a general statement of the expenditure incurred, accompanied, so far as is possible, with vouchers; (*c*) and references to any Transactions, Journals, or other publications in which the results of the research have been printed.

The work of the Grantees shall be subject to inspection.

RESEARCH SCHOLARSHIPS.

The Council of the British Medical Association is prepared to receive applications for three Research Scholarships, each of the value of £150 per annum, tenable for one year, and subject to renewal by the Council, provided the whole term of office has not exceeded three years.

The scholarships exist for the encouragement of research in Anatomy, Physiology, Pathology, Bacteriology, State Medicine, Clinical Medicine, and Clinical Surgery.

The Scholars' work shall be subject to inspection.

Applications for Scholarships must be made on forms to be had of the General Secretary, and returned on or before May 31st.

ERNEST HART RESEARCH SCHOLARSHIP.

The Council of the British Medical Association is also prepared to receive applications for the Ernest Hart Memorial Scholarship of the value of £200 per annum, tenable for one year, but subject to renewal by the Council for another year. The Scholarship is for the study of some subject in the department of State Medicine.

N.B.—Applications for Scholarships and Grants should, as a rule, be accompanied by a recommendation from the head of the laboratory in which the applicant proposes to work, setting out the fitness of the candidate to conduct such work, and the probable value of the work to be undertaken. This is not intended, however, to prevent applications for Grants in aid of work which need not be performed in a recognized laboratory.

GUY ELLISTON, *General Secretary.*

429, Strand,
April, 1906.

[By-law 9: ". . . . every Branch shall furnish to the Council of the Association not later than March 15th, a report of its proceedings during the previous year, a statement of its numbers, and a financial statement in such form as the Council may from time to time prescribe."]

BRANCH.	MEMBERSHIP.		FINANCIAL STATEMENT.						MEETINGS.						REPORTS OF PROCEEDINGS AND REMARKS.
	On December 31st, 1904.	On December 31st, 1905.	Balance from 1904.	Deficit (if any) from 1904.	Receipts for 1905.	Expenditure, 1905.	Balance to 1906.	Deficit (if any) to 1906.	Branch.	Scientific.	Medico-Political, Ethical, etc.	Occasions when Members dined together.	Average attendance.	Branch Council.	
			£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.							
BIRMINGHAM	557	507	9 10 1	—	97 4 0	91 18 4	14 15 9	—	7	13	—	1	37½	8	A grant not exceeding 1s. per head per member was made to each Division, and found to be insufficient in the cases of the Central and the Coventry Divisions. A supplementary grant was therefore made of £10 11s. 8d. to the Central and of £3 0s. 6d. to the Coventry to clear off their arrears. The balance in the hands of the Honorary Treasurer at the end of the year is £5 1s. 8d., as against a balance of £9 10s. 1d. the previous year. This shows that the excess of income over expenditure, as shown on the year's working, has decreased, and that the margin is insufficient to meet any extraordinary expenditure, from whatever cause arising. The Branch Council is of opinion that the scheme lately approved by it—namely, of returning any surplus to, and receiving any deficit from, head quarters—would be a solution of the difficulty, and preferable to a *general* increase of grant throughout the kingdom.
BORDER COUNTIES ...	147	150	10 4 11	—	29 0 0	29 17 1	9 13 10	—	3	3	2	3	20	7	The position in which a local nursing association with reference to the working of the Midwives Act was carefully considered and the action of its Committee of Management controlled satisfactorily by the intervention of the Branch.
CAMBRIDGE AND HUNTINGDON	156	152	26 14 1	—	30 14 0	22 5 0	35 3 1	—	3	2	2	2	25	6	At one meeting the East Anglians were entertained as guests by members of this Branch.
DORSET AND WEST HANTS	203	219	32 9 10	—	43 3 8	33 16 11	41 16 7	—	3	3	3	3	39	4	The members of the Branch, being well over 200, are entitled to a separate Representative on the Central Council. Owing to the fact that the Treasurer of the Branch has changed hands during the year, and also the Secretaries of the Divisions (the Annual Meeting being held in May), there has been great difficulty in allocating the separate items, although, all payments having been made by cheque, there has been no difficulty as to the total receipts and payments. The sum of £10 10s. was voted as memorial to the late Secretary and Treasurer, Dr. Lush, in recognition of his long services and the manner in which he had hoarded up the funds, probably more than this being due to him.
DUNDEE	109	109	12 1 2	—	21 12 6	22 15 8	10 18 0	—	8	1	7	1	12	8	——

LEINSTER	338	310	21 3 4½	—	66 0 6	63 0 2	24 3 8½	—	1	—	—	1	33	5	The Branch has dealt locally with the work of the formation of the Irish Committee, and the question of fees paid to medical officers by Irish Lights Commissioners and Admiralty, besides other routine work.
METROPOLITAN COUNTIES	2,539	2,589	558 10 6	—	527 6 10	355 3 5	730 13 11	—	—	—	—	—	—	—	——
MIDLAND	510	546	55 15 3	—	108 19 9	93 2 0	71 13 0	—	1	—	—	—	23	4	In 1905 the whole energies of the Branch were given to the annual meeting of the Association held within its area at Leicester.
MUNSTER	103	109	31 7 8	—	22 2 0	10 12 3	42 17 5	—	4	—	4	—	16	2	At the general meeting of the Branch Dr. D. J. O'Connor was elected Representative of the Branch on the Irish Committee.
NORTH OF ENGLAND ...	569	645	95 9 8	—	125 16 0	133 9 8	87 16 0	—	4	2	2	1	35	5	The Branch is doing all it can to make itself indispensable to every member of the profession. We have organized two county Committees to take over the work of the Durham and Northumberland County Medical Union, which we have absorbed. This work, which necessitates paid secretaries (who are solicitors) is expensive, but absolutely essential in this district if we are to live up to our ideal. We have, therefore, opened a new voluntary fund, called the Branch Defence Fund, to meet these new expenses, and to carry on the work of protecting our members engaged in the various forms of contract practice. Will the Central Council allow the call for annual subscriptions to this fund to be placed on the notice sent from head quarters? We are at present engaged in fighting the Northumberland miners, or some of them, who wish the medical men engaged in colliery practice to take a reduction in their fees. The Branch is grateful to the Central Council and to the Editor of the JOURNAL for much help received, but would like to warn the Central Council that it may become necessary for us to approach it for an extra grant under the powers given by the last Representative Meeting, as we find the 4s. grant will be quite insufficient for fighting or protective purposes. As our Divisions become more active they alone will absorb most of the 4s.
NORTHERN COUNTIES OF SCOTLAND	118	124	2 11 4	—	22 14 0	14 0 0	11 5 4	—	2	2	2	2	30	4	The question of medical defence was again discussed at the annual meeting, when 18 voted for the motion that the Association should not undertake medical defence, while only 3 voted in favour of its doing so. The other questions discussed were advertising of medical practitioners in connexion with hydropathic establishments, ambulance work, medical inspection of schools, and the question of fees paid by police authorities to medical men in emergency cases. No questions of local interest came up for discussion.
NORTH LANCASHIRE AND SOUTH WESTMORLAND	135	128	18 12 6	—	26 15 2	6 8 0	38 19 8	—	3	3	1	1	32	4	The Branch is working satisfactorily. The meetings have been well attended, and much interest has been taken in the subjects under discussion. Mr. Stephen Paget very kindly delivered an address on Aural Cases in General Practice, which was published in the JOURNAL. The Furness Division reports that the members have found the organization a source of great strength in the negotiation with the clubs. The Lancaster Division explains that nearly all the men resigning are retiring from practice.

SOUTH WALES AND MONMOUTHSHIRE	447	476	65 14 6½	—	91 14 0	94 5 2	63 3 4½	—	3	2	1	1	40	8	During the past year the Branch Council has given very full consideration to the question of the conditions of Contract Practice, and has organized, for the purpose of dealing with this question, a standing Branch Contract Practice Committee. This Committee has met, and now has under its consideration the raising of an Emergency Fund to meet expenses incurred, and to assist members who may suffer loss by their loyalty to the Rules of the Branch. In the early part of the year the Branch Council had under its consideration the question of the Abergwynfi Colliery Workmen's Medical Society. They confirmed the action taken by the Cardiff Division, and appointed a small Subcommittee to meet the Workmen's Committee. A settlement ~~was~~ effected ~~on the Association's~~ terms. In July the Council was called upon by the Executive of the Newport Division to express its opinion upon some points in the dispute with the Ebbw Vale Workmen's Committee, especially with regard to the rate of remuneration to be demanded, as this might affect the Branch as a whole. Resolutions were passed insisting upon the creation of a Guarantee Fund for the salaries of the medical staff, and upon a sufficient stoppage out of the wages to provide adequate salaries per annum. No definite poundage rate was mentioned. In connexion with the Abertysswg dispute, it was resolved: "That this Branch Council cannot encourage any new scheme on the bases of fixed salaries and control by committees in any part of South Wales." The Branch Council desires to record its appreciation of the services rendered to them in connexion with the organization of the Contract Practice Committee, and in the Ebbw Vale, and other disputes by Mr. J. Smith Whitaker.

SOUTH-WESTERN	411	419	78 0 10	—	83 4 0	76 0 4	85 4 6	—	5	3	2	1	36	6	The policy of the Branch is, as it has been in the past, to keep the Branch meetings principally for the discussion of scientific matters, leaving as far as possible to the Divisions the questions concerning medico-politics and kindred matters. The Branch Council guarantees the payment of Division expenses up to an amount not exceeding 2s. per head per annum. The majority of the Divisions have kept well within this so far, and one Division (Barnstaple) has been assisted by an extra grant (during 1905) over and above the capitation grant allowed by the Branch Council. A Code of Rules to regulate procedure in ethical matters was adopted, having received the sanction of the Central Council. The Branch Council drew up a scale of fees for the guidance of practitioners in regard to the inspection and supervision of midwives under the provisions of the Midwives Act of 1902. The Branch Council sanctioned the petition of the Newton Abbot Division that henceforth this Division should be called "Torquay Division."

YORKSHIRE	776	770	139 4 3	—	150 7 3	77 15 6	211 16 0	—	3	—	—	3	38	4	At the request of a number of medical men in the Richmond Division, they have left the Yorkshire Branch, and have joined the Darlington Division of the North of England Branch. The Branch Council again regrets that the Divisions take so little interest in the work of the Association. With the exception of Bradford and Scarborough very few meetings have been held. Huddersfield reports complete loss of interest in the Division. The Committee of the Wakefield and Doncaster Division decided at their annual meeting last June not to elect officers or call any more meetings owing to the apathy of the members of the Division. This was represented to the Medical Secretary, and arrangements were made for him to address meetings of the Wakefield and Huddersfield Divisions. No report has been received from the Halifax Division. The Council suggest that if possible arrrngements be made by the Divisions to have during the year two or three conjoint meetings with the local medical societies.

BRITISH GUIANA	32	31	—	—	—	—	—	—	3	2	—	—	6	3	Financial statement under revision. At the last annual meeting it was decided not to supply light refreshment, as the meetings will in all probability take place at the Public Hospital, where there will be no hiring of rooms.
BURMAH	34	41	59 5 4 (Rupees 889)	—	57 9 4 (Rupees 862)	35 2 0 (Rupees 526)	81 12 8 (Rupees 1,224)	—	13	13	13	—	13	2	During the year the question of the housing of the immigrant coolie population was raised, and the Sanitary Commissioner to the Government of Burmah was addressed on the subject, particularly with reference to the epidemics of plague and small-pox. A reply was received stating that steps were being taken in this matter by the Health Officer, Rangoon Municipality. The question of improvement of the condition of nurses in Burmah was also raised, but no definite conclusion was arrived at. The meetings are practically entirely devoted to clinical work, except so far as they are social gatherings. There is practically nothing of an ethical or medico-political nature about any of the discussions.
CAPE OF GOOD HOPE (EASTERN PROVINCE)	85	89	23 3 11	—	17 11 6	16 9 8	24 5 9	—	6	6	7	—	9.5	6	The most noteworthy event of 1905 has been the fission of the Grahamstown Division, hitherto identical with the Eastern Province Branch, into two smaller Divisions. Of these one remains—the Grahamstown Division; the other, whose area was most amicably agreed upon, becomes the East London Division.
CAPE OF GOOD HOPE (WESTERN PROVINCE)	142	160	102 4 10	—	27 19 0	30 6 1	99 17 9	—	8	8	4	1	20	9	The Committee for advancing medical science reported: (1) That a Clinical Committee be appointed, which should make, in conjunction with the President, the necessary arrangements for holding clinical and pathological meetings at the hospitals or elsewhere. (2) That an annual lecture be delivered in Capetown under the auspices of the Branch, with as long a notice as possible, and possibly a small endowment; the arrangements to be under the control of the Council of the Branch, with power to select the lecturer. (3) That the Branch recognizes the imperative necessity of providing permanent rooms for the Branch suitable for library, reading room, and meeting room; that the expense of equipment be met out of the surplus funds of the Branch, and the maintenance by an increased subscription from local members. (4) That a Post-Graduate Committee be formed to organize a scheme of post-graduate lectures such as may be thought suitable. (5) That the annual meeting be followed by a dinner. (6) That the Committee, while of opinion that the time had not yet arrived for promoting a complete scheme of medical education, recommends to the Branch that cordial support be given to the South African College in its proposal to found Chairs of Anatomy and Physiology. (7) That the Committee ask the Branch to discuss the reformation of a South African Medical Association. The holding of appointments under Associations that canvass for patients, and involving the making of profits by laymen through medical services, has been considered to be unethical by this Branch. Organization of medical aid to the poor was considered unnecessary. Evidence *re* amendments *re* Medical Acts was given before a Select Committee. The Public Health Acts Amendment Bill was considered seriatim, with recommendations. Colonel Bruce appointed Representative of Eastern and Western Branches on the Central Council.

PROPOSED ROYAL CHARTER.

CONJOINT meeting of the Chelsea, Lambeth, Richmond,
andsworth, and Westminster Divisions of the Metro-
litan Counties Branch and of the Croydon and Norwood
visions of the South-Eastern Branch of the British
dical Association was held at the Battersea Town Hall
April 19th, under the chairmanship of Dr. J. H. **Galton**,
consider the proposed application for a Royal Charter
the British Medical Association, the draft of which
s published in the Supplement to the British Medical
urnal of March 24th.

Mr. T. **Jenner Verrall**, Chairman of the Central Organ-
ation Committee, gave a brief explanation of the draft.
e Explanatory Memorandum accompanying the draft
arter had been prepared by the Organization Com-
ttee at the request of the Central Council of the Asso-
tion, in accordance with the directions of the Repre-
tative Meeting at Leicester. He invited those present
ask questions concerning the draft Charter, and pointed
; that the Charter was drawn up on the lines of the
constitution of the Association. Scarcely any new
tter had been included except in regard to subjects
cerning which specific directions had been received
t they were to be included. The duty of the
nmittee therefore was practically, with the aid of
nsel, to draft a Charter in proper form, taking care
t everything was included that it was intended the
arter should contain. Mr. Verrall then related the
tory of the circumstances that had led up to the pro-
al for a Royal Charter, and observed that the prime
ver in the matter was the Association itself. The
presentative Meeting of the Association had directed
t an alteration of the Memorandum of the Association
uld be undertaken; but when the Council proceeded to
y that out, they were told by Mr. Beaufort Palmer,
counsel consulted, that it would be a much better
n to apply for a Royal Charter. That advice was
orted to the Representative Meeting at Leicester, and
as decided that a Royal Charter should be applied for.
Verrall then described the advantages to be gained by
harter, and commented on the reasons why it would
have met the difficulties of the question if the
ociation were to be wound up and a new company
ned. One great reason in favour of a Royal
rter was that certain objects could be included as
sible to be undertaken by the Association, such as
evolent schemes for which there was little chance of
ining the sanction of the Board of Trade if included
any fresh Memorandum. In proposing a Royal
rter, the Association was aiming at greater freedom
ction in the future, and Mr. Verrall explained how,
he opinion of counsel, this was to be obtained not
by the definition in the Charter of the objects of
Association, but also by giving facility for altering
regulations. Mr. Verrall dealt with the question of
difficulties in securing a Charter, and stated that the
ion had been formed that these difficulties were not
ly to be insuperable. He then discussed the form
he draft, its division into the Charter proper,
nances, and By-laws, and pointed out that the
nances contained those matters upon which it was
cially desirable the Association should not form
precipitate a judgement. That safeguard would
secured by reason of the fact that the Ordi-
es, as distinguished from the By-laws, could not
hanged without the consent of the Privy Council.
addition to the fresh subjects which the Repre-
ative Meeting had specifically directed to be in-
ed, provision had been made for giving the Colonial
ches greater freedom in regard to subscriptions, as
ad been frequently pointed out that it was not
ible in the Colonies to carry out all the work on the
subscription as sufficed at home. One important
t Mr. Verrall wished to emphasize was that the power
eferendum possessed by the Council was retained
r the Charter, although the control exercised by the
y Council might have been supposed to be sufficient
ke the place of the referendum; nevertheless it was
ght well, in the interests of the more conservatively-
ned members, to retain the referendum so as to secure
possible check upon precipitate action. As to the
of procuring the Charter, it had been pointed out by
Solicitor to the Association that the later stages of the proceeding were the most difficult to estimate, and it was not possible at present to form any very certain opinion on the point. Mr. Verrall concluded by reminding the meeting that under the present democratic form of constitution the Association must decide the matter entirely for itself. It was the Association that had first started the movement, and the officials, honorary and other, had only carried out the behests of the Association, so that the final responsibility of determining whether the answer to the question of obtaining a Charter was to be "yea" or "nay" rested with the individual members of the British Medical Association.

The **Chairman** then stated that the procedure to be followed was that those present should raise any point of difficulty that might occur to them. Any resolutions that might be proposed would be put to the vote at the conclusion of the discussion, after Mr. J. S. Whitaker, the Medical Secretary, had delivered his supplementary address explaining the difficulties that were raised. The Chairman also commented on the inclusion of medical defence and medical agency work in the objects clause of the proposed Charter and urged the meeting to give most serious consideration to these matters.

Dr. **Crookshank** inquired whether the inclusion of medical defence, medical agency, and other matters in the objects clause meant that those would be undertaken at once by the Association if the Charter were obtained.

With the leave of the meeting, Mr. **Whitaker** explained that the inclusion of those matters in the objects clause merely placed it in the power of the Association to undertake such work when it might think proper, but even after the granting of the Charter such new work could not be taken up without a definite vote of the Association.

Dr. **Fothergill**, after welcoming the precedent set by so many Divisions uniting to discuss important matters affecting the whole Association, reminded the meeting that, as the Representative Meeting at Leicester had by a vote of more than 4 to 1 approved of the suggestion that a Charter should be applied for, the discussion could hardly get away from that fact. The desire was for greater freedom; and opportunity to extend the usefulness of the Association gradually, and as thought desirable. This could be done only under a comprehensive Charter. He regretted that the Memorandum issued had not made the best of the case by concisely stating the nine or ten additional objects it was desired to include. After naming these, he stated that the keynote of the Charter should be to put the Representative Meeting in the right place as the Final Court of Appeal. In his opinion the principles that should be kept in view were shortly, that the Divisions should be paramount; the Representative body their mouthpiece; the Central Council being solely an executive body of the Representatives; the Branch Councils only existing when and under conditions desired by a coterie of Divisions, and to be their local organizing centre, getting their power from these Divisions; and not in any way acting as the master of those Divisions. In criticizing the details of the Charter, Ordinances, and By-laws, these principles should be borne in mind. He then asked several questions with regard to the various clauses in the Charter, pointing out what he suggested were desirable amendments.

Dr. **Capes**, Dr. **Bernard O'Connor** and Dr. **Belilios** also submitted various questions.

Dr. **Burgess** observed that medical defence was carried out at the present time by people who were well fitted for the task, and nothing could be better than the way in which they did the work. He was opposed to the Association taking up medical defence. It also seemed to him that the sale of medical practices was dirty work for the Association to undertake.

Dr. **L. Williams** expressed his concurrence with the views of the last speaker.

Dr. **Hugh Woods**, Secretary of the London and Counties Medical Protection Society, contended that it was better for the Association to apply for a Charter than to attempt to alter the Memorandum of the Association. There was a sentimental value in a Charter, because thereby the Association would be on a higher plane than it would be as merely a limited company. He advocated the approval of the proposal to procure a Charter.

Dr. **Hugo** asked for an explanation of the large powers contained in Clause 12 of the Draft Charter.

Dr. **McManus** said that in his view the Association should look after the medical man from his cradle to the grave, and his family as well. Medical defence should be taken up by the Association because it was notorious that the present Defence Associations had not the funds to fight a big case through to the House of Lords. He would like to see the sale of practices taken out of the hands of the present agencies and put on a sound commercial basis. He strongly supported the view that a Charter should be applied for.

Dr. WALKER then expressed his opinion that the word "may" should be eliminated from the Charter, and the word "shall" substituted.

Dr. O'SULLIVAN drew attention to the provisions for the election of members of the Central Council by the Representative Meeting, which he considered to be defective, inasmuch as they were elected for one year only; this would not afford sufficient time for experience to be gained. He thought that the period should be three years.

Mr. J. S. WHITAKER, the Medical Secretary, then delivered a supplementary address in explanation of the questions raised, and pointed out that, as regards the question raised by Dr. O'Sullivan, the Charter followed exactly the present regulations of the Association. It would be possible for a Division, in considering the draft Charter, to suggest any alterations in this respect that it might think proper, but the Organization Committee had had no instructions from the Representative Meeting to make the Charter different in this respect from the present regulations. Dr. Fothergill and other speakers had asked what were the advantages to be expected from the proposed Royal Charter, and it had been said that the Explanatory Memorandum in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of March 4th, 1906, was unsatisfactory from that point of view. It must be remembered, however, that in drawing up that Memorandum it was necessary in the one document to meet and anticipate all difficulties that might arise, not only concerning one section of members, but all. Dr. Fothergill, for example, had given much time and thought to the matter, and therefore might think explanations unnecessary which others would desire, such as the history of the circumstances which had led up to the present application. The opinion received from Mr. Fischer Williams which Dr. Fothergill considered ought to have been included in the history had been published in the BRITISH MEDICAL JOURNAL in full, and could be referred to when required. With regard to the advantages to be gained by obtaining a Royal Charter, the whole of Section II of the Explanatory Memorandum dealt with the advantages of incorporation under a Charter. These were specified under four separate headings: the first was the wider definition of the objects of the Association; the second was the greater freedom of action; the third was the extension of the representative principle; and the fourth was the alterations of regulations under a Charter. Concerning the fourth heading, the Organization Committee was bound by the resolution of the Representative Meeting at Leicester. The Committee had not been directed to recast the regulations, and it would have exceeded its duty if it had suggested such alterations. The Divisions of the Association might recast the regulations in any way they might think proper, but it was not the duty of the Organization Committee to do so. As far as possible the present framework of the Association had been retained. The financial statement for 1905 had not been circulated, because it was not ready at the time the Explanatory Memorandum was published. It had first to be submitted to the Council of the Association at its meeting on April 18th. Replying to Dr. Fothergill's question concerning the power of the Association to assign funds to others for carrying on work instead of doing it itself, Dr. Whitaker pointed out that that was provided for in the clause setting forth the objects of the Association. In Paragraph VIII of the second subclause of the part of the Draft Charter dealing with the objects of the Association it was provided that the Association

> may establish, endow, contribute to, organize and manage provident or benevolent funds for the benefit or assistance of members of the Association or of the medical profession and their families or dependents.

Dr. Fothergill and others had raised the difficulty that under a Charter it might be necessary to publish alterations of the regulations in the *London Gazette*, but the Solicitor of the Association had definitely ascertained at the Privy Council office that this was not required. The only publication necessary would be the fact that the Association had applied for the Charter; in any case all proposed alterations of the regulations of the Association were as a matter of fact published in the BRITISH MEDICAL JOURNAL, and were therefore made known as widely as if they were published in the *London Gazette*. It had been pointed out that life assurance appeared to be covered by the definition of the objects of the Association, and that the contemplated subscription would be insufficient for such a purpose. As had already been stated, however, in answer to other questions, the inclusion of insurance, medical benevolent work, medical defence, or medical agency within the scope of the defined objects of the Association did not necessarily mean that the Association would take up any of those departments of work. None of them could, in fact, be taken up without a vote of the Association specifically deciding the point, and if the Association should at any time decide, for example, to take up life assurance one of the matters then arising for consideration would be the provision of such additional subscription as might be necessary for the purpose. Attention had been drawn to the distinction between the home and the Colonial Divisions and Branches as regards the power to levy extra subscriptions. The reason for the distinction was simply that several Colonial Branches had intimated their desire for this power, which appeared necessary to meet their special requirements, whereas there had been up to the present no indication of such a need or such a desire in the case of the home Divisions or Branches. If they should desire it, it would be, of course, within their power to modify the regulations accordingly The advisability of procuring a new Memorandum instead of applying for a Charter had been raised by Dr. Bernard O'Connor. The answer was that the Association under a Charter would be free from the trammelling restrictions of the High Court; under a Charter the Association would enjoy much greater freedom than as a limited company The question of going to the High Court to change the present objects, Clause (3) in the Memorandum had been raised by Dr. Bernard O'Connor. It had to be remembered, however, that that clause was the only one that could be altered. Part of the difficulty lay in Clause 4 of the Memorandum, and that clause was unalterable even by the High Court, its powers only applying to the object Clause (3). Clause 4 contained the conditions on which the Board of Trade gave a right to the Association to dispense with the word "limited," and it prevented any part of the funds of the Association being applied for the benefit of individual members except for services rendered. Even if a new Company were formed, the Board of Trade was in Mr. Beaufort Palmer's opinion, unlikely to pass any clauses giving the Association all the powers required A certain paragraph in the history of the circumstances leading up to the present application for a Charter was criticized by Dr. Bernard O'Connor as being incomplete The answer was that the history was a mere recital of the events leading up to the consideration of the matter by the Representative Meeting last year. That meeting having before it in full all the information now summarized, decided by a four or five to one majority that it was advisable to apply for a Charter, and instructed the Council accordingly He had been asked by Dr. O'Connor specifically what were the matters, if any, contemplated in 1904 as desirable for the Association to undertake, which it appeared could only be undertaken under a Charter, which of these, if any, were contemplated in 1901 when the new constitution was under consideration, and why was it not then recognized that it would be necessary to obtain a Charter to carry them out. The answer was that the Representative Meeting at Oxford wished the Association to be free in the future to undertake medical benevolent work, medical defence, medical agency, and other matter of which only medical defence had been definitel contemplated prior to 1901. For medical benevolent work it was clear that the Association could not apply its funds under the present Memorandum of Association, and perhaps not in any way under the Companies Acts. As regards medical defence, the difficulty was one of varyin legal advice. In 1901 the Committee that considered the matter was still under the impression, which the Association had been under since 1896, that the resolutions passed at Birmingham in that year would, if confirmed by the High Court, enable the Association to take up individual defence; but after the Representative Meeting at Oxford in 1904 had directed the Council to have these resolutions again confirmed by general meetings and brought before the High Court, the Council, on taking counsel's opinion, was advised, as was reported to the Representative Meeting at Leicester, that it was very doubtful whether these resolutions would be sufficient for the purpose, and whether an alteration of the Memorandum of Association to carry these out could, in fact, be obtained. These were the new facts upon which the Council passed its resolution *nem. con.*, advising the Representative Meeting to give up the attempt to obtain an alteration of the Memorandum of Association, and instead to proceed to apply for a Charter. It was on this statement by the Council that the meeting, as had already been said, resolved, by a 4 or 5 to 1 majority, that an application for a Charter should be prepared.

In answer to the inquiry as to the effect of Clause 12 of the draft Charter,

Mr. **Whitaker** explained that the object of the clause was to provide the machinery by which alterations in the Charter might be obtained, these resting, so far as the Association was concerned, with the Representative Meeting, subject to a Referendum at the discretion of the Council, as in the case of other alterations of the regulations.

The following resolution, proposed by Dr. **Crookshank** and seconded by Dr. **Fothergill**, was then put to the meeting and carried unanimously:

> That this meeting of the Divisions, while approving the principle of the Association applying for a Royal Charter, reserves to themselves individually the suggestion of amendments to the scheme submitted.

The next resolution, proposed by Dr. **Crookshank** and seconded by Dr. **Fothergill**, was then put to the meeting and carried by 15 votes to 1:

> That it is desirable that the proposed scheme for a Royal Charter be reprinted and issued in the SUPPLEMENT at as early a date as possible, with the suggested alterations and additions sent in by Divisions inserted after the clause each refers to.

The last resolution, proposed by Dr. **Burgess** and seconded by Dr. L. **Williams**, referring to the clauses concerning medical defence and agency business being undertaken by the Association, was put to the meeting and declared not carried by 18 votes against to 9 in favour:

> That Subsections VI and VII in Section 2 of Clause *b* of the Ordinances be omitted from the Charter as being in every way undesirable.

Hearty votes of thanks to the speakers concluded the meeting.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In seventy-six of the largest English towns, including London, 8,332 births and 5.250 deaths were registered during the week ending Saturday last, April 21st. The annual rate of mortality in these towns, which had been 16.9, 17.0, and 17.1 per 1.000 in the three preceding weeks, rose last week to 17.3 per 1,000. The rates in the several towns ranged from 6.9 in Bournemouth, 7.8 in Wolverhampton, 9.3 in Southampton, 9.6 in Tottenham, 9.8 in Handsworth (Staffs.) and in Newport (Mon.), and 10.1 in King's Norton, to 21.1 in Warrington, 21.6 in Merthyr Tydfil, 22.9 in Bootle and in Salford, 23.1 in Tynemouth, 23.2 in Coventry, 23.4 in Middlesbrough, 23.6 in Liverpool, and 25.9 in Burnley. In London the rate of mortality was 19.2 per 1,000, while it averaged 16.5 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.7 per 1,000 in the seventy-six towns; in London this death-rate was equal to 1.9 per 1,000, while among the seventy-five other large towns the rates ranged upwards to 2.7 in Bury, 3.4 in Bradford, 3.6 in Bristol and in Preston, 4.1 in Liverpool, 4.3 in Walthamstow, and 7.6 in Burnley. Measles caused a death-rate of 1.7 in Bristol, 1.8 in Bury, 1.9 in Newcastle-on-Tyne, 2.0 in Great Yarmouth, 2.4 in Liverpool, 2.7 in Preston, 3.0 in Walthamstow, and 4.6 in Burnley; scarlet fever of 1.2 in Sheffield; diphtheria of 1.3 in Walthamstow and 1.4 in Halifax; whooping-cough of 1.3 in Bristol and in Aston Manor, 1.4 in Merthyr Tydfil, 1.5 in West Bromwich and in Burnley, and 2.0 in Coventry; and diarrhoea of 1.5 in Warrington. The mortality from enteric fever showed no marked excess in any of the large towns. One fatal case of small-pox was registered in Plymouth, but none in any other of the seventy-six towns. The number of small-pox cases under treatment in the Metropolitan Asylums Hospitals, which had been 8, 8, and 7 on the three preceding Saturdays, was again 7 on Saturday last, the 21st inst.; one new case was admitted during the week, against none in each of the three preceding weeks. The number of scarlet fever patients in these hospitals and in the London Fever Hospital at the end of last week was 2,225, against 2,386, 2,322, and 2,301 at the end of the three preceding weeks; 288 new cases were admitted during the week, against 223, 292, and 270 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

During the week ending Saturday last, April 21st, 1,104 births and 604 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 18.9, 19.4, and 19.1 per 1,000 in the three preceding weeks, further declined to 17.6 per 1,000 last week, but was 0.3 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the rates ranged from 10.6 in Perth and 13.1 in Aberdeen to 19.6 in Dundee and 20.6 in Greenock. The death-rate from the principal infectious diseases averaged 1.5 per 1.000 in these towns, the highest rates being recorded in Glasgow and Leith. The 296 deaths registered in Glasgow included 8 which were referred to measles, 4 to diphtheria, 10 to whooping-cough, and 5 to diarrhoea. Three fatal cases of measles and 3 of diarrhoea were recorded in Edinburgh; and 2 of measles in Dundee.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, April 14th, 458 births and 406 deaths were registered in six of the principal Irish towns, as against 534 births and 389 deaths in the preceding period. The annual death-rate in these towns, which had been 23.6, 26.6, and 21.2 per 1,000 in the three preceding weeks, fell to 20.4 per 1,000 in the week under notice, this figure being 3.3 per 1.000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 7.8 in Waterford and 17.4 in Londonderry to 24.1 in Belfast and 28.7 in Limerick. The zymotic death-rate in the same six Irish towns averaged 0.7 per 1,000, or 0.3 per 1,000 lower than during the preceding period, the highest figure—2.5—being recorded in Belfast, while no deaths under this heading were recorded in Cork, Limerick, or Waterford. Whooping-cough was responsible for 17 deaths, 13 of them occurring in Belfast.

During the week ending Saturday, April 21st, 538 births and 425 deaths were registered in six of the principal Irish towns as against 458 births and 406 deaths in the preceding period. The annual death-rate in these towns, which had been 26.6, 21.2, and 20.4 per 1,000 in the three preceding weeks, fell to 17.3 per 1,000 in the week under notice, this figure being the same as the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 7.8 in Waterford and 11.2 in Londonderry to 24.9 in Belfast and 28.1 in Dublin. The zymotic death-rate in the same six Irish towns averaged 1.1 per 1,000, or 0.4 per 1,000 higher than during the preceding period, the highest figure—3.5—being recorded in Belfast. To whooping-cough 22 deaths were ascribed, all but 1 occurring in Belfast.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following appointments have been made at the Admiralty: J. **Jenkins**, Fleet Surgeon, to the *Hood*, on recommissioning, April 21st; G. T. **Collingwood**, Fleet Surgeon, to the *President*, additional, for three months' hospital course, to date April 12th; C. J. E. **Cock**, Staff Surgeon, to the *Thetis*, to date April 19th, and to the *Perseus*, on recommissioning, undated; H. H. **Pearse**, Staff Surgeon, to the *Vernon*, additional, for the *Furious*, and W. K. **Hopkins**, Staff Surgeon, to the *Victory*, for Portsmouth Dockyard, to date April 19th; G. S. **Davidge**, Surgeon, to the *Thetis*, on the *Perseus* paying off, undated; E. P. G. **Causton**, Surgeon, to the *Pembroke*, for disposal; W. N. L. **Cherry**, Surgeon, to Royal Marine Division, Chatham, to date April 11th; J. **Sugrue**, M.D., Fleet Surgeon, to the *Resolution*, recommissioning, undated; G. E. **Kennedy**, Fleet Surgeon, to the *Queen*, E. St. M. **Nepean**, Fleet Surgeon to the *Empress of India*, both on recommissioning; J. **Bradley**, M.D., Fleet Surgeon, to the *Royal Oak*, vice Kennedy; W. G. **Stott**, M.B., Fleet Surgeon, to the *Acheron*, vice Burton, all to date May 8th; H. W. **Macnamara**, Fleet Surgeon, to *Euryalus*, on recommissioning, May 15th; C. L. W. **Bunton**, M.B., Staff Surgeon, to the *Triumph*, on recommissioning, May 8th; H. E. **Tomlinson**, Staff-Surgeon, to the *Bedford*, vice Stott, May 9th; J. E. **Phillips**, Staff Surgeon, to the *Royal Arthur*, on recommissioning, May 15th; R. L. **Dickenson**, Surgeon, to the *Pembroke*, April 11th; and A. G. **Eastment**, Surgeon, to the *Pembroke*, April 19th, both for disposal. The appointment of Fleet-Surgeon W. J. **Colborne** to the *Russell* has been cancelled, and he has been appointed to the *Hogue*, on recommissioning, undated; J. H. **Acheson**, M.B., Fleet-Surgeon, to the *Russell*, on recommissioning, April 21st; E. **Sutton**, Staff Surgeon, to the *St. George*, on recommissioning, May 15th; E. S. **Tuck**, Staff Surgeon, to the *President*, additional, for three months' course at Guy's Hospital, April 23rd; N. H. **Mummery**, Surgeon, to the *Latona*, April 18th; J. **Verdon**, Surgeon, to the *Hyacinth*; M. T. **Malf**, M.B., Surgeon, to the *Russell*, both on recommissioning, April 21st; F. L. J. M. **de Verteuil**, Surgeon, to the *Hogue*, on completing, May 15th; G. E. **Hamilton**, M.B., Surgeon, to the *Vengeance*, on completing; W. N. **Horsfall**, M.B., Surgeon, to the *Euryalus*, on recommissioning, both May 15th; F. J. **Gowans**, M.B., Surgeon, to the *Triumph*; A. D. **Spalding**, Surgeon, to the *Queen*, both on recommissioning, and W. L. **Hawkins**, Surgeon, to the *Leda*, vice Gowans, all dated May 8th; C. A. G. **Philips**, Surgeon, lent to the *Trafalgar*, April 16th.

Staff Surgeon E. **Marshall** has been appointed to the *President*, additional, for study at the West London Hospital, and not to the *Pembroke*, additional, as stated in our issue for April 7th.

THE GRENADIER GUARDS.

Brigade-Surgeon-Lieutenant-Colonel Charles Edward Harrison, M.B., of the Grenadier Guards, is appointed President of a Medical Board to examine Militia and Yeomanry candidates for commissions in the regular forces in London on May 7th and 8th.

INDIAN MEDICAL SERVICE.

The services of Lieutenant-Colonel Sir R. H. **Charles**, K.C.V.O., M.D., Bengal Establishment, Surgeon in India to the Prince of Wales, are placed at the disposal of the Home Office, from March 20th.

Lieutenant-Colonel H. **Thomson** has been confirmed in appointment of Sanitary Commissioner, Madras, from April 29th.

Lieutenant-Colonel W. F. **Thomas** is appointed to act as District Medical and Sanitary Officer, with medical charge of Central Gaol, Trichinopoly.

CHANGES OF STATIONS.

The following changes of stations amongst the officers of the Royal Army Medical Corps have been officially reported to have taken place during March, 1906:

		FROM	TO
Colonel	R. H. Forman, M.B.	Woolwich	India.
Lieut.-Col.	J. R. Dodd, M.B.	Mhow	Bareilly.
,,	S. Townsend, M.D.	Wellington	Dover.
,,	B. T. McCreery, M.B.	Secunderabad.	Bangalore.
,,	C. W. Thiele, M.B.	,,	Bellary.
,,	W. L. Reade	—	Bangalore.
,,	J. Carmichael	Mian Mir	Jullundur.
,,	W. Dick, M.B.	Dover	Edinburgh.
,,	F. H. Treherne	Nowshera	Rawul Pindi.
,,	J. M. Irwin, M.B.	Aldershot	London.
,,	R. Kirkpatrick, C.M.G., M.D.	Jullundur	Lichfield.
,,	Sir A. A. Brooke-Pechell, Bart., M.B.	Portsmouth	London Dist.
,,	T. W. Hamilton, C.M.G., M.B.	Shorncliffe	Aldershot.

,,	G. Ormrod, M.B.	—	Meerut.
,,	A. E. S. Irvine	Curragh	Dublin.
,,	J. S. Dunne	Aldershot	Deepcut.
,,	H. Stewart, M.B.	Curragh	Dublin.

Orders have been given for the transfer on May 1st to the Northern Command of the Lichfield (Militia Company of the Royal Army Medical Corps) and the Sherwood Foresters and Staffordshire Volunteer Bearer Companies.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel H. Scott, M.B., retired pay, and Lieutenant-Colonel R. H. Hall, M.D., have been appointed Medical Officers in the London Recruiting Area.

Captain A. C. Lupton, from Newcastle-on-Tyne, has been appointed to the 1st Life Guards.

Lieutenant L. Bousfield, M.B., now at Malta, has been selected for employment with the Egyptian Army.

The following Indian appointments in the Eastern Command have been made to the command of the various hospitals specified: Lieutenant-Colonel W. E. Berryman, to Muttra; Lieutenant-Colonel M. J. Sexton, Chakrata; Major J. B. Buchanan, M.B., Barrackpore; Major J. Donaldson, Agra; Major A. J. Luther, Landour; Major S. H. Withers, M.B., Chaubuttia: Major W. Tibbits, M.B., Delhi; and Captain B. S. Bartlett, to Fort Allahabad.

In the Western Command, Lieutenant-Colonel G. F. Gubbin has been posted to the Bombay Brigade; Captain M. F. Foulds, from the Jubbulpore Brigade, has also been posted to the Bombay Brigade.

ROYAL ARMY MEDICAL CORPS (MILITIA).

Mr. Robert Johnstone Stirling is appointed to be Lieutenant, under date April 11th.

VOLUNTEER RIFLES.

Surgeon-Major J. P. Elliot, of the 1st Northumberland Fusiliers, is granted the rank of Honorary Surgeon-Lieutenant-Colonel. Surgeon-Major and Honorary Surgeon-Lieutenant-Colonel J. P. Elliot resigns his commission, with permission to retain his rank and to wear the prescribed uniform.

Surgeon-Lieutenant-Colonel Frederick W. Gibbon, V.D., of the Tyne Division, Submarine Miners, Royal Engineers, and Surgeon Lieutenant Edward Cureton, V.D., M.D., of the 1st Shropshire and Staffordshire Royal Garrison Artillery, from Honorary Associates, are appointed to be Knights of Grace in the Order of the Hospital of the St. John of Jerusalem in England, April 18th.

Vacancies and Appointments.

VACANCIES.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column, advertisements must be received not later than the first post on Wednesday morning.

BELGRAVE HOSPITAL FOR CHILDREN, Clapham Road, S.W.—Senior and Junior Resident Medical Officers. Honorarium at the rate of £20 and £10 a year respectively.

BIRKENHEAD BOROUGH HOSPITAL.—Junior Resident House-Surgeon. Salary, £80 per annum.

BODMIN: CORNWALL COUNTY ASYLUM.—Third Assistant Medical Officer. Salary, £135, rising to £155 per annum.

CAMBRIDGE UNIVERSITY: PATHOLOGICAL LABORATORY.—John Lucas Walker Studentship. Annual value, £200.

CANTERBURY: KENT AND CANTERBURY HOSPITAL.—House-Physician. Salary, £90 per annum.

CHARING CROSS HOSPITAL, W.C.—Assistant Physician.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, Victoria Park, E.—(1) Resident Medical Officer. Salary, £100 per annum. (2) Physician to Out-patients. (3) Surgeon-Dentist.

COLCHESTER: ESSEX AND COLCHESTER HOSPITAL.—House-**Surgeon. Salary, £100 per annum.**

COVENTRY AND WARWICKSHIRE HOSPITAL.—Junior House-Surgeon. Salary at the rate of £60 per annum.

DEVONPORT: ROYAL ALBERT HOSPITAL.—Resident Medical Officer. Salary, £100 per annum.

DOUGLAS: NOBLE'S ISLE OF MAN HOSPITAL AND DISPENSARY.—Resident House-Surgeon. Salary, £90 per annum.

EVELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—Surgeon to Out-patients.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.—House-Surgeon. Salary, £20 for six months, and £2 10s. washing allowance.

HULL ROYAL INFIRMARY.—House Physician. Salary, 80 guineas per annum.

IPSWICH: EAST SUFFOLK AND IPSWICH HOSPITAL.—Third House-Surgeon. Salary, £50 per annum.

ITALIAN HOSPITAL, Queen Square, W.C.—Honorary Assistant Physician.

LEICESTER INFIRMARY.—Assistant Surgeon.

LONDON MEDICAL MISSION, Endell Street, W.C.—Assistant Medical Officer.

METROPOLITAN ASYLUMS BOARD.—Male Assistant Medical Officers at the Fever and Small-pox Hospitals. Salary, £180, rising to £240, per annum.

MONTROSE ROYAL ASYLUM.—Senior Assistant Medical Officer. Salary commencing at £200 per annum.

MOUNT VERNON HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Hampstead.—Resident Medical Officer. Honorarium, £50 per annum.

NEWCASTLE-ON-TYNE: CITY ASYLUM, Gosforth.—Assistant Medical Officer. Salary, £140, rising to £160, per annum.

MATTERS REFERRED TO DIVISIONS.

PROVISIONAL AGENDA

FOR

Annual Representative Meeting

TO BE HELD IN

Caxton Hall, Caxton Street, Westminster, S.W.,

ON

JULY 24th, 1906, and following days (as may be necessary).

The Annual General Meeting is fixed for Tuesday, July 24th, 1906, at 10 a.m., to be immediately followed by the Annual Representative Meeting.

ORDER OF BUSINESS.

1.

A. Receive the return of the election of Representatives of Divisions for the year, and receive notices, if any, of the appointment of substitutes for Representatives, under Article XXX and By-law 18.

2.

B. Elect Chairman.

3.

C. Adopt Standing Orders.

The Standing Orders as adopted at Leicester will be found appended (see p. 236).

Notice has been given of the following motions for amendment:

AMENDMENTS TO STANDING ORDERS.

4.

By the DUNDEE BRANCH:

That there be added:—

(*a*) The Annual Representative Meeting shall at its first meeting appoint a Committee of five members, who shall report upon the financial aspects of any proposal involving special expenditure which has not already been reported on by the Finance Committee.

5.

(*b*) The Meeting shall not consider any proposal involving special expenditure until it has been reported upon by the Finance Committee, or by the Committee appointed as above.

[*Supplement, April 21st.*]

6.

D. Receive the Annual Report of the Council, presented under By-law 34, and consider motions relating thereto.

ANNUAL REPORT OF COUNCIL, 1905-6.*

---

* The Annual Report of the Council was published in the SUPPLEMENT of April 28th.

7.

E. Receive the Financial Estimate presented by the Council under By-law 34, and consider motions relating thereto.

8.

F. Receive Special Report of the Council pursuant to Minutes 50, 53, and 54, of the Representative Meeting at Leicester:

Minute 50.

Resolved: That the Representative Meeting issue the necessary authority for application on behalf of the Association to be made to the Privy Council praying His Majesty to grant a Royal Charter of Incorporation to the Association.

Minute 54.

Resolved *nem. con.:* That the Central Council be instructed to submit the draft of the application for a Royal Charter to the Divisions as soon as possible, with an estimate of the probable cost and with an explanatory memorandum.

9.

G. Receive Additional Reports of the Council (if any) in the order in which the Council shall submit them for consideration, and consider motions relating thereto.

10.

H. Receive the Report of the Medico-Political Committee, and consider motions relating thereto.

MEDICO-POLITICAL COMMITTEE.

ANNUAL REPORT TO THE REPRESENTATIVE MEETING FOR THE YEAR 1905-6.*

11.

I. Receive Special Report of the Medico-Political Committee on action taken under the scheme, approved by the Representative Meeting at Oxford, for the nomination of candidates for the General Medical Council. (For List of Candidates see page 238.)

12.

J. Receive the Report of the Ethical Committee, and consider motions relating thereto.

ETHICAL COMMITTEE.

ANNUAL REPORT TO THE REPRESENTATIVE MEETING FOR THE YEAR 1905-6.*

13.

K. Consider any motions placed upon the Agenda of the Meeting by which it is proposed to make By-laws or to alter or repeal existing By-laws:

I. Amendments of substance of existing By-laws.

II. Proposed new By-laws.

AMENDMENTS TO BY-LAWS.

I. AMENDMENT OF EXISTING BY-LAWS.

14.

Amendment of By-law 17.

Grants to Divisions.

By the Altrincham Division (Lancashire and Cheshire Branch):

To amend By-law 17 by adding to it the following words: "If a Division shall be of opinion that the grant annually made by the Branch Council in any year to the Division is insufficient to defray those expenses which are necessary for the proper conduct of the work of the Division, the Central Council may, upon representation having been made to it by the said Division to that effect, direct that such additional grant shall be made by the Branch to the Division as the Central Council shall deem necessary, and the Branch Council shall thereupon make such additional grant; provided that in no case shall a Branch be called upon by the Central Council to make a greater additional grant than will raise the total amount granted by the Branch to that Division for the year to three shillings per head of the membership of the Division."

[*Supplement, February 24th.*]

Existing By-law 17.

Out of the moneys received in accordance with the last preceding By-law, the Branch shall defray all its expenses, and shall also pay to each Division of the Branch such sum per Member as the Branch Council may consider necessary to defray the expenses of the Division.

15.

Amendment of By-law 23.

Representatives on Central Council.

By the Hampstead Division (Metropolitan Counties Branch):

That a Branch have an additional member on the Central Council for each complete 300 members in excess of 400.

Existing By-law 23.

Any Branch, or group of Branches, having an aggregate membership of not less than 200 may elect one Member of Council, and any Branch or group of Branches having an aggregate membership of not less than 400 may elect two Members of Council, and an additional member for each complete 600 Members in excess of 400. Branches in the United Kingdom having less than 200 Members shall be grouped for this purpose with neighbouring Branches, unless in the opinion of the Council the special conditions of any such Branch justify the grant of separate representation. The grouping of Branches not within the United Kingdom for the purpose of electing Members of Council shall be determined by the Council, provided that the total number of Members of Council whom such Branches are entitled to elect shall not be less in proportion to the total membership thereof than those elected by the Branches in the United Kingdom.

[*Supplement, April 21st.*]

16.

By the Council of the Association:

Additional Section of By-law 40.

Science Committee.

That a Science Committee, consisting of fourteen members, shall be appointed by the Council, who shall advise, and where so directed act for, the Council in all matters not specially referred to other Committees which concern the work of the Association for the promotion of the Medical and allied Sciences, including the conditions of award of Scholarships, Grants, or Medals given by the Association, or under trusts undertaken by the Association, the adjustment of the Sections at the Annual Meeting, the arrangement of Committees for special scientific work, and the encouragement and assistance of the scientific work of the Branches and Divisions. The Committee shall have power to co-opt, for the consideration of the award of Scholarships, Grants, and Medals, members, not exceeding four in number, specially qualified to assist in its work.

[*Supplement, April 21st.*]

---

* The annual report of the Medico-Political and Ethical Committees will be published at an early date.

17.

Amendment of By-law 40.

Standing Committees.

By the Dundee Branch:

That the By-law be amended in accordance with the following propositions:

A.—STANDING COMMITTEES.

(1) That there be a Finance Committee.

(2) That there be a Journal Committee.

(3) That there be a Hospitals Committee.

(4) That there be an Arrangements (Annual Meeting) Committee.

(5) That the Premises and Library Committee be removed from the List.

B.—MEMBERSHIP OF COMMITTEES.

(6) That the Chairman of Representative Meetings and the Treasurer be *ex officio* members of all Committees.

1. Finance Committee.

(7) That the Chairman of the Organization Committee for the time being be *ex officio* a member of the Finance Committee.

(8) That the Chairman of the Journal Committee for the time being be *ex officio* a member of the Finance Committee.

(9) That the Chairman of the Science Committee for the time being be *ex officio* a member of the Finance Committee.

(10) That the Chairman of the Medico-Political Committee for the time being be *ex officio* a member of the Finance Committee.

(11) That in addition to the *ex officio* members, the Finance Committee have eight ordinary members appointed by the Council from its own number.

2. Journal Committee.

(12) That the Journal Committee have nine ordinary members appointed by the Council, of whom five at least shall be from its own number.

3. Hospitals Committee.

(13) That the Hospitals Committee have twelve ordinary members appointed by the Council, of whom six at least shall be from its own number.

4. Arrangements Committee.

(14) That the Arrangements Committee have as ordinary members six members appointed by the Council from its own number, and six members appointed by the Local Executive Committee for the annual meeting.

C.—FUNCTIONS OF COMMITTEES.

1. Finance Committee.

(15) That it be the duty of the Finance Committee to certify the accounts prior to their presentation to the Council.

(16) That it be the duty of the Finance Committee to advise the Council on the administration of any funds held in trust by the Association and of the Superannuation Fund, and, when necessary, the appointment of administrators for any such funds.

(17) That it be the duty of the Finance Committee to report to the Council on the financial bearings of any proposals involving special expenditure.

(18) That it be the duty of the Finance Committee to supervise and report to the Council on the general working and organization of the central office.

(19) That it be the duty of the Finance Committee to consider and report to the Council upon the management of the property of the Association.

2. Journal Committee.

(20) That it shall be the duty of the Journal Committee to consider and report to the Council upon any matters connected with the Journal or other publications of the Association.

3. Hospitals Committee.

(21) That it shall be the duty of the Hospitals Committee to consider and report to the Council upon all questions concerning hospitals and other medical charities.

4. Arrangements Committee.

(22) That it shall be the duty of the Arrangements Committee (*a*) to advise the Council on the arrangements for the Annual Meeting, including the definition of Sections and Subsections; (*b*) to submit to the Council a list of nominations for the officers of Sections and readers of the addresses.

5. Redrafting of By-law 40.

(23) That it be an instruction to the Chairman, the Secretaries, and the Solicitor to adjust By-law 40 in accordance with these and any non-conflicting resolutions adopted at the Annual Representative Meeting, and until this be done these resolutions shall take the place of any corresponding parts of the present By-law 40.

[*Supplement, April 21st.*]

18.

Amendment of By-law 40.

Standing Committees: Election.

By the North Manchester Division (Lancashire and Cheshire Branch):

That the Annual Representative Meeting be empowered to elect half the members of each Standing Committee.

19.

Attendance.

Standing Committees:

By the North Manchester Division (Lancashire and Cheshire Branch):

That any member of a Standing Committee of the Association absenting himself from two successive meetings without satisfactory explanation shall be deemed to have resigned, and the Committee shall forthwith fill the vacancy.

[*Supplement, March 31st.*]

Existing By-law 40, Standing Committees.

Nevertheless, there shall be Standing Committees as follow:

(1) *Journal and Finance.*

A Journal and Finance Committee not exceeding fifteen in number (five to form a quorum) shall be appointed by the Council, which shall, *inter alia*, examine into the general working of the Office and of the Journal, and certify the quarterly accounts prior to their being presented to the Council.

(2) *Premises and Library.*

A Premises and Library Committee not exceeding nine in number (three to form a quorum) shall be appointed by the Council, to which shall be referred all matters connected with the Library and its management, as well as the management of the House Property of the Association.

(3) *Public Health.*

A Public Health Committee not exceeding nine in number (three to form a quorum) shall be appointed by the Council, to which shall specially be referred all questions relating to Public Health and the Poor-law Medical Service.

(4) *Colonial.*

A Colonial Committee not exceeding nine in number (three to form a quorum) shall be appointed, to which shall be referred all questions specially relating to the Branches not in the United Kingdom. Of such Committee five members shall be appointed by the Representatives of these Branches on the Council, and two by the Council,

(5) *Naval and Military.*

A Royal Naval and Military Committee, not exceeding nine in number (three to form a quorum), shall be appointed by the Council, to which shall be referred all matters relating to the Royal Navy Medical Service, the Army Medical Service, the Indian Medical Service, and the Medical Organization of the Auxiliary Forces. Such Committee to include the Representative Members of these Services who are on the Council.

(6) *Medico-Political.*

A Medico-Political Committee shall be appointed, consisting of sixteen members (seven to form a quorum), which shall deal with all matters involving the public relations of the Profession not specially referred to other Committees, and shall be composed of the Chairman of Representative Meeting, the Treasurer, *ex officio*, and twelve other Members, all of whom shall be appointed by the Council, until the first Representative Meeting, and thereafter six of such Members shall be appointed by the Council, and six by the Representative Meeting. Such Committee to report to the Council and to the Representative Meeting, to act under the Council, and to have the services of a salaried officer.

(7) *Ethical.*

An Ethical Committee (otherwise designated the Central Ethical Committee) shall be appointed consisting of twelve members (five to form a quorum) which shall advise the Council on proposed Rules of Divisions and Branches relating to professional conduct, shall investigate and report to the Council upon the cases of Members whose conduct is to be considered by the Council, shall adjudicate in cases of disputes on ethical questions referred to it by Members of the Association, and generally shall advise, and, where so directed, act for the Council, on all questions of Professional conduct. Until the first Representative Meeting such Committee shall be appointed by the Council, and thereafter five members of such Committee shall be appointed by the Council and five by the Representative Meeting. This Committee shall have the services of a salaried officer.

(8) *Organization.*

An Organization Committee shall be appointed by the Council, not exceeding nine in number (three to form a quorum), which, subject to the directions of the Council, shall deal with all questions of the boundaries or area of Divisions and Branches, and the Rules thereof other than those relating to ethical matters, and advise the Council thereon, and shall exercise such powers as may be conferred upon it by the Council in advising and assisting Divisions or Branches in the strengthening of their organization. This Committee shall have power to add to its number, for special purposes, a limited number of Members specially qualified to assist in its work. This Committee shall have the services of a salaried officer.

(9) *Scottish Committee.*

A Scottish Committee, consisting of one Secretary from each Scottish Branch and the Scottish Members of the Central Council. It shall have a Secretary, resident in Scotland, and shall meet at such place and time as the Committee may itself direct, and shall report to the Council on any matters specially concerning Scotland.

(10) *Irish Committee.*

An Irish Committee, consisting of the Irish Members of the Central Council, one Secretary from each Irish Branch, and one Member elected by each Branch; provided that, in the case of the Leinster and Ulster Branches, such elected Members shall be practitioners not resident either in Dublin or Belfast, and provided that, in the event of the Secretary of a Branch being also a Member of the Central Council, such Branch shall have power to elect a further Member of the Committee.

II.—PROPOSED NEW BY-LAWS.

20.

By the Council of the Association:

(By-law drafted by the Council pursuant to Instructions of the Representative Meeting at Leicester.)

(1) Representation of the Representative Meeting on the Council.

That the Representative Meeting shall have power to elect annually not more than six members of the Central Council.

21.

Addition Proposed by the Council.

(2) Tenure of Office of Members of Council Elected by the Representative Meeting.

That each member of Council elected by the Representative Meeting shall hold office for one year, and at the end of that time shall be eligible for re-election, unless he has served as a member of Council elected by the Representative Meeting for six years successively, in which case he shall for one year be incapable of being so elected.

22.

(By-law drafted by the Council pursuant to Instructions of the Representative Meeting at Leicester.)

(3) Supplementary Grants to Divisions and Branches.

In addition to the grants made in pursuance of By-law 16, the Council, on the application of any Division or Branch, shall have power to make a supplementary grant of such amount as the Council may deem proper. Every application by a Division, not itself a Branch, shall be forwarded through the Branch Council, whose duty it shall be to transmit the same to the Central Council, with such comment, if any, as the Branch Council may deem expedient.

All applications for supplementary grants shall be referred by the Council to the Organization Committee for report thereon, and, in considering the same, the said Committee and Council shall have regard to the evidence of work done by or through the agency of such Division or Branch for the Association or the medical profession, and also to the amount which may have been voluntarily subscribed locally for any purpose for which such a grant may be desired.

[*Supplement, April 21st.*]

L. Consider proposed alterations of the Articles of Association which are submitted for the consideration of the Representative Meeting.

PROPOSED ALTERATIONS OF THE ARTICLES OF ASSOCIATION.

23.

Amendment of Article XXVII.

Election of Representatives.

By the Wandsworth Division (Metropolitan Counties Branch):

For "three months" read "nine months."

Existing Article.

Representatives of Divisions shall be elected by Constituencies formed as follows, each such Constituency being entitled to elect one Representative:—Any Division having not less than 50 Members may form one Constituency, and every Division having less than 50 Members shall be grouped by the Council with another Division or with other Divisions to form a Constituency having not less than 50 Members. In no case shall the total number of Constituencies formed throughout the Association exceed 300, and the final delimitation of such Constituencies shall rest with the Council. In the case of a Constituency formed within the United Kingdom, the Representative shall be elected by a general meeting of Members of the Constituency held not more than 3 months nor less than 3 weeks before the Annual Representative Meeting, and in the case of a Constituency not formed within the United Kingdom, the Representative shall be elected either in manner aforesaid or by voting papers sent to each Member of the Constituency, as the said Constituency may decide. Such meeting shall be convened, or such voting papers dispatched by the Secretary of the Constituency, who, in the case of a Constituency composed of more than one Division, shall be chosen by the Secretaries of those Divisions, and if they cannot agree, by the Council. The Secretary of each Constituency shall inform, not less than 14 days before the Representative Meeting, the General Secretary of the name and address of the Representative elected by such

Constituency, and the General Secretary shall issue to such Representative a ticket of admission to the Meeting.

[*Supplement, March 3rd.*]

24.

Expenses of Representatives.

By the Northamptonshire Division (South Midland Branch):

That the Representatives of Divisions be paid all out-of-pocket expenses incurred in attending Representative Meetings, etc.

[*Supplement, February 24th.*]

25.

Expenses of Representatives.

By the Wandsworth Division (Metropolitan Counties Branch):

(Amendment to foregoing motion by the Northamptonshire Division.)

That the word "all" in the first line and the word "etc." in the third line be omitted, and that at the end the words "to the extent of not more than 15s. a day" be added.

[*Supplement, April 21st.*]

M. Consider motions placed upon the Agenda of the Meeting by Divisions or Branches, relating to the honour and interests of the Medical Profession or of the Association.

NOTICES OF MOTION

(Other than Proposed Amendments of Articles, By-laws, or Standing Orders).

The following notices have been grouped according to the subjects to which they severally relate:

I.—NOTICES AFFECTING THE REGULATIONS AND ADMINISTRATION OF THE ASSOCIATION.

I.—NOTICES AFFECTING THE REGULATIONS OF THE ASSOCIATION.

26.

Officers of Divisions.

By the Wandsworth Division (Metropolitan Counties Branch):

That it be an instruction to the Central Council to alter all Articles and By-laws so that "the Chairman of a Division" be called "the President of the Division"; and the "Executive Committee of a Division" be called "the Division Council."

[*Supplement, March 3rd.*]

27.

Constitution of Central Council of the Association.

By the Hampstead Division (Metropolitan Counties Branch):

That at least one Registered Dental Surgeon should be added to the Central Council of the Association, either by election or by co-option.

[*Supplement, April 21st.*]

By-laws 16 and 17.

Capitation Grants.

By the Wandsworth Division (Metropolitan Counties Branch).

28.

(1) That in view of the greater activity and organization now apparent in various Divisions of the Association, the time has come for reconsideration of By-laws 16 and 17 whereby fixed capitation grants are made to the Branches and through them to the Divisions.

29.

(2) That it be an instruction to the Central Council to consider the following among other subjects, and report to the Divisions by March 31st, 1907, what changes in the By-laws they suggest.

30.

(*a*) That it is not desirable that there be gradually accumulating funds lying idle in the hands of various Branches, which, as such (at all events for the present), seem to have no need of them.

31.

(*b*) In view of the expenses of local Scientific Medical Societies it is not unreasonable to suppose that some Divisions should require grants up to even 7s. 6d. a head per annum, which might be given in instalments in accordance with work done, and made direct from the Central Office.

32.

(*c*) That there should also be made direct to Branches, for Branch expenses, from the Central Office capitation grants up to 2s. 6d. per annum in accordance with work done, which could be increased by grants from Divisions for special purposes made by special Division resolutions.

33.

(*d*) That a basis for the necessary first instalment in each year to a Branch or Division could be arrived at by consideration of the average of expenses incurred during the past three years.

[*Supplement, April 21st.*]

34.

Capitation Grant to Divisions and Branches.

Local Control.

By the Bournemouth Division (Dorset and West Hants Branch):

That the Capitation Grant to Branches should be absolutely at the disposal of the Branches and Divisions, and to be allocated to the Divisions as agreed on.

[*Supplement, April 21st.*]

II.—NOTICES AFFECTING THE ADMINISTRATION OF THE ASSOCIATION.

35.

Premises.

Alterations.

By the Wandsworth Division (Metropolitan Counties Branch):

That it be an instruction to the Central Council before arranging for any alteration of the present premises of the Association involving an outlay of over £200, or the obtaining at any time of premises elsewhere in London or the provinces, to first consult the members through the Divisions and obtain their wishes on the main principles involved.

[*Supplement, February 10th.*]

36.

Management of Library.

By the City Division (Metropolitan Counties Branch):

That it be an instruction to the Council of the Association to make arrangements for keeping the Library of the Association open till 11 p.m. daily; except on Saturdays, when it shall be open till 1 p.m.

[*Supplement, March 3rd.*]

37.

Circulating Medical Library.

By the Gateshead Division (North of England Branch):

That the Council of the Association be requested to take into consideration the feasibility of adding to the other attractions of the Association a Circulating Medical Library, and report to the Divisions in time for a decision to be taken at the next Representative Meeting.

[*Supplement, April 28th.*]

38.

Facilities for Social Intercourse at Head Office.

By the City Division (Metropolitan Counties Branch):

That it be an instruction to the Council of the Association to provide facilities at the Association's premises in London for the better social intercourse of members, especially country members visiting London.

[*Supplement, March 3rd.*]

39.

Official Reports and Journal.

Title "Doctor."

By the Gateshead Division (North of England Branch):

That in all official reports connected with the Association and in the columns of the British Medical Journal, the word Dr. be used as a title for every registered medical man unless he is either known to be practising as a consulting surgeon or has signified his desire to be called Mr.

[*Supplement, February 10th.*]

40.

Year Book.

Date of Issue.

By the North Manchester Division (Lancashire and Cheshire Branch):

That the Year Book be issued not later than October 1st in each year.

41.

Officials.

Regulation and Co-ordination of Duties.

By the North Manchester Division (Lancashire and Cheshire Branch):

That a Committee be appointed to inquire into the duties of the General and Medical Secretaries, with a view to their better regulation and co-ordination.
[*Supplement*, *March 31st.*]

42.

District Organizing Secretaries.

By the Wandsworth Division (Metropolitan Counties Branch):

That in order to accelerate the consideration of, and dealing with, matters of local interest that do not affect the principles or policy of the Association, and so relieve the routine work of the Central Office, it is desirable that there be gradually introduced the principle of District Organizing Medical Secretaries. That it be an instruction to the Central Council to consider the matter, and to report with a scheme to the Divisions by March 31st, 1907.
[*Supplement*, *April 21st.*]

II.—NOTICES AFFECTING THE WORK OF THE ASSOCIATION.

I.—MEDICO-POLITICAL.

43.

Coroners' Law: Medical Witnesses.

By the Hampstead Division (Metropolitan Counties Branch):

That the medical witness at a coroner's inquest should be the medical man last in attendance upon the deceased, or the first to see the dead body, as has been the practice until recently pursued.
[*Supplement*, *April 21st.*]

Nurses' Registration: Representation of Medical Profession on Central Board.

By the Wandsworth Division (Metropolitan Counties Branch):

44.

(1) That in the opinion of this Representative Meeting the number of seats allotted to the medical profession on the Council in the Bill for Nurses' Registration now before the House of Commons is inadequate.

45.

(2) That it be an instruction to the Central Council to take the necessary steps in order to have the one seat allotted under the auspices of this Association increased to seven.

46.

Payment of Medical Men called in in Complicated Midwives' Cases.

By the Hampstead Division (Metropolitan Counties Branch):

That the recommendations of the Medico-Political Committee relative to the payment of Medical Men called in to attend the patients of midwives be endorsed, and the Council of the Association urged to take immediate steps to ensure the introduction of clauses dealing with this matter into any suitable Bill at the earliest possible moment.
[*Supplement*, *April 21st.*]

Vaccination.

By the Hampstead Division (Metropolitan Counties Branch):

47.

Compulsory Revaccination.

That revaccination prior to the statutory age for leaving elementary schools be made compulsory.

48.

Supply of Government Lymph to all Practitioners.

That Government lymph should be supplied to all practitioners who desire it.

49.

Office of Public Vaccinator.

That the office of Public Vaccinator should either be abolished, or made a whole-time appointment.
[*Supplement*, *April 21st.*]

50.

Contract Practice: Medical Organization.

By the Hampstead Division (Metropolitan Counties Branch):

That for the purpose of deciding upon the local conditions under which contract practice should be carried on, an organized body, such as a Division of the British Medical Association, in conjunction with all the local profession, should be formed in each affected district.
[*Supplement*, *April 21st.*]

51.

Relation of the Medical Profession to the State. Income and Property Tax.

By the Exeter Division (South-Western Branch):

That the question of the incidence of the Income Tax upon the medical profession be referred to the Divisions for consideration, together with the Memorandum on the subject submitted by the Exeter Division.

MEMORANDUM BY THE EXETER DIVISION ON REPLACEMENT OF INCOME TAX BY PROPERTY TAX.

Income tax, as now levied, puts a premium on idleness generally, and specially penalizes intellectual work, because it makes no practical distinction between income from earnings and income from property. It especially constitutes a most unfair burden on the professional classes.

Income tax thus forms a standing grievance, and a direct incentive to the introduction of steep graduation as a supposed means of remedying its injustice. But steep graduation will not right what is radically wrong in the tax, whilst it will introduce a very dangerous principle. The income tax is wrong because the theory on which it rests is wrong. The State is theoretically supposed to protect income, and income tax is the charge made for this protection. But does the State protect income? Take two illustrations:

1. A man without property earns £1,000 a year by his profession. He breaks down. (The State makes no attempt to replace his income.)
2. A family lives on an income of £1,000 a year wholly earned by a man who has no surplus to insure his life. He dies. (The State treats his survivors as paupers.)

In each of these cases a heavy payment is made to the State annually for protection of income. Where does the protection come in? It does not come in at all. The State in fact does not protect income.

The State protects two things—person and property. Person repays this protection by work and by indirect taxation; property should repay it by a proportional property tax. But income should not be taxed for protection which it does not get. In other words, income tax should be abolished and property-tax should be put in its place. No other arrangement will be equitable. Such a tax will not press on the artisan and labouring classes, will not constitute an unjust burden on the professional classes, penalizing intellectual work, but will be borne by those on whom it ought to fall—the owners of property over a certain minimum amount. By a reasonable system of exemption and abatements, its incidence can be adjusted so as not to fetter industry or to press unduly on those who may fairly claim abatement or remission. It will no more stop saving than the present income tax stops earning. It will no more drive capital out of the country than the income tax does. It will remove the excuse now existing for such confiscatory taxation as a steeply-graduated income tax.

Now that the principles of taxation are likely to be considered, this change from income tax to property tax ought to be taken into account.
[*Supplement*, *April 21st.*]

52.

Nomination of Candidates for General Medical Council.

Declaration.

By the Gateshead Division (North of England Branch):

That the second paragraph in the "Declaration by Candidates," in the Scheme for Selection of Candidates for the General Medical Council by the British Medical Association, be omitted as unnecessary.

[*Supplement, February 10th.*]

II.—ETHICAL.

Position of Consultants: Proposed Separate Class.

By the Hampstead Division (Metropolitan Counties Branch):

53.
That a class to be styled "Consultants" shall be recognized as possessing special knowledge and experience of at least one department of practice and shall undertake not to treat patients, habitually, either at their own consulting rooms or at the houses of patients or elsewhere, except in cooperation throughout the treatment of any case, either personally or by correspondence, with practitioners usually in charge of such patients.

54.
Rider: This does not refer, under present circumstances, to patients seen at the charitable institutions to whose staff consultants are attached.

[*Supplement, April 21st.*]

III.—HOSPITALS.

55.
Constitution and Management of Hospitals.

Representation of Local Profession on Committee.

By the Hampstead Division (Metropolitan Counties Branch):

That the constitution and management of hospitals whose staff are general practitioners are specially a matter of concern to the local profession, who should be adequately represented on the Committee of Management.

Hospital Administration.

By the Hampstead Division (Metropolitan Counties Branch):

56.
That the following be substituted for the corresponding paragraphs in the propositions already approved by the Representative Meeting as to Hospital Administration. (Published by the Hospitals Committee in the Supplement for February 17th, 1906.)

(*a*) For Paragraph 10 substitute the following:

57.
Limitation of Cases.

(10) That the number of new cases to be seen professionally on any one day by an honorary medical officer shall be limited to 20 (until the out-patient departments become consultative).

(*b*) For Paragraph 12 substitute the following:

58.
Retirement of Staff.

(12) That it is desirable that in all hospitals there shall be an age and service limit for the retirement of the members of the medical and surgical staff.

[*Supplement, April 21st.*]

59.
NOTICES OF MOTION NOT CLASSIFIED.

By the Waterford Division (South-Eastern of Ireland Branch):

(1) That it be an instruction to our Representative to move at the annual meeting a motion to carry into effect our resolution asking for a representative on the Council of the Association for small Branches like ours where, as in our case, they represent interests different from and antagonistic to those of the predominant and associated Branch.

(2) That he be instructed to move that the Association and its Council do bring to a practical conclusion the question of medical defence of the members of this Association, than which we conceive none to be more important to members of this Association, whether individually or collectively.

(3) That the same be further instructed to move that such steps be taken to give practical effect to the Oxford resolutions, and to the whole trend of medical opinion, on the subject of the gratuitous or semi-gratuitous hospital treatment of the well-to-do as will place our profession in the same position as that of the law, and preserve us from further plunder and robbery.

(4) That the same be further instructed to move that power be taken in the new Charter to subsidise a parliamentary representative or representatives.

(5) That he be further instructed to give his warm support to any well-considered proposal for the reform on a representative basis of the General Medical Council.

(6) That he be further instructed to take the sense of the meeting on the entire exclusion of the mass of the profession, and even of the majority of hospital staffs, from all share in medical teaching.

(7) That he be further instructed to take the sense and pleasure of the meeting on the necessity for having all medical examinations duly advertised and open to the presence of every registered medical practitioner.

(8) Further, that our Representative shall move at the annual general meeting, to be held in London in July next, that the Council be requested to appoint a Materia Medica Committee, whose duty it will be, with such professional aid as they can summon to their assistance, to investigate and pronounce on the uses and properties of all drugs which shall be used by the profession, and that in view of the grave injury inflicted on the public and on the profession alike by the present wholesale introduction of drugs by mere commercial firms, whereby the ground is being cut from under our feet, and the gullible public are induced to accept nostrums on the sole strength of mere assertions, that the hospitality of our museum and the pages of our Journal shall be both shut out from giving any further aid to the wholesale advertisements of drugs and preparations the sole virtues of which have too often no existence save in the mendacity of their introducers.

(9) Further, that our Representative shall move that, in the opinion of this meeting, the British Medical Journal should more largely advocate the rights, interests, and claims of the medical masses in the future than it has done in the past.

ELECTION OF COMMITTEES.

60.
N. Elect six members of the Association in accordance with By-law 40 (6) to serve on the Medico-Political Committee for the ensuing year.

By-law 40. (6) *Medico-Political.*

A Medico-Political Committee shall be appointed consisting of sixteen members (seven to form a quorum), which shall deal with all matters involving the public relations of the profession not specially referred to other Committees, and shall be composed of the Chairman of Representative Meeting, the Treasurer, *ex officio*, and twelve other members, all of whom shall be appointed by the Council, until the first Representative Meeting, and thereafter six of such members shall be appointed by the Council, and six by the Representative Meeting. Such Committee to report to the Council and to the Representative Meeting, to act under the Council, and to have the services of a salaried officer.

61.
O. Elect five members of the Association in accordance with By-law 40 (7) to serve on the Ethical Committee for the ensuing year.

By-law 40. (7) *Ethical.*

An Ethical Committee (otherwise designated the Central Ethical Committee) shall be appointed consisting of twelve members (five to form a quorum), which shall advise the Council on proposed Rules of Divisions and Branches relating to professional conduct, shall investigate and report to the Council upon the cases of members whose conduct is to be considered by the Council, shall adjudicate in cases of dispute on ethical questions referred to it by members of the Association, and generally shall advise, and, where so directed, act for the Council, on all questions of professional conduct. Until the first Representative Meeting such Committees shall be appointed by the Council, and thereafter five members of such Committee shall be appointed by the Council and five by the Representative Meeting. This Committee shall have the services of a salaried officer.

62.
P. Elect other Committees, if any.

By Order, J. SMITH WHITAKER,
Medical Secretary.

APPENDIX.

STANDING ORDERS
RELATIVE TO
BUSINESS AT REPRESENTATIVE MEETINGS.
(AS ADOPTED AT LEICESTER.)

I.—ORDER OF BUSINESS.

(A) *Annual Representative Meeting.*

Except as may be otherwise determined in the manner prescribed by the Standing Orders, the order of business shall be as follows:

1. Election Returns.—Receive the return of the Election of Representatives of Divisions for the year, and receive notices, if any, of the appointment of substitutes for Representatives under Article XXX.

2. Standing Orders.—Adopt Standing Orders.

3. Annual Report of Council.—Receive the Annual Report of the Council, presented under By-law 34, and consider motions relating to the adoption thereof in whole or in part.

4. Financial Estimate.—Receive the Financial Estimate presented by the Council under By-law 34, and consider motions relating to the adoption thereof in whole or in part.

5. Special Reports of Council.—Receive Special Reports of the Council, if any, in the order in which the Council shall submit them for consideration, and consider motions for the adoption thereof in whole or in part.

6. Report of Medico-Political Committee.—Receive the Report of the Medico-Political Committee, and consider motions for the adoption of the same in whole or in part.

7. Report of Ethical Committee.—Receive the Report of the Ethical Committee, and consider motions for the adoption of the same in whole or in part.

8. Elect Members of Medico-Political Committee.—Elect six members of the Association to serve on the Medico-Political Committee for the ensuing year.

9. Elect Members of Ethical Committee.—Elect five members of the Association to serve on the Ethical Committee for the ensuing year.

10. Consider By-laws.—Consider, in such order as the Meeting shall determine, any motions placed upon the Agenda of the Meeting by which it is proposed to make By-laws or to alter or repeal existing By-laws.

11. Consider other Motions by Divisions or Branches.—Consider, in such order as the Meeting shall determine, any motions placed upon the Agenda of the Meeting by Divisions or Branches, relating to the honour and interests of the Medical Profession or of the Association.

12. Amendment of Standing Orders.—Consider proposed amendments of Standing Orders, other than those relating to the order of business.

13. General Order of Daily Sessions.—The matters described in the foregoing Clauses shall be considered in the order therein prescribed, or as otherwise duly determined, from day to day until the completion thereof or until the expiration of four days from the first day of the Meeting, whichever shall first occur; provided that at each daily session after the first, the Meeting shall, before proceeding to the consideration of the matters aforesaid, (*a*) confirm the Minutes of the Proceedings of the previous daily session; (*b*) consider motions, if any, relating to the order of business of the day. At the conclusion of the business of the last daily session the Meeting shall confirm the Minutes thereof for presentation to the Council.

14. Hours of Daily Sessions.—All Representative Meetings not concluded by 6.30 p.m. shall stand adjourned either to 8 p.m. of the same day, or to the next day, as may be decided by a show of hands. All such Meetings shall stand adjourned at 10 p.m.

15. Varying Order of Business.—The order of business may be varied, either at the commencement or after the expiration of two hours from the commencement of any daily session, by the vote of two-thirds of those present and voting.

16. Precedence of Motions of which Notice Given.—Motions and amendments of which notice shall have been given to the General Secretary in time for them to appear in the Daily Journal shall have precedence, in the order in which such notice shall have been given, over those relating to the same subject, or otherwise having a like claim to precedence in the order of business, of which such notice has not been given.

17. Motions on the Same Subject.—If two or more of the motions placed on the Agenda of the meeting by the Council and by Divisions and Branches shall appear to the Chairman to relate to the same subject he shall ascertain the will of the meeting in respect of the consideration of one of such motions as an original motion, and of the others as amendments thereto, in such order as the meeting may determine.

18. Motions on Subjects dealt with in Reports.—If a recommendation of the Council or of a Committee, or an amendment moved that a specified portion of a report of the Council or of a Committee be not approved, shall appear to the Chairman to relate to the same subject as a motion placed upon the Agenda by the Council or by a Division or Branch, the Chairman shall ascertain the will of the meeting as to the consideration of the said motion as an amendment to the adoption of the said recommendation, or to the approval of the said report.

(B).—*Special Representative Meetings.*

1. Read Authority for Convening Meeting.—Read the Resolution of Council, or the requisition from Divisions, in pursuance of which the Meeting is convened.

2. Notice of Substitutes.—Receive notices, if any, of the appointment of substitutes for Representatives.

3. Order of Business.—If the Meeting is convened to consider more than one matter, determine the order in which such matters shall be considered.

4 Special Business.—Consider the matters which the Meeting is specifically convened to consider, in order determined by the Meeting.

5. Minutes.—Confirm the minutes of the Meeting for presentation to the Council.

II.—COMPOSITION AND ARRANGEMENT OF THE MEETING.

1. Composition.—The persons constituting the Meeting, hereinafter called members of the Meeting, shall be those duly elected Representatives of Divisions, or substitutes duly appointed under Article XXX and By-law 18, of whose election or appointment the General Secretary shall have received due notice, together with Members of Council for the time being.

2. Arrangement.—Distinctive seats shall be provided for the following groups of persons respectively, namely:

(*a*) Representatives of Divisions.
(*b*) Members of Council who are not Representatives of Divisions or Officers of the Association.
(*c*) Officers of the Association, present in virtue of their office, or at the request of the Meeting, for the assistance thereof.
(*d*) Members of the Association who are not Representatives of Divisions or Members of Council.
(*e*) Reporters representing such journals as may be authorized by the Chairman, subject to the approval of the Meeting.

Withdrawal of Strangers.—It shall be competent at any time for a member of the Meeting to move that persons who are not members of the Meeting be requested to withdraw, or that persons who are not members of the Association be requested to withdraw, but it shall rest in the discretion of the Chairman to submit or not to submit such motion to the Meeting.

III.—PROCEDURE.

1. Temporary Chairman.—If the Chairman of Representative Meetings be not present at the time fixed for opening any daily session of a Representative Meeting, whether annual or special, the Chairman of Council, or in his absence the Treasurer, shall take the Chair, and shall forthwith call upon the Meeting to appoint a Chairman to act during the absence of the Chairman of Representative Meetings.

2. Minutes.—Minutes shall be taken of the proceedings of the Meeting, and the same shall be duly entered in a book provided for the purpose. The Minutes of each daily session of the Annual Representative Meeting shall be printed and circulated to the members of the Meeting. Minutes (if) (when) printed in the Daily Journal of the Annual Meeting shall be deemed thereby to have been circulated as required by this order.

3. Attendance.—No Representative shall leave the Meeting without permission obtained personally from the Chairman at the time of leaving. If during any daily session of a Representative Meeting it shall at any time appear to the Chairman that a quorum is not present, the roll shall be called of Representatives appointed to attend the meeting, and those Representatives who are found to be then absent, not having previously obtained leave from the Chairman, shall be deemed to have been absent from the said session. A list of members reported as absent from any daily session or sessions of a Representative Meeting shall be supplied at the close of such meeting to the Chairman and shall by him be transmitted to the Council, together with such explanations of the cause of absence as any members so reported may have furnished to him in writing.

4. Procedure as to Presentation of Reports.—A Report of the Council or of a Committee shall be brought before he Meeting by a motion or motions that the Report be eceived and approved, and that the recommendations to he Meeting (if any) therein contained be adopted, each uch recommendation being made the subject of a sepa- ate motion. The Chairman of the body submitting a Report shall if present move the reception and adoption hereof, and of the recommendations contained therein.

5. Procedure as to Other Motions.—Motions placed on he Agenda of the Meeting by the Council shall be brought efore the Meeting by the Chairman of Council if present, motions so placed by a Branch shall be introduced by a member of Council elected by the Branch, and motions so laced by a Division shall be introduced by the Representative thereof.

6. Absence of Authorized Mover of Adoption of Report r Other Motion.—In the absence of any member uthorized to make any motion referred to in the two last receding orders, any other member deputed by such ember may make such motion on his behalf, and if no ember shall have been so deputed, such motion shall be ade formally by the Chairman.

7. Seconding Motions.—No seconder shall be required r any of the motions referred to in Sections 4 and 5. All her motions and all amendments shall be required to be oved and seconded.

8. Time Limits of Speeches.—(*a*) A member of the eeting shall be allowed to speak for fifteen minutes in oving a resolution which does not require seconding, d for ten minutes in moving any other resolution, or y amendment. Except as aforesaid, no speech shall ceed five minutes.

Reducing Time Limit.—(*b*) The Meeting may at any riod of any session reduce the time to be allowed to eakers, whether in moving resolutions or otherwise, ring the remainder of such session.

9. Mode of Voting—Show of Hands.—Only Representa- tes of Divisions shall vote on any question before the eting.

Voting shall be by show of hands, except in the cases lowing, namely:

Vote by Card.—(*a*) If upon the Chairman proceeding to e the vote of the meeting upon any motion or amend- nt, any Representative of a Division shall move that said vote be taken by card, and twenty Representatives in their places in support of such motion, the vote ll be taken by card.

ivision.—(*b*) If the Chairman, after taking a vote by w of hands upon any motion or amendment, shall be pinion that the numbers of members voting for and inst such motion or amendment are not thereby ascer- ied with sufficient accuracy, he shall have power to ct that the meeting shall divide upon the said motion mendment.

0. Election of Committees.—Any member of a mittee elected by the Representative Meeting has not attended half of the meetings during year, shall for one year be ineligible for appointment to the same Committee. Nominations for those members of Standing Committees who are appointed by the Annual Representative Meeting shall be handed to the Secretary of the Meeting not later than the termination of the second day's proceedings. All nominations should be made with the assent of the nominee. The names of all those who have been so nominated before the close of the second daily session shall be printed in a list which shall be circulated with the minutes of the Representative Meeting of that day. Each member desiring to vote shall mark on the voting paper with a × names not exceeding the number of members to be elected to each Committee, and shall return the paper to the Secretary at such time before the close of the day's proceedings as shall be fixed by the Chairman.

IV.—RULES OF DEBATE.

1. Every member shall be seated except the one who may be addressing the Meeting, and when the Chairman rises no one shall continue standing, nor shall any one rise until the Chair is resumed.

2. A member of the Meeting shall stand when speaking, and shall address the Chair.

3. A member who speaks shall direct his speech strictly to the motion under discussion, or to a motion or amendment to be proposed by himself, or to a question of order.

4. A member shall not address the Meeting more than once on any motion or amendment, but the mover of an original resolution may reply, and in his reply shall strictly confine himself to answering previous speakers, and shall not introduce any new matter into the debate; provided always that a Member may speak to a point of order, or, by consent of the Meeting, in explanation of some material part of a speech made by him, which he believes to have been misunderstood.

5. A motion or amendment once made and seconded shall not be altered or withdrawn without the consent of the Meeting.

6. An amendment shall be either—

To leave out words;
To leave out words and insert or add others;
To insert or add words;

or in such form as shall be approved of by the Chairman, provided always that the amendment be relevant to the motion on which it is moved, and be not equivalent to the direct negative thereof.

7. No notice of motion, or amendment to any motion before the Meeting, not already published, shall be considered by the Meeting until a copy of the same with the name of the proposer has been handed in in writing to the Chairman.

8. Whenever an amendment upon an original motion has been moved and seconded, no second or subsequent amendment shall be moved until the first amendment shall have been disposed of, but notice of any number of amendments may be given.

9. If any amendment be rejected, other amendments may be moved on the original motion. If an amendment be carried, the amendment or motion as amended shall take the place of the original motion, and shall become the question upon which any further amendment may be moved.

10. If it be proposed and seconded that the Meeting do now adjourn, or that the debate be adjourned, or that the Meeting do proceed to the next business, or that the question be now put, such resolution shall immediately be put to the vote without discussion, except as to the time of adjournment, provided always that the Chairman shall have power to decline to put to the Meeting the motions that the Meeting do proceed to the next business, or that the question be now put.

11. A motion that the Meeting do now adjourn, or that the Meeting do now proceed to the next business, or that the debate be now adjourned, or that the question be now put, shall not be made within a period of one hour after a previous motion to the like effect, unless, in the opinion of the Chairman, the circumstances are materially altered.

12. Smoking shall not be allowed during such time as the Chairman is in the Chair.

V.—SUSPENSION OF STANDING ORDERS.

Any one or more of the Standing Orders, in any case of urgency, or upon motion made on notice given through the Daily Journal may be suspended at any Meeting, so far as regards any business of such Meeting, provided that three-fourths of those present and voting shall so decide.

GENERAL MEDICAL COUNCIL.

ELECTION OF DIRECT REPRESENTATIVES FOR ENGLAND AND WALES, NOVEMBER, 1906.

Meeting of Representatives for England and Wales to select Candidates for the General Medical Council.

A Meeting of Representatives for England and Wales will be held at a time fixed by the Representative Meeting to select candidates in accordance with the Scheme approved by the Representative Meeting at Oxford.

The following candidates have been duly nominated and have signed the requisite declarations:

Name.	*Address.*	*Nominating Division or Divisions.*
BROADBENT, GEORGE HARRY, M.R.C.S. ... (Member of Central Ethical Committee, Member of Lancashire and Cheshire Branch Council, and Representative of North Manchester Division.)	8, Ardwick Green, Manchester	MANCHESTER (NORTH).
BROWNE, HENRY LANGLEY, M.D., F.R.C.S.Ed. **(Chairman of Council of the Association.)**	**Moor House, West Bromwich**	CENTRAL BIRMINGHAM. CITY (LONDON). KENSINGTON. MARYLEBONE. SWANSEA. WEST BROMWICH.
BULLAR, JOHN FOLLETT, M.B., F.R.C.S. ... (Member of Branch Council, Southern Branch.)	7, Carlton Crescent, Southampton	WINCHESTER.
CLARK, ANDREW, F.R.C.S. ... ... (Member and late Chairman of Central Council, and President of the Metropolitan Counties Branch.)	71, Harley Street, W.	CITY (LONDON). MARYLEBONE. ST. PANCRAS AND ISLINGTON.
GODSON, ALFRED, M.B., M.C.Cantab.... ... (Chairman of the Stockport, Macclesfield, and East Cheshire Division.)	Cheadle House, Cheadle, Cheshire	STOCKPORT, MACCLESFIELD, and EAST CHESHIRE.
HELME, THOMAS ARTHUR, M.D., M.R.C.P. ... (Honorary Secretary and Treasurer of Lancashire and Cheshire Branch, Member of Central Council and Medico-Political Committee.)	3, St. Peter's Square, and Mayfield, Victoria Park, Manchester	MANCHESTER (CENTRAL). MANCHESTER (WEST).
JACKSON, GEORGE, F.R.C.S. ... ... (President of the South-Western Branch, and Member of the Medico-Political Committee.)	10, Portland Villas, Plymouth	EXETER. GATESHEAD. KENSINGTON. MANCHESTER (NORTH). PLYMOUTH.
LATIMER, HENRY ARTHUR, M.D. ... ... (Chairman and Representative of Swansea Division, Member of Medico-Political Committee.)	4, Belvoir Place, Swansea	SWANSEA. SOUTH-WEST WALES.
McMANUS, LEONARD STRONG, M.D. ... ... (Representative of Wandsworth Division, Member of Medico-Political Committee.)	25, Spencer Park, Wandsworth Common, S.W.	STRATFORD. WANDSWORTH.
MORISON, JAMES RUTHERFORD, F.R.C.S. ... (Member of Branch Council and Chairman of Northumberland Committee, North of England Branch.)	14, Saville Row, Newcastle-on-Tyne	BLYTH. CLEVELAND. CONSETT. FURNESS. GATESHEAD. MARYLEBONE. NEWCASTLE-ON-TYNE. NORTH NORTHUMBERLAND. SOUTH SHIELDS. STOCKTON-ON-TEES. SUNDERLAND. WANDSWORTH.
RENSHAW, CHARLES JEREMIAH, M.D., F.F.P.S.Glas. ... (Representative on Lancashire and Cheshire Branch Council and ex-Chairman of Altrincham Division.)	Beech Hurst, Ashton-on-Mersey, Lancashire	ALTRINCHAM. MANCHESTER (CENTRAL). MANCHESTER (WEST).

SMITH, FREDERICK JOHN, F.R.C.P., M.D. ... (Honorary Secretary, Metropolitan Counties Branch.)	138, Harley Street, W.	STRATFORD.
STRATON, CHARLES ROBERT, F.R.C.S.EDIN. ... (Member of Central Council, Medico-Political Committee and Colonial Committee.)	West Lodge, Wilton, Salisbury	WANDSWORTH. WINCHESTER.

By Order, J. SMITH WHITAKER, *Medical Secretary.*

Meetings of Branches & Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.]

BIRMINGHAM BRANCH:

COVENTRY DIVISION.

A MEETING of this Division was held on April 3rd, Dr. DAVIDSON being in the chair.

Paper.—Mr. W. E. BENNETT read a paper on The Tolerance of the Peritoneum. A discussion followed, in which Drs. MILNER MOORE, PENDRED, and J. ORTON took part, and Mr. BENNETT replied.

Provident Dispensaries.—Dr. DAVIDSON proposed the adoption of the resolution recommended by the Committee, namely:

> That the Division having, on February 15th, last, approved of a scheme of principles and rules which they consider appropriate for the proper management of a provident dispensary, hereby declare that no member of the profession in the area of the Division should associate himself with or continue to be associated with any provident dispensary which is managed on lines fundamentally different from those principles and rules.

Before moving the adoption of the resolution recommended by the Committee of the Division, he thought it would be well to refer to the way in which the dispensary uestion had been brought to the notice of the Division t that time. He did not think it necessary to recapitu- ate the various agitations against the Coventry Dispen- ary during the last twelve or fifteen years, or the attempts f the staff to obtain internal reforms in the working of e institution, nor would it be seemly on his part, from e position he once held on the staff, so to do. Dr. avidson thought, however, that all would agree that ntract medical practice, as understood and approved y the medical profession generally, aimed at providing tendance and medicine during sickness to working men nd their families, who were too poor to pay the ordinary es, by small regular payments during health. The spensary was a large institution of subscribing or free embers and members of friendly societies devoted to ntract work only, and under the control and manage- ent of a committee of which an overwhelming majority ere laymen, and here a danger arose of persons in a perior position, and able to pay the ordinary fees, being owed to become members, and take advantage of con- act work which was never intended for them. There s no doubt this abuse did exist and still existed, and as ng as it remained it acted detrimentally not only on ose on the staff of the institution, but on those who re in practice unconnected with it. It had become dent that this state of affairs could not go on indefi- ely, and the staff of the dispensary seemed to have ived at the same conclusion, for they recently ap- ached the Committee of the Division and submitted o questions: (1) What reforms does the Division think ould be introduced into the management of the dis- nsary? and (2) what support will the Division accord to e staff of the dispensary in carrying out these reforms? e Committee, however, did not feel that they could in y way pledge the Division in either of these questions; y therefore proceeded to answer the first question by ommending the Division to adopt the scheme fundamental principles and rules for the nagement of provident dispensaries recommended the Medico-Political Committee of the Associa- n with certain modifications. The scheme, some- at modified, was adopted by this Division on Feb- ry 15th last. This, therefore, formed the answer of Division to the first question. The second question o what support the Division would accord to the staff in ng to carry out the reforms presented some difficulties. ould, for instance, be of little assistance to the staff he dispensary for the Division to offer threats of what lutions it would pass if the staff were unable to carry r reforms, and, on the other hand, it would be absurd the Division to proscribe those who accepted new ointments under the dispensary while countenancing position of present holders. The only course apparently left open was to pass a definite resolution expressing the feeling of the Division on the present unsatisfactory condition of the dispensary management. This, if passed by the necessary majority, would strengthen the hands of the present staff by enabling them to represent, with the united force of the whole local profession behind them, that unless the needed reforms were carried their positions would be untenable, while it would equally express the relationship of the Division to any new comers who should accept such appointments while the matter is still *sub judice.* Dr. Davidson therefore moved, on the recommendation of the Committee, the resolution above mentioned. This was seconded by Dr. CALLAGHAN and supported by Dr. MILNER MOORE. Dr. PICKUP proposed as an amendment the addition of the following rider:

> Subject to any alteration which may be suggested by the staff of the Coventry Dispensary and not disapproved by the Division.

This was seconded by Dr. FENTON. After some discussion the mover and seconder of the amendment agreed to alter this rider to read as follows:

> Subject to any alteration which may be suggested by the staff of the Coventry Dispensary and approved by the Division.

This was spoken to by Drs. CALLAGHAN, RICE, KENDRICK, WEBSTER, SNELL, and PHILLIPS; Drs. DAVIDSON and CALLAGHAN with the assent of the meeting, agreed to add this rider to the original proposition. Dr. WEBSTER then proposed that the resolution should be amended by being made to apply to all forms of contract practice; this was not seconded. The original proposition, with the added rider, was then put to the meeting, and it was carried unanimously.

Bradford Rule B.—The SECRETARY proposed, on behalf of the Committee, that the Bradford Rule B should be altered so that "fourteen days' notice" should read "seven days' notice." This was seconded by Dr. PHILLIPS and spoken to by Dr. WEBSTER. Dr. PICKUP proposed as an amendment that the notice should be "ten days"; this was seconded by Dr. WEBSTER, and, after some discussion, the amendment was withdrawn and the original proposition was carried, 21 voting for it and 1 against it.

METROPOLITAN COUNTIES BRANCH.

CHELSEA, RICHMOND, AND WANDSWORTH DIVISIONS.

A CONJOINT meeting of these three Divisions was held on April 27th at the High School for Girls, Putney.

Wandsworth Cottage Hospital for Children.—The business of the meeting was to consider the report of a Committee with reference to the Wandsworth Cottage Hospital for Children. It appears that the building which it is proposed to use as a hospital had been taken by some nuns who had come over from France in recent years, and, being too large for their requirements, the trustee of the property, Father Cooney, while prepared to equip it in every way fully as a hospital ready for use, was not prepared, once it had been taken over by a committee of management, to provide funds for its maintenance. He had made a suggestion that the Committee should have full power over financial matters, including legacies left to the hospital, or that a lease should be granted to the Committee by the trustee. A conjoint Committee had been appointed by the Divisions to elaborate a scheme for the medical conduct of the hospital, and in their report this Committee recommended that the scheme, if approved, should be submitted to a meeting of the profession at an early date. On the motion of Mr. HUGH R. KER, Mr. G. D. MACKINTOSH took the chair.—Dr. BIGGS, Chairman of the Joint Committee, moved, and Mr. LLEWELLYN WILLIAMS seconded, that the report of the Joint Committee be received.—This was carried *nem. con.*—On its adoption being moved, Dr. SHEARER said the Committee did not seem to have seen all the trustees. They had only seen one, and the others might not be bound by what he said. Further, the report only referred to a hospital for children not exceeding 12 years of age. From inquiries he had made in the neighbourhood he found that a children's hospital was not wanted, and he would prefer a paying hospital for adults as well as children, with wards appropriated to certain districts. He moved that the report be referred back to the Committee for further inquiry.—Dr. BIGGS said the Committee had had several interviews with Father Cooney, and he had always given them to understand that he was the sole trustee, and had promised that whatever the profession agreed to should be carried out.—Mr. Howell said the position was this: Father Cooney was able somehow to provide money for building the hospital, and even for extension if necessary, but not for its maintenance. He did not think it safe for them to go in for it at all, unless they saw how it was to be carried on. They should not take the responsibility of assisting to start it without having any funds.—Dr. Fothergill said they had been asked to give a scheme how the hospital should be conducted, and they had done so. He read certain suggestions left at his house that day by Father Cooney, as follows:

1. That the title "Wandsworth Hospital" should signify the Management Committee only.
2. That all bequests, etc., left to the Wandsworth Hospital should go to this Committee.
3. That the Committee shall be free to leave the present buildings and go to other quarters, thus establishing an independence between the trustee and the Managers.

Or a lease. The Committee are prepared to accept one of these schemes; they have not had time to decide which. It is hoped that either would be acceptable to the British Medical Association.

—Mr. Hugh Ker said he agreed with Dr. Fothergill that they had nothing to do with the finance question at present. They had been asked to form a scheme for the conduct of the hospital, and had done so. If this scheme was passed now and accepted by the trustee, then would come the question how it was to be carried out.—Mr. Llewellyn Williams thought the hospital was not wanted, but that the best way was not actively to oppose it, but let it die of inanition.—Mr. Howell agreed that the hospital was not wanted. He referred to the financial difficulties in which so many of the London hospitals found themselves, and asked what was the use of increasing the number of beds to be provided for by building a hospital in Putney.—Mr. Edmund Owen thought it was remarkable that Father Cooney should be prepared to equip the hospital and not provide anything to maintain it. London hospitals were all more or less in need of funds. If he were in general practice in the neighbourhood he would have nothing to do with the hospital. It was the general practitioners who would apparently have to finance it. He advised them to tell Father Cooney that the hospital was not needed, and that it would be absurd to start it under present circumstances.—The amendment on being put to the vote was lost, as was also another one proposed by Mr. Howell that, having regard to the difficulty of raising funds for hospitals in general, it is inadvisable to prepare a scheme for a hospital in Putney; and the report was then carried *nem. con.*—The proposed constitution for the hospital was then considered and passed without material alteration, except the addition of a clause, proposed by Dr. Biggs, that there should be a Medical Committee to which all medical questions should be referred.—The Conjoint Committee's thirteen recommendations were next considered *seriatim*, and were approved. These suggested that the hospital should be open only to children not exceeding 12 years of age; that there be no subscribers' letters; that no charge be made to any patients for maintenance or medical attendance; that no accident be admitted and no out-patients receive treatment; and that every patient on admission produce a certificate of suitability for admission from a registered medical practitioner practising in the vicinity of the hospital. On the motion of Dr. Shearer, a recommendation was added that the nursing staff should be under the control of the Medical Committee.—Dr. Gilbert Richardson next proposed:

> That after a satisfactory arrangement shall have been made by the local medical profession with the Trustee of the Wandsworth Cottage Hospital for Children, the following be the procedure followed for the conduction by the Wandsworth Division of this Association of the annual election of the four representatives of the profession to act on the Committee of that hospital:
>
> (*a*) That nominations be asked for from all registered medical practitioners practising in Putney, Southfields, Fairfield, and Springfield Wards of the Wandsworth Borough who shall be entitled to vote, and that when the hospital has 100 beds, Fulham is to be included.
>
> (*b*) That only medical practitioners resident and practising in these districts shall be eligible for election.
>
> (*c*) That any medical practitioner who shall have served as such representative for five years consecutively shall be ineligible for re-election for one year.
>
> (*d*) That voting shall be by reply post-cards.

These proposals were carried. On the motion of Dr. Crookshank it was resolved:

> That each Division be asked to consider and approve a resolution in terms similar to the following:
>
> "That in the opinion of this Division any member of the profession who shall accept an appointment at, or use, the proposed Wandsworth Cottage Hospital for Children before any conference of the representatives of that hospital with representatives of the Chelsea, Richmond, and Wandsworth Divisions shall have had a definite and satisfactory result, will act in a manner injurious to the interests of the medical profession in the district."
>
> "That a copy of this resolution be sent to every medical practitioner within the area of this Division."

Vote of Thanks.—A vote of thanks to the Chairman brought the meeting to a close.

Stratford Division.

A meeting of the Stratford Division was held on Thursday, April 26th, at the Alexandra Hotel, Stratford, E., at 9 p.m., Dr. Stocker presiding.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Contract Practice.—A discussion on Contract Practice was opened by Dr. Rose. Dr. Beadles gave a lengthy and interesting summary of his experience in connexion therewith, and after a prolonged discussion it was proposed by Dr. Hay and seconded by Dr. Taylor:

> That this Division cannot endorse the recommendations of the Committee on Contract Practice, as they consider them based on insufficient information and impracticable in the present state of medical organization.

This was carried unanimously.

Hospital Out-patient Departments.—The question of hospital out-patient departments was then discussed, and as a result it was proposed by Dr. Parker and seconded by Dr. Rose:

> That the resolution on hospital out-patient departments does not, in the opinion of this Division, suggest a satisfactory solution of the question.

This was carried unanimously.

Registration of Nurses.—In regard to the registration of nurses, after discussion, the Division approved of the method of registration for nurses proposed by the Select Committee of the House of Commons; and the separate registration of midwifery nurses on the basis of the Leicester resolutions was also approved of, an amendment being negatived.

The Ethical Committee.—The Division then considered the Ethical Committee's reply to a resolution of the Division. It was decided to take no further action in the matter, and the following resolution, proposed by Dr. Hay and seconded by Dr. Parker, was unanimously carried:

> That in view of the great delay and consequent unsatisfactory termination of the case of gross unprofessional advertising sent up from this Division to the Central Ethical Committee in September last, it is advisable in the interests of efficiency that a less leisurely method be adopted at head quarters in dealing with similar cases in the future.

The Honorary Secretary was instructed to communicate this resolution to the Medical Secretary.

Proposed Royal Charter.—The proposed application for a Royal Charter was then considered, and in general approved of, the following resolution, however, being carried unanimously on the motion of Dr. Hay, seconded by Dr. Rose:

> That the Division is of opinion that the time has now come for the abolition of Branches and Branch Councils, and that the Central Council of the Association should be elected by the Representatives of the Divisions at the Annual Representative Meeting.

Letter Nominations for Central Council.—A letter was read from the Wandsworth Division *re* conference for suggesting nominations for Central Council election, and Dr. Harold H. Beadles and Dr. Percy Rose were nominated as delegates from this Division.

The proceedings then terminated.

☛ *To ensure the insertion of notices in this column, they must be received at the Central Offices of the Association not later than the first post on Tuesday.*

Association Notices.

ANNUAL REPRESENTATIVE MEETING.

The Annual Representative Meeting will take place in the Caxton Hall, Caxton Street, Victoria Street, London, S.W., on Tuesday, July 24th, immediately after the Annual General Meeting, which will be held at 10 o'clock in the forenoon; on Wednesday, July 25th, at 10 a.m.; on Thursday, July 26th, at 10 a.m. if required; also on Friday, July 27th, at 10 a m. if required.

BY ORDER OF THE COUNCIL,

GUY ELLISTON, *General Secretary.*

April 18th, 1906.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH.—The annual meeting of the Branch will be held on Wednesday, May 30th, at the Medical Library, University College, Bristol, at 4.30 p.m. Names of andidates for Representatives of the Branch upon the Central ouncil must be sent to Dr. Newman Neild on or before May 5th. Candidates must be nominated by three members.—EWMAN NEILD, M.B., W. M. BEAUMONT, Honorary Secrearies.

BATH AND BRISTOL BRANCH: BRISTOL DIVISION.—The nnual meeting of the Division will be held on Thursday, ay 17th, at 8 o'clock, at the Medical Library, University ollege, Bristol.—NEWMAN NEILD, M.B., Honorary Secretary.

BATH AND BRISTOL BRANCH: TROWBRIDGE DIVISION.—otice is hereby given that the annual meeting of this ivision will be held at the Town Hall, Trowbridge, on ednesday, May 23rd, at 2.45 p.m. Business: To elect fficers; consider communications from the Association *re* harter, Contract Practice, etc., and any other business.—JOHN UBB-THOMAS, The Halve, Trowbridge, Wilts, Honorary ecretary.

SWALLOW, Honorary Secretary Dinner Committee, 61, South Side, Clapham Common.

MIDLAND BRANCH.—Nominations of candidates for the Council of the Association for the ensuing year must be sent before May 14th to ASTLEY V. CLARKE, 37, London Road, Leicester, Honorary Secretary.

NORTH OF ENGLAND BRANCH.—Election of Representatives on the Central Council.—Notice is hereby given that nominations of two Representatives for the North of England Branch, each signed by not less than three members, must reach me not later than May 21st.—ALFRED COX, Cotfield House, Gateshead, Honorary Secretary.

NORTH WALES BRANCH: NORTH CARNARVONSHIRE AND ANGLESEA DIVISION.—The annual meeting of this Division will be held at the British Hotel, Bangor, on Wednesday, May 30th, for the election of officers, Representatives, etc., and other business. Members having papers to read or cases to show will please notify the honorary secretary on or before May 19th.—H. JONES ROBERTS, Pen-y-groes, Honorary Secretary.

SOUTH-EASTERN BRANCH.—The annual meeting of this Branch will be held at Norwood on Wednesday, June 27th, Dr. Hetley, President-elect, in the chair. The following will be the agenda: (1) To elect the officers of the Branch. (This will be done by voting papers sent to each member of the Branch. Nominations by three members for the offices of President-elect, Vice-Presidents, and Secretary may be sent to the Honorary Secretary on or before May 21st.) (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. N.B.—Three members to represent the Branch on the Central Council will also be elected by voting papers. Nominations for these posts, each of three members in writing, should be sent to the Secretary of the Branch on or before May 21st.—H. M. STEWART, Dyffryn, 123, Thurlow Park Road, Dulwich, Honorary Secretary.

SOUTH-EASTERN BRANCH: CROYDON DIVISION.—The annual meeting of the Division will be held at the Croydon General Hospital on Thursday, May 17th. Business meeting, chairman, Dr. Rosser. Agenda: (*a*) Minutes of the previous meeting. (*b*) Election of officers for the coming year. (*c*) To decide when and where the next meeting shall be held, and to elect a chairman. (*d*) Other business. Clinical meeting, chairman, Mr. C. Wray. Members willing to exhibit cases are requested to communicate with the honorary secretary not later than May 12th. A detailed agenda paper will be issued later. Dinner at the Greyhound Hotel, charge 5s., exclusive of wine. Members intending to remain to dinner are requested to send a post-card to that effect to E. H. WILLOCK, 113, London Road, Croydon, Honorary Secretary.

SOUTH-EASTERN BRANCH: NORWOOD DIVISION.—A meeting of this Division will take place at the Queen's Hotel, Upper Norwood, on Thursday, May 10th, at 4 p.m., Henry Hetley, M.D., of Upper Norwood, in the chair. Agenda: (1) Minutes of last meeting. (2) To decide when and where the next meeting shall be held, and to nominate a member to take the chair thereat. (3) Draft of proposed Royal Charter (vide SUPPLEMENT to the BRITISH MEDICAL JOURNAL, March 24th, 1906).—H. J. PRANGLEY, Anerley, S.E., Honorary Secretary.

SOUTH-EASTERN BRANCH: REIGATE DIVISION.—A meeting will be held at the Cottage Hospital, Redhill, on Thursday, May 17th, at 3.30 p.m., Dr. John Walters, J.P., in the chair. Agenda: To elect a Representative of the Division, and to consider any other Association business. A discussion on some points in Urinary Surgery will be opened by Mr. James Berry, B.S., M.B.Lond., F.R.C.S.Eng., Surgeon to the Royal Free Hospital. Some interesting specimens will be shown. All members of the South-Eastern Branch are invited to attend and to introduce professional friends. Tea will be provided after the meeting.—W. A. BERRIDGE, Honorary Secretary, Redhill.

SOUTH MIDLAND BRANCH.—In accordance with the by-laws, nominations of a member of Central Council to represent this Branch must reach me on or before May 12th.—E. HARRIES JONES, Honorary Secretary, 45, Sheep Street, Northampton.

SOUTH WALES AND MONMOUTHSHIRE BRANCH.—Election of Representatives on Central Council.—Nominations in writing, signed by three members of the Branch, must be sent in on or before May 24th to Dr. FRANK G. THOMAS, 68, Walter Road, Swansea.

SOUTH-WESTERN BRANCH.—The nomination of candidates for the office of elective members of Council (Branch Representatives on the Central Council of the Association) for the ensuing year must be made by three electors, and in writing, on or before May 19th, to the Honorary Secretary of the Branch, Mr. G. YOUNG EALES, 1, Matlock Terrace, Torquay.

STAFFORDSHIRE BRANCH.—In accordance with the By-laws notice is hereby given that nominations of Representatives of this Branch in the Council of the Association must be received by me, duly signed by three electors and in writing, on or before May 26th.—G. PETGRAVE JOHNSON, Stoke-upon-Trent, Honorary Secretary.

STAFFORDSHIRE BRANCH.—The third general meeting of the session will be held at the Victoria Hotel, Wolverhampton, on Thursday, May 10th. The President, Dr. G. S. Hatton, will take the chair at 3.30 p.m. Business: (1) Minutes of the last general meeting. (2) Correspondence. (3) Exhibition of Living Cases. (4) Paper, B. Cridland: Some Remarks on the Treatment of Squint. (5) Paper, E. Deanesly: A Survey of Surgical Work in a Provincial General Hospital. (6) Exhibition of Pathological Specimens, etc. A dinner will be arranged for 6.30 p.m. (charge 5s.), should a sufficient number of names be sent in.—G. PETGRAVE JOHNSON, Stoke-on-Trent, Honorary General Secretary.

ULSTER BRANCH.—The spring meeting of this Branch will be held in Derry on Saturday, May 5th. Members having any communications to make to the meeting will please send me particulars not later than April 24th.—CECIL SHAW, M.D., Belfast, Honorary Secretary.

WEST SOMERSET BRANCH.—In accordance with the resolution passed at the spring meeting last month, a special meeting will be held at the Taunton and Somerset Hospital on Tuesday, May 8th, when the President, Mr. Gordon Henry, will take the chair at 3.45 p.m., to discuss the proposed application for a Royal Charter for the British Medical Association, and other business if necessary. Details of the proposed Charter will be found in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of March 24th.—W. B. WINCKWORTH, Taunton, Honorary Secretary.

YORKSHIRE BRANCH.—The annual meeting of this Branch will be held at the Eye and Ear Hospital, Bradford, on Wednesday, June 13th. In accordance with By-law 24 notice is hereby given that nominations for Representatives on the Council of the Association must be received by me, in writing, duly signed by three members of the Branch, on or before May 19th.—ADOLPH BRONNER, M.D., 33, Manor Row, Bradford, Honorary Secretary.

Naval and Military Appointments.

THE VOLUNTEERS.

THE King has been graciously pleased to confer the Volunteer Officers' Decoration upon the undermentioned officers of the Volunteer Force:

In the Northern Command (Rifles) Surgeon-Lieutenant (Hon Major Volunteers) JOHN C. NICHOL, M.D., of the 4th Volunteer Battalion Manchester Regiment.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN seventy-six of the largest English towns, including London, 9.435 births and 5.080 deaths were registered during the week ending Saturday last, April 28th. The annual rate of mortality in these towns, which had been 17.0, 17.1 and 17.3 per 1.000 in the three preceding weeks, declined again last week to 16.7 per 1,000. Among the several towns the rates ranged from 7.7 in Walsall, 7.9 in Burton-on-Trent, 8.3 in Northampton, 8.8 in East Ham, 9.0 in Hornsey, and 9.8 in Brighton, to 20.2 in Tynemouth, 20.3 in Huddersfield and in Middlesbrough, 20.9 in Stockport, 21.1 in Oldham, 22.3 in Birmingham, 22.8 in Great Yarmouth and in Hanley, and 23.4 in Liverpool. In London the rate of mortality was 17.3 per 1,000, while it averaged 16.5 per 1,000 in the seventy-five other large towns. The death-rate from the principal infectious diseases averaged 1.6 per 1,000 in the seventy-six towns: in London this death-rate was equal to 1.7 per 1,000, while among the seventy-five other large towns the rates ranged upwards to 2.6 in Tottenham and in Birmingham, 2.9 in Tynemouth, 3.0 in Bristol, 3.1 in Middlesbrough, 3.9 in Liverpool, 4.4 in Bury, and 6.9 in Great Yarmouth. Measles caused a death-rate of 1.4 in Manchester, 1.6 in Newcastle-on-Tyne, 1.9 in Bristol and in Tynemouth, 2.0 in Burnley, 2.1 in Liverpool and in Middlesbrough, 4.4 in Bury, and 5.0 in Great Yarmouth; scarlet fever of 1.3 in Tottenham; diphtheria of 1.3 in Walthamstow; whooping-cough of 1.0 in West Ham, 1.3 in Reading, 1.4 in Birmingham and in Cardiff, 1.5 in West Bromwich and in Warrington, and 1.6 in Wallasey; and diarrhoea of 1.1 in Oldham. The mortality from enteric fever showed no marked excess in any of the large towns. No fatal case of small-pox was registered last week in any of the seventy-six towns. The number of small-pox patients in the Metropolitan Asylums Hospitals, which had been 7 on each of the two preceding Saturdays, had declined to 6 on Saturday last, April 28th; no new case was admitted during the week, against 1 in the preceding week. The number of scarlet fever cases remaining under treatment in these hospitals, and in the London Fever Hospital, at the end of last week was 2,240, against 2,322, 2,301, and 2,225 at the end of the three preceding weeks: 314 new cases were admitted during the week, against 292, 270, and 288 in the three preceding weeks.

HEALTH OF SCOTCH TOWNS.

DURING the week ending Saturday last, April 28th, 1,011 births and 531 deaths were registered in eight of the principal Scotch towns. The annual rate of mortality in these towns, which had been 19.4, 19.1, and 17.6 per 1,00 in the three preceding weeks, rose again to 18.4 per 1,000 last week, and was 1.7 per 1,000 above the mean rate during the same period in the seventy-six large English towns. Among these Scotch towns the death-rates ranged from 12 6 in Leith and 14.0 in Aberdeen to 21.4 in Greenock and 23.4 in Paisley. The death-rate from he principal infectious diseases averaged 1.8 per 1,000 in these towns, he highest rates being recorded in Leith and Greenock. The 303 deaths registered in Glasgow included 12 which were referred to measles, 3 to diphtheria, 13 to whooping-cough, and 5 to diarrhoea. Four fatal cases of measles, 3 of scarlet fever, 2 of whooping-cough, and 2 of diarrhoea were recorded in Edinburgh: 4 of whooping-cough n Dundee; 2 of whooping-cough in Leith; and 3 of diarrhoea in Greenock.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, April 28th, 571 births and 394 deaths were registered in six of the principal Irish towns, as against 538 births nd 425 deaths in the preceding period. The annual death-rate in hese towns, which had been 21.2, 20.4, and 17.3 per 1,000 in the three receding weeks, rose to 21.8 per 1,000 in the week under notice, this gure being 5.1 per 1,000 higher than the mean annual rate in the seventy-six English towns for the corresponding period. The figures ranged from 18.6 in Londonderry and 20.5 in Limerick to 22.4 in Dublin nd 26.0 in Cork. The zymotic death-rate in the same six Irish towns veraged 1.4 per 1,000, or 0.3 per 1,000 higher than during the preceding period, the highest figure—3.7—being recorded in Londonderry. From whooping-cough 18 deaths were recorded in Belfast, and rom typhus 1 in Galway.

President-elect :

RICHARD ANDREWS REEVE, B.A., M.D., LL.D., Dean of the Faculty of Medicine, University of Toronto.

Chairman of Representative Meetings :

Sir VICTOR HORSLEY, F.R.C.S., F.R.S., Surgeon, University College Hospital; and Surgeon, National Hospital for Paralysed and Epileptic.

Chairman of Council :

HENRY WM. LANGLEY BROWNE, M.D., Ch.B., F.R.C.S.E., Consulting Surgeon, West Bromwich District Hospital.

Treasurer :

HY. RADCLIFFE CROCKER, M.D., F.R.C.P., Physician Skin Department, University College Hospital, London.

PROGRAMME OF BUSINESS.

An Address in Medicine will be delivered by Sir JAMES BARR, M.D., F.R.C.P., F.R.S.E.

An Address in Surgery will be delivered by Sir VICTOR HORSLEY, M.B., F.R.C.S., F.R.S.

An Address in Obstetrics will be delivered by WALTER SPENCER ANDERSON GRIFFITH, M.D., F.R.C.P.

THE SECTIONS.

There will be 13 Sections as shown in the subjoined list; hey will meet on Tuesday, Wednesday, Thursday and Friday, August 21st, 22nd, 23rd and 24th, from 9.30 a.m. to 2.30 p.m.

The President, Vice-Presidents, and Secretaries of each Section constitute a Committee of Reference for that Section.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the BRITISH MEDICAL JOURNAL *without special permission.*

No paper must exceed 15 minutes in reading, and no subsequent speech 10 minutes.

It is requested that copies of any papers offered in any of the Sections might be supplied to one of the Honorary Secretaries of the Section not later than May 15th, accompanied by a short abstract, in order that such abstract may be printed and circulated before the meeting.

ANATOMY.

President: Professor Arthur Robinson, M.D., Birmingham.

Vice-Presidents: Professor Alexander Primrose, M.B., C.M., Toronto; David Edward Mundell, B.A., M.D., C.M., Kingston; Donald Armour, F.R.C.S., London.

Honorary Secretaries: Charles Buckingham Shuttleworth, M.D., C.M., F.R.C.S., 45, Bloor Street E., Toronto; Gawn Shaw Cleland, M.B., M.D., C.M., 730, Queen Street E., Toronto; J. Herbert Sanders, M.D., 1a, Palace Gardens Mansions, W.

DERMATOLOGY.

President: Norman Walker, M.D., Edinburgh.

Vice-Presidents: Graham Chambers, M.B., Toronto; Harry B. Anderson, M.D., C.M., Toronto; Arthur John Hall, M.D., Sheffield; Ernest Solly, M.B., Harrogate.

Honorary Secretaries: David King Smith, M.B., 311, Jarvis Street, Toronto; Donald Macgillivray, M.B., 12, Carlton Street, Toronto; John Campbell Rankin, M.B., 38, University Road, Belfast.

LARYNGOLOGY AND OTOLOGY.

President: J. Dundas Grant, M.D., London.

Vice-Presidents: George R. McDonagh, M.B., L.R.C.P., Toronto; Herbert Stanley Birkett, M.D., C.M., Montreal; John Macintyre, M.B., Glasgow; Hugh Edward Jones, M.R.C.S., Liverpool.

Honorary Secretaries: David James Gibb Wishart, B.A., M.D., C.M., L.R.C.P., 47, Grosvenor Street, Toronto; Geoffrey Boyd, B.A., M.B., 167, Bloor Street, Toronto; Adam Brown Kelly, M.D., 26, Blythswood Square, Glasgow.

MEDICINE.

President: Sir Thomas Barlow, Bart., K.C.V.O., M.D., London.

Vice-Presidents: Professor Alexander McPhedran, M.B., Toronto; Professor James Stewart, M.D., C.M., Montreal; Alexander Napier, M.D., Glasgow; William Calwell, M.D., Belfast.

Honorary Secretaries: Robert Dawson Rudolph, M.D., M.R.C.P., 396, Bloor Street W., Toronto; John Taylor Fotheringham, B.A., M.B., M.D., C.M., 36, Carlton Street, Toronto; Robert Hutchison, M.D., 22, Queen Anne Street, London, W.

The following subjects have been selected for discussion:

Tuesday, August 21st.—On Blood Pressure in Relation to Disease. The subject will be treated under the following headings: (*a*) Physiological Introduction, by Dr. Percy M. Dawson (Baltimore). (*b*) Clinical Methods of Investigating Blood Pressure, by Dr. G. A. Gibson (Edinburgh). (*c*) Pathology and Therapeutics of Morbid Blood Pressure, by Sir Wm. Broadbent. (*d*) The Relation of Blood Pressure to Arterial Sclerosis, by Professor Clifford Allbutt. The following will also take part: Dr. Mackenzie (Burnley), Sir James Barr, Dr. Theodore Janeway (New York), Dr. Rudolf (Toronto), and others.

Wednesday, August 22nd.—A joint discussion with the Physiology Section on Over-nutrition and Under-nutrition, with special reference to Proteid Metabolism, to be opened by Professor Chittenden (Yale).

Thursday, August 23rd.—Papers on Heart Block, by Dr. Mackenzie (Burnley), Dr. G. A. Gibson, Dr. Erlanger, Professor Osler, and others.

Friday, August 24th.—Papers.

OBSTETRICS AND GYNAECOLOGY.

President: A. H. Freeland Barbour, M.D., Edinburgh.

Vice-Presidents: Professor James Algernon Temple, M.D., C.M., Toronto; Professor Adam H. Wright, B.A., M.B., Toronto; Professor William Gardner, M.D., Montreal; T. Arthur Helme, M.D., Manchester.

Honorary Secretaries: Frederick Fenton, M.D., C.M., 75, Bloor Street E., Toronto; Kennedy Crawford McIlwraith, M.B., 54, Avenue Road, Toronto; Cuthbert Lockyer, M.D., 117a, Harley Street, London, W.

It has been arranged that on August 21st, 22nd, and 23rd the first part of the meeting be devoted to a discussion on the following subjects:

Tuesday, August 21st.—Hyperemesis Gravidarum.

Wednesday, August 22nd.—The Changes in Uterine Fibroids after the Menopause, with Special Reference to Operation.

Thursday, August 23rd.—The Appendix Vermiformis in Relation to Pelvic Inflammation.

Friday, August 24th.—Papers, etc.

Dr. J. C. Cameron, of Montreal, will introduce the discussion on August 21st; Dr. Charles A. L. Reid will probably introduce that on August 22nd; and Dr. T. Arthur Helme will introduce that on August 23rd.

OPHTHALMOLOGY.

President: Robert Marcus Gunn, F.R.C.S., London.

Vice-Presidents: George Herbert Burnham, M.D., F.R.C.S.E., Toronto; John W. Stirling, M.D., Montreal; Joseph Nelson, M.D., Belfast; Arnold Lawson, F.R.C.S., London.

Honorary Secretaries: James Metcalf MacCallum, B.A., M.D., C.M., Toronto; Duncan Neil McLennan, M.D., C.M., 126, Bloor Street W., Toronto; Frank P. S. Cresswell, F.R.C.S., B.Sc., 24, Windsor Place, Cardiff.

The subjects which have been chosen for discussion are:

Tuesday, August 21st.—Rare Forms of Choroiditis. To be opened by Mr. J. B. Lawford (London). The following will also take part: Dr. Hill Griffith (Manchester), Dr. H. Knapp (New York), and Dr. C. Bull (New York).

Wednesday, August 22nd.—Sympathetic Ophthalmia. To be opened by Dr. G. H. Burnham (Toronto). The following will also take part: Mr. Arnold Lawson (London) and Dr. J. W. Stirling (Montreal).

Thursday, August 23rd.—Affections of the Lachrymal Passages. To be opened by Dr. Desjardines (Montreal). The following will take part in the discussion: Dr. Risley (Philadelphia) and Dr. Theobald (Baltimore).

Friday, August 24th.—Visual Tests for Public Services. (*a*) Marine and Railroad Services. To be opened by Dr. T. H. Bickerton (Liverpool). Dr. Williams, jun. (Boston), Dr. Thompson, sen. (Philadelphia), and Dr. Allport (Chicago) will also take part. (*b*) Military Services. To be opened by Mr. Arnold Lawson (London).

PAEDIATRICS.

President: George Alexander Sutherland, M.D., London.

Vice-Presidents: Henry T. Machell, M.D., L.R.C.P., Toronto; Allan M. Baines, M.B., Toronto; Otto Jackson Kauffmann, M.D., Birmingham; H. Betham Robinson, M.S., London.

Honorary Secretaries: Edward Stanley Ryerson, M.D., C.M., 261, College Street, Toronto; Joseph S. A. Graham, M.B., 102, College Street, Toronto; Ralph Vincent, M.D., 1, Harley Street, London, W.

The Section will meet on Tuesday, Wednesday, Thursday, and Friday (August 21st, 22nd, 23rd, and 24th), at 9.30 a.m., adjourning at 12.30 p.m. each day.

The following preliminary arrangements have been made:

A discussion on Congenital Pyloric Stenosis. The medical aspects of the subject will be introduced by Dr. Edmund Cautley (London), and the surgical aspects will be introduced by Mr. Harold J. Stiles (Edinburgh).

A discussion on Pneumococcal Infection. The medical aspects of the subject will be introduced by Dr. Henry Ashby (Manchester).

It is hoped that a Clinical Demonstration of interesting cases in one of the Toronto hospitals may be arranged.

PATHOLOGY AND BACTERIOLOGY.

President: Professor J. G. Adami, M.D., F.R.S., Montreal.

Vice-Presidents: Professor John J. Mackenzie, B.A., M.B., Toronto; Professor Walter Thomas Connell, M.D., C.M., Kingston; Ingersoll Olmsted, M.D., Hamilton; Professor Robert Fraser Calder Leith, M.B., Birmingham.

Honorary Secretaries: Gideon Silverthorn, M.B., M.D., C.M., 266, College Street, Toronto; Harold C. Parsons, B.A., M.D., C.M., 72, Bloor Street W., Toronto; Frank George Bushnell, M.D., Sussex County Hospital, Brighton.

The following preliminary arrangements have been made:

Tuesday.—On Nuclear Pathology and Physiology, to be pened by Professor Adami and Dr. McCallum, and llowed by Dr. Gustav Mann (Oxford), Professor E. Vace Carlier (Birmingham), and Professor A. S. F. rünbaum (Leeds).

Wednesday.—Etiology and Life-history of Malignant ew Growths. To be opened by Professor H R. Gaylord Buffalo); Professor Clowes (Buffalo) and Drs. Buxton nd Beebie (New York), and others are expected to take art in the discussion.

Thursday.—The Forms of Arterio-sclerosis, their Classication and Experimental Production. To be opened by rofessor W. H. Welch (Johns Hopkins University, Baltiore), Dr. Klotz (Montreal), and Dr. J. J. MacKenzie Toronto); and followed by Professor L. Aschoff (Freiburg), rofessor Leith (Birmingham), Professor Clifford Allbutt Cambridge), Professor W. Osler (Oxford), Professor Adami Montreal), and others.

Friday.—Papers upon Pathogenic Protozoa, by Professor ary N. Calkins (New York), Dr. Mott (London), and Dr. . Ballah.

Arrangements will be made for the exhibition in the athological Museum of specimens illustrating the work f the section. Members wishing to exhibit material or hotographs should communicate with Dr. N. E. Abbott, IcGill Medical College, Montreal.

Those who propose taking part in the discussions are equested to send in their papers, accompanied by a short bstract, to the Honorary Secretaries not later than May 5th, in order that the abstracts may be printed and irculated before the meeting. Papers from members in he United Kingdom and Europe should be sent to Dr. ushnell, and those from members in the Dominion of anada or the United States of America, etc., to Dr. ilverthorn or Dr. Parsons.

PHYSIOLOGY.

President: Professor **Wm. Dobinson Halliburton**, I.D., F.R.S., London.

Vice-Presidents: Professor **Archibald B. Macallum**, I.A., M.B., F.R.S., Toronto; Professor **Wesley Mills**, I.A., M.D., Montreal; Professor **Charles Scott Sherington**, M.D., F.R.S., Liverpool.

Honorary Secretaries: **Herbert E. Roaf**, M.D., The Biohemical Department, The University, Liverpool; **Gustav Iann**, M.D., 25, Beechcroft Road, Oxford.

A large number of prominent American physiologists ave accepted invitations to attend, and British physilogists will thus have the opportunity of making the ersonal acquaintance of their American colleagues. everal French physiologists have also signified their itention to be present, and it is hoped that other reigners may also accept the invitations sent to them.

A joint discussion on the Rôle of the Nucleus in utrition with the Section of Pathology has been arranged, nd another joint discussion with the Section of Medicine ill also take place, the subject being Over-nutrition and nder-nutrition, with special relation to Proteid Metaolism in Health and Disease. This will be opened by rofessor Chittenden.

PSYCHOLOGY.

President: **Wm. Julius Mickle**, M.D., London.

Vice-Presidents: **Nelson Henry Beemer**, M.D., Toronto; **harles Kirk Clarke**, M.D., Toronto; **Reginald Langon-Down**, M.B., London.

Honorary Secretaries: **Alfred Thomas Hobbs**, M.D., uelph, Ontario; **Goldwin Howland**, B.A., M.B., 540, padina Avenue, Toronto; **John Turner**, M.B., Essex ounty Asylum, Brentwood.

The following subjects have been selected for special iscussion in the Section of Psychology:

General Paralysis.
Epilepsy.
Dementia Praecox.
Psychology and Medicine.

STATE MEDICINE.

President: **Frederick Montizambert**, I.S.O., F.R.C.S.E., .C.L., M.D., Ottawa.

Vice-Presidents: **E. P. Lachapelle**, M.D., Laval Univerty, Montreal; **Charles Sheard**, M.D., Toronto; **Peter enderson Bryce**, B.A., M.B., Ottawa; **Joseph Groves**, .B., Isle of Wight.

Honorary Secretaries: **Joseph D. Page**, M.D., Quebec; **F. G. E. Pearson**, M.D., Brantford, Ontario; **Edward Sergeant**, L.R.C.P., County Offices, Preston; **Arthur A. Mussen**, M.D., Municipal Offices, Liverpool.

The following special subjects have been suggested for discussion:

Protection and Control of Milk Supply.
Prevention of Tuberculosis.
Training and Supervision of Midwives.
Notification of Phthisis.
Provision and Administration of Isolation Hospitals.
Isolation Hospitals and "Return" Cases.
Medical Inspection of Children attending Elementary Schools.
Quarantine and Inspection of Shipping.
Medical Examination of Immigrants.
Supply of "Water Gas" and Dangers of Carbon Monoxide Poisoning.

SURGERY.

President: Sir **Hector Clare Cameron**, M.D., Professor of Clinical Surgery, Glasgow.

Vice-Presidents: **Fred. Le M. Grasett**, M.B., C.M., F.R.C.S.E., Toronto; **Francis J. Shepherd**, M.D., C.M., LL.D., F.R.C.S.E., Montreal; **Alfred B. Atherton**, B.A., M.D., LL.D., Frederickton, N.B.; **Tecumseth Kingsley Holmes**, M.D., Chatham, Ontario.

Honorary Secretaries: **Harry A. Beatty**, M.B., 207, Simcoe Street, Toronto; **Frederick William Marlow**, M.D., C.M., F.R.C.S., 699, Spadina Avenue, Toronto; **Sinclair White**, F.R.C.S., Ranmoor, Sheffield.

Arrangements have been made for special discussions on the following subjects:

The Surgical Treatment of Ascites Secondary to Chronic Hepatitis.
Prostatectomy.
Duodenal Ulcer.
Peritonitis.

THERAPEUTICS.

President: **Donald MacAlister**, M.D., Cambridge.

Vice-Presidents: **John Lorenzo Davison**, B.A., M.D., C.M., Toronto; **Alexander D. Blackader**, B.A., M.D., Montreal; Sir **Alan Reeve Manby**, M.V.O., M.D., East Rudham; Professor **J. Rose Bradford**, M.D., F.R.S., London.

Hon. Secretaries: **Velyien E. Henderson**, M.A., M.B., University of Toronto; **Charles Potter Lusk**, M.D., C.M., 99, Bloor Street W., Toronto; **E. R. Morton**, M.D., 22, Queen Anne Street, London, W.

The following subjects have been selected for discussion:

Tuesday, August 21st.—The Kidney, its Pharmacology and Therapeutics.

Wednesday, August 22nd.—Serumtherapy.

Thursday, August 23rd.—Joint Session with the Section of Medicine on the subject of Heart-block.

Friday, August 24th.—The Place of Materia Medica and Therapeutics in the Medical Curriculum.

The Secretaries will be glad to receive specimens, drawings, tracings, or preparations for exhibition during the session.

HONORARY LOCAL SECRETARIES.

Frederic Newton Gisborne Starr, M.B., Medical Building, Toronto.
Professor **John Joseph Mackenzie**, B.A., M.B., Medical Building, Toronto.
David James Gibb Wishart, B.A., M.D., L.R.C.P., Medical Building, Toronto.

COMMITTEE PATHOLOGICAL MUSEUM.

Professor **John Joseph Mackenzie**, B.A., M.B., Toronto, *Chairman.*
Maude Abbott, B.A., M.D., Montreal, *Secretary.*
Professor **Gordon Bell**, M.D., Winnipeg.
Professor **W. T. Connell**, M.D., Kingston.
Andrew Robertson Gordon, M.B., Toronto.
J. A. McGregor, M.D., London, Ontario.

EXHIBITION COMMITTEE.

Chairman: Dr. **Arthur Jukes Johnson**, Toronto.

Secretaries: Dr. **T. D. Archibald**, Toronto; Dr. **W. A. Young**, Toronto.

HONORARY LOCAL TREASURER.

Professor J. W. Ross, Toronto.

TORONTO ARRANGEMENTS COMMITTEE.

Dr. GEO. A. BINGHAM, 68, Isabella Street, Toronto.
Dr. C. J. C. O. HASTINGS, 258, Wellesley Street, Toronto.
Dr. A. A. MACDONALD, 341, Bloor Street West, Toronto.
Professor J. J. MACKENZIE, Medical Laboratories, Toronto.
Dr. ALEX. MCPHEDRAN, 151, Bloor Street West, Toronto.
Dr. R. B. NEVITT, 46, Bloor Street West, Toronto.
Dr. R. A. REEVE, *President-elect*, 48, Bloor Street E., Toronto.
Dr. F. N. G. STARR, 112, College Street, Toronto.
Dr. J. ALGERNON TEMPLE, 333, Bloor Street W., Toronto.
Dr. D. J. GIBB WISHART, 47, Grosvenor Street, Toronto.

PROGRAMME OF PROCEEDINGS.

TUESDAY, AUGUST 21ST, 1906.

9.30—12.30 a.m.—Meetings of Sections.
2.30 p.m.—Address on Obstetrics, Dr. W. S. A. Griffith.
4.30 p.m.—Garden Parties.
8 p.m.—Address of Welcome; Introduction of Guests, Delegates, etc.; and President's Address.
9.30 p.m.—Reception by the Lieutenant-Governor in the Parliament Buildings.

WEDNESDAY, AUGUST 22ND.

9.30—12.30 a.m.—Meetings of Sections.
2.30 p.m.—Address on Medicine, Sir James Barr, M.D.
4.30 p.m.—Garden Parties.
8.30 p.m.—Address on Surgery, Sir Victor Horsley, F.R.S.
9.30 p.m.—Reception.

THURSDAY, AUGUST 23RD.

9.30—12.30 a.m.—Sectional Meetings.
4.30 p.m.—Garden Parties.
7.30 p.m.—Annual Dinner.

FRIDAY, AUGUST 24TH.

9.30—12.30 a.m.—Sectional Meetings.
2.30 p.m.—General Meetings.
4.30 p.m.—Garden Parties.
Excursions.
8.30 p.m.—Soirée.

SATURDAY, AUGUST 25TH.

Excursions to the Niagara Power Company's plant, through the courtesy of Sir Henry M. Pellatt.
Excursion to Muskoka.
Excursion to Lambton, through the courtesy of the President, Mr. Austin.

Meetings of Branches & Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

BORDER COUNTIES BRANCH.

THE spring meeting of this Branch was held at the Keswick Hotel, Keswick, on May 4th. In the unavoidable absence of the President, Vice-President, and the President-Elect, the chair was taken by Dr. J. W. CRERAR of Maryport.

Confirmation of Minutes.—The minutes were read, approved, and signed.

Apologies for Absence.—Apologies for absence were intimated from the President (Sir James Crichton-Browne), Vice-President (Dr. Barnes of Carlisle), and the President-Elect (Dr. Bowser of Penrith); also from Drs. Bell, Donald, Doughty, G. B. Muriel, G. J. Muriel, Logan, and Powers.

Branch Representative on Central Council.—The CHAIRMAN then intimated that the election of the Branch's Representative upon the Central Council would shortly take place, and that he had pleasure in announcing that Dr. Maxwell Ross of Dumfries had agreed to allow himself to be again nominated for the post—an announcement that was received with great satisfaction by the meeting. The Chairman went on to say that at the meeting of the Branch Council which had just taken place it had been resolved to approach the Council of the North Lancashire and South Westmorland Branch with a view to altering the terms of the subsisting agreement between that Branch and the Border Counties Branch. He pointed out that it was understood between the two Branches at present that each Branch was in turn to have the right of nominating the Representative upon the Central Council for four years successively. Last year, however, the term for which it was possible for any member to sit upon that Council had been reduced to six years instead of eight, and it was thought that it would be better to extend the terms of the agreement between the Branches to that time and so allow each Branch a full term of membership. A resolution confirming the action of the Council was then passed *nem. con.*

Registration of Nurses.—A motion standing in the name of the President, Sir J. Crichton-Browne, and dealing with the proposed composition of the Central Board to supervise the registration, etc., of nurses, was then discussed, and it was agreed that this was a very important question, and that it would be as well to ask the different Divisions of the Branch to consider the following (draft) resolution, and report to the Branch Council:

> The members of the Border Counties Branch beg to record their opinion that on any Central Board formed by legislative enactment to supervise the education, registration, and discipline of nurses, there should be medical representatives, at least equal in number to the representatives of the nursing body.

Another matter which had been brought before the Council that day was also mentioned by the Chairman, namely, the advisability of revising the boundaries of some of the Divisions in the light of the experience gained during the past three years. The Council had, he said, agreed to go into this matter, and had appointed a Subcommittee to deal with the question and report to it.

The meeting confirmed the action of its Council.

Dinner.—After the conclusion of the meeting the members dined together in the hotel.

NORTH CUMBERLAND DIVISION.

A MEETING of the Division was held as the George Hotel, Penrith, on Friday, April 6th, at 3 p.m. The Council met at 2.45 p.m. Dr. BOWSER of Penrith was in the chair.

Confirmation of Minutes.—The minutes of the last meeting having been read and approved were signed by the Chairman.

Matters referred to Divisions.—The various matters referred to the Divisions which had been printed in the SUPPLEMENTS of the JOURNAL from July 22nd, 1905, to March 31st, 1906, were then read over by the CHAIRMAN and laid before the meeting. Some discussion took place on the recommendation on ambulance work, and it was finally resolved that in this Division the matter remain *in statu quo*. The draft Royal Charter for the Association was then discussed, and it was unanimously resolved to recommend that a clause be inserted in Paragraph 2 authorizing the formation of (*a*) a circulating medical library; and (*b*) social club houses in London and other large centres if such be desired.

Rules of Central Midwives Board. — The CHAIRMAN intimated that the Subcommittee appointed to consider the rules of the Central Midwives Board reported that in its opinion no change was necessary. This was confirmed.

Division Areas.—The CHAIRMAN further stated that the Division Committee had resolved to request the Branch Council to reconsider the Division areas in the light of the experience gained during the three years' working under the new organization. This action was also confirmed by the meeting.

Communications.—Dr. SYME showed (*a*) a patient operated on for suppuration in both frontal sinuses and in the right maxillary antrum; (*b*) a case of laryngeal paralysis; (*c*) a patient on whom the radical mastoid operation was performed for urgent symptoms. Dr. EDINGTON read a paper on serumtherapeutics with special reference to pernicious anaemia; cases were shown with charts. Dr. DONALD read a paper on auto-intoxication in goître. Dr. SEDGWICK reported a case of Banti's disease, with a brief note on blood examination. All the papers were followed by interesting discussions.

Dinner.—Several of the members dined together after the meeting.

GIBRALTAR BRANCH.

A GENERAL meeting of the members of this Branch was held on April 20th, Colonel MCNAMARA, P.M.O., in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

History of the Branch.—Dr. L. D. PARSONS, Assistant Surgeon, Colonial Hospital, and Port Surgeon, Gibraltar, gave a short sketch of the Branch since its organization. The last meeting of the Branch was held in October, 1899. The present meeting was convened for the purpose of admitting new members, electing office bearers, and settling the agenda for the next ordinary meeting of the Branch.

Resignation of Honorary Secretary.—The Honorary Secretary, Dr. ABRINES, then tendered his resignation, and stated that he had already handed over to Dr. Parsons the papers relating to the Branch, together with a small sum remaining of the funds.

Election of Officers.—The following office-bearers were elected:—*President:* Colonel J. McNamara, R.A.M.C. *Vice-President:* Deputy-Inspector-General J. Porter, C.B. *Honorary Secretary and Treasurer:* Dr. L. D. Parsons. *Members of Council:* Lieutenant-Colonel D. V. O'Connell, R.A.M.C., Major Robinson, R.A.M.C., Dr. N. Oman, Dr. Abrines, Dr. Fairbank.

Meetings.—It was decided that the meetings of the Branch should be held quarterly unless otherwise specially notified. The meetings will be held in the Board Room of the Colonial Hospital, or such other place as may from time to time be decided upon. The hour of meeting will be 5 p.m.

Next Meeting.—The next meeting was fixed for the last Thursday in May (31st).

Complimentary Member.—Dr. Oliva, a local Spanish practitioner, was proposed as a complimentary member by Dr. ABRINES, seconded by Dr. OMAN, and unanimously elected.

Vote of Thanks.—The meeting closed with a hearty vote of thanks to the Chairman.

GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.

A MEETING of this Division was held on April 27th in the Royal Hotel, Hamilton. Dr. BRUCE GOFF presided.

Confirmation of Minutes.—The minutes of the last meeting were read, and after a slight addition suggested by Dr. ROBERTSON, were approved and signed by the Chairman.

Letters.—The SECRETARY read two letters received by the Division, one of which he was instructed to answer; the Division appointed a small committee to answer the other.

Financial Statement.—The SECRETARY read his annual report, which showed that the income of the Division was £5 8s., being at the rate of 1s. 6d. per head on 72 members. The expenditure was £4 13s. 10d., leaving a balance of 14s. 2d.

Election of Officers.—The following officers were elected: *Chairman*, Dr. Bruce Goff (Bothwell); *Vice-Chairman*, Dr Millar (Uddingston); *Secretary*, Dr. Livingstone Loudon (Hamilton); *Representative to Representative Meeting*, Dr. Goff; *Representatives to Branch Council*, Drs. Service and Loudon; *Council*, Dr. Kirkland, Dr. Crawford, Dr. Jack, Dr. Kerr (Hartwood), Dr. Lindsay.

Matters referred to Divisions.—The following decisions were come to in regard to matters referred to the Division:

(*a*) Recommendations of Science Co-ordination Committee. The Division determined to do nothing.
(*b*) Question of out-patient departments in hospitals. The Division generally approved.
(*c*) Division libraries. Division determined to do nothing.
(*d*) Draft Royal Charter. Generally approved.
(*e*) Recommendations of Committee on Contract Practice. Not approved by Division.

HALIFAX (NOVA SCOTIA) BRANCH.

THE regular fortnightly meeting of the Branch was held at the City Council Chamber on February 28th.

Proposed Grouping of Branches.—Pursuant to a communication from the Medical Secretary regarding the proposed grouping of this Branch with those of Bermuda and Montreal for the election of one representative on the Central Council, a resolution was passed deprecating such action, and the Secretary was instructed to communicate to the Medical Secretary the views of the Branch in this matter.

Model Tenements.—The PRESIDENT introduced the Rev. Dr. Armitage, who addressed the Branch, setting forth a proposition for the erection of a block of model tenements in Halifax, and asking the interest and support of the medical profession. A Committee was appointed to investigate and report on the subject.

Papers.—C. DICKIE MURRAY, M.B., read a paper entitled The Medical Examination of Immigrants, giving a clear account of the working of the United States Immigration Service at Halifax.—Dr. A. C. HAWKINS followed with a short paper on The Diseases of Immigrants. The two papers were discussed together.

A meeting was held on March 14th.

Registration of Births.—A committee was appointed to interview the proper authorities with a view to securing compulsory registration of births at Halifax.

Model Tenements.—The Committee *re* model tenements reported strongly in favour of the proposition, which was therefore on motion heartily endorsed.

Patent Medicine Legislation.—A Committee was appointed to investigate the patent medicine question, with a view to securing any necessary legislation.

Paper.—Dr. G. L. SINCLAIR, Government Inspector of Humane and Penal Institutions, read a short paper entitled The Medical Aspects of Hypnotism, supplementing it with a series of demonstrations of hypnotic phenomena, using as subjects several of the gentlemen present.

New Members.—At the close of the regular meeting, the Branch Council elected sixteen new members.

On March 28th the Branch met at the Halifax Hotel.

Practising Opticians.—The action of certain practising opticians at Halifax in prescribing eye-drops and ointment in certain cases was condemned, and it was decided to bring the cases reported to the notice of the Provincial Medical Board.

Papers.—Dr. E. A. KIRKPATRICK read a paper entitled Nasal Obstruction: Its Effects, Prevention, and Cure. Discussion followed. Dr. W. N. EAGAR read a paper entitled Congenital Hypertrophic Pyloric Stenosis. He claimed that this condition was usually considered rare only because most cases are undiagnosed, and that it was really responsible for a good many of the cases of "marasmus" so-called.

New Members.—The Branch Council, after this meeting, elected eight new members, and re-elected one former member.

On April 11th the final meeting for the year was held.

Registration of Births.—The Committee *re* birth registration reported satisfactory progress in securing legislation.

Patent Medicine Legislation.—The Committee *re* patent medicine legislation reported that their Bill had passed its second reading in the Legislature.

Exhibit.—JOHN STEWART, M.B., exhibited Luys's segregator, explaining its uses, and stating his experience with the instrument.

Physical Deterioration.—The programme for the evening concluded with a discussion on physical deterioration, taken part in by Dr. A. P. REID, Provincial Health Officer, and others.

New Members.—The Branch Council elected seven new members.

LANCASHIRE AND CHESHIRE BRANCH.

THE FINANCES OF THE ASSOCIATION.

A GENERAL meeting of this Branch was held in the Memorial Hall, Albert Square, Manchester, on Thursday, May 3rd, at 4.15 p.m., to consider the present state of the finances of the Association, the chair being taken by the PRESIDENT, Sir James Barr, M.D.

The following resolutions, which had been unanimously adopted by the Council of the Branch, were considered:

1. This Council views with alarm the serious decrease in the surplus funds of the Association during the past year, and urges upon the Central Council the absolute necessity of curtailing the expenses in the several departments, notably that of the Medical Secretary.

2. This Council instructs the Representative of the Branch to bring the matter before the Council of the Association.
3. That the action of our members on the Council of the Association be approved, and that they be thanked for their services in opposing unnecessary expense in the organizing department of the Association, and further that this Branch Council hopes that they will continue in such action.
4. That in the opinion of this Council it is desirable that the Medical Secretary should devote his attention to organizing and advisory, and not to clerical, work.

Resolution 1.—It was proposed and seconded that Resolution 1 be approved; whereupon an amendment was moved and seconded—

> To omit the last six words, "notably that of the Medical Secretary."

The amendment, having been put from the Chair, was declared to have been lost. On the motion being put as the substantive resolution, a further amendment was moved and seconded:

> To substitute for the last six words the following, "notably those of the Editor and the Medical Secretary, and of increasing the income."

The amendment, having been put from the Chair, was declared to have been lost. On the original motion being put as the substantive resolution it was declared to be carried.

Resolution 2 was approved.

Resolution 3.—It was proposed and seconded that Resolution 3 be approved, whereupon an amendment was moved and seconded—

> To delete the words "in the organizing department of the Association."

The amendment, having been put from the Chair, was declared to have been lost. On the motion being put as the substantive resolution it was declared to be carried.

Resolution 4 was approved.

Chester and Crewe Division.

Annual Meeting.

The annual meeting of the Chester Division was held in the Chester General Infirmary at 6 p.m. on May 4th.

Minutes.—The minutes of the last annual meeting as reported in the British Medical Journal were taken as read.

Alteration of Rules.—Mr. Taylor moved and Dr. Stolterforth seconded the deletion of the latter half of Rule 6 of the Division Rules. This was modified by Dr. Mann to read, instead of the latter half: "The Chairman not to hold office for more than two consecutive years." This, on being put to the meeting, was carried.

Report of Executive Committee.—The Executive Committee's report was then read and approved.

Election of Officers.—The officers for the ensuing year were elected. It was proposed by Dr. Mann and seconded by Mr. Taylor that Mr. Granger be re-elected Chairman. It was proposed by Dr. King and seconded by Dr. Jephcott that Dr. Laird (Crewe) be elected Vice-Chairman. It was proposed by Mr. Taylor and seconded by Dr. Mann that Dr. King be re-elected Honorary Secretary and Treasurer. It was proposed by Dr. King, and seconded by Dr. Stolterforth, that Dr. Parry be elected the Representative at Representative Meetings. It was proposed by Mr. Taylor and seconded by Dr. Stolterforth, that Mr. Granger and Dr. King be the Representatives on the Branch Council. It was proposed by Dr. Stolterforth and seconded by Dr. King that Mr. Taylor and Drs. Mann and Robinson (Runcorn), and Dr. Grey (Crewe) be members of the Executive Committee. These were all agreed to *nem. con.*

Proposed Application for a Charter.—This question was then discussed. It was decided that it be left to the discretion of the Representatives: this to apply after further discussion, to all matters which might come before the Representative Meeting. This concluded the business of the meeting.

Clinical and Pathological.—An interesting clinical and pathological meeting had been held immediately before the meeting by the Chester Medical Society.

METROPOLITAN COUNTIES BRANCH:

Hampstead Division.

An extra meeting of this Division was held on Friday, April 27th, at 5 p.m., at St. Mary's Schools, Church End, Finchley (the first meeting held there), Mr. F. R. Humphreys in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were taken as read.

Nominations for Officers.—The Honorary Secretary read a letter from Dr. F. J. Smith (honorary secretary, Metropolitan Counties Branch) asking for nominations for election of Branch Council officers. Dr. Ford Anderson proposed and Dr. Oppenheimer seconded that Mr. Humphreys should be nominated as one of the Vice-Presidents, Dr. Smith as Senior Secretary, Mr. H. W. Armit as Junior Secretary, or, failing the latter, Dr. Goodall.

General Medical Council Election.—A letter was received from the Honorary Secretary of the Wandsworth Division with respect to the election for the General Medical Council. It was decided to defer consideration of this to a later date.

Cottage Hospitals.—A discussion took place on this subject with special reference to proposed formation of a cottage hospital at Finchley. Dr. Ford Anderson said that our object should be to establish hospitals for the good of the community which shall satisfy the aspirations of the medical profession. He warned Finchley members to beware of initial faulty conditions. "Initial errors of disposition prove fatal beyond belief," as a great general had said. Started on improper lines the evils would increase like a "snowball." The interests of the medical profession must be considered. He had examined the reports of twenty-five cottage hospitals and he found the Finchley scheme one of the best as regards the rules laid down. A basal rule should be: "That there shall be adequate representation of the medical profession on the management of the hospital." Representatives should be annually elected by some organized body which would obtain the suffrages of the professsion. It was not proposed at Finchley to have an out-patient department, and that was wise. As regard the casualty department, they must bear in mind, however, that nothing was so much abused as casualties. As regards medical staff, his idea was that all the medical men in the neighbourhood should be entitled to treat patients in the hospital. He thought that there should be no fixed staff, but that medical men should be elected from month to month to deal with casualties. There should be no subscribers' letters. As regards paying patients, a few beds should be reserved for these, and patients might pay for maintenance according to their means. A cottage hospital should enable us to treat our patients on the same lines as in private practice, with all the advantages of a hospital added.—Mr. Nockolds, in proposing a vote of thanks to Dr. Anderson, said he was very glad to hear that he approved of the proposed rules.—Dr. Dill Russell, in seconding the vote of thanks to Dr. Anderson, said that he would pay special attention to the question of adequate representation of the medical profession on the management—a point not clearly defined in the rules drawn up. He would like to know what Dr. Anderson considered adequate representation.—Dr. Anderson expressed the opinion that five out of twenty, or one-third of the members of the Board, should be medical men. For admission to the hospital patients must be financially and medically suitable. Subscribers had no right to dictate to the professsion as to who should be admitted. They must not expect a *quid pro quo* for money given as charity. He thought that laparotomies and other major operations should be done by consultants acting as a consulting staff only.—Dr. Russell thought that the general practitioners at Finchley should do all the operations.—Dr. Oppenheimer agreed with Dr. Anderson on the question of consultants. He thought the tendency of general practitioners towards universal specialism was as bad as the tendency of consultants to act as general practitioners.

St. Pancras and Islington Division.

A meeting was held at the St. Pancras Workhouse on Friday, April 27th, Dr. Francis J. Buckell of Canonbury in the chair.

Nominations for Vacancies.—The following members were nominated to fill vacant offices on the Branch Council: Drs. Lauriston E. Shaw, as President; F. J. Buckell, as a Vice-President; F. J. Smith, as Secretary; and Betham Robinson, Treasurer. Drs. Walter Smith and Buckell were nominated as candidates for the membership of the Council of the Association. Drs. Theobald and Yeld were chosen to attend the proposed conference on the selection of candidates for membership of the Central Council.

Proposed Royal Charter.—Mr. WHITAKER, Medical Secretary of the Association, gave an address explaining the terms of the Draft Royal Charter, and answered questions as to the changes it would bring about if adopted. Dr. WALTER SMITH, who has made a deep study of the Draft Charter, raised many questions upon the advantages and disadvantages of the proposals; he objected to the Council having unlimited power in spending money; to the restriction of the power of meeting to this country and the colonies; to the absence of any scheme for the formation of a club for medical men, and of the provision of a large hall for meetings. He raised the question of the payment of arrears of subscriptions, and of what was meant by "the honour and interests of the profession" in Ordinance 17. He thought the period of twenty-eight days within which the Council must meet—see Section IV, 17 (*a*) and (*e*)—was too short. Mr. WHITAKER explained that the present period was only seven days. Dr. BUCKELL called attention to the serious under-representation of large Divisions upon the Council, and suggested an extra representative for each additional 300 instead of 600 members. In the end the Division approved the application for a Charter unanimously, and also approved the terms of the Draft Charter in general, but was unable to accept all the clauses in detail. Several amendments were carried.

Hampstead General Hospital.—Drs. THEOBALDS and YELD reported on the results of a conference held to consider the question of out-patient practice at the general hospital at Hampstead, and a series of resolutions was adopted *nem. con.* as drawn up by the conference.

Vote of Thanks.—A vote of thanks to Dr. THACKRAY for providing refreshments was duly passed.

Annual Meeting.—The SECRETARY announced that the next meeting would be the annual meeting for election of officers, etc., and would be held on May 25th at the Islington Infirmary on Highgate Hill, by the invitation of Dr. Robinson.

WESTMINSTER DIVISION.

A MEETING was held at 20, Hanover Square, on Thursday, May 3rd, at 8.30 p.m., Dr. HASLIP in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

Correspondence.—A letter received from the Secretary of Charing Cross Hospital was read in reply to the one the Honorary Secretary of the Division had been instructed to write, drawing the attention of the Hospital to the resolution passed at the last meeting of the Division in reference to the fact that members of the resident hospital staff had left the institution, for the purpose of viewing dead bodies.

Central Council Election.—Communications from the Wandsworth Division were read, inviting this Division to send two representatives to take part in a meeting to be held in which representatives from all Divisions of the Metropolitan Counties Branch should arrange to support the candidature of general practitioners for the Central Council election. After considerable discussion as to the definitions of consultants and general practitioners, it was decided to send two representatives, and they were instructed to put forward the name of Dr. Haslip as a candidate. Dr. Donald Baynes and Dr. Bruce Porter were then elected representatives.

Hospital Abuse.—The meeting then proceeded to the consideration of Dr. Ford Anderson's paper on hospital abuse, which had been published in the SUPPLEMENT for June 3rd, 1905. The four resolutions which had been carried at the meeting before which this paper had been read were one by one discussed. The discussion was chiefly carried on by the CHAIRMAN, Dr. CAUTLEY, Dr. DAUBER, Dr. BRUCE PORTER, Dr. LONGHURST, and Dr. DONALD BAYNES. The resolutions were then put separately to the meeting, and were carried.

Proposed Royal Charter.—It was decided to postpone the consideration of the Royal Charter to a future meeting.

NORTH WALES BRANCH.

A MEETING of the Branch was held at the Westminster Hotel, Rhyl, on Tuesday, April 24th, at 2 p.m., Dr. EMYR O. PRICE (Bangor), President, in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read, confirmed, and signed.

Report of Branch Council.—The HONORARY SECRETARY (Mr. H. Jones Roberts) read the report of the Branch Council, which was received and adopted.

Financial Statement.—The financial statement for the year 1905, which showed a balance to the credit of the Branch of £1 0s. 5d., was received and adopted.

The Jones Morris Memorial Fund.—The HONORARY SECRETARY reported that the total amount of the subscriptions received was £100 15s. It was resolved:

> That another and final appeal be made to those members who have not yet subscribed, and that the subscription list be closed the end of June, in order that the form which the memorial shall take may be decided upon at the annual meeting of the Branch to be held in July.

The Medical Officership of Bangor Workhouse.—Dr. GREY EDWARDS (Bangor) brought to the notice of the meeting the position taken up by the medical profession at Bangor in regard to the vacancy in the medical officership of the Bangor workhouse. The guardians having refused to increase the salary of £50 previously attached to the appointment, the local practitioners agreed not to apply for the post unless the salary was increased to £70. This the guardians had been forced to do at their last meeting, and it was considered that the field should be left clear to the three local practitioners who were applying for the appointment at the increased rate of pay. It was resolved:

> That this meeting approves of the action of the profession at Bangor in relation to the appointment of a medical officer to the Bangor Workhouse, and wishes it ultimate and complete success.

Papers:—Cancer in North Wales.—Dr. RICHARD JONES, D.P.H. (Blaenau Festiniog): On the Prevalence of Cancer in North Wales—a Statistical Inquiry. A discussion followed, in which the PRESIDENT, Drs. JOHN ROBERTS (Menai Bridge), W. PERMEWAN (Liverpool), and J. LLOYD ROBERTS (Colwyn Bay), took part. It was resolved:

> That in the opinion of this Branch it is desirable that the vital statistics for England and Wales, as prepared by the Registrar-General, be separately prepared for Wales—namely, for South Wales and Monmouthshire and North Wales. A copy of this resolution to be forwarded to the Local Government Board.

The following papers were also read: Mr. J. HOWELL EVANS, F.R.C.S. (London): Rebellious Uterine Haemorrhage, illustrated by a number of pathological specimens; in the discussion which followed, Professor BRIGGS, Drs. HILL ABRAM, PERMEWAN, RICHARD JONES, and H. JONES ROBERTS took part. Mr. G. F. NEWBOLT, F.R.C.S. (Liverpool): Some Remarks on Four Consecutive and Successful Operations for Perforated Gastric Ulcer. Dr. G. A. CRACE-CALVERT (Ruthin): Obervations on the Opsonic Index of Tuberculous Patients undergoing Sanatorium Treatment. Dr. J. HILL ABRAM (Liverpool): Some Cases of Intrathoracic Tumour. Dr. J. LLOYD ROBERTS (Liverpool): On Colitis Sinistra. Mr. J. HOWELL EVANS (London) gave a Lantern Demonstration illustrating Injuries to the Fetal Head at Birth which produce Intracranial or Extracranial Haemorrhages.

Vote of Thanks.—The PRESIDENT proposed, the HONORARY SECRETARY seconded, and it was unanimously resolved:

> That a hearty vote of thanks be accorded to the readers of papers, the meeting having been one of the most interesting in the history of the Branch.

SOUTH WALES AND MONMOUTHSHIRE BRANCH

CARDIFF DIVISION.

AN ordinary general meeting of this Division was held at the Cardiff Infirmary on Thursday, April 26th, Dr. D. R. PATERSON in the chair.

Confirmation of Minutes.—The minutes of the last ordinary general meeting were read and confirmed.

Proposed Royal Charter.—The proposed Royal Charter was briefly explained by the SENIOR SECRETARY (Dr. Ewen J. Maclean), and it was unanimously resolved:

> That the Cardiff Division approves of the proposed application for a Royal Charter of Incorporation to the British Medical Association.

Proposed State Registration of Nurses.—The recommendations drafted by the Select Committee of the House of Commons were read, and, after some discussion, it was unanimously resolved:

1. That the Cardiff Division approves in general of the method of registration for nurses proposed by the Select Committee of the House of Commons.
2. That the Cardiff Division approves of the separate registration of midwifery nurses.

SOUTH-WESTERN BRANCH:

BARNSTAPLE DIVISION.

THE annual meeting of this Division was held at the Queen's Hotel, Ilfracombe, on Wednesday, April 18th, Dr. E. J. TOYE in the chair.

Confirmation of Minutes.—The minutes of the last meeting were read and confirmed.

Annual Report.—The HONORARY SECRETARY presented his annual report, which showed that the membership of the Division remained about stationary, but that there was a very marked increase in the attendance of members at the meetings, and that there had been at times an overplus of clinical material.

Election of Officers.—The following officers were then elected for the ensuing year: *Chairman*, Dr. E. J. Toye; *Vice-Chairman*, Dr. Tucker; *Executive Committee*, Drs. Kettlewell, Jonas, Valentine, Parsons, Kendle, and Hobling; *Honorary Secretary and Treasurer*, Dr. Ellis Pearson; *Representative on Branch Council*, Dr. E. J. Toye.

Discussion.—Dr. TOYE then opened a discussion on Should Fishing be Permitted in the Public Reservoirs? in which Drs. SLADE-KING, GOODING, KETTLEWELL, JONAS, and KENDLE joined.

Paper.—The HONORARY SECRETARY (Dr. Kendle) read notes on a case of pancreatic abscess, and an interesting discussion followed, in which all present took part.

Entertainment at Cliff Hydro.—At the conclusion of the meeting the members present were kindly entertained to tea at the Cliff Hydro by the courtesy of Dr. Toller, who also exhibited to them the very excellent electrical installation there, a demonstration of which was much enjoyed by all present.

SYDNEY AND NEW SOUTH WALES BRANCH.

THE regular general meeting of this Branch was held at the Royal Society's Rooms, Sydney, on Friday, December 15th, 1905, Dr. RENNIE in the chair.

Confirmation of Minutes.—The minutes of the previous meeting were read and confirmed.

New Members.—The CHAIRMAN announced the election of Dr. W. D. Langton of Redfern, and the nomination of Dr. E. H. M. Stephen and Dr. F. G. Connor.

The late Dr. D. Weald.—Dr. RENNIE proposed a resolution of condolence with the Queensland Branch on the death of their late Honorary Secretary (Dr. David Weald).—Seconded by Dr. QUAIFE and carried.

Apology for Non-attendance.—An apology was received from the President (Dr. Beeston) for non-attendance.

Papers.—Professor WELSH, in conjunction with Dr. CHAPMAN, read a paper on Precipitin. Drs. FLASHMAN, STACY, and HANKINS made some remarks on the paper. Dr. CHAPMAN replied.—Dr. SINCLAIR GILLIES read a paper on a case of Bradycardia. A discussion ensued, in which Drs. WILKINSON, LITCHFIELD, and MACDONALD GILL took part. Dr. SINCLAIR GILLIES replied.

The annual meeting of the Branch was commenced on Thursday, March 29th, at the Association Rooms, 121, Bathurst Street, Sydney, Dr. BRADY in the chair.

Appointment of Scrutineers.—The Chairman appointed Drs. Gill and Palmer scrutineers, and Drs. Harris and Nolan assistants.

The Chairman then handed the ballot papers to the scrutineers, and the meeting adjourned until the following evening.

The adjourned annual meeting was held on Friday, March 30th, Dr. BEESTON in the chair.

New Members.—The following were elected: Dr. G. A. Buchanan, Nyngan; Dr. A. W. Campbell, 183, Macquarie Street, Sydney; Dr. Constance D'Arcy, Royal Hospital for Women, Paddington; Dr. John C. Douglas, Stockton; Dr. W. B. Kerr, Hellensburg; Dr. James M. McEnroe, R.P.A. Hospital, Camperdown.

Report and Balance Sheet.—The report and balance sheet were taken as read. Dr. CRAGO proposed that the report and balance sheet be adopted. Seconded by Dr. CARRUTHERS. Carried unanimously.

Presidential Address.—Dr. BEESTON read his Presidential address. Dr. RENNIE proposed that a hearty vote of thanks be accorded to Dr. BEESTON for his address. Carried by acclamation. Dr. BEESTON replied.

Election of Office-bearers.—The following office-bearers were elected for the ensuing year:—*President:* Dr. F. A. Pockley. *Vice-President:* Dr. Newmarch. *Councillors:* Dr. Hankins, Dr. Crago, Dr. Rennie, Dr. Beeston, Dr. Abbott, Dr. Dick, Dr. Brady, Dr. MacCormick, Dr. Worrall, Dr. Hinder, Dr. Maitland, Dr. Read.—Dr. POCKLEY then took the chair, and thanked the members for having elected him President.

Auditors.—Election of auditors for 1906:—Drs. Sawkins and T. H. Hall.

Vote of Thanks to Scrutineers.—A vote of thanks was accorded to the scrutineers and assistants; carried by acclamation.

By-law.—The HONORARY SECRETARY moved the adoption of the following by-law:

> That the Representative of the Branch on the Central Council may be a member of a Branch of the British Medical Association other than the Sydney and New South Wales Branch.

—Seconded by Dr. CRAGO and carried.

Representatives on Central Council.—The following gentlemen were elected representatives on the Home Council:—Dr. C. J. Martin, G. E. Twynam.

Portrait of Sir P. S. Jones.—The PRESIDENT (Dr. Pockley) presented the portrait of Sir Philip Sydney Jones. Sir PHILIP JONES thanked the members for the gift.

Vote of Thanks to Mr. P. Spence.—The HONORARY SECRETARY moved a vote of thanks to Mr. Percy Spence for his work in connexion with the portrait of Sir Philip Jones.

ULSTER BRANCH.

A JOINT meeting of this Branch and of the Ulster Medical Society, adjourned from March 29th, was held in the Medical Institute, Belfast, on Wednesday, April 25th, Dr. CALWELL in the chair.

Tughan v. Darnell.—The meeting was summoned to consider what further proceedings should be taken regarding the decision in the case of Tughan *v.* Darnell. It was reported that after inquiry and due consideration of the prospects of success, Dr. Darnell had decided to abandon the appeal of which notice had been lodged. The meeting thereupon decided to start a fund to assist Dr. Darnell in paying the expenses of the proceedings, which will probably amount to about £800 out of pocket. A large General Committee was formed, with Dr. Leonard Kidd (Enniskillen), President of the Ulster Branch, and Dr. William Calwell, President of the Ulster Medical Society, as Honorary Treasurers; and Drs. Cecil Shaw and Thomas Houston, Honorary Secretaries. A number of subscriptions have been promised, and a circular will shortly be sent out giving particulars.

PORTADOWN AND WEST DOWN DIVISION.

THE spring meeting of the Portadown and West Down Division was held at Portadown on April 4th, Dr. LAWLESS in the chair. Apologies were received from Drs. S. E. Martin and Chancellor.

Proposed Royal Charter.—The Draft Charter was considered and approved.

State Registration of Nurses.—The principle of the State Registration of Nurses was approved, the Division confiding in the Council to use its best efforts to secure due control of the profession in the government of the nurses.

Papers.—Dr. HOWARD SINCLAIR read an interesting and instructive paper on points in the early diagnosis of pulmonary tuberculosis.—Dr. DEENY read notes of a case of perforative appendicitis.—Dr. DARLINGTON showed a young man with large tumour of elbow. There was a good deal of discussion of the cases.

Next Meeting.—The next meeting was directed to be held in Newry.

MEMBERS are reminded that the Library and Writing Rooms of the Association are fitted up for the accommodation of the members in commodious apartments, at the office of the Association, 429, Strand. The rooms are open from 10 a.m. to 5 p.m., except on Saturdays, when they close at 2 p.m. Members can have their letters addressed to them at the office.

The following will be the agenda: (1) To elect the officers of the Branch. (This will be done by voting papers sent to each member of the Branch. Nominations by three members for the offices of President-elect, Vice-Presidents, and Secretary may be sent to the Honorary Secretary on or before May 21st.) (2) To receive the annual report of the Branch. (3) To transact any business that may be transacted by an ordinary meeting. N.B.—Three members to represent the Branch on the Central Council will also be elected by voting papers. Nominations for these posts, each of three members in writing, should be sent to the Secretary of the Branch on or before May 21st.—H. M. STEWART, Dyffryn, 123, Thurlow Park Road, Dulwich, Honorary Secretary.

SOUTH-EASTERN BRANCH: CROYDON DIVISION.—The annual meeting of the Division will be held at the Croydon General Hospital on Thursday, May 17th. Business meeting, chairman, Dr. Rosser. Agenda: (*a*) Minutes of the previous meeting. (*b*) Election of officers for the coming year. (*c*) To decide when and where the next meeting shall be held, and to elect a chairman. (*d*) Other business. Clinical meeting, chairman, Mr. C. Wray. Members willing to exhibit cases are requested to communicate with the honorary secretary not later than May 12th. A detailed agenda paper will be issued later. Dinner at the Greyhound Hotel, charge 5s., exclusive of wine. Members intending to remain to dinner are requested to send a post-card to that effect to E. H. WILLOCK, 113, London Road, Croydon, Honorary Secretary.

SOUTH-EASTERN BRANCH: FOLKESTONE DIVISION.—A meeting of the Division will be held at the Hotel Wampach on Tuesday, May 15th, at 8.30 p.m. Agenda: To consider the matters referred to the Divisions (see SUPPLEMENT to the BRITISH MEDICAL JOURNAL, May 5th). The annual meeting of the Division will be held at the Hotel Wampach on Tuesday, May 22nd, at 7.15 p.m. Agenda: (1) To elect officers, the Representative of the Division on the Branch Council, and the ordinary members of the Executive Committee. (2) To receive the annual report of the Executive Committee, including the finances. (3) To make new rules or alter or repeal existing rules. (4) To transact any business that may be transacted at an ordinary meeting. A meeting of the Folkestone, Ashford, and Dover constituency will be held after the annual meeting at the same place. Agenda: (1) To elect Representative in Representative Meetings of the Association. (2) To elect a Secretary. (3) To consider the business of the Annual Representative Meeting. Dinner at 8.30 p.m.; charge 5s.—P. VERNON DODD, M.D., Honorary Secretary, 14, Manor Road, Folkestone.

SOUTH-EASTERN BRANCH: REIGATE DIVISION.—A meeting will be held at the Cottage Hospital, Redhill, on Thursday, May 17th, at 3.30 p.m., Dr. John Walters, J.P., in the chair. Agenda: To elect a Representative of the Division, and to consider any other Association business. A discussion on some points in Urinary Surgery will be opened by Mr. James Berry, B.S., M.B.Lond., F.R.C.S.Eng., Surgeon to the Royal Free Hospital. Some interesting specimens will be shown. All members of the South-Eastern Branch are invited to attend and to introduce professional friends. Tea will be provided after the meeting.—W. A. BERRIDGE, Honorary Secretary, Redhill.

SOUTH MIDLAND BRANCH.—In accordance with the by-laws, nominations of a member of Central Council to represent this Branch must reach me on or before May 12th.—E. HARRIES JONES, Honorary Secretary, 45, Sheep Street, Northampton.

SOUTH MIDLAND BRANCH: AYLESBURY DIVISION.—The annual meeting of this Division will be held in the Board room of the Royal Bucks Hospital on Tuesday, May 15th, at 2.30 p.m. Agenda: (1) The minutes of the last meeting to be read and confirmed. (2) To elect the Chairman and other officers for the ensuing year. (3) To consider the advisability of drawing up list of medical men willing to be sent for by midwives in emergencies. (4) To decide which Branch this Division should be grouped with for purposes of representation. (5) To consider the application of the Association for a Royal Charter (see SUPPLEMENT to the BRITISH MEDICAL JOURNAL, March 24th, 1906). (6) Letters and any other business.—HORACE ROSE, Honorary Secretary, Aylesbury.
